THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Edited by Funk & Wagnall Company (Adam W. Wagnall, Pres.; Wilfred J. Funk, Vice-Pres.; Robert J. Coddigy, Treas.; William Neiel, Sec'y), 354-360 Fourth Ave., New York

VOL XLIX., No. 1

NEW YORK, JULY 4, 1914

WHOLE NUMBER 1263

TOPICS OF THE DAY

STRENGTHENING THE GRIP OF THE COMMERCE COMMISSION

EVERY DECISION of the United States Supreme Court, as one editor remarks, seems to put a little more iron in the grip of the Interstate Commerce Commission. Only six weeks ago the court confirmed the Commission's supremacy over rate rulings by State authorities—considered in our issue of June 20. Two more decisions in the final batch handed down last week before the court's adjournment for the summer will further confirm the Commission's control over interstate carriers. And a notable feature of the situation is that this centralization of power meets with general favor. "No one will regret" the intermountain decision, says a Wall Street organ noted below, and, so far as we have seen, no one does, tho it changes transportation conditions in the West and may cause local dissatisfaction on that account. In the intermountain case the court declares the "long and short haul" clause of the Commerce Act constitutional, and confirms the authority of the Interstate Commerce Commission to issue "blanket" and "zone" rates; and in the pipe-line case it declares petroleum-carrying pipe-lines to be common carriers, and as such subject to regulation by the Commission. In these two decisions, marks the *Philadelphia Record*, "the authority of the Interstate Commerce Commission to regulate is advanced to the fullest extent claimed by the most radical advocates of the Hepburn Act." But it is on the intermountain rate case that public interest, for a number of reasons, chiefly centers. For one thing, as the editorial commentators point out, this decision disposes of Mr. Brandeis's contention that the Commission had no power to make blanket rates, and therefore could not, even if it wished to, grant the petition of the Eastern roads for a 5 per cent. rate increase. Further, by putting such cities as Spokane, Denver, Reno, Ogden, and Salt Lake City on a more nearly equal footing with the coast cities in the matter of transportation rates, it promises greatly to stimulate the industrial and commercial development of the whole intermountain region, which lies between the Rocky Mountains and the coast range. It means, moreover, as the *Washington Post* remarks, that "there will no longer be any doubt that the Commission has been made the absolute master of the railroads, and almost the final court of appeal."

The history of this important case is thus briefly sketched in the *Indianapolis News*:

"The intermountain rate case extends back to June and July, 1911. Acting under the provisions of the long and short haul

clause, the Commission sought to adjust rates from the East to such intermountain cities as Phoenix and Spokane. In the past railroads had felt privileged to charge such intermountain cities the regular rate to the Pacific coast and then add to this the local rate from the coast back to the destination. The theory was that possible competition by water—then around Cape Horn, and in the future by the Panama Canal—made it necessary for the carriers to discriminate in favor of the coast points. The long and short haul clause took from the carriers the power to charge more for a short than for a long haul, but clothed the Commission with discretion to make exceptions to fit cases of actual or possible competition. Accordingly, the Commission adjusted intermountain rates as a whole. The old rates were cut, but permission was given the roads to charge comparatively less for coast hauls—this solely because of water competition.

"The decision was not wholly pleasing either to the intermountain cities or to the seventeen common carriers involved. The order was appealed to the Commerce Court—which has now ceased to exist—and this court set aside the whole order on the theory that the Commission had no power to establish rates applicable to zones, but could only pass on the reasonableness of specific tariffs. On this issue the case was carried to the Supreme Court."

In the decision, which is unanimous, the court affirms the constitutionality of the "long and short haul" clause, which had been challenged by the roads, and establishes the authority of the Commission to establish blanket rates applicable to specified zones.

This decision seems popular with the press. We find *The Wall Street Journal*, a conservative organ that can not be suspected of any lack of sympathy with the railroads, declaring that "no one will regret the decision." For—

"If the Commission is to have any authority over rates at all it should be such authority as will carry with it the fullest degree of responsibility for the commercial, industrial, and social results involved. A regulating body with just enough authority to interfere with the delicate adjustment of interstate freight-rates would be, and at times has been, one degree worse than one with plenary powers."

The *Brooklyn Eagle* also fails to see anything hostile to the interests of the railroads or their stockholders in this decision, since it "merely means that we are getting closer to the replacing of a multiplicity of regulators with a single regulator, and that will be a real advantage when it comes." And in the *Brooklyn Citizen* we read:

"Hereafter, as already said, there will be no other question

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. RECEIPT of payment is shown in about two weeks by date on address label, description including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS should be sent before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnall Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

for the courts to pass upon when the Commission makes a rate, whether general or special, than the reasonableness of it. If the rate or general scale prescribed by the Commission, in other words, is reasonable, it will be sustained, and there will be no question of jurisdiction to argue about.

"That the Commerce Commission has power to authorize a general increase of freight-rates may be said to be the central proposition of the decision as it stands. The converse of this, that it has equal power to reduce them, subject only to review on the ground of what is fair, follows as a matter of course. The effect of the decision can not fail to be good."

The railroads have little reason to complain of this decision, thinks the *Boston Transcript*, because "if it fails to acknowledge their contention in one respect, it promises to benefit them in another"—namely, in clearing the way for the Commission to grant the rate increase asked for by the Eastern roads. It is this aspect of the case which moves the *Baltimore News* to remark: "One by one the bars to restoration of railroad prosperity come down." "The power of regulation which the decision establishes," notes the *Buffalo Express*, "does no injustice to railroads, and it insures general fairness to the shippers." It is welcomed by the *Troy Record* as "a long step toward eliminating the possibility of corporate abuses in transportation matters." And while the *New York Globe* remarks that by this decision "no substantial advantage is taken from the railroads," the *Washington Times* notes that "the intermountain region wins one of the greatest victories ever placed to its credit." As the *New York Commercial* sees it, a decision that stimulates the development of the intermountain region must ultimately benefit the railroads by increasing traffic. We read:

"Transcontinental railroads will lose something by this decision as far as rates on business they have been doing are concerned; but this decision will remove a long-standing grievance of which the whole intermountain country has complained and will stimulate industries in that territory which should add greatly to the traffic handled by the railroads. A single instance of what may follow is the possibility of developing vast deposits of sulfate of soda or Glauber salts which lie close to the main line of the Union Pacific Railroad at Laramie, Wyo. Commercial sodas are made chiefly from common salt, or chlorid of soda, and the first step in the process is to convert the common salt into sulfate of soda. These deposits at the soda lakes near Laramie are commercially pure and save the expense of this first step. Many years ago large soap-makers in Chicago and other Middle West points looked into this soda deposit and made arrangements to use it, but they were fenced off by the high freight-rate, tho the deposits lie within about thirty miles of the Great Divide at Sherman and the rest of the eastward haul is all down-hill as far as Omaha. They found it cheaper to buy caustic soda made from common salt than to bring in the Laramie soda.

"Laramie business men at one time promoted a glass factory in which the soda and sand found in the immediate neighborhood of the city were used, but they could not find a market for their glass because freight-rates from Laramie to Salt Lake City, for instance, were higher than from Pittsburg to San Francisco, and it cost them more to lay it down at Omaha or Kansas City than the rate from New Jersey points, or even from France and Belgium. Almost every place of importance in the intermountain country can tell a similar tale of disappointed ambitions. The whole territory from the Canadian boundaries to the Mexican frontier is now rejoicing, and the railroads need not despair because the resources of that intermountain country are so vast and so little developed that there is room for expansion which might easily double the present traffic of the roads concerned within less than ten years."

The *New York Times* also notes that the railroads are not complaining very loudly of this decision, despite the fact that as a result of it shippers are already asking the refund of \$12,000,000 overcharges on shipments to the intermountain region. Says *The Times*:

"There is no way of stimulating land travel without benefiting railways and the one sure thing is that there is to be great growth of transportation throughout all the mid-continent area, regardless of the portion which goes via Panama in either direction. It is easy to criticise the decision in details. The one rates are not proportioned either to distance or to other

rates which the Commission has declared reasonable. But the are based on transportation conditions and are without malice against the railways. The railways can thrive under rates made if the country thrives, and no rates which are injurious to the country can stand. The country is coming to understand that it and the railways are in the same boat, and that neither can thrive at the expense of the other."

The *New York Sun*, remarking that the Supreme Court decisions of the last three years have greatly reduced "the debatable area surrounding the two great statutes, the Sherman Law and the Interstate Commerce Act, which constitute the definition of the political limits of the American business field, is apparently not altogether pleased to learn that "the Interstate Commerce Commission has a life and death power over railroad enterprise through a sweeping control of rates." After discussing in detail several of the court's recent decisions, including the intermountain rate case, *The Sun* goes on to say:

"That these and other recent judicial pronouncements have done much to make a new world for business is obvious. It is a world of diminished economic incentives as they have been understood, for altho the opportunity of profit still beckons, it is an opportunity of profits increasingly circumscribed by law.

"It was the unfettered spirit of economic adventure which gave the United States its present magnificent railroad system, and despite the speculative evils which attended their provision, the country gained enormously by the encouragement which offered to capitalistic hardihood. In the same way corporate enterprise has expanded generally, to the immense benefit of the people altho greed for profits flourished in the expansion. How much the country's business can stand in the way of enforced submission to the dictates of vote-coaxing politics and still preserve its growing vigor is a question, but there is no question about the lines of business legality along which business effort must be guided if the late tendency of Supreme Court decisions is regarded."

But while "regulated business" is clearly "coming to be the order of the day," *The Sun* finds that even this fact has certain compensating features. Thus:

"Dispositions toward communism are curbed by the trial of government regulation of business activities, and under any circumstances energy, ambition, and intelligence must in the last analysis repose confidence in popular fair-mindedness and rely on public opinion, informed by self-interest, to modify or transform altogether the conditions of any political experiment which may be undertaken.

"Extreme regulation of the railroads is demonstrably an attempt to avert government ownership; and if it appears to invite that awful alternative it is because of the danger that the regulative principle may be so overloaded that it can not be reconciled with private ownership. If public regulation of property privately owned is to succeed, public demands must be compatible with a sufficient return on capital to induce its accumulation and investment.

"The Interstate Commerce Commission is now all but substituted for the traffic managements representing the owners of the railroad systems of the country. Nevertheless there is a reasonable probability that the Supreme Court's declaration of the Interstate Commerce Commission's power over the railroads, concentrating and emphasizing the Commission's responsibility for their welfare, and thus for the general welfare, will insure a larger measure of fair treatment for the carriers than regulation has hitherto afforded them."

In spite of the justice of the intermountain rate decision, remarks the *Philadelphia Inquirer*, "it can be seen that the situation is a complicated one, and will be more so when the Panama Canal is working regularly." For:

"Under the law the canal is closed to steamships owned by railways. This gives to independent steamship companies a great advantage, and as a result the bulk of freight for points near the Pacific coast will be carried by water and then given a short railway haul. This will cut off a great deal of the business of the railways, for which they can get no compensating traffic.

"In most situations of the sort there is always an alternative, but laws and regulations have taken these from the railways so that they are without resource except what comes from increased business, and in these days that is not increasing at all."

A CONFLICT OF SIGNALS

Would it not be better to prevent this collision than to investigate it after it has happened?

McKay in the New York American.

WHY OUR GOLD GOES TO EUROPE

DEMOCRATS ARE BLAMING the railroad scandals, and President Wilson's critics are blaming the tariff and the trust bills now before Congress, for the recent huge exportations of gold to Europe. The gold movement is linked with the Claffin failure by those who scout the idea of a "psychological" business depression, and the President is asked if these things are imaginary. The President replies in a speech predicting a wave of prosperity within a few weeks and many expect the departing gold to return soon. The basic facts of the discussion are that a recent week showed a record exodus of gold to Europe, and that last week brought up the total of gold exports for the year to \$81,250,000, and for the present movement to \$65,250,000. But many financial writers, who refuse to show any great concern over such a "draining" of our gold reserves, point out that we have plenty more, and that the exodus can not last long, at the worst. Many are inclined to think with the New York Times how "strange," how indicative of a "perverse" disposition, it is for people to distrust the soundness of conditions in the country which spares the gold "rather than in the countries which are demanding it." The "plain truth" about these gold exports, so the New York Commercial informs us, "is that practically all this gold is going to Paris, because Paris is in bad shape and needs help." We, on the other hand, can spare the gold, and our

large exports simply "prove our strength and prosperity as well as our ability and willingness to help France in its hour of need." France has "imported \$48,250,000 in gold from us," we are told, for the same reason that we imported \$78,000,000 of gold from London in the "panic" month of November, 1907. And *The Commercial* adds:

"Within six weeks we will export wheat that will call for the return of part of this gold or for a large increase in our credit balances abroad. As far as can be seen, the Tariff Bill and the temporary balance of trade against us in April have nothing to do with our gold exports. Paris is simply paying a premium for gold and is getting it on usurious terms."

Reasons for the "precarious" banking situation in France were noted in our columns last week. And European bankers, adds the Brooklyn *Eagle*, "are aware not only of their own necessities, but of the fact that we have established a new 'system' of finance, which differs from prevailing methods in the important particular that it may enable us to keep our gold here—to prevent an exodus." Hence they may be "casting an anchor to the windward." On this side the water, to quote the Springfield *Republican*, "trade reaction has gorged the banks with money, rendering money rates very low," and "with the shrinkage of merchandise this spring," tho the new tariff has not yet "become a material factor," the "balance of trade is against us."

But while the exports of gold under these conditions do not

WE'VE ALL FELT THAT WAY AND LIVED.

-Darling in the Des Moines Register and Leader.

seem very "menacing" to *The Republican*, the *New York Press* is frankly worried—

"Any child can see that if we keep on owing foreign countries big money each month on our trade balance, as well as owing them hundreds of millions a year for those interest, dividend, and freight charges, we shall have to go on shipping gold just the way we'd ship coal."

Such a state of affairs as *The Press* intimates is due to the Democratic tariff, asserted Senator Smoot (Rep., Utah) the other day, "and if there is not a change before many months in the amount of increased imports and the amount of decreased exports, we may well wonder what is going to happen to our finances in the near future. It can not be otherwise than detrimental." The tariff, retorted Senator Hollis (Dem., N. H.), has nothing to do with it—

"The movement of gold is a very delicate matter that is governed entirely by the rate of exchange. When any foreign country is willing to pay a small fraction of 1 per cent. more for the use of gold it can draw it from us.

"The reason that is ascribed by the best economists for the present outflow of gold is that foreign investors and security holders have become so frightened at the disclosures regarding the New York, New Haven & Hartford Railroad and at the frauds that were perpetrated in the St. Louis & San Francisco Railroad deal that they are dumping over our securities and are sending them back to this country. We therefore have to send the gold abroad to pay for them."

Neither of these explanations is from an economist; each is from a politician, and each represents "a one-sided view of the situation and interested motives," comments the *New York Journal of Commerce*. The change in "the balance of trade" is due, it says, largely to an increase in our exports, something quite unaffected by the tariff. Moreover,

"The selling of American securities abroad has also been an influence; but it is doubtful whether the particular railroad disclosures referred to had much to do with that. It would be quite as fair to attribute the selling of securities to the financial condition of the railroads on account of the failure of the Interstate Commerce Commission to allow them to advance their rates, and to a depressed state of general business in this country caused by apprehension of more restrictive legislation or further Government prosecutions."

This editor's conclusion is that "while the situation is exceptional for various reasons, there is not the slightest ground for apprehension as to 'what is going to happen to our finances in the near future':"

"Business has been comparatively inactive for some time, and domestic banking operations are restricted. There has been a large accumulation of reserves and our gold supply is superabundant. The reserves of one kind and another in the hands of the Government exceed \$1,100,000,000, to say nothing of those in the vaults of banks. Klondike and Australia gold comes in to some extent on the Pacific Coast, and our own product is about \$90,000,000 a year. Whatever we part with we get value for in some form, and there is profit in exporting gold as well as cotton or wheat, when we have it to spare. There is nothing alarming in our 'unfavorable balance of trade' for two or three months or a reduction in the 'favorable balance' when there are obvious reasons for it. The equilibrium will be restored when the exceptional demand from Europe is satisfied."

The *New York Evening Post* calls attention to periods of activity in gold shipments under the Taft and Roosevelt Administrations as noteworthy as the present. It further quotes government reports showing that during the ten months ending in April "and in which we exported \$47,000,000 gold, we imported no less than \$60,000,000," and this with our own production made a net increase in our total gold supply of \$63,000,000 in the past ten months.

Even now, say the financial writers on several New York papers, there are signs that the export movement of gold is prac-

tically at an end. It will cease altogether, says Director of the Mint George Roberts, "when the grain crop moves from this country to Europe."

CLUBWOMEN FOR SUFFRAGE

A TRIUMPH for woman suffrage greater than the conquest of any single State was won when the General Federation of Women's Clubs indorsed the principle of political equality at the recent biennial convention at Chicago, say a number of interested editors, who thus find the indorsement of woman suffrage by women more important than its indorsement by the men. Nor is the *Chicago Tribune* alone in considering the move "the most important indorsement of woman suffrage in the history of the movement." The now successful fight of the suffragists "to break down the Federation's constitutional bar on political and religious subjects" was a long one, as a Chicago correspondent notes. For it was just twenty-two years ago, we are reminded editorially by the *Albany Knickerbocker Press*, "during the first biennial convention at Chicago," that "a delegate arose and proposed the indorsement of equal suffrage in a plank of the Federation. She stood alone. Not another delegate supported her. She was gently and firmly suppressed." Then "the convention proceeded peacefully to discuss self-improvement, personal culture, kindergartens, and other comparatively tame, non-inflammable subjects." But this year, by a "vigorous and preponderant chorus of 'ayes'" the convention passed this resolution:

"Whereas, the question of political equality of men and women is to-day a vital problem under discussion throughout the civilized world,

"Resolved, that the General Federation of Women's Clubs give the cause of political equality its moral support by recording its earnest belief in the principle of political equality regardless of sex."

That such an organization, declares the *Chicago Tribune*, "representing as no other does thoughtful, practical, and forward-looking women throughout the Republic, should vote virtually unanimously for the suffrage means that the fight for enfranchisement is won. It will be retarded here and yielded with limitations there, but the time will not be long before woman votes as man votes in every part of the United States." The "moral victory" in the Chicago convention, agrees the *Chicago Herald*, "spells a series of practical and legislative victories all over the land." Such papers as the *Columbus Dispatch* and *St. Louis Republic* are found in agreement with the *New York Globe*, to which this victory seems "more important than the winning of a new State," because

"It has within it the seeds of many State victories. The majority of men are disposed to concede the vote to women when it shall fairly appear that the women really want it. Now it can be no longer said that the most representative and embracing organization of women in the country is opposed or indifferent."

The strong protest of an antisuffrage minority at the convention must not be forgotten. The president of the National Association Opposed to Woman Suffrage, Mrs. Arthur M. Dodge, herself a prominent clubwoman, declared that the suffrage would antagonize thousands of women and needlessly "inject politics into philanthropies."

The cause of suffrage has received a double impetus, remark several Chicago papers, since during the very week of the Federation convention the Illinois Supreme Court declared constitutional the law by which women in that State are now partially enfranchised. This means, in the words of the *Chicago Tribune*, that "the women voters of Illinois now may take off their wraps and hang up their bonnets. They have come to stay." And while this fact is "primarily of State interest," it

TO BE SOLD TO GREECE "FOR PEACEFUL PURPOSES"

This is the *Idaho*, for which, together with her sister ship, the *Mississippi*, Greece is willing to pay our Government \$11,500,000, which is what they cost us to build six years ago. With the purchase-money, says Secretary Daniels, we will build a new superdreadnought of the latest type.

is, in the opinion of the *Chicago News*, "of import to the whole country":

"The fact that suffrage has crossed the Mississippi River has had a moral influence on the Eastern States. If the Illinois Supreme Court's decision had been adverse, the cause would have been set back in the country as a whole."

ARMORED DOVES OF PEACE

TO THOSE who have feared that the sale of two of our obsolete battle-ships to Greece may start a third Balkan War, with fresh horrors, the statement of President Wilson that "if he had any idea that the vessels were to be used against Turkey or any other nation he would not support the project" will give a grateful sense of relief and security. A paragrapher in the *New York Herald* has deduced from this the hint that, since the ships are not meant for war, they must be "solely for the purpose of spreading the gospel of prohibition," but the more sober statements quote the President as avowing that "it had been represented to him that it would even up the balance of power in the Mediterranean and make for peace." So sure of it has he been that he has even met the remonstrances of Rustem Bey, the new Turkish Ambassador, with this argument, and we are given to understand the Ambassador was told, to his surprise, that the President "had assurances from the Greek legation that the battle-ships were wanted for peaceful purposes." On this subject the Ambassador reserved some doubts, possibly because he felt, as the *New York Times* suggests, that the peace Greece longed for was "that which follows victorious war—the desert of the familiar apothem." We are told that Mr. Vouras, the Greek *Chargé d'Affaires*, urged the peace motive for the sale, and Greek representatives in Washington "have declared that a modern battle-ship purchased from Brazil will be delivered soon to Turkey, and that only by equalizing the two navies will loss of life be averted." To this Rustem Bey replies:

"We have every reason to believe that Greece is preparing for war on Turkey, and the acquisition of these two ships will give to her an added naval preponderance which will make it possible for her to act against us. Greece is already stronger on the sea than Turkey, altho when the two superdreadnoughts being built for Turkey in England are delivered that will not be the case, and with the *Idaho* and the *Mississippi* as a part of the Greek Navy she will be vastly superior and in position to declare war. Assurances from Greece that possession of these

two ships will work for peace are not worth what they seem, for statesmen, no matter how sincere their motives, are sometimes driven into war. Greece is in an excited state, and popular opinion could easily force the country into conflict."

The \$11,500,000 received for the out-of-date ships (which are but six years old) is to be spent for a new dreadnought, making the bargain a very happy one financially, but all do not agree on the ethical stand of the United States in this matter. Representative Stafford (Rep.), of Wisconsin, declared in the House that this country is virtually embroiling itself in the disputes of Turkey and Greece; and, further,

"if the countries were at actual war it would be regarded as a violation of neutrality on our part were we to make this sale. The step we are about to take is about as bad. Turkey may be a despised nation in the European group, but it does not behoove this Government to take part in the imbroglio between it and Greece."

The *Richmond Times-Dispatch* takes even a more serious view of the ethical principles involved:

"Greece is securing battle-ships for another war with Turkey. Turkey is securing battle-ships for another war with Greece. Unless these two nations can strengthen their navies by purchase, there will be little chance of war. The question, then, enters: Should the United States help along war for a small profit, or should it help along peace? It may be that the refusal of the United States to sell will not insure peace, for the battle-ships may be bought elsewhere. That, however, is not our part. An individual can not excuse itself for wrong-doing by pointing to the wrong-doing of others, nor can a nation."

In answer to such pleas as this the *Denver Rocky Mountain News*, affecting a more practical tho not less sincere attitude, replies that "there can be no more question of our right to do business with Greece than there is of Turkey's right to purchase two new dreadnoughts from British shipyards, where they are now building with all possible speed." The *New York Mail* refers with some scorn to those who fear that the *Idaho* and *Mississippi* may be used for war. We are reminded that "we are not exercising any sort of protection over the Sultan of Turkey," nor can we "go behind the returns and find out what warlike use is likely to be made of the material we sell." The United States bought two cruisers of Brazil at the outbreak of the Spanish War, but because of this, queries the writer, "was the Brazilian Government guilty of a hostile act toward Spain?" Secretary of the Navy Daniels rejoices over the bargain, and exclaims:

"This is a splendid thing for the Navy, and I am naturally

much gratified that the House concurred with the Senate in accepting the Department's recommendation, and thus taking advantage of this unusual opportunity. In the stead of these two vessels the Navy will obtain a superdreadnought of the most advanced type, such as the *Pennsylvania*, and not unequal to four vessels of the type of the *Mississippi* or *Idaho*.

"This ship will carry a main battery of twelve fourteen-inch guns, as against the eight twelve-inch attained by the *Mississippi* and the *Idaho* combined. She will have a speed of 20.5 knots, as compared with the maximum of 17.17 knots attained by the

MOVING TOWARD PEACE IN MEXICO

TWO EVENTS happened last week that seemed to some to presage the approach of peace in Mexico. Villa's capture of Zacatecas is seen as a step toward Mexico City and peace by conquest. The Niagara Falls mediators, at the same time, have cleared the way for peace by another route, mediation between the warring factions—if they will adopt that method. The end of the A. B. C. mediation is variously described as a confession of signal failure, or a triumph "prodigious and unprecedented in the history of international relations." This sharp difference of opinion seems to be due to the fact that while the mediators did offer a settlement of "the international side of the Mexican problem," they left the "internal problem" to others. The main difference of opinion between the representatives of Huerta and our Administration concerned itself with the choice of a new provisional President; the Mexicans insisted on a "neutral," the Americans declared for a Constitutionalist. Now, unless Villa's soldiers take the question out of the hands of the diplomats, the choice is to be made by Mexicans. For, in the protocol signed at Niagara Falls all parties agree to recognize a provisional government to be "constituted by agreement of the delegates representing the parties between which the internal struggle in Mexico is taking place." It is further agreed that the United States will make no claim for "war indemnity or other international satisfaction," and that the provisional government in Mexico will grant amnesty to all foreigners and arrange for the proper settlement of foreigners' claims for damages. With this, says the *New York Journal of Commerce*,

"The mediators virtually wash their hands of the whole business. This may have settled 'the international side of the Mexican problem.' It may possibly have put the internal side in the way of settlement, but it is left far from an actual settlement. . . . Will delegates of the Huerta and Carranza factions get together and agree to a plan to be carried out in good faith? If they do not, or, if they devise a plan which our Government does not like and does not believe will result in permanent pacification and constitutional rule, or if the elections conducted under a plan to be adopted are as farcical as elections in Mexico have been for many years, what then? Our delegates have not agreed that the United States will keep hands off while a provisional government is being constituted and 'the powers of a permanent government' are being established. They would not agree to the withdrawal of troops from Vera Cruz before the new provisional government is set up. . . . There is no assurance that a permanent result will be reached. All that is really settled now is the imbroglio between the United States and Gen. Victoriano Huerta. Even that is not placed beyond the possibility of renewal."

This is one point of view, but other observers, like the *New York Evening Post*, rejoice in "this clear-cut disposal of our part in the matter," and think that "what with the steady march of the Constitutionlists toward complete military success, it will be strange if the negotiations do not ultimately result in bringing the Huertists to terms on lines substantially identical with those marked out by President Wilson from the beginning." This country triumphs, believes the *New York Times*, because our disinterestedness is pointed out to the world, and particularly to Mexico, because we avoid war, and "pledge lasting friendship with Mexico and establish on a new and promising footing our relations with all Latin America." The "only possible source of new trouble," it is asserted, will be the council of representatives of the two Mexican factions. But *The Times* feels confident that "this council will take up its deliberations in the right spirit," and it has "no doubt whatever of the outcome." Similar optimism is said to prevail in Washington, where the feeling is that Villa's victories will make for an agreement between the representatives of the two factions.

But the "internal questions" are the hardest questions to settle, and, says President Huerta, they "appertain ex-

HOW WE TREAT MEXICAN INVADERS.

These plump Mexican children were poor and ill fed when they came across the Rio Grande into the United States. Chaplain Axton, of the 20th U. S. Infantry, is holding two of them in his arms.

Mississippi and *Idaho*. Through the concentration of her big guns in four turrets and use of oil for fuel, she will require a crew of about 800 men, whereas each of the old ships required a crew of 700 men.

"Battle-ship No. 39 has not yet been named, and this year's Naval Appropriation Bill authorizes the construction of two new battle-ships, which, with this new ship, will total four unchristened young leviathans. Therefore, on this coming Fourth of July Uncle Sam will have the pleasing fraternal duty of choosing names for his first set of quadruplets."

The *Idaho* and *Mississippi*, says the *Springfield Republican*, will place Greece "in a decidedly better position with regard to Turkey's purchase of the Brazilian *Rio de Janeiro*." Why the *Idaho* and *Mississippi* have been called "the war-ships of peace" is explained by the *New York Greek organ Athena*, of whose editorial opinion a translation reads:

"Greece was in a position to strike before she acquired these battle-ships. Being stronger, there was nothing to prevent her, except the desire for peace, and strong reasons for avoiding a war just at this time. . . . On the other hand, Turkey's war fever, inflamed by the thought that the navy of Greece would be considerably the weaker should Turkey's new dreadnoughts arrive before any Greek reinforcements, will be cooled by this purchase. . . . The President of the United States was right in saying that by this act a third war in the Balkans may be avoided."

clusively to the Republic," and "never have been, are not, and will not be the subject-matter of discussion in the conferences." Yet we find a wide belief that the representatives of Huerta and Carranza may decide to enter into the negotiations at any moment. The *New York Evening Post's* Niagara Falls correspondent is one of those who expects the Mexicans to get together. Villa, he says, "is understood to be in thorough sympathy with the conference," and,

"His victory at Zacatecas has not affected the situation, except as it forecasts the purpose of the Constitutionalists to obtain the larger share in the control of the new Administration on account of their military success. Carranza's attitude is also understood to be favorable, as his contention—that the selection of a provisional President is an internal problem—is now upheld."

At Niagara Falls, the American representatives proposed that a Constitutionalist be agreed upon to succeed Huerta, and President Wilson let it be known that he would insist upon such a selection. This the Huerta delegates flatly rejected, and gave their reasons in a statement to the American public, saying:

A provisional Government composed of revolutionaries, and with revolutionaries in authority throughout the country, would turn the elections as it wished; the public vote would be falsified and the result would necessarily be the election of another revolutionary. . . . In Mexico, in the present circumstances, only a well-balanced Government can guarantee electoral freedom, so that the rejection of the neutral Government proposed by the mediators is tantamount to abetting and even to exacting fraud and violence at the elections."

Such a result, they continued, would be a bad thing for both countries because it would "create a National sentiment of hostility in the Mexican people," and also bad for Carranza and his party, because Mexican public opinion "would ever accuse them of having brought about the intervention of a foreign nation to enable them to achieve power." It was declared that despite their many successes in the field, the Constitutionalists have not the majority of Mexicans with them. And if they had, under a neutral Government, the revolutionary candidate "would be assured of a certain and honorable victory."

In the American delegates' reply the strong military position of the Constitutionalists (now further strengthened by the taking of Zacatecas) was emphasized. The permanent restoration of peace in Mexico, said Messrs. Lamar and Lehmann, "can only be obtained by consulting the just wish of the Constitutionalists, who are not only in numerical majority, but are now the dominant force in the country." For, they pointed out, if a neutral should be chosen as provisional President, we "would still be confronted with the insurmountable fact that the Constitutionalists, now almost completely triumphant, would reject the plan, repudiate the man, and press forward with renewed zeal to Mexico City, with all the loss of blood and life that may involve." Nor do the American envoys believe that a neutral President could be found, even if such a choice were desirable. As they remarked:

"In such a contest as that which has been waged in Mexico for years, it is not only fair, but necessary, to assume that every intelligent man of any prominence is at heart on one side or the other, and the country might well question the patriotism of any Mexican who has been colorless in such a contest. . . . The effort, therefore, should be, not to find a neutral, but one whose attitude on the controlling issues would make him acceptable to the Constitutionalists, while his character, standing, and conduct would make him acceptable to the other party."

In answer to the criticism that a Constitutionalist provisional Government would not hold a fair election, the Americans suggested a bipartisan board, with Constitutionalists in the majority, to supervise the election, and offered the assurance that all the influence our Government could legitimately use would be exerted to secure an honest election.

After so careful a presentation of these radically differing viewpoints, there is little new argument left for editors who

favor either. The *Boston Herald*, for one, does not "see what business it has been of the President of the United States thus to take sides in the affairs of another country." The *Boston Transcript* and the *Rochester Post Express* believe the Huerta delegates were absolutely correct in taking the stand they did. The *Jacksonville Florida Times-Union* admits that it might perhaps "be difficult to find a prominent man in Mexico who has not sided with either faction, but it would not be impos-

MAKING THE REVOLUTION POPULAR.

That the Constitutionalists do not expect to win all their successes at the point of the bayonet is clear from this picture of General Carranza's secretary giving money to the poor at Saltillo.

sible, and every one knows that only by the selection of such a man can an honest election be held in Mexico."

But the greater number of editors who are moved to comment upon this issue seem to favor the American contention and to look upon the task of finding a neutral President for Mexico as a hopeless one. Thus, for instance, argue such representative dailies as the *Springfield Republican*, *New York Evening Post*, *Chicago News*, and *Baltimore Sun*. That the only "practical" and "logical" way to establish a stable government in Mexico is to "recognize Carranza and his army of 100,000 men" is likewise the judgment of the *Worcester Gazette*, *Baltimore American*, *Milwaukee Journal*, *Savannah News*, and *Dallas News*. The Huerta men at Niagara are described by the *Milwaukee Free Press* as representing "the científicos and the whole land-holding class of Mexico no less than they represent Huerta personally." When they "speak of a neutral provisional President," says the *New York World*,

"they mean one who, while not openly attached either to the dictatorship or the rebellion, is steeped in aristocracy and land monopoly. . . . If this grandee element persists in its refusal to accept a Constitutionalist whose moderation would be guaranteed by the United States, Brazil, Argentina, and Chile, it will have an opportunity presently to deal with General Villa, who is a land reformer of the machine-gun type."

TUNING UP FOR A TRANSATLANTIC FLIGHT.

In this hydroaeroplane, the *America*, built for Mr. Rodman Wanamaker by Glenn H. Curtiss, Lieut. John Cyril Porte, of the British Royal Navy, and George E. Hallett expect to fly from Newfoundland to England by way of the Azores and Spain. These pictures were taken on Keuka Lake, near Hammondsport, New York, where the *America* was launched and her first trial flights successfully made last week. The *America* is propelled by two 100 horse-power motors and her wings measure 72 feet from tip to tip.

THE ROOSEVELT O. K. FOR PERKINS

THE PINCHOT WAR on Perkins seems to have received its quietus from Colonel Roosevelt's emphatic assertion that "Mr. Perkins has been, on the whole, the most useful member of the Progressive party," and his equally emphatic statement that "as for reading him out of the party, when that is done they will have to read me out too." As recorded in our issue of June 20, Mr. Amos Pinchot recently started a vigorous fight against Mr. Perkins as Chairman of the National Executive Committee of the Progressive Party, on the ground that he "has been monopoly's ardent supporter and one of the most distinguished opponents of social and industrial justice that our generation has produced." This attack, which was launched after Colonel Roosevelt had sailed for Spain, was indorsed by Mr. Gifford Pinchot, whose prominence was second only to the Colonel's among the original founders of the party. But while the old party papers were watching with unconcealed glee the development of what promised to be the first serious split in the ranks of the youngest of the political parties, the Colonel returned to these shores and promptly called the mal-

contents back into line with the following statement, from which we have already quoted the two salient sentences:

"Mr. Perkins has been, on the whole, the most useful member of the Progressive party. No man has served with greater zeal and disinterestedness. He has striven in absolute good faith for the principles of the party both as regards corporations and business generally, and as regards the group of questions dealing with the welfare of the wage-worker and his economic and social advance."

"As for reading him out of the party, when that is done they will have to read me out too."

To this Mr. Amos Pinchot replies that the question is not whether Mr. Perkins should be read out of the party, but whether or not he "should remain executive leader of the party."

One result of Colonel Roosevelt's determination to stand by Perkins, reports the Washington correspondent of the *New York Evening Post*, is that "Progressives in Congress are in consternation, fearing that men of the Murdock stripe will be driven into the Wilson camp." Progressive dailies continue to avoid the whole subject of the Pinchot-Perkins feud, while other papers either commend the Colonel's loyalty to his supporter, or ask jeeringly if anybody expected the leader of a party to quarrel with the party's "meal ticket."

FOREIGN COMMENT

IS THE DREADNOUGHT OBSOLETE?

OVER A YEAR AGO Mr. Winston Churchill, First Lord of the British Admiralty, told Parliament that "the strength of navies can not be reckoned only in dreadnoughts, and the day may come when it may not be reckoned in dreadnoughts at all." And now comes Admiral Sir Percy Scott with an article in the *London Times* proclaiming "the uselessness of great battle-ships" and predicting the "future of naval warfare." There has been a good deal of desultory talking and writing on the question of whether iron-surface ships should not be consigned to the scrap-heap, and submarines and air-ships

be regarded as a nation's best protection. But here we have expressed the deliberate verdict of a naval specialist of the first rank. He it was who made possible the recent advance in marksmanship with heavy guns. He invented the "director," which has enormously increased the possibility of hitting at long distance. He tells us in *The Times* that everything he has done to enhance the value of the gun is rendered useless by the advent of the submarine, with its deadly torpedo. Battle-ships, and indeed all war-vessels which have not the quality of submersion, are to become obsolete. In harbor, on the ocean, in

narrow waters, dreadnoughts and super-dreadnoughts are at the mercy of the submersible torpedo-carrier. The Admiral formally states his theory as follows:

"The introduction of the vessels that swim under water has, in my opinion, entirely done away with the utility of the ships that swim on the top of the water."

"The functions of a vessel of war were:

Defensively,

1. To attack ships that come to bombard our ports.
2. To attack ships that come to blockade us.
3. To attack ships conveying a landing party.
4. To attack the enemy's fleet.
5. To attack ships interfering with our commerce.

Offensively,

1. To bombard an enemy's ports.
2. To blockade an enemy.
3. To convoy a landing party.
4. To attack the enemy's fleet.
5. To attack the enemy's commerce.

"The submarine renders 1, 2, and 3 impossible, as no man-of-war will dare to come even within sight of a coast that is adequately protected by submarines; therefore, the functions of a battle-ship as regards 1, 2, and 3, both defensively and offensively, have disappeared.

"The fourth function of a battle-ship is to attack an enemy's fleet, but there will be no fleet to attack, as it will not be safe for

a fleet to put to sea. This has been demonstrated in all recent maneuvers both at home and abroad where submarines have been employed, and the demonstration should have made us realize that, now that submarines have come in, battle-ships are of no use either for defensive or offensive purposes, and, consequently, building any more in 1914 will be a misuse of money subscribed by the citizens for the defense of the Empire."

Speaking of the vast expenditure required by the maintenance of a strong fleet of "ships that swim on the top of the water," the Admiral remarks:

"What we require is an enormous fleet of submarines, air-ships, and aeroplanes, and a few fast cruisers, provided we can find a place to keep them in safety during war-time."

"It has been argued to me that our enemy will seize some island in the Atlantic, get some fast cruisers there, with plenty of coal, and from this island prey on our commerce. This is ridiculous; the moment we hear of it we send a flotilla of submarines towed by an Atlantic liner, she drops them just when in sight of the island, and she brings them back to England when they have sunk everything they found at the island."

"If we go to war with a country that is within the striking distance of submarines, I am of opinion that that country will at once lock up their dreadnoughts in some safe harbor; we shall do the same; their aeroplanes and air-ships will fly over our coun-

try; they will know exactly where our ships are, and their submarines will come over and destroy anything and everything that they can get at."

"We shall, of course, do the same, but an island with many harbors and much shipping is at a great disadvantage if the enemy has submarines."

"I do not think that the importance of submarines has been fully recognized, neither do I think that it has been realized how completely their advent has revolutionized naval warfare. In my opinion, as the motor-vehicle has driven the horse from the road, so has the submarine driven the battle-ship from the sea."

Sir Percy, thinks the *London Times*, has given expression to a very plausible theory which can only be tested by experience. In any case, the changes he advocates must come gradually:

"The British Empire is not to be risked for a new theory, even if some millions might thereby be saved; and there is always a danger that theories like Sir Percy Scott's may be used broadcast by political idealists, who will not stop to test their soundness if only they serve a political argument. If such a revolution as Sir Percy Scott predicts is to come at all, it can only come most slowly and step by step. It may not come at all in the manner which he foretells, for no one can say at present how rapidly flying craft may not be improved and how great may not be their effect upon naval construction, even of the submarine type. All

these possibilities are in the realm of speculation, and any good believer in aeroplanes could put up a counter-theory to Sir Percy Scott as plausible as his own. In the meantime the security of the Empire has to be maintained; and while every effort must be made to keep this country in the vanguard of development with flying craft and submarines, the time has not

"THAT'S THE WAY THE MONEY GOES!"

—London Daily News.

yet come, nor is it even in sight, when Great Britain or any other Power will risk its whole future on those experiments."

David Hannay, in the *Manchester Guardian*, reminds his readers that the use of torpedoes as the most formidable weapons of sea warfare was advocated as an invincible method of naval offense and defense by the late Admiral Colomh. But "the Russo-Japanese War has been fought since his death, and the torpedo played a very small part in it." Mr. Hannay thinks Sir Percy too imaginative, and says of his essay:

"It is a very impressive picture, is it not? Written by a literary man doing a 'scientific' novel or scare tale it would pass well enough. But is it what we have a right to expect from a most accomplished naval gunner and a naval officer of long service and approved capacity? The imaginative, fancy picture-making spirit of the thing is out of place over Sir Percy Scott's name."

The Pall Mall Gazette (London) declares that the Admiral has been too hasty in publishing his views, and we read:

"We are not going to assert that, in the more or less distant future, the oft-repeated prophecy may not be justified by the event. The performances of the submarine in our own maneuvers and those of the French during the past two years have been of a kind to give a violent shock to the advocates of the hammer-and-tongs engagement above water (such as Sir Percy Scott was himself till yesterday). But we do say, and with emphasis, that such a declaration, made by one who has won so much authority with the public by the services he has rendered, is premature, and, because premature, mischievous."

While the *London Standard* is of opinion that the battle-ship has still a large rôle to play, yet it warns us not to underrate the aeroplanes and submarines:

"Let us by all means keep in mind the supreme importance of the new instruments, and remember, in Mr. Churchill's words, that the strength of navies can no longer be computed in battleships alone. We can not have too many submarines and sea-planes, or spend too much time and thought in training our officers to handle them."

The ironical comment of *The Nation* (London) closes as follows:

"Gone is the vaunted dreadnought, and the millions sunk in her raddled carcass. Shall we therefore stop building her? Not at all. War in submarines would be much too

SOCIALISM VS. MILITARISM IN FRANCE

FORTY-NINE CABINETS in forty-three years indicate something of the vicissitudes of political life in France.

Just now the turmoil at the capital centers around the conflict between socialism and militarism. In early June Mr. Ribot was Premier for a single day, until the Chamber of Deputies voted him out on the first ballot. Ribot's cabinet was hailed with enthusiasm by the steady-going *Temps*, *Gaulois*, and *Figaro*, but was hooted by the Socialist press. "Universal public opinion is with them!" cried the *Temps*, and the next day they fell. Then the Socialist Viviani, who had failed a few days earlier to form a cabinet, was asked to try again, which he did, with better success, and at this writing is still balancing on the pinnacle, amid dubious predictions from the press. The great question which the Viviani ministry will have to manipulate and solve is the law of three years' military service. Now the Prime Minister of France calls himself an "independent Socialist," and at the great meeting of the Socialists last year at Pau a declaration was made that the law of three years' service and the military expansion both in Germany and France should be discouraged and opposed. This might seem to put him in an untenable situation, but Mr. Viviani won a vote of confidence from the Chamber of Deputies by explaining the impossibility of changing the three years' military service law directly or indirectly until the proposed substitutes, like military preparation

THE OLD WAR-GOD AND THE NEW.

—© Simplicissimus (Berlin).

among youths and the utilization of reserves, prove their efficiency. His majority on the first ballot was 233.

The necessity of the three years' service law is explained by Mr. Leroy-Beaulieu in his *Économiste Français* (Paris), in which he writes as the foremost financial authority and political economist in France. He thinks that, in the face of public opinion and the dangerous position of the country, the law of three years can not possibly be repealed by any legislature. He writes:

"At the present moment the military law of three years' service must be put aside from the discussion of the political situation, for no one would venture on openly attacking it. Beyond all doubt any proposal to abrogate it would be rejected by an overwhelming majority. The necessity for this period of

service is too manifest, considering the present state of Europe and of the world and our relations with our powerful neighbor. These relations involve several delicate and thorny questions. We may say that more clearly day by day this lengthened period of service is shown to be absolutely necessary. For the birth-rate in France has not ceased to dwindle since 1890 or 1893, and this means that the number of conscripts is likely to grow less every year. We must not forget that between 1893 and 1912 the number of births fell off by 125,000. This leads us to expect that in twenty years, even tho the death-rate becomes lower, the annual number of conscripts will be diminished by from 59,000 to 55,000. Under these circumstances it is impossible to abridge the legal period of service."

The German press are of course interested in the situation. "The critical position of the ministry in France," the *Vossische Zeitung* (Berlin) remarks somewhat complacently, "springs from the new military law, and if the Radicals had the least political sense they would understand that the time is badly chosen for discussing the law of three years. The majority of the French people have manfully accepted it, and besides that, the maintenance of this law is an obligation which is laid upon France with regard to her allies and friends." "The program of Pau, to repudiate the law if it is carried out in France," declares the *Berliner Neuesten Nachrichten*, "would simply proclaim the bankruptcy of the political and military world-policy of the French Republic."

Naturally enough, the Russian press, too, have something to say upon this subject, "as an offensive and defensive ally of France, and we read in the *St. Petersburg Zeitung*:

"The French Radicals have no scruples about weakening the Army to please the idle talkers of Pau, even tho it imperils France. The experiment of a two years' service made by France in 1905 and completed in 1908, by which the period of training for the reservists was shortened, yielded anything but good results. In fact, since 1905, Germany has thrice threatened France with war. How can the Chamber of Deputies dream of reducing by one-third the effectives of the French Army, thus violating a system based upon a dual alliance and a triple entente?"

"France will be acting scurvily and at a great risk if she change her present military system," declares the *Novoye Vremya* (St. Petersburg), "and we should like to ask how she would be able, with a weakened army, to fulfill the obligations imposed by the Franco-Russian alliance. The French Radicals are playing with fire—always a dangerous game."

Some of the complications that make the situation interesting are sketched by Lucien Wolf in the *London Graphic*, as follows:

"There is, in the first place, an organic disturbance of French

RENÉ VIVIANI.

The Socialist Premier of France, who is supporting the military law condemned by the Socialists last year.

political life on a very wide scale, and this is complicated by no fewer than four local maladies of exceptional virulence. The organic disturbance is represented by the displaced center of gravity of the Republic, which has edged so far to the Left as to render doubtful whether its indispensable conservatism can any longer be maintained. The four subsidiary maladies are (1) a Presidential trouble, (2) an Army crisis, (3) a Financial crisis, and (4) a Parliamentary crisis. All these are more or less in a dangerous state, altho they vary in their malignancy.

"Least of all has been heard of the Presidential trouble, but it is none the less exceedingly disquieting. M. Poincaré was elected to the Presidency in abnormal circumstances, which subsequent events have not justified. The various shades of Reaction, alarmed at the growing battalions and pretensions of the Extreme Left, combined to create a khaki atmosphere for his nomination. He was put forward as the candidate of a new and rejuvenated France, at once militant and conservative, and when he was elected—with a disconcerting lack of patriotic unanimity—his friends did their best to compromise him by calling for a greater personal initiative in the exercise of his high functions. Whatever else the general election did last month it did not confirm this conception of the Presidency, seeing that the Extreme Left—Socialist-Radicals and Socialists—were returned in largely increased strength. And now the hour of reprisals has come, for no stable Cabinet can be formed without the 'Blue,' and no Cabinet in which the 'Bloo' predominates will agree long with M. Poincaré."

CAUSE OF THE ITALIAN STRIKE

THE IMMEDIATE CAUSE of the great strike in central and northern Italy was told in the cable dispatches; the underlying cause is given in the Italian press. The cables said it "began after two Socialist workmen had been killed at Ancona"; the press tell us it is the climax of long and

bitter industrial strife in which the workers declare they are being starved to death, and the employers declare their employees shirk their tasks. The trouble area was filled with troops during the strike, but violence was studiously avoided, even soldiers who defended themselves being punished—a policy which is attributed to the Government's fear of provoking a revolution, and which throws a significant ray of light on the volcanic possibilities lumbering there. We are told that the strike stopt or checked industrial activity and even the electric and steam roads and daily newspapers in the following cities: Ancona, Rome, Bologna, Florence, Venice, Genoa, Milan, Turin, Bergamo, Terni, Brescia, Civita Vecchia, Bari, Leghorn, and Perugia. Altho the strike has now come to an end, the causes of it may be seen in the columns of the Socialist press as well as in the cables.

JAURÈS, THE SOCIALIST CONQUEROR IN THE ASSEMBLY.

Jaurès draws in his train the whole radical clique;
Then come M. Callaux, the husband and hero,
And downcast Doumergue, who is naught but a zero.

—*Le Rire* (Paris).

lucubrations of political economists. While Naples did not join in this general strike, it is from the *Rivista Popolare* of that city, a bright and outspoken Socialist organ, that we read that hunger and the monopolization of the land by rich proprietors have ruined Italy, while the heavy taxation imposed by the augmentation of armaments and of soldiers has aggravated the situation. The editor quotes the words of "certain laboring men" from whose lips fell the following melancholy sentences:

"This moment is one of exceptional seriousness and, what is worse, no hope appears on the horizon. We are reduced to the last extremity. We have now been forced to abandon all food except bread and salt. We have to pay for water. To-day we are measuring out bread and water to ourselves and our children. To-morrow we shall lack even such food as this. The land-owners wrap themselves round with their chilling claim to a right of proprietorship; the priests try to keep in the swim with them; the Government is readier to give us lead than bread. And, indeed, it is better to die by lead than by famine."

This writer blames the taxes imposed upon imported grain. These taxes were intended to protect the wheat-growers of southern Italy, but were practically paid by the artisans and special laborers and corporation and government employees in the large cities.

Speaking of "the crisis through which Italy is now passing," Professor and ex-Deputy Pantaleoni, in the *Giornale d'Italia* (Rome), agrees in part with the Socialist editor, but intimates that the workers are also to blame. He tells us that the moral life of Italy has become relaxed and social discontent and greed pervade all classes, so that the weakest go to the wall. Speaking of the backwardness of Italy, he tells us that scarcely two-fifths of arable territory have been cultivated in accordance with modern methods so as to yield profitable returns. He lays the blame of this on the ignorance and indolence of the peasantry and the neglect of the Government, underlying which is a certain moral deadness. This state of things has produced a crisis in Italy, of which he writes:

"It is very serious, this crisis, both by its intensity and by its wide-spread effect, and even by the most favorable of hypotheses it will be more serious still as it goes on. In all classes of society we see rising up a contempt for the law and for right; a disregard of all constitutional administrative and judicial measures; a tendency to have recourse on every occasion to agitation and to violence. The causes of the evil with which Italy suffers are the high-handedness, injustice, corruption, and weakness which have now either invaded or defied the functions of States. In Italy we see nothing else but agitators. People neither fit themselves nor show any activity for anything but agitation."

And not only are low wages paid to the laborers, but he says that they have been so corrupted by agitators that they lose all wish to work:

"Failure has attended the attempts to introduce modern farming methods in some places. The laborers have not given their best efforts to the employment of machinery for irrigation and fertilization, and those who employ them have been compelled to return to the primitive system of cultivation. Naturally a diminished amount of produce, or produce of diminished value, results in the diminution of wages."

Government monopolization of the railroads and of insurance, he adds, has involved the Government in a financial muddle that has kept it from solving the industrial problem.—*Translation made for THE LITERARY DIGEST.*

GERMAN VIEW OF THE "MILITANTS"

THE GERMAN POLICE would never permit in Germany the outrages that are being perpetrated right along by the militant suffragettes in England and Scotland, says the *Berliner Tageblatt*. The British police are not so well organized as the German, it explains, and that is why the violence continues unchecked. True, Germany has its woman-suffrage advocates, but they do not resort to arson, window-smashing, bomb-throwing, or the destruction of art. Under the title, "Our Cousins," this writer beseeches the English authorities to act with more decision against these feminine lawbreakers. He thinks that the "Wait and See" policy of Mr. Asquith may end in some violent explosion of wrath against the "arson band" who invaded Westminster Abbey and St. Paul's Cathedral. To quote his words:

"Whenever conversation lags anywhere, people persist in trying to solve the question how the English Government can restrain the suffragettes. Honorable men who humbly bear the yoke of our social and legal restrictions blame the weakness of the British Government and assert that nothing like the suffragette movement in England

can ever happen to us. . . .

Happily, our women of the Women's Rights Society are reasonable, gentle, and amenable, and those among them who are most fiery would never set fire to a church. While ordinary epidemics quickly tend to spread into every country, this female malady has generally spared other peoples, which merely shows that England is the special field for the exploitation of new inventions and quack medicines of all sorts. Byron has said in his 'Don Juan' that passion in them is seated in the head, which plainly shows us the weak spot from which the disorder of the suffragettes proceeds."

"CURFEW SHALL NOT RING TO-NIGHT."

—Punch (London).

a kind of rinderpest, and as the English have known how to get rid of the sickly animal that infects the herd, so should she rise up mercilessly against the militant suffragettes. To quote his words:

"The London Government has not consulted foreign experts, as it did when the rinderpest raged in South Africa, and it has not offered a prize for a remedy. The outside world can only entertain a hope that the British people will eventually triumph over this plague, and we feel bound to beseech our cousins beyond the Channel to avoid an attitude of indolent surrender. This prayer is echoed by those of our people to whom female suffrage is not a thing to be dreaded. But with us the opinion that arson and picture-hacking are profitable to their cause has no place in the brains of our docile women. Should matters proceed to such a length that the suffragettes gain their point, it would be a very sad thing if it destroyed the refined usages of woman's life, and instead of the teapot or the coffee-pot, these harmless and innocent emblems of yesterday's life, the kerosene-can should symbolize woman's influence. . . .

"With the establishment of women's right to vote, very little change would be brought about and very little would be attained. Should women gain the key to Paradise, this Paradise, to its last plot, would be found in the possession of men; then would begin a battle for this position or for that place or for some little eminence in power, and there would follow a terrible struggle, for women so far would not have learned what man can do and what he will not do. 'When Mabel Smith was defeated for office 300 window-panes were smashed, all the flower-gardens were devastated, and 17 churches destroyed.' England is rich in art treasures, famous buildings, and a civilization which is worthy of honor, but if the war method of the suffragettes ends in victory, how long will these things survive?"

SCIENCE AND INVENTION

FISHING FOR HOSTILE AIR-SHIPS

THE LATEST THING in bombs, to destroy an enemy's aeroplanes or dirigibles, is used to bait a sort of fish-hook, with which the military aviator angles for his prey. When the hook catches the hostile craft, the bomb explodes; for, unlike the common angler, the object of the fisherman in this case is not

A FAST AEROPLANE "HOOKS" THE ENEMY'S SLOWER MACHINE.

to land what he hooks, but to destroy it. This device, of which we read in an article on military aeronautics contributed to *Flying* (June), is the invention of Mr. Joseph A. Steinmetz, of Philadelphia, a member of the Aero Club of America and vice-president of the Aero Club of Pennsylvania. Says the writer:

"It is an ironical fact that the best bomb-dropping device and the best aircraft guns are American inventions—inventions which are being adopted by all the first-

and second-class Powers, except the United States! So it is not surprising to find that the last word in devices for aerial warfare, an aircraft destroyer much more far-reaching than any bomb-dropping device or aerial gun invented, is again an American invention. . . .

"As described in the patent, this invention relates to offensive operations against aircraft, and its object is to provide for the destruction of an air-ship by another air-ship, which itself incurs little risk or injury. Preferably, the attacking air-ship is an aeroplane, since this type of air-ship is capable of quickly changing its direction at high speed and of rising or falling at the will of the operator.

"The invention involves lowering bombs to a suitable distance from aircraft in flight by means of a wire or other flexible connection, and providing the upper side or end of each bomb with contact devices adapted to cause an explosion when the bomb is drawn upwardly by deflection of its supporting wire through its meeting an air-ship. Such deflection must occur whenever there is contact between the laterally moving, pendent wire and an airship, except only in the highly improbable case where the wire and the attacked air-ship are moving in the same direction at substantially the same speed, when explosion can be caused by manually pulling the wire.

"The accompanying diagrams give a diagrammatic representation of (1) an aeroplane provided with the devices destroying another aeroplane while in flight; and (2) of two aeroplanes attacking a dirigible as it is about to start. Any one familiar

with flights knows that both examples are theoretically correct, that is, a fast aeroplane has a controlling advantage over a slow one, even if the excess of speed is but five or ten miles an hour. Likewise, almost any standard aeroplane has a traveling range great enough to permit it to venture out within a radius of 100 to 200 miles to attack the enemy's aircraft. In neither case the crew of the attacking aeroplane risks more, possibly not as much, as an ordinary scout. Yet how tremendous the possibilities of putting the enemy's air fleet out of commission!

"Aeroplanes equipped with such devices would be a deadly menace to air-ships, magazines, sheds, ships in repair and under construction. Air-ships equipped with larger devices of this type can play havoc with sea and land forces, particularly at night; and may attack and destroy an enemy's air-ships and hangars, docks, magazines, ships, and terrorize very generally. There would be no means of defense against such air-ships except fast aeroplanes armed with guns or similar devices.

"One striking feature about this device is its simplicity and low cost. The mechanical contrivance which explodes the bomb whenever one of the barbs catches is simple and effective; and the aviator is protected from possible difficulties through the dangling wire by a simple device which cuts the wire when the tension reaches a given figure."

With the building of huge dreadnoughts and the development of machine guns it was thought that the science of warfare had gone a long way toward abolishing warfare. But the rise of the air-ship advances this end by adding new terrors as well as new instruments for attack:

"Thus at the rate progress is being made in military aeronautics we may expect that the next war in Europe will see aerial warfare as terribly intensive as Wells could depict it. That much is admitted by the military authorities of the world. They know that fortresses and tactical divisions are all vulnerable to and defenseless against aircraft, therefore they have efficient aeronautical organizations, fleets of aircraft which will defend them from attack just as eagles defend their nest; and the means of defense are also means of offense. Just as

a ship without aeroplanes is blind, so a fort without aeroplanes is a helpless target; and an army lacking aerial fighting forces will be doomed at the start of hostilities."

THE "HOOKED" AEROPLANE IS DESTROYED BY EXPLODING THE BOMB.

DESTROYING A DIRIGIBLE.

Swift aeroplanes may hook up a dirigible and destroy it by the Steinmetz device as it is about to start. In the air it is even easier, and one aeroplane is sufficient to put any dirigible out of commission.

NO MORE FLYING GLASS

MORE THAN HALF the injuries due to automobile accidents—53 per cent., to be accurate—are caused by broken glass. And of wounds due to broken glass, 35 per cent. leave indelible scars, 15 per cent. cause serious mutilation, and 2 per cent. are fatal. All of which goes to show that

BITRIPLEX GLASS STRUCK BY A REVOLVER BULLET.

a device for preventing broken glass from flying about would probably save life and limb. It is interesting to know, therefore, that "triplex" glass does not fly. This product, as briefly described some time ago in these columns, consists of two sheets of ordinary glass separated by a thin sheet of transparent celluloid—all caused to adhere closely by chemical agents and heavy pressure. Experiment shows that in circumstances where ordinary glass would break and fly in all directions, the triplex glass simply shows a network of radiating cracks. In a collision between automobiles, where the shattered glass would probably wound all the occupants seriously, possibly with fatal results, under ordinary conditions, the triplex would simply crack and do no harm beyond covering the passengers with a fine powder. Says a writer in *La Science et la Vie* (Paris, June):

"It happens quite frequently that by a sudden stoppage the traveler is thrown against the glass in front, breaking it and wounding the occupants the more dangerously as the glass is thicker. If, on the contrary, it is triplex glass, it is not broken, but cracks in a spider's-web pattern. If a door fitted with ordinary glass is shut too violently, the glass flies to pieces. If it is provided with triplex glass it may be shattered to fragments without a single one becoming detached.

"If three panes of glass and two of celluloid are used, plates called 'bitriplex' are the result. These are so solid that they can not be broken, even with violent blows of a hammer. They may be cracked, and the outer sheets may even be pulverized, but it is impossible to get through the combination.

"One of the most curious experiments that can be tried is the following: an oak plank, two inches thick, is shot at from a distance of six yards with a revolver, using smokeless powder. The ball penetrates the wood and remains buried in it. Then a sheet of triplex glass one-fifth inch thick, in an oak frame, is placed 20 inches from the plank. On firing, as before, the ball makes a clean hole in the glass and a deep dent in the plank, but falls to the ground without penetrating it.

"When the 'bitriplex' is used, the ball makes a scarcely visible dent in the plank, all its penetrative energy having been absorbed by the glass. . . .

"The triplex glass may be used also in motorists' goggles. Pebbles torn from the ground by the tires of the automobile might break ordinary glasses, which are thus more dangerous to the wearers' eyes than is the dust from which they are designed to serve as a protection."—*Translation made for THE LITERARY DIGEST.*

THE MINER AS A CIVILIZER

THAT THE MINER is the true pioneer—the scout of civilization—doing work in the wilderness for which those who came after him often get the credit, is the assertion of T. A. Rickard, delegate of the Royal School of Mines of London to the recent celebration of the fiftieth anniversary of the Columbia School of Mines in New York. Mr. Rickard's address is printed in full in *The Mining and Scientific Press* (San Francisco, June 6), and we quote a few paragraphs, altho some of the speaker's most eloquent and interesting passages are in his more detailed historical descriptions of mining exploration, which lack of space obliges us to omit. Said Mr. Rickard:

"Civilization was developed on a metallic basis, not as regards money, for credit is the expression of an advanced state of society, but as regards implements and instruments, machinery and transport, facilities of living and of communication, all of which required the use of metals. The need of them and the consequent market for them induced enterprising men to probe the hills and scour the deserts in search of the mineral deposits that are distributed with such perplexing irregularity in the outer crust of the earth. These deposits were not to be found near the smiling corn-field or the gentle hilltops, but in regions where geologic unrest had produced inequalities of contour and ruggedness of aspect, where the surface was bare of soil and the mountains exposed their heart of rock. The miner, therefore, left the sheltered valley and plunged into the outer wilderness. And in his wanderings he found not only the metallic ore that was the immediate object of his quest; he also discovered new tracts of agricultural land, and new dwelling-places for his tribe. Returning home, he told the farmers and shepherds that fertile fields and lusher meadows were awaiting them across the range. They migrated thither, while he again adventured afar across the ranges, ever pioneering the advance. . . .

"The story of mineral exploration and racial migration is peculiarly the heritage of our people, the Anglo-Celts. It is the motif that runs through the drama of English and American history, more particularly during the last hundred years. Even in its barest outline, it serves to suggest that the miner is the pioneer of industry and the herald of empire.

"The first social organizations around the shores of the Mediterranean sent their prospectors to the hinterlands of

AFTER A COLLISION WITH AN AUTOMOBILE.

The triplex glass of the trolley-car is cracked, but not broken.

Europe, Asia, and Africa. The gold of Ophir, the copper of Sinai, the silver of Laurium were part of the web and wool of those early civilizations. The mines of Iberia gave Hannibal the sinews of war against Rome, and the gold of Dacia strengthened the resources of Rome under Trajan. But the greatest adventure was that of the Phenicians who passed through the pillars of Hercules into the western ocean in order to reach the

far Cassiterides, the tin islands that in turn were to produce those Cornishmen to whom this earth is one big mine. After Carthage and Rome, in turn, had been overthrown, the mining industries of the known world were disorganized. Desultory operations persisted in Hungary, Spain, and Saxony, but the Middle Ages to the miner were as dark below ground as above. Even the discovery of America, which marked the beginning of a new world movement, was not connected with a real advance in mineral exploitation, altho associated with the gaining of gold and silver. It is true, the wave of Spanish conquest broke over the American continent, penetrating the treasure-vaults of Mexico and Peru. But the Spaniard devastated, he did not develop. He gathered the harvest that the patient Indian had sown by the laborious toil of centuries. Cortez and Pizarro were filibusters, not explorers; they were pirates, not miners. . . .

"But the great era of mineral exploration came with the discovery of gold in Australia and California. It was the prelude to a world-wide migration, an enormous expansion of trade, a tremendous advance in the arts of life, and the spread of industry to the waste places of the earth.

"The color of energy began to tint the blank spaces on the map. The western half of the North-American continent, all of Australia, the southern half of Africa, the northern half of Asia, were invaded, penetrated, and explored by those in search of gold, or other metals, and as each successive mineral discovery was made by the miner, he called upon his fellows to come and take a hand in the good work. He was the scout far ahead of an army of development. Trade follows the flag, it is true, but the flag follows the pick. . . .

"You say that most of these adventurers were not miners. I demur. What is a miner? He is the man who does the work of a miner, and that is, to extract mineral wealth from the ground. Most of the young and lusty men that rushed to California had never seen a mine, but that does not matter. They went to do the work of mining, and with the washing of the first panful of gold-bearing gravel they won the badge of Agricola. They had the machinery most used in mining—human muscle—they had the science most approved in that ancient art, organized common sense; they achieved the fundamental purpose of mining, to exploit mineral profitably. They came, they worked, they conquered; and from their labors has arisen a great and glorious commonwealth. . . .

"The British Empire and the American Commonwealth alike have advanced in the track of the miner. He made the great West a part of your heritage; he conquered the overseas dominions more truly than the soldiers of the King. The curtains that hid Central Africa were parted momentarily by the slave-trader, the elephant-hunter, and the missionary, but when these emerged those curtains closed again. It was left to the miner to place his candle so that like 'a good deed in a naughty world' it might illumine a path for human industry. The primeval forests, the sun-lit valleys, and the grassy plains of Australia remained as they were in the morning of time until the prospector called for his own people to come thither across the sea. The fur-trader traversed the snowy plains and penetrated the pine-clad mountains of the Canadian Northwest; the salmon-fisher sailed into the long estuaries; but neither of them touched the heart of that great lone land. Not until the pick of the miner awoke echoes that had slumbered since creation did the vast solitude respond to the pulsations of human endeavor. Hunters, traders, even soldiers and farmers, crossed the prairies from the Mississippi to the Rocky Mountains, and adventured over the desert to the Pacific coast. They carried the flag and they hoisted it over the new domain, but it was an empty conquest, and a vain annexation until the miner again spoke the word that set the world aflame."

THE SOIL AND DISEASE

THAT MANY DISEASES arise from soil-conditions was formerly a wide-spread belief, and is still asserted by many authorities. A writer in *The Medical Council* (Philadelphia, June) asserts that this theory is outworn, and that the soil, except where abnormally infected, is a conservator of health, not a harbinger of disease. The theories that malaria is due to soil-conditions, he says, have utterly collapsed, and of the diseases once thought to originate in the soil, including "military fever," typhoid, yellow fever, and more recently pellagra, cry-

sipelas, beriberi, dysentery, tuberculosis, tetanus, anthrax, ameboid dysentery, cholera infantum, and epidemic meningitis, it is now fairly certain that none is there present normally. The organisms of some may infest both soil and water, but these are only "carriers" in such cases, not generators. To quote:

"As medical science advances it is more than probable that the soil as a generator of disease will be dismissed from consideration. It is quite true that buried accumulations of filth may proliferate various organisms, but that normal soil does so except as is taught in agricultural books is not probable. The normal bacteria of the soil are not pathogenic to man. . . .

"After going through much authoritative literature, we are unable to find many authenticated instances of pathogenic bacteria normally occurring in the soil. More and more is it being thought that tetanus bacilli largely come from the in-

testinal tracts of the domestic animals and do not proliferate in the soil, altho the spores may long remain viable. . . . Practically the only bacillus of which distinct claims of pathogenic activity have been asserted, and which may proliferate in tropical soil, is the *B. cloacæ*. But recent study shows it to be merely a colon bacillus of cattle which resists the lethal action of sunlight, and thus is very slowly killed. . . .

"As a matter of fact, normal soil is a natural and beneficent bacteriological laboratory, various nitrifying bacteria promoting growth and others decomposing humus and organic matter, thus rendering it available as plant food. But when natural conditions are disturbed, the bacterial balance is also disturbed; and fungi, molds, algæ, and other organisms proliferate, to the detriment of man and animals. Note, it is not so much bacteria but other organisms which proliferate. Disturbed soil needs to be cultivated, and cultivated well. And yet the processes of artificial cultivation are often productive of vegetable forms of diminished resistance, as note the phylloxera disease of cultivated grapes, the various blights and the root growths so destructive of highly developed plant life. . . .

"The soil is a great conservator of health, not a menace; its life and death processes are among the most wonderful in nature. 'Back to the soil' needs to be a health slogan as well as an economic one. But what kind of soil? The best answer is that of modern scientific farming, which conserves the soil as well as man. Science was long a very artificial thing; but it is now being naturalized. And the encouraging thing is that science pays in efficiency and dollars and cents. Scientific farming is not only the most profitable, but it is one of the greatest conservators of public health.

"And yet how foolish some sanitarians are! One alleged scientist recently stated that he would as soon his children played with poison as with earth, as all of the pathogenic bacteria came from the soil. And another 'city builder' wishes that not one blade of grass be allowed to grow within the limits of the city. Children know better, and 'scientists' should.

"Let us get back to the soil and the sun! Let us . . .

TRIPLEX WIND-SHIELD, CRACKED BUT NOT BROKEN IN A COLLISION.

NEARER VIEW OF THE WIND-SHIELD.

contaminating the soil and the atmosphere, and sanitation will progress by leaps and bounds. Sanitarians are, perforce of circumstances, compelled to make insanitary conditions tolerable; but what a great work could be done were these unnecessary conditions removed and the sanitarian allowed to devote his attentions more to man in a proper environment! Man himself is the great problem, after all. This world is a place 'where every prospect pleases and only man is vile.' Too long have we blamed our troubles upon this good old earth that we have abused so sorely. Let us begin with ourselves and let the earth wag along as the Creator intended it should."

STAMPLESS POSTAGE—The proposed replacement of the familiar gummed postage-stamp by a machine that makes an impression directly on the envelop—a method devised abroad—has already been noted in these columns. According to *The World's Work* (New York, July) a machine of this type is now

A STAMPLESS STAMPING MACHINE.

It pays the postage on letters without the trouble of sticking stamps on them.

coming into general use and will seal, stamp, count, and face approximately 250 pieces of mail per minute. We read:

"The postage meter proper is contained in a small cylindrical steel case. Its two principal parts are the numbering system and the printing mechanism. The latter impresses a die on the mail matter, printing the evidence of prepayment. The first line of the die indicates the amount of postage, the second gives the number of the impression, the name of the post-office is on the third line, and the fourth is the number of the permit. This die plate is the property of the Post-office Department, and to obtain the use of one a certain prescribed application must be used. The mechanism of the meter is capable of numbering up to 100,000, and may be set to print any number of impressions desired. When postage is needed by a business house that uses one of these machines the meter is sent to the post-office, where it is opened by the meter clerk and set for the desired number of impressions and denomination of postage, for which he charges the same sum as for a like quantity of adhesive stamps. Each machine may, of course, be provided with more than one meter, so that operation need not cease during the time a meter is being set by the Post-office Department. One of the illustrations shows the nature of the postage imprint. If, for example, the meter has been set to give 25,000 impressions, the first envelop stamped will show the numeral 25,000, and the next 24,999, and so on until the meter reaches zero. There it will stop, and no amount of tinkering will cause it to start again until it has been reset by the meter clerk."

FAKE WIRELESS MESSAGES

DESPITE STRINGENT REGULATION of wireless apparatus—national and international—the mischievous or malicious sender of false messages still occasionally continues to make a nuisance of himself and sometimes comes very near to causing serious trouble. It is essentially the act of a coward to perpetrate a practical joke at a distance of fifty or a hundred miles, with practically no risk of detection. That persons of sufficient education and skill to operate wireless apparatus will stoop to such things is almost unbelievable, but the logic of facts compels one to admit it. The writer of a leading editorial in *The Electrical Review* (London, May 8) has this to say on some recent instances:

"It will be remembered that at the time of the disaster to the *Titanic*, and on several other occasions, much annoyance was caused to individuals and to the public by the dissemination of false messages by wireless telegraphy; a recurrence of this trouble took place on Friday last, when messages were received in Japan purporting to emanate from the American liner *Siberia*, and stating that she was aground and sinking off the coast of Formosa. On Saturday the vessel arrived at Manila, and denied issuing the call for help; moreover, she can not have been within 100 miles of Formosa, which lies far out of her course from San Francisco.

"The *Siberia* was insured for about £400,000, and on Friday reinsurance rates were quoted at 50 per cent. British and Japanese cruisers were dispatched to her aid. Much mental suffering must have been undergone by the relatives and friends of those on board her, and it is obvious that very heavy financial loss might result, perhaps has resulted, from the erroneous announcement.

"Whether the signals were transmitted in good faith by some other vessel in trouble, or whether they were the work of a practical 'joker'—save the mark!—is not yet definitely settled. The incident, however, draws attention to certain attributes and possibilities of wireless telegraphy which render it capable of being employed very greatly to the disadvantage of the community.

"In the first place, it is practically impossible to identify the sender of false news, except under special circumstances easily avoided. Inquiries could be made of the owners of licensed installations on land, but even if one of these were the culprit, how could the fact be proved? It is not necessary, however, to obtain a license in order to be able to make signals, any more than

a poacher need obtain a game-license before setting about his unlawful business. A temporary aerial could be sent up with a kite or a small balloon under cover of darkness, or hauled up to the top of a tree or a flagstaff, and dropt before daybreak, without leaving any outward sign of its passing presence. While apparatus is available for determining approximately the direction from which a message is received, it would not commonly be available, or be used if available in such a case, and it gives no indication of the distance of the sender. At sea, of course, it would be an easy matter for a malevolent operator—if such a person existed—to dispatch misleading messages without fear of detection. Thus the authors of messages which are not *bona fide* can remain anonymous at pleasure, with little risk of discovery.

"The evil which can be wrought by false messages is incalculable. Their employment for the purpose of causing fluctuations in the value of securities in the money market is an obviously possible form of abuse of wireless telegraphy, and it is not difficult to conceive of conditions under which false messages supposed to be transmitted, for example, from a British war-ship to the Admiralty, or *vice versa*, in a time of international tension, might excite a people to frenzy and precipitate an appeal to arms. Wireless communication can not be effectually severed or interrupted, and messages can not be prevented from arriving at their goal; but neither can their propagation be prevented, and the greatest caution should be exercised in accepting them as genuine if the circumstances afford the slightest reason for doubt. Very heavy penalties should be prescribed for the misuse of this otherwise invaluable system of communication."

CAN FRIGHT WHITEN HAIR?

THAT the numerous accounts of hair whitened "in a single night" by grief or fright are probably mythical is one of the conclusions of an interesting article on "Growth and Color Changes of Hair," contributed editorially to *The Journal of the American Medical Association* (Chicago, May 30). The writer, whose object is to collect the very latest investigations on this subject, begins by contrasting the dogmatic statements of the older writers, and their slender basis of fact, with the products of modern scientific research, whose chroniclers realize that every sentence is likely to be subjected to the keenest scrutiny and criticism. He formulates certain questions about the hair which he believes still lack complete and satisfactory answers. He believes it to be settled, however, that hair never "turns" gray or white; it falls out and is replaced by white or gray hairs. This, of course, disposes, if it is true, of the "single-night" stories; for full heads of hair do not grow in twelve hours. We read:

"Why does or does not the hair grow in certain regions in certain individuals? What are the conditions contributory to growth? How are the natural changes in color brought about and what determines them? The physician is frequently asked such questions as these, and for a convincing answer to them he will search with little success.

"Experimental studies in this field can not readily be conducted on man. Certain facts are, of course, matters of common observation. The beard grows anew after shaving, and this tonsorial practice is believed to stimulate the growth of the hair. Precisely why it does is not clear; tho the stimulus which shaving applies to the skin is said to produce a reaction favorable to improved local circulation and nutrition of the areas involved. For the same reason, that is, increased cutaneous activity as shown by the sweat-glands and neighboring structures, the beard is said to grow more rapidly in summer.

"Surgeons sometimes observe an unexpectedly intensive growth of the hairs in the immediate vicinity of suppurating wounds or in parts exposed to hot-air treatment. This may be interpreted as the outcome of the unusual hyperemia of the regions involved. Evidence of the probable accuracy of this view has been offered by the Greifswald surgeon, Georg Schöne, in experiments with white mice. When pieces of the hair-covered skin were removed from the region of the back and again transplanted thereon, many of the hair-follicles were noticed to atrophy at first; but presently an abnormally rapid and intense growth of hair ensued. This was especially conspicuous at the edges of the wounds. The active metabolism in the region of the healing and regenerating tissues is assumed to account for the result.

"If the pigment which produces the natural color of the hair is lacking, the hairs present a gray or white appearance. The silvery color may further be due to the presence of more or less air in the hair. To account for the blanching of the hair—the familiar accompaniment of old age and a phenomenon which frequently begins long before middle life is fairly concluded—various views have been set forth at different times. The silvery gray appearance which is seen in aging persons is doubtless characterized to some extent by the occurrence of larger numbers of air-cavities, and not by the destruction of the pigment as has frequently been postulated. For the hair-pigment is among the most resistant of organic substances and can be destroyed only

by the most vigorous chemical treatment. Destruction of the pigment—in distinction from the artificial coloring or staining of the pigment—is scarcely conceivable without decomposition of the hair itself. Dry hairs contain more air, and therefore will appear somewhat lighter in color than moist ones; but black hair may be dried to the utmost without becoming white, and the hairs of mummies dried through the centuries still show their pigment precisely as do fresh hairs."

Some years ago, the writer goes on to relate, Metchnikoff, of the Pasteur Institute in Paris, propounded a different theory of the mechanism by which black hair turns white. According to him, the hairs are invaded at certain times by special cells, analogous to the white cells of the blood, which find their way to the pigment, engulf it and carry it with them in their exit from the hair. This view has, however, never been seriously accepted by those who have made first-hand studies of the subject. The true explanation of color-changes of the hair is probably to be

A METER AND ITS WORK, TAKING THE PLACE OF STAMPS.
A postal clerk sets it at any number of cancellations desired and charges for them at the regular rates.

found, the writer thinks, not in a destruction of pigment or in bleaching, but rather in a complete renewal of the hair. He says:

"Pigmented hairs fall out and are replaced by unpigmented or white ones. The appearance of gray or white hair is, therefore, attributable to the formation of a new hair coat rather than by the alteration of the old one. Completed pigmented hairs never turn gray; they fall out. It is nevertheless observed that the process of pigment formation may cease during the development of a hair. In that event the tip will remain pigmented tho the base appears white.

"How are we to harmonize these statements, it may be asked, with the many published records of hair having turned white suddenly as the presumable consequence of fright or other profound emotion? A careful study of the reputed instances has invariably shown that they were mythical. It is popularly related that Marie Antoinette grew gray during the night after she was condemned to be executed. It is true that at her death her hair was gray; but her biographers all record that her hair had been gray long before the time of her death. This may serve to illustrate the value of hearsay evidence and popular tradition.

"The conspicuous changes which the color of the fur of certain species of animals undergoes at different seasons of the year, becoming white in the winter months, affords an opportunity of investigating this pronounced transformation seemingly so closely related to what is seen in advancing age in man. The studies of Schwalbe have demonstrated that here, too, there is no alteration of the color of the summer fur. The dark hairs fall out as the season advances and white hairs grow in their place. No sudden mutations are found."

LETTERS AND ART

STREET MUSICIANS.

"Hang a cartoon of Steinlen's in every 'fat man's' drawing-room and the social revolution would come upon us unresisted."

THE STREET IN FULL CRY.

Steinlen concentrates into one moment of mob-consciousness many of the types one sees in a Parisian street.

THE "LAUREATE OF THE STREETS"

A "PAVEMENT ARTIST," "the artist of the streets," or the "artist laureate of the Socialist movement"—these are some of the phrases by which the English papers are trying to define Théophile Alexandre Steinlen. He is a native of Lausanne, but established as a Parisian artist. His fame has now emigrated to the city across the channel, where his work is the resort of the fashionable at the Leicester Galleries. Now and then, when the poster-craze was on us during the nineties, we used to see some of his work in this country, particularly his drawings of cats, in which he found a *genre* all for himself. His cats have perhaps made Steinlen's artistic fortunes, suggests *The Nation* (London), for "this competent animal arouses no moral discomfort, no disturbing sympathy, in the spectator." In Steinlen's cat one finds "terror and truth on a discreetly inhuman plane." Not so Steinlen's other subjects. "The same athletic truth-telling has recorded the gestures of the midinette in the street, the mason on his scaffold, and the miner on strike." "With all its instincts for evading moral discomfort, the leisured world has been compelled to face his sketches of tramps and work-girls, his harlots and his gutter children." He is not to be regarded as a propagandist. He does not "go out to see and record the things which will harry the mind of the middle class." But—

"He has never learned to shut his eyes to the things which are there. He is the artist of the streets, and his pencil knows no master. There are many ways of seeing the streets. One may treat them as landscapes in slate and stone. One may see in them, as Mr. Muirhead Bone does, an epic of triumphant toil. For Phil May, whose swift expressive work had at moments a slight and fugitive suggestion of Steinlen's, they were a comic stage, which grew devitalized only because he was too conscious of the audience in the stalls. For Steinlen it is rarely the mere

visual show of things which matters. For him the streets are a garment, which has come by long use to express the personality of its workman-wearer. They have their emotional moments, the hour of going to work, the hour of coming home. Nothing in them is quite indifferent to him. He will render with the same passion and dramatic fidelity the cats and the school children, the tramps and the gossiping girls. But work is the supreme reality, work in all its gestures and emotions, from the free, lissom back of the young mother who has done her own washing to the pale, bloodless form of the sweated little milliner bending under the burden of her accomplished task. He is neither pessimist nor optimist. He will draw you a crowd of out-of-works hurrying through the snow until you see in the storm that drives them the stark modern fury, economic necessity. He will draw with a lyrical passion the young laborer's return to his wife. His is a slight, average figure, and a good commonplace face. Her beauty, habited in work-a-day rags, is all in the intense and rapturous abandonment of her attitude. They are clasped in an embrace which brings forgetfulness of all else in life, and you turn contented from the drawing, reflecting that there are joys which neither capitalist nor war-maker can tarnish. Here, too, is a companion drawing. It is a bare upper room in a worker's dwelling. A mother, opulent in her stores of tenderness, beautiful in her mere woman's grace, is kissing a common slum child. Once again you reflect that much is left in life when wage-slavery has done its worst. But the hinted moral of the drawing seizes you as you turn away. Through the window are visible the lightly sketched chimneys and graceless gables of the factory that dominates that worker's nursery. Your nostrils can just detect the sulfur in the polluted air. Your ears can just catch the imperious hooting of the whistle and the deafening hum of the machines. That mother's love will struggle with poverty and disease, with squalor and ugliness around the cradle of her child. Something in the bare room and that intruding industrial landscape presages her defeat. Civilization is the pursuit of comfort, and comfort is the successful avoidance of truth."

How many of us, asks the writer, would dare to place upon

our walls one of Steinlen's more poignant drawings? For example:

"Hang on your bedroom wall that awful little sketch called 'The Thief.' Note the ragged clothes, the bare, swollen feet of the little street urchin; gaze at his face, transfigured by a greed that has risen to passionate lust as he contemplates the unguarded stores of a boot-shop—endless boots of brown and black, solid and elegant, boots innumerable, boots for all the world, and never a foot inside them. Gaze at that sketch on your bedroom wall, and then open your cupboard contentedly, and choose a pair from your ample store for your own wearing. A man who faced the experiment loyally would go barefoot in a week.

"We are all engaged, with more or less success, in works of fiction. Our satisfying houses, our flights to the lying loneliness of green lanes and hawthorn hedges, our library shelves, packed with romance and speculation—they are all an effort to make for ourselves a fictitious world that excludes Steinlen's streets. No factory chimney, we are resolved, shall overshadow our nursery, and we turn with angry discomfort from the artist who intrudes it on us. Hang a cartoon of Steinlen's in every 'fat man's' drawing-room, and the social revolution would come upon us unresisted."

THE WANING JUDGMENT OF PARIS

PARIS has long had a reputation for taste in all manner of artistry. It has not only been conceded her, points out a writer in the *London Times*, but she has "come to consider herself the supreme arbiter" and has "assumed the mantle of infallibility." But there are many signs, we are told to believe, that the dominance of Paris is crumbling away. One of these is "that significant episode of the harem skirt, which Paris ordained and the rest of the civilized world politely or impolitely hooted." Besides this, there is "a triumvirate of young and extremely virile rivals in Munich, Vienna, and Berlin." Munich especially, this writer thinks, should be considered her strongest rival, because at the present moment she is "attracting artistic genius from all over the world, for the purpose of study and the purpose of practise." She has "5,000

and tonic. From any rise an Alpine chain stretches out a fifty-mile panorama of peaks. Housing is modern and wholesome. In substitution for the dirt-and-disease-rotted Quartier Latin or the vice-infested region of Montmartre, the artist quarter of Munich has broad and spacious streets, clean and sanitary dwellings, and a wonderfully reasonable scale of living. In order

"THE END OF THE ROMANCE."
A common scene of artist life in Montmartre.

to study art, it is no longer necessary to live in conditions of medieval piggery. Hygiene and genius are not incompatible elements. Munich has fine ancient galleries, an abundance of modern collections, and an infinity of 'one-man shows.' But its chief asset is its sense of overflowing youth. Munich is essentially young and modern. The ancient portion of the city is healthily being broken up and scrapped. The artist is not shackled to the past. He is not overwhelmed by the dominance of traditional greatness. He is not tempted to fritter away his abilities in an endeavor to ape the ancients.

"In consequence, the 'Munich style' in pictures, furniture, fabrics, and the applied artistry of the home is *sui generis*, a vivid expression of young and modern thought. Its influence is at the present moment sweeping over Europe. You can know 'Munich style' by its bold, broad splashes of color and its severe simplicity of line. This is not the 'Nouveau Art' of the early years of the century, wriggly and snaky and curlicuesque. It is based on the straight line, the square, and the plain circle; and it is sane and pleasant to live with. If you insist on an ancient analogy, it is Grecian simplicity in a modern renaissance of feeling.

"The movement in architecture, furniture, and interior decoration is not confined to the home. One finds it embodied in banks, insurance buildings, business offices, even in factories. There is, for example, a turbine-factory in Berlin which is a joy to look upon. There is a champagne-works near Wiesbaden which rivals an art gallery. There is a recent insurance building in Munich which is more dignified than a great many palaces. Outside and in, down to the smallest detail of fittings, these buildings are conceived in modern virile thought."

Dress fashion is more especially the creation of Vienna in this triumvirate:

"Vienna has all the daring and smartness for which Paris has gained its reputation, plus the virility of youth. It is claimed, with seeming reason, that nowhere else in Europe are there such artists in the 'tailor-made.' The new fabrics for dress and home decoration which Vienna is now pouring over Europe are startlingly beautiful and original. They open up a whole new territory of color harmonies.

"Berlin is the commercial partner in the trio. Here are hardheaded business men who are thrusting into the markets

Illustration from "Gutter Children" (Paris, 1906)

ONE OF STEINLEN'S GUTTER CHILDREN.
Rehearsing for her turn in the cabaret.

artists—professors, practitioners, and students" to prove her claims. We read:

"The city is in itself inspirational. The air is clean, keen,

of the world the creative thought of Munich and Vienna. Recently Berlin staged an exhibition of 'German Clothes' in order to prove that Paris is no longer the undisputed arbiter of fashion."

All of which seems to mean, to this writer at least, that Paris, instead of being arbiter, is in turn being judged herself, and the change seems to present a striking anomaly:

"For half a century or more French genius has been most strikingly manifest in the region of artistic taste. That dominance is passing. French genius is seemingly turning to another direction—mechanical invention. The pioneers in motor-cars, the pioneers in submarines, the pioneers in aircraft, Frenchmen are losing one field and gaining another. It seems curious to think that two nations can be so exchanging traditional activities. The prosaic German excelling in matters of artistic fancy; the temperamental Frenchman excelling in cold mechanical inventions! Yet this seems to be the shifting of contemporary history.

"From the special point of view of the British business man the new movement is worth close attention. All who cater to woman and the home—and that means men engaged in scores of manufacturing and merchandising industries—will have to reckon with the trend of thought of the new triumvirate of Munich-Vienna-Berlin. Its backing of artistic genius is a driving power of tremendous forcefulness. Munich art is not merely a local art confined to natives. There are few real Munichers among the artists there. It is rather that men and women from all over the world—Austrians, Frenchmen, Italians, Englishmen, Australians, Canadians, Americans, South-Americans—are concentrating on Munich as a desirable focus for artistic study and pooling genius there. They are exchanging ideas, striking sparks from one another. The 'Munich style' they are evolving is a crystallate of cosmopolitan thought. Their common factor is their youth and virility."

NEW YORK'S PLAYS IN LONDON

WHAT LONDON LIKES of our theater and what we like of hers seems an insoluble mystery to both parties concerned. Just now there are many migrations of both plays and players to the other side, but the chances of success are never calculable beforehand, and the general question of taste seems to get no confirmatory evidence from the results obtained. A musical play, "Adele," that delighted New York for months, recently tried its fortunes at the London Gaiety, the home of musical comedy. "There was nothing national about this product," observes the *New York Sun*, "for the music came from Germany, the text originally from France, and the actors from various quarters of the globe. But New York was the melting-pot, and it went to try its fate in London with the prestige of success here. It was to stand or fall on its merits as a New York favorite." What happened to it and what is happening to some of its fellows leads *The Sun* into these reflections:

"Great was the fall thereof. The audience on the first night express its disfavor, and the play was soon withdrawn. But London is not without New York successes this summer. 'Potash and Perlmutter,' as well as the eminent Sam Bernard, of Birmingham and the Duke of York's Theater, have been taken to the British heart. And in the fortune of these two American essays in entertainment lies an explanation of the attitude of British playgoers toward what America has to send them.

"In the stories of Montague Glass the two heroes mutter and guggle a gibberish that is as grotesque as the speech of civilized human beings well could be. It must be most difficult for London audiences to understand. Sam Bernard sputters his fractured English with the German gutturals, and London holds its sides. The eccentricities of 'Mrs. Wiggs of the Cabbage Patch' were to West End theater-goers the height of American humor. Of such stuff are the American plays, successful in London, made.

"It is more or less possible to observe a character common to all these works. Every one made the American a strange and uncouth creature, speaking in all but unknown English, in appearance more or less outlandish, and in demeanor altogether different from the Englishman. To the English public searching for amusement our plays may be highly diverting, but when

they attempt to deal with any higher civilization or to offer what may be esthetic or artistic in another sense of the word, they court failure. In other words, to enjoy the American on the stage, English audiences must be able to laugh at, not with him. There have been exceptions to this rule. But it has held good in the majority of cases."

Both "The Belle of Bond Street," wherein Sam Bernard figures, and "Potash and Perlmutter" were American successes also, else they would not have hazarded their fortunes on the London stage. Nor were they merely tolerated here. In the *London Morning Post's* account of the former it would seem that the personality of Sam Bernard won the day for the piece:

"In the course of a few words of thanks for the really hearty reception given to 'The Belle of Bond Street' at the Adelphi last night Mr. Sam Bernard mentioned that it was twenty-nine years since he had appeared in London. To most theater-goers, therefore, he was in the position of a newcomer, a stranger. It was high time we made the acquaintance of this gifted comedian—one of the best and cleverest and most individual of the many fine artists America has sent us lately. Mr. Sam Bernard will not make the London public forget the original *Hoggenheimer* of the late Willie Edouin, but at least he may have even thus early the satisfaction of knowing that there were many present last night who thought there was very little to choose between the two performers. Edouin was extraordinarily funny in his own inimitable way; Mr. Bernard is no less diverting in his."

The "Belle of Bond Street," it is seen, was originally an English piece known as "The Girl from Kay's." Its Americanization is not resented by the *London Evening Standard*:

"'The Girl from Kay's' has lost her character during her American visit, and few would recognize the simple English maiden of about a decade ago in the bold Bond Street minx, who now appears with a host of New York associates of the Shubert company at the Adelphi. We do not mean by this that *Winnie Harborough*, whom Miss Ina Claire plays so demurely and tastefully, is in any way a 'hussy,' but merely that the piece as a whole could not be accused of being reticent. . . .

"At any rate, you can't get away from Mr. Sam Bernard, the *Max Hoggenheimer* of the cast. . . . He dances with the best and sings with the—well, he is very versatile. He is never still: he is always on the twitch, like a bantam cock in fighting vein, and as he bobs backward and forward before his *vis-à-vis* he fires off incongruous epigrams in the best Yanko-Jewish style, keeping the audience in ripples and outbursts of laughter the whole time he is in view."

"Potash and Perlmutter" wins by itself, for the play is presented by an entirely English company. Mr. James Waters, in *The Daily Mail* (London), writes:

"'Potash and Perlmutter' is another signal example of London's readiness to give a whole-hearted welcome to strangers who come here with an attractive entertainment. Before its production at the Queen's Theater, London had never heard of the authors of this human and amusing story of two humble New York Jews in the wholesale clothing business. Now that story fills the theater to the doors every night!"

The same writer indicates the unanimity of judgment on another piece:

"At the New Theater, in St. Martin's Lane, Mr. Cyril Maude is playing every night with the confidence of an actor-manager who knows that the 'House-Full' boards are telling only the simple truth to passers-by. His play, 'Grumpy,' was a lucky find. He happened one day to tell Mr. Dion Boucicault that he wanted a play very badly. 'Do you know of one?' he asked. Mr. Boucicault after a while remembered that he had sent a drama to New York to Mr. Charles Frohman, who wanted one for one of his star actors over there. The star actor did not like it. So the piece was returned. That was 'Grumpy.' Mr. Maude read it. He took it to New York last winter, and an unfashionable theater was packed for 200 consecutive performances with the best audiences the Empire city can boast of. He will resume the run with it over there after the London season, when the great heat is exhausted in America, and, according to estimates of experts, Mr. Maude will get three years' business with this one play in America, and make enough money to build a cathedral, should his ambition soar in that direction."

LONDON'S NEGLECT OF OUR PICTURES

WHETHER IT PROVES the volatility of the English or the shallowness of the American, our serious art, like the better class of our theatrical productions, fails to "get over" in London. Dispatches to the *New York Times* assert that the "Coney Island features" of the Anglo-American Exhibition at Shepherd's Bush attract more attention than the fine-art section. This, too, in spite of the fact that "one of the most remarkable exhibitions of American art ever brought together abroad" is being shown there. Mr. Joseph Pennell, the American artist, who lives in London, thinks this neglect a "scandalous shame," and he has urged the management to invite the newspaper critics especially to visit the fine-art section. Few, it is said, have availed themselves of the opportunity, tho Mr. Humphry Ward, critic for the *London Times*, did so. He finds our artists almost more French than American, and, in a promenade of the galleries, he declares, "you find it difficult to convince yourself that you are not in the Salon of the Champ de Mars." Further:

"There are pictures of Red Indians and skyscrapers, but they are painted in a French or rather in a cosmopolitan manner, just as Longfellow wrote poetry about American subjects like the English poets. The Americans practise the cosmopolitan painting much better than we do when we attempt to practise it. One can see at a glance that their painters are on the average much more conscientious than ours. No doubt they paint for a public that is not indifferent to the manner in which they paint, provided their hearts are in the right place. But like all cosmopolitan artists they seem more anxious to pass a certain examination standard than to express themselves.

"For the Paris Salons are, as it were, a great annual examination at which you may pass with or without honors. Their standard is more rational than that of the Academy, but it is a standard designed to test the skill of the artist rather than his art. Now, the Americans, as we know, have a very honorable and modest respect for French judgment in all artistic matters; and most of their painters are ambitious to paint up to the Paris standard. Most of them also do paint up to it; but the result is that an exhibition of American pictures is apt to look like a collection of the works of prize students. There is not one utterly inept picture in the American Section for ten in the British; but when we look for signs of American art we do not find it. There may in America be painters who have no anxiety to prove that they can paint; but if so, few of their works have reached the exhibition."

The best pictures in the exhibition, according to this critic, "are always the simplest, always those in which the artist seems least conscious of his accomplishment." Few of the landscapes, he complains, strike one as having been painted in another continent:

"The French accent makes the landscape itself seem French, and there is more American originality in Mr. John Noble's 'Paris Plague,' with its delicate echoing blues, than in most of the conscientious versions of native country. Mr. E. Carlsen's 'Still Life' has the same extreme delicacy, and, when we remember Whistler we are inclined to think that this may be the real peculiarity of American art. He, of course, is the greatest of American painters, as Poe of American poets, and both give us something exquisitely slight and fastidious; both only hint at what most poets or painters express, and carry their art a little further than any one else upon a basis of assumptions. It is the same, too, with Mr. Henry James, and we may expect that American painting will find itself when it has learned to take the whole art of Europe for granted, when the great Italians and Velasquez and the great Frenchmen have all sunk into its subconsciousness, as the poetry of England had sunk into the subconsciousness of Poe when he wrote 'The Sleeper.' It

is not likely that America will produce Manets or Gauguins or Van Goghs, but it may produce more Whistlers in a delicate, fastidious reaction against the matter-of-factness of its own national spectacle."

OLD DAYS IN THE THEATER

OLD PLAYS are not included in that aphorism of the sentimentalist about "old wine, old books, and old friends" being "best," tho old players might gain a place in every revision of the phrase by a playgoer of more than fifty. An effort to test opinion on this point, or some such

WHILE GHOSTS OF THE PAST WALK ON THE STAGE.

Punch sees the audience thus reviving "old-time atmosphere."

motive, has made Mr. Bertram Forsyth revive "old days" in London, and show acting "as it used to be." With this effect on the critic of the *London Standard*:

"Before the curtain went up the audience was treated to a number of selections on the harpsichord by the young Mozart as he appeared at the Haymarket Little Theater in 1765, of whom it was written that 'all the overtures were of the boy's own composition.' Next came the arrival of 'a royal personage,' and down through the stalls, attended by his suite, and preceded by Kemble holding a candelabrum, came the august gentleman to be placed with many bowings in a seat near the stage. Mr. John Philip Kemble (impersonated by Mr. Forsyth) then recited a well-written prolog done for the occasion by Mr. Arthur Scott-Craven, and to the cry of an orange-wench in the audience calling 'Sweet China oranges,' the play began.

"For the most part the producer has treated his subjects in a spirit of gentle burlesque, and quite wisely he has gone to some of the most bizarre episodes in the history of the English stage.

"Thus we had that terrible precocity, the Infant Roscius (impersonated very successfully by Miss Della Pointer), appearing as *Norral* in an act of the tragedy 'Douglas'; Roscius, better known as Master Betty, for whom Pitt once adjourned the House of Commons, so that members might go and see him perform, who was honored by King and Queen, and who made a large fortune before he retired from the stage. With him were Mrs. Siddons, her extremes of passion and gesture admirably portrayed by Miss Marjorie Patterson, and Mr. Kemble, stamping grandiloquently, bowing low to the applause of Eminence in the front row, and generally behaving in rather a mountebank fashion. This was 'as it used to be' no doubt—with a bit of Mr. Forsyth superadded. . . .

"'Hamlet' next with Mr. Garrick stalking about in an amazing plumed hat, a comic *Hamlet* if ever there was one (the burlesque must have been laid on rather thick here), and finally, in a passion, driving away at his sword's point the spectators who had encroached too far on the stage."

RELIGION AND SOCIAL SERVICE

FUNERAL, AT TORONTO, OF THE SALVATIONISTS LOST ON THE EMPRESS OF IRELAND.

THE SALVATIONIST TEMPERAMENT

EVEN the note of the memorial service held in the Albert Hall, in London, by the Salvation Army, for the dead of the *Empress of Ireland*, was one of joy instead of sadness. The signs of mourning were white instead of black, says *The War Cry* (New York), describing the "ninety-four vacant chairs draped in white" in the center of the arena, forming "a pathetic reminder of those members who were lost." The note was probably not so different from that of all the other meetings of this International Congress. Mr. Harold Bigbie describes their "group consciousness" as one of "extraordinary happiness." As a meditative spectator, not one of them, nor confessedly of the Christian persuasion, he records in the *London Chronicle* the effect they produce:

"These variously dressed, variously complexioned Salvationists streaming into the hall from the four corners of the world, with their flags flying, their bands playing, brought with them a sense of exhilaration and sent vibrations of joy, not beating, but dancing across the air. These atoms of consciousness were not assembling, like the atoms of consciousness in a music-hall, to be made happy; they were happy; they brought happiness with them, filled the hall with it, and made the air conscious of it. And as they swarmed into the place one remembered that they brought their happiness, not from Aready, but from the slums of the cities of the world. It was amazing to reflect—as they marched behind their flags and their bands, crossing in front of General Booth, saluting, and marching to their places in the hall—that these happy people are more deeply acquainted with the havoc of evil, the pangs of destitution, and the pitiful weakness of humanity than those who pull a long face and tell us that everything on earth is going pell-mell to the devil."

The churches might muster as large an assembly as they. The hall, with a capacity of 15,000, has been full to overflowing before. But the group-consciousness of the churches would be very different, thinks Mr. Bigbie:

"The Churches, when you get through their troublesome theologies, are simply temperaments. There is a Roman temperament, an Anglican temperament, a Wesleyan temperament, a High Church, an Evangelical, a Broad Church temperament. The Salvation Army is a temperament. And last night in the Albert Hall one realized, as if one were looking at a picture of the human mind, how universal is that temperament. The people from Java, from Korea, from the West Indies, from Sweden, Finland, India, and South America brought into the Albert Hall, not dissent from the Churches, not a cast-iron theology, but the same temperament which drove William Booth into the gutters of life, and which made him happier the more deeply he plunged into the dark places of existence.

"It is worth while thinking of the Salvation Army tempera-

ment. It perplexes at certain points, it is not a thought-out temperament, it is not a temperament to be expressed in the careful terms of philosophy, but it is a world-temperament, and it expresses in amazing form the victory of the Christ idea. Westcott saw that the Salvation Army recalled the Church to one of its lost ideals, but who sees that it is the temperament of the Army, appealing to every race under the sun, which makes it triumph? These people hold ideas about the nature of man and his destiny in the world of spirit which might trouble many a Modernist, many a philosopher; but those ideas—what are they but efforts of the brain to freeze into words feelings which have neither language nor laws? The temperament is the force. And this temperament is a longing of the soul for happiness, a disposition of the spirit toward joy, and a power to make every sacrifice possible to man or woman in order to attain uttermost delight.

"Why do their bands play such cheerful music, why do they laugh when they greet, why do they dance and clap their hands, why is there something in their eyes which you miss in so many other Christians? Because their disposition toward happiness has found its goal. They have given up their souls and bodies to the poor, the sorrowful, and the lost. They have made themselves of no account. They have broken every tie which bound them to vanity and ambition. They are the gipsies, the vagabonds, the Bohemians of religion. And every problem which distresses the world and glooms the minds of the world's prisoners they look at from the vantage of the stars, and cry, 'All's well.'

"William Booth lives in the heart of humanity, because his appeal was universal. He pulled a trigger in the mechanism of the human race, and released something which society, with its thousand conventions, has struggled since the beginning of social existence to extirpate and destroy.

"There in the Albert Hall last night you could see the work of that old dead prophet in the faces of thousands of people separated by tradition, language, and political animosities, but united as one body in this Army of Happiness—you could see it in their eyes, you could hear it in their voices, and whether you understood it or not, whether you could make your surrender to it or not, there, at any rate, was the multitudinous fact—the fact that the soul desperately in earnest about happiness finds happiness in the denial of itself and in a life of poverty, devotion, and ministration. All the world flowed into the Albert Hall last night, and its group consciousness was the heart of William Booth. . . .

"I said to myself, watching them assemble, watching this world in miniature, and thinking of their happiness and their poverty—'All these atoms of consciousness are drawn together into this one place by the force of a dead man, born less than ninety years ago in Nottingham—one for whom no form could express his sense of Divine Reality, who passionately believed in the eternal significance of new-birth, who agonized over sin and suffering and poverty, and who went out into the wilderness and endured persecution and penury for the sake of his torturing Truth.'"

THE CARNEGIE ATTITUDE TO THE RELIGIOUS COLLEGE

THE CARNEGIE FOUNDATION for the Advancement of Teaching has been furnished the opportunity of repelling the rather frequent charges made against it of weakening the hold of denominations upon the institutions founded by them. This charge was repeated along with several other indictments by Mr. Thomas W. Churchill, president of the Board of Education of the City of New York, at the commencement exercises of Manhattan College. "Mr. Carnegie's efforts are crushing individuality out of American colleges and lessening their contributions to public service," Mr. Churchill declares. Moreover, "the Foundation has deliberately and conspicuously made a mark of the religious colleges—particularly of the small institutions which in their own field carried on a great Samaritan work with limited equipment but a splendid spirit, and one after another many religious colleges have been seduced by great wealth to give up the independence that should be found in a college if nowhere else, and to forsake the faith of their founders." It makes him "boil with shame," he avers, "to think that in this generation and in this Republic any body of men would so brazenly employ the tremendous power of great wealth as to permit it to buy the abandonment of religion." Mr. Churchill, according to the report of his speech in *The Evening Post* (New York), adds:

"It is no surprise that these men hold up abstract ideals of culture rather than practical ideas of public service. By reason of the imperfection of our labor laws, a lucky ironmaster skims from the work of thousands of artisans the cream of their wages until he amasses through them a fortune that makes that of Croesus look like a little pile. And to these men who work before the furnaces this heap of wealth stands in the way, blocking the entrance of their own sons into institutions which the public had expected to throw the light of education into wider and wider strata of society. For the Carnegie Foundation by its requirements excludes from the colleges which it aids with money such youths as do not meet the requirements which the Foundation sees fit to establish."

Mr. Clyde Furst, the secretary of the Foundation, was approached by the newspapers for a statement respecting Mr. Churchill's charges; and as most emphasis was placed by the latter on the charge that the Foundation deliberately made a mark of the religious college and set about seducing it from its faith, Mr. Furst addressed himself to a definition of Mr. Carnegie's attitude in that particular:

"The only reason for the provision in the act of incorporation of the Foundation, to the effect that retiring pensions shall be paid only to teachers in institutions not under the control of a sect, nor imposing any theological test as a condition of connection therewith, is administrative expediency. If a college were owned or controlled by another organization, it would be very difficult, if not impossible, to deal with that college alone. A foundation like this can not, for instance, deal with a national organization like the Catholic Church.

"That the Carnegie Foundation has ever objected to such denominational colleges as such is not true. It has at present most cordial relations with denominational institutions such as the University of Chicago, which is Baptist, and the Catholic University of America in Washington. And we gladly cooperate with all good educational efforts, whether denominational or not. For example, we have recently given aid to a large denomina-

tional organization which desired to spend three and one-half million dollars on education. It came to the Foundation for advice in guiding and developing the institutions under the care of that church. It asked and obtained our most earnest cooperation.

"There have been no gifts to denominational institutions which approach those of Mr. Carnegie's. He has given over twenty million dollars to such institutions in this country, including college buildings and libraries. His Church Peace Foundation of \$2,000,000 included all denominations, the Roman Catholics being represented by Cardinal Gibbons as a director. In addition, Mr. Carnegie has frequently given organs to Roman Catholic churches.

"As for the charge that the Foundation has striven for abstract scholarship, the absurdity of that is shown in the vigorous criticism which we have sustained for belittling the need of such scholarship in the State of Vermont, as compared with the need for vocational training. Our latest bulletin is a study of educational problems in Vermont prepared at the request of the State Educational Commission appointed by the legislature. We recognized the rural-community problem, and our report recommended the recognition by the State of the reorganization of elementary and secondary education, including vocational training as its immediate and supreme duty."

There is a further elucidation of Mr. Carnegie's pension system:

"The Foundation has no way of enforcing its will except by disseminating information, nor has it any desire to have educational institutions conform themselves to a common pattern. Our constant effort is to impress upon them the necessity of adapting themselves to the work that they have to do.

"As for the pensions to retired professors, our aim is to be simply an object-lesson in the pension system. Any college that wants to can start its own pension system at a cost of something like a building or two, and we will gladly help them make the plans. We have taken much trouble to help uni-

versities to found their own pension systems, Brown University being a recent illustration. The new pension system of the Protestant Episcopal Church was planned in our office, and the Church Pension Fund has taken over one of our men to run it.

"Criticism like Mr. Churchill's is very far from being representative. All of the national bodies representative in education are feeling the usefulness of the Foundation. The study of medical education was carried on in cooperation with the American Medical Association. A similar comprehensive study of legal education has been begun at the request of the American Bar Association. And a similar study of engineering education has been begun at the request of the joint committee representing the national engineering societies. From many other sources urgent requests are coming in for advice and assistance even from those small denominational institutions which are not admitted to our list of those participating in the benefits of our retiring allowance system."

The *New York Times* comments:

"Mr. Carnegie has repeatedly explained that he withholds his largess from denominational colleges, not from any antagonism to them, but because each of these institutions has behind it a large body of friends who ought also to be its supporters, and he prefers to extend his aid to those that are not the objects of a special interest. That the effect of this discrimination has been to cause the removal of several colleges and universities from the sectarian to the non-sectarian category may or may not be a reason for criticizing the officials who made the change, but it hardly warrants attack on the Carnegie Foundation as a foe of religion. The liberties of those who believe in denominational education have not been infringed in the slightest degree, and it is difficult to see that they have any grievance against Mr. Carnegie unless it lie in a fear on their part that they may not be able long to resist the temptation to revise their belief, which is a purely incidental effect of his selective generosity. This they are unlikely to admit."

THOMAS W. CHURCHILL.

Who accuses the Carnegie Foundation of using its wealth to "buy the abandonment of religion."

"MOVIES" IN CHURCH AND OUT

ONE of the most insidious suggestors of evil in this country is the moving picture—such is the statement made by the head of the Pinkerton Detective Agency to the convention of police chiefs recently in Grand Rapids, Michigan. He told them that "hardly a day passes that he does not read of the practical effect of filling the boy's mind with crime"; and gave it as his opinion that pictures of safe-blowers, robbers, and hold-ups should be forbidden by law. He confessed that he had received overtures from moving-picture concerns that he had refused to accede to, "to take part in running down a gang of bank film robbers, and to superintend the staging of the life of Adam Worth, the famous international crook who stole the Gainsborough painting." The New York Sun reports him to this effect:

"Within the province of the moving pictures lies a dangerous power for evil that can not be too seriously considered. A written story of crime and human frailty may pass from memory, but a pictured delineation is apt to remain. Take a serial picture of sordid crime, like those that illustrate the shocking features of white slavery, drug depravity, and gunmen gangs. What good purpose can any normal person expect them to serve? To the rough and weak and ignorant it is like throwing more fuel upon a fire already hard to control.

"There are those affield to-day in this inviting business who ought to be brought to book bluntly for their sins on this score.

"The motion-picture is now, and will become more so, one of the greatest educational factors in modern life. The forbidding scenes of the underworld are the snakes in the grass that should be scotched and crushed for the general good of a most worthy business as well as the protection of the world at large."

As a contrast to these evil uses of the "movies" comes a proposition from Mr. Cleveland Moffett to use films of a presumably more elevating sort for the entertainment of the poor children swarming on the streets of New York who have nothing to occupy themselves on the hot summer evenings. He writes in a letter to the New York Times:

"The Church Entertainment Society, recently organized in a small way, under the patronage of Mrs. John H. Flagler, Mrs. Nelson H. Henry, Mrs. R. U. Johnson, Mrs. J. Heron Crossman, Mrs. Simon Baruch, Mrs. Charles Merritt Field, Miss Juliet Thompson, Miss Sophie Irene Loeb, Dr. Percy S. Grant, Dr. Howard Duffield, Mr. Edward R. Johnstone, Mr. Paul Poin-dexter, and Mrs. Mai S. Thomas, suggests that moving-picture entertainments, instructive and entertaining, be arranged for poor children in some of our churches that would otherwise be silent and empty. These moving pictures will be accompanied by appropriate organ music, which will be a joy and an inspiration in these pitiful lives. Scores of churches in New York City might be put to this use in the interest of future citizens.

"No one can deny that under its towers and steeples New York City has gathering-places enough to accommodate 1,000,000 poor people, gathering-places admirably suited to pressing needs of the masses, gathering-places, as things are, that stand more than half the time empty and silent. It should be noted that these churches from which the people are thus excluded belong absolutely to the people, were built and paid for by the people, are maintained by popular contributions, and are exempt from taxation by the people's favor. Why, then, should these buildings with their fine organs not be used in the interest of the people at such times as they would otherwise be unused?"

In line with the suggestion contained in an article by Mr. George Croel, recently quoted by us, the Church Entertainment Society, non-denominational, "asks the assistance of those who believe that a church is not less sacred, but rather more sacred, if its efficiency among poor people, especially poor children, is increased." For example:

"On April 30, 1914, a moving-picture entertainment was given at the Church of the Ascension, Fifth Avenue and Tenth Street, where beautiful and instructive and amusing films, furnished through the kindness of the Vitagraph Company, were shown with the accompaniment of organ and voice, to about 1,000 poor people. On Thursday evening of this week, June 18,

at eight o'clock, a similar entertainment will be given at the Old First Presbyterian Church, Fifth Avenue and Twelfth Street, to which some 2,000 of the dwellers in the poor districts near Washington Square have been invited. They may be asked to pay one cent each.

"What is chiefly needed is the cooperation of men and women who realize that a large part of the misery, the vice, and the crime in this city and in all cities, is due to the fact that poor children are left to kick about the streets and grow up under street conditions."

THE CHURCH'S LOSS OF SOCIAL LEADERS

IN ITS ZEAL to save the world the Church is in danger of forgetting to "save its own saviors." It is "leaking at the top," declares *The Biblical World* (Chicago). By that expression is meant that the Church is "losing young and vicarious idealists who are ready to sacrifice for the cause of Jesus, but who believe that his cause can better be served in some other institution than the Church." They are the social workers, playground directors, municipal reformers, and practically all other leaders in the struggle for larger social good. "Their impulses are Christian, but theologically they are agnostics." If asked why they are not identified with some church, their answers are frank. "They believe they can do more good in organizations which have more definitely practical purposes and demand no profession of religious belief." *The Biblical World* views this answer not as a protest against orthodoxy, because it observes that "such men and women are found no more universally in 'liberal' churches than in orthodox. Their self-imposed ostracism is born of something deeper than the unwillingness to subscribe to creeds." The question is then put, "Why is the Church losing these men and women?"

"Partly because they have been told by preachers that they can not accept science and be Christians.

"Partly because the churches with which some of them are acquainted have been controlled by men without knowledge or sympathy with education, who prefer preachers who are theologically as narrow-minded as themselves.

"Partly because they have never been taught to think their religion in terms of their best thinking. Therefore they believe themselves to be more out of touch with the Church than they really are. They despair of its future because they do not understand its present.

"Partly, one might almost say largely, because they are themselves spiritually indifferent. In many cases they are altruistic materialists. Religion they hold to be a survival of primitive days and to be subordinate to ethics. They hold that it is useless to preach the gospel to men with empty stomachs, and therefore prefer to help people get good housing and good jobs rather than a sustaining faith in God and immortality.

"But whatever may be the reasons for the loss of these efficient workers, the churches should at least be as much interested in them as in the leaders across the seas. It has a mission at home to those that are neither dependent, defective, nor delinquent. Why should the Church be indifferent to men and women simply because they are strong and influential? A religion or any phase of a religion which can not satisfy the intellectual life of its time is as surely doomed as a religion which can not master the conscience of its time. One does not need to know much history to see this."

The question is next put, "What shall the Church do to prevent the loss of these modern men and women?"

"For one thing, its teachers and preachers must live in to-day's thinking. Homiletical cleverness, oratorical persuasiveness, ecclesiastical authority will not avail with men and women whose eyes have once been used in a methodical search for truth. Such honesty may bring its possessor bitter experiences, misrepresentation, loss of position, but the honesty quite as truly as the blood of martyrs has been the seed of the living Church.

"Either Christianity will compel the assent of honest men of modern training, or it is doomed to become in America what it is in Europe: the patron and protégé of ignorance."

REVIEWS OF NEW BOOKS

GEORGE CATLIN'S MASTERPIECE

Catlin, George. *North-American Indians. Being Letters and Notes of Their Manners, Customs, and Conditions. Written during Eight Years' Travel among the Wildest Tribes of Indians in North America, 1832-1839.* Two volumes. With three hundred and twenty illustrations carefully engraved from the author's original paintings. Large 8vo, pp. ix-588. Philadelphia: Leary, Stuart & Company. \$7.50.

This is a reprint of a work which was published in 1846, and, altho perhaps forgotten by the present generation, was famous in its day and received high praise from the American and English reviews of the period. It was then described as the most valuable record of Indian life in existence, and excerpts from its pages were printed widely in the daily newspapers, because of the current interest which then attached to the Indians. When Catlin published his book, painted savages were still roaming the Western plains, and the smoke of the wigwam ascended from places now occupied by thriving cities. Sky-scrapers may now be seen where the red man pitched his tent. The extermination of Indian life has been so ruthless and thorough that his very history is in danger of falling into oblivion. The author of the present work saw this clearly and deliberately devoted himself to the task of saving from oblivion the Indian story and tradition.

George Catlin was born in 1796, in the Wyoming Valley, the scene of the famous Indian massacre. His early life was care-free and was passed in comparative leisure, "a book in one hand and a rifle in the other," as he describes it. He studied law for two years and passed the bar, but suddenly abandoned his profession, and began the study of art on his own account without teacher or adviser. Utterly ignoring all the ordinary canons and schools of art, he invented a unique system of line and color representation which was admirably adapted to his purpose. His legal studies, far from being useless, had enabled him to acquire a good clear style of expression. Thus equipped in 1836, he set out upon the savage Odyssey which was to last eight years and have important results for American history.

It was an arduous and perilous undertaking in those days to trust oneself among savage tribes in a trackless wilderness; yet our author seems to have accomplished his purpose without serious misadventure. He visited forty-eight different tribes, speaking different languages and containing about 400,000 souls, and brought home about five hundred studies in oil, consisting of views of villages, wigwams, games and religious ceremonies, dances and other amusements. The most important of these are reproduced in the volume before us. The original collection in its entirety forms "Catlin's North-American Indian Gallery" in the National Museum.

As a result of his investigations the author makes the statement that the Indians of North America at first reached the amazing total of sixteen millions. He avers that six millions have fallen victims to the smallpox, and the remainder to the sword, bayonet, and whisky; "all of which means of their death and destruction have been visited upon them by

acquisitive white men whose forefathers were welcomed by the Indian and fed with green corn and pemmican."

Of the utmost interest as folk-lore, and the equal of "Robinson Crusoe" in picturesqueness and wealth of graphic detail, are the author's pages depicting the intimate life and habits of the Mandan tribe of the Upper Missouri. This tribe he found typical of what was best in the Indian character. Many of our preconceived notions of the red men must be altered—that of their taciturnity, for example. Mr. Catlin found the Indian, at least among the tribes of the Upper Missouri, "a far more talkative and conversational race" than the white men. He describes their wigwams as abodes echoing at times with fun and laughter, the pipe being passed around to accompanying jokes and anecdotes. Their home life, the peaceful side of their existence, their marriage customs, their wooings, their story-tellings, their natural eloquence, are described as never before with pen and pencil. Like Fenimore Cooper, of the renowned *Leatherstocking Tales*, the author found honor and heroism among the men, and beauty and modesty among the women. On the other hand, in contrast with all this, the savage and blood-thirsty phase of Indian character emerges more lurid than ever in these pages. The scenes of Indian cruelty which the author witnessed were incredibly horrible. He actually painted a scene of torture while it was being enacted, thus literally duplicating the story of that artist whose model was put to the torture to furnish a realistic picture of human agony.

OTHER BOOKS WORTH WHILE

Bailey, L. H. (Editor). *The Standard Encyclopedia of Horticulture.* Vol. I. A-B. Pp. 602. New York: The Macmillan Company. \$6.

This is the first of a six-volume encyclopedia founded on the *Cyclopedia of American Horticulture*, edited by Mr. Bailey fourteen years ago. The advances of the science of horticulture have been so great in that time that the scope of the new work has been greatly enlarged, and under the supervision of Mr. Bailey, long director of the State College of Agriculture at Cornell University, and one of the recognized authorities on the subject, a work has been produced that far exceeds anything of the kind hitherto published. In the preface, Mr. Bailey tells us that the method of the *Cyclopedia* "turns about two purposes—the identification of species and the cultivation of plants." The nomenclature is that of the "Vienna Code," adopted by the Botanical Congresses at Vienna (1905) and Brussels (1910). With the standard here set and maintained throughout, the book will be one that should be in every public and reference library, and on the bookshelves of all who make horticulture their business in life.

Harte, Bret. *Stories and Poems.* Compiled by Charles Meeker Kozlay. Pp. 429. Boston and New York: Houghton Mifflin Company. \$6.

America has no writing son to whom she yields more sincere admiration than to Bret Harte. Mr. Kozlay has, for years, been studying the files of California news-

papers, and here presents a vast amount of hitherto uncollected writings by Harte, immature and unrevised, but revealing the same genius which was shown later in more finished form. Most of the stories and poems were contributions to *The Golden Era* and *The Californian* during the years 1860-65. They are alive with that rare sense of humor so peculiar to Bret Harte, that appreciation of motive underlying the lives of the pioneers of the West, as well as a keen sympathy with all that is genuine and true in character. Many specimens would doubtless have been lost had they not here been collected for preservation. They show steady and gradual development. The author then signed himself "Bret," "H.," "F. B. H.," or used some of his many *noms-de-plume*. The book is attractively bound, beautifully illustrated, and is a great addition to our Bret Harte bibliography.

Taylor, James Monroe. *Before Vassar Opened.* Pp. 287. Boston and New York: Houghton Mifflin Company. \$1.30.

There is no longer anything new or startling about "Higher Education for Women." It is not many years, however, since few institutions of learning existed which welcomed girl students. In this book, President Taylor, of Vassar, gives a comprehensive and concise history of the educational movement in its relation to women, and the gradual steps by which larger opportunities came to be a part of a woman's privilege. He cites all the seminaries and so-called "colleges" that existed both in the South and North before the war, and gives high praise to such women as Emma Willard, who founded the Troy Seminary in 1821; Mary Lyon, Holyoke in 1837; Catharine Beecher, Hartford in 1822, and describes the opportunities offered by Oberlin and other institutions. The greater part of the book, however, is devoted to the founding and the founder of Vassar. Matthew Vassar was a wealthy brewer of Poughkeepsie who desired to utilize his wealth in establishing some institution in the service of education, but Milo P. Jewett deserves the credit of originating in Mr. Vassar's mind the impulse and conviction which resulted in Vassar College. "He not only nurtured the seed, he planted it." The many vicissitudes encountered and surmounted in the development of the scheme involve the counsels of literary celebrities, some jealousy, misunderstandings, and mistakes, but the trend was forward, and Vassar was opened by John Raymond in 1865. The book is a very interesting addition to the history of education.

Martin, Frederick Townsend. *Things I Remember.* 8vo, pp. 297. New York: John Lane Company. \$3 net.

The late Mr. Martin produced in this book an interesting volume about things and people well worth remembering. It is a book of gossip which no one but a person of wide social experience and excellent taste could have produced. We have lingered with pleasure over every page of it. It is stamped with the hallmark of American cosmopolitanism. It stands in the class of books that come from "the mob of gentlemen who write with ease."

What a Complete Dentifrice is

Your dentist will tell you what a dentifrice should be—and you will find that Colgate's Ribbon Dental Cream fulfills requirements.

This safe dentifrice does six things—and does them well.

Checks decay

1. It has a slight—but not over-emphasized—antiseptic action which so far as is necessary or advisable in a dentifrice, checks the growth of decay germs.

Maintains a proper condition

2. Its slight alkaline reaction corrects acidity of the saliva and helps it to maintain the proper balance of alkalinity in the whole oral cavity.

Delicious in flavor

3. Ribbon Dental Cream has a delicious flavor that makes the care of the teeth a pleasure—and therefore a regular habit. Though wholly lacking the "druggy" taste of many dentifrices, it contains no honey, saccharine, glucose or sugar.

Not over-medicated

4. Its cleansing action is not chemical—it contains none of the ingredients of some dentifrices which bleach rather than clean. Nor does it contain medicines, which are best left for the dentist to prescribe if needed.

Safe because it is free from grit

5. It polishes the teeth to natural whiteness. The precipitated chalk used for its base is made by Colgate & Co., for their sole use. It contains none of the harsh, angular particles often found in even the best of ordinary precipitated chalk.

Fragrant and wholesome

6. It imparts to the breath a refined fragrance and to the mouth a sensation of wholesome cleanliness—gratifying and refreshing.

COLGATE'S RIBBON DENTAL CREAM

is therefore a complete dentifrice. As such you too should use it.

A generous trial tube, and our booklet, "Oral Hygiene," for 4c in stamps. Please mention The Literary Digest.

COLGATE & CO.

Dept. Y 199 Fulton St. New York

Makers of Cashmere Bouquet Soap—
luscious, luring, refined.

CURRENT POETRY

If art alone made poetry great, then no praise would be too high for Miss Grace Fallow Norton's "Sister of the Wind" (Houghton Mifflin Co.). For her verses are exquisitely made—not a word or a syllable is out of place. But the poet must be something more than the artist; he must have strong passion and deep sympathy. The note of sincere human feeling would improve even so lovely a fantasy as this:

Malerude

BY GRACE FALLOW NORTON

My love hath bade me bring a wave
To cover her bright body bare.
All purified, fringed, and Tyrian-tinged,
Fine as she is and fair;
This is the cloak that she would have
Beneath the torrent of her hair.

I brought my love a beryl-stone,
A jacinth and a chrysolite,
Got from a sage of hoary age
Who curst all beauty's might
(Nothing he had to call his own;
I, too, weep often in the night).

I brought my love a heart-sweet song
That passed me in the Wishing Wood;
For when a bird flew west I heard
The song fly east and stood
Upon the eastern borders long,
To snare the song for Malerude.

She laughed, the Scornful! So I go
With net and spear, with snare and lure,
To bring the wave she longs to have;
I'll spear it swift and sure
When foam about the rim doth show,
Pure as her lips are vain and pure.

I'll take it when an opal flush
Fills all the hollow, and the frail
Green roods that bend above it blend
With cloud and crescent pale;
I'll lift it in a holy hush—
Thinking on that which it shall veil.

The little moon for broodery,
For clasp two stars of faintest gold,
O for her hair to weave my snare,
O golden fold on fold!
O for a wave to cover me—
She is so cruel and so cold.

Few contemporary poets have surer mastery of the sonnet than Mr. Thomas S. Jones. These stately lines are from a new edition of "The Rose-jar" (The Mosher Press).

To Song

BY THOMAS S. JONES, JR.

Here shall remain all tears for lovely things,
And here enshrined the longing of great hearts,
Caught on a lyre whence waking wonder starts,
To mount afar upon immortal wings;
Here shall be treasured tender wonderings,
The faintest whisper that the soul imparts,
All silent secrets and all gracious arts
Where nature murmurs of her hidden springs.

O magic of a song! here loveliness
May sleep unhindered of life's mortal toll,
And noble things stand towering o'er the tide;
Here mid the years, untouched by time or stress,
Shall sweep on every wind that stirs the soul
The music of a voice that never died!

Not even Roden Noel, or that laureate of the sea, the late Algernon Charles Swinburne, put the very spirit of the great waters into his verse more strongly than does Miss Damrosch in the following poem, which we take from the June *Scribner's Magazine*. In her sonorous lines the waves lap and splash; her realism is accurate and beautiful.

Swimming by Night

BY ALICE BLAINE DAMROSCH

It is night-time; all the waters round me
Grow electric, tenser, in the starlight.
See, the Milky Way is full of splendor.
Over there the white star and the red star
Beckon from their pinnacles of silence.
All the larger waves are tipped with glory,
And the little ripples pause and whisper,
As they touch my cheek with ghostly fingers.
I will swim till I can swim no longer.
I will spurn the shore that blots the starlight
From my vision, I will shake it from me,
Strike out boldly into open waters.
I know sometime that my strength will falter,
That I must turn shoreward, leave my star-search.
Give in to the sweet, soft, acquiescent
Land breeze, redolent with sleeping hay-fields.
How I hate it, I would fill my nostrils
With the sharper, fruer breath of heaven,
Raising up my head once in so often
From the waters for great drafts of glory.
In me is the strength of gods; I battle
With the waves and buffet them for pleasure,
I will beat them, break them in my passing.
Feel them close again behind my shoulder;
Every muscle has its strength for service,
Now I summon all to do my pleasure.
Bid them bear me out into the darkness,
Far off where the startled night bird circles,
Half awakened by my silent coming,
Frightened by my dim arm rising, falling.
I will go, yes, there and even farther.
I will seek the source of the creation,
Swim with mighty strokes to the horizon,
Where the drowned stars and the stars in heaven
Meet and mingle in new constellations;
I will reach them, dare to touch them even,
Cleansed and purified by many waters,
Even I may breathe upon their splendor.
It is written that the night must vanish,
But this hour is mine, I will not yield it,
I defy the dawn to take it from me.
Oh, to live and battle thus forever!

How Rossetti would have enjoyed the richly hued first stanza of "Eve"! And how he would have shuddered at the grotesquely prosaic phrase "uncramped her curves"! The poem is from Mr. Norman Gale's "Collected Poems" (The Macmillan Co.).

Eve

BY NORMAN GALE

A scarlet bird upon her shoulder's snow
Was perched, and whistled to his envious fellows;

A thousand tints of feathers lit the air,
Bewildering greens and reds and blues and yellows.

Primeval glories clustered in her form;
Uncramped her curves; she was the joy of Beauty.

An unseen angel drank her with his eyes,
Then trembled to the heart. His name was Duty.

White innocently naked thus she stood,
With lion-whelps and tiger-cubs around her,
A wall of creepers parted. From the wood
Leapt Adam—doubling Paradise—and found her.

You Start to Eat Them One by One

Puffed Wheat and Puffed Rice are so dainty—so crisp, airy and fragile—that you treat them at first like confections. One starts to eat them grain by grain.

Yet these are but whole grains—nothing is added. The almond taste—like toasted nuts—comes from terrific heat. And steam explosion makes each grain like a bubble.

The Only Perfect Cooking

Prof. Anderson's process is the only way known to fit every food granule for easy digestion. In Puffed Grains, each separate food granule is literally blasted to pieces.

Other forms of these grains are delicious. But this way alone gives perfect cooking—makes them scientific foods. There lies the main reason for Puffed Grains.

Puffed Wheat, 10c
Puffed Rice, 15c
Except in Extreme West

**CORN
PUFFS**
15c

The different Puffed Grains with all the ways of serving offer you endless variety. Serve them with cream and sugar. Mix them with berries. Float them like crackers in bowls of milk.

Use like nut meats in candy making or as garnish for ice cream. Serve one in the morning, another at night—for the summer dairy supper.

No other cereal food ever created affords such a wealth of enjoyment.

PERSONAL GLIMPSES

BERTHA VON SUTTNER

ON June 21, in Vienna, died a woman celebrated the world over for her fierce and untiring warfare against arms, armaments, and the expense, waste, and brutality of war among nations. In this long battle she had had little on her side save the burning conviction that war must go and that universal peace must be established. Her one weapon was the pen. With her book, "Die Waffen Nieder," and the magazine of the same name that followed, she made her name and her cause known in every civilized nation. Strange stories are told of the influence of this book upon the fighting Powers of the world; but whether they be true or not, the influence of Bertha von Suttner has been felt and will continue to be felt everywhere in the slowly changing form of public opinion on the subject of war. She herself came of a warlike family, yet without knowing much of warfare and without much thought upon the subject until she had reached middle life and left her home. The New York Times prints a short sketch of her life:

Born in 1843, the daughter of Field-marshal Count Franz von Kinsky, the Baroness became noted as the editor of *Die Waffen Nieder*, the magazine of the International Peace Bureau in Bern, which was named after a novel written by her in 1889, designed to spread the idea of peace throughout Germany and Austria.

When a girl Baroness von Suttner was betrothed to Prince Adolf Wittgenstein, but he was killed in battle. In 1876, she was married to Baron Gundard von Suttner, who died in 1902. In 1912 Baroness von Suttner spent six months in the United States, where she delivered a series of lectures in the cause of peace.

The Baroness was at one time secretary to Dr. Alfred B. Nobel, who established the Nobel Foundation, and as a champion of the "Brotherhood of Nations" is said to have been the inspiration that prompted him to offer his peace prize. She was a member of the Advisory Council of the Carnegie Peace Foundation.

"The Inventory of a Soul," published in 1882, was her first book. For a number of years she wrote novels and novelettes in which peace propaganda was only incidental, but the publication of "Lay Down Your Arms," in 1890, which gave a picture of the miseries which war brings to the relatives of the combatants and held up the glories of victory as only shams, made her famous at once. In the next year she founded the Austrian Peace Society, and from that time on her work in the interests of arbitration was her principal activity, and most of her writings were subordinated to that aim. She traveled all over Europe, lecturing and gathering peace workers into conference. Her work at Bern and with Dr. Nobel was carried on along with vigorous literary activity, and she published altogether more than thirty novels and novelettes.

The Baroness was Honorary President

Hills

Heavy Roads

Boulevards

Every-day tests of your lubrication

Try them on
nearby roads

How soon does incorrect lubrication show up?
Often in one short run.

Consider three types of roads:

Hills. You come to a sharp grade. With one lubricant you must drop to a lower speed. With another lubricant you can climb the hill easily.

Why?

Because the first lubricant is wrong in body. Compression and explosion escape past the piston rings. Power is wasted. If the oil is low in quality, you must also overcome excessive friction.

Only oil correct in body and quality will give you full power for the hills.

Heavy Roads. The conditions are very similar to those in hill climbing.

Sand, mud or "rough going" bring heavy strains to the motor.

Where an oil correct in body and quality carries the car along easily, an incorrect oil brings power-waste and excessive friction-drag. Overheating is apt to follow.

Boulevards. Along level roads loss of power is not so often noticed.

But, even on the smoothest roads, only the correct grade of oil will give you full power and full mileage from your gasoline.

To compare the efficiency of any oil with that of Gargoyle Mobiloil, make this test:

Test. Select a steep hill. See how far you can go up on high gear with the former oil. Then clean out your motor with kerosene. Fill your oiling system with the correct grade of Gargoyle Mobiloil. Be sure that operating conditions in both cases are identical. Use the same test. See how much farther you go up the hill.

Use the oil specified for your car in our Lubricating Chart, printed in part on the right. A copy of our complete Chart will be sent any motorist on request.

On request we will also mail a pamphlet on the Construction, Operation, and Lubrication of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

Mobiloils

A grade for each type of motor

It is safest to buy Gargoyle Mobiloils in original barrels, half-barrels and sealed five and one-gallon cans. See that the red Gargoyle, our mark of manufacture, is on the container.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants. For information, kindly address any inquiry to our nearest office. The city address will be sufficient.

Correct Lubrication

Explanation: In the schedule, the letter "A" to the one indicates the grade of Mobiloil that should be used. For example: "A" means Gargoyle Mobiloil "A." For all electric vehicles use Gargoyle Mobiloil "A." The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

That Won't end Corns

That liquid, that plaster—based on old ideas—won't terminate a corn.

Don't try it. Your druggist has a new way—the scientific **Blue-jay**. It is so efficient, so easy, so painless that it now removes a million corns a month.

The way is this: Apply **Blue-jay** at night—it takes only a moment. From that time on the corn will cease to pain.

Forget the corn for two days, then simply lift it out.

Blue-jay loosens the corn. In 48 hours you can remove it without any pain or soreness. Folks have proved that, up to date, on sixty million corns.

Stop paring corns. Stop the old-time treatments. End your corns forever in this simple, easy way.

Try it on one corn.

Blue-jay For Corns

of the International Peace Bureau at Bern, and remained active all her life in the cause of disarmament and arbitration; but as an actual influence in achieving the ends for which she was working, "Lay Down Your Arms" was probably more valuable than all the rest of her life-work. Among her other publications were "The Age of Machinery," a journal of The Hague Peace Conference in 1900; "Martha's Children," a sequel to "Lay Down Your Arms"; "Letters to a Dead Man," "The Great Thoughts of Humanity," and "The Romance of an Author."

Of the power of her book and the personality of its author, the New York *Evening Post* remarks editorially:

To her, it may be expected, monuments will be built when the militarism she fought so ardently shall have been abolished on earth. But her great book, "Ground Arms," will always be her truest memorial. Whether the story is true or not that a reading of this tract induced the Czar of Russia to call the first Hague Conference we do not know. It is, however, certain that no other brief for peace has won so many converts or exercised so great an influence in all quarters of the globe. Her portrayal of war's horrors opened the eyes of millions to its actual nature, and may be counted one of the great forces which are steadily bringing about the emancipation of the world from wholesale murder, even the war goes on at present in its most harrowing form, as so recently in the Balkans.

The author of "Ground Arms" has frequently and not inaptly been compared to the author of "Uncle Tom's Cabin." Both volumes exercised an international influence, being translated into many foreign languages and running through countless editions. Mrs. Stowe's famous book is credited by so careful a historian as Mr. Charles Francis Adams with having prevented, together with the Emancipation Proclamation, the recognition of the Confederate States by the British Government—that is, with having saved the Union. Fifty years hence the actual accomplishment of "Ground Arms" may be clearer than to-day. There is, however, one great difference between the two books: Mrs. Stowe wrote her book after having lived amid slave scenes, while the Baroness von Suttner penned her descriptions of the barbarisms of war without having herself come into contact with them—in contrast to Tolstoy's noble "War and Peace," which was founded on numerous personal experiences of bloodshed. During Bertha von Suttner's youth was fought, in her neighborhood, the Austrian war of 1866. It left her cold, as she said in her memoirs: "I'm ashamed to write these words, but this event made no impression on me—none at all." The Franco-Prussian War likewise left her indifferent. It was not until she came under the influence of a single notable personality that her eyes were opened and her soul set on fire by the iniquities of that which is justly termed "the sum of all villainies."

This personality was, of course, Alfred Nobel, and, strangely enough, her meeting with him was wholly the result of chance. She had answered an advertisement for a

secretary and housekeeper, and had no other thought than thus to earn her livelihood. It was only later, in the home of the great peace advocate, watching his work and absorbing his ideas, that she came to regard the issue of peace and war as of first importance to herself. Nobel was at that time engaged in research, endeavoring to discover some explosive so powerful as to make war impossible. He discovered dynamite, but did not attain the end he sought. Meanwhile his secretary was becoming his disciple. We read on:

It was from him that she learned to hate militarism with all her ardent and powerful nature. Years afterward the great peace prize which her former employer founded came to her as a fitting reward for her own achievements, for her ability to visualize the carnage and waste of war so movingly that the bulk of her readers, probably, still think that it was of her own sorrow and widowhood that she wrote so wonderfully. The prize was the more welcome since it found her in great need. Indeed, she was compelled to the last to labor for her means of sustenance. She gave generously to the great cause, and she suffered much for it. The hatred of the militarists for her knew few bounds, particularly in her own country. When last in the United States, at the beginning of the Balkan troubles, her mail was full of exulting and abusive letters and post-cards from officers and men of the Austrian Army, exulting in what they considered the certain approach of war and reviling her as tho her aim in life was the lowering of humanity, and not its uplifting. Fortunately for her and her nation's happiness, Austria escaped the horrors of the conflict only to pay heavily economically for the waste of lives and property and the destruction of trade in the near-by states.

Of the many aspects of this rare life, not one seems to us more striking than that the person who so powerfully moved the reading world as to become herself one of the foremost of her time was of the sex which suffers most from war, tho it is usually denied any voice in the making of it or in the preservation of peace. Then, Bertha von Suttner was no genius; there was within her no innate, overwhelming desire to express herself and her views on what became to her the be-all and end-all of her life. It was rather her iron will and determination to stir the world which we must admire. Without means, or reputation as a writer, speaking without authority or personal experience, she yet found her way to people's hearts. It is all a wonderful example of what single-minded, unselfish devotion to a great cause can accomplish. If only a few thousand such as she would in similar way give themselves to the peace cause, we should surely measure a far more rapid progress. Naturally, the Baroness quickly lost interest in mere nationalism and came to realize internationalism as the true aim of an enlightened age. It was the sense of the relationship of nations which made her say in what was probably her last personal letter to friends in this country:

"What a comfort it is to my soul to see how widely and how bravely Americans are protesting against war, even if

it is already begun. I do hope that the mediation of the South American republics will ward off the danger of a regular war between the States and Mexico. For the pacifists of Europe it would be a dreadful blow if the leaders of the New World should fall into the crimes and errors of the Old."

DERBY DAY

THE Derby, says a London writer in the *New York Globe*, is far more than a mere horse-race. It resembles Christmas pantomime, Yorkshire pudding, London fog, and the Magna Carta in being one of the bulwarks of the British nation. On Derby day the British Empire seems to surge back from those far-famed lands where the sun never sets and overflows upon Epsom Downs. It is true that the King is there, and that society in its newest bib-and-tuckerie is parading before the obliging photographer in the grandstand; it is true that there are horses that run and men who ride them, and doubtless to some these things seem of overwhelming importance; but they are really only the unimportant part that gets itself into the newspapers. The real Derby day is known to those thousands outside the grandstand—excursionists, bookies, tipsters, gipsies, hawkers, 'Arries and 'Arriets from London, tramps, beggars—flooding the Downs with a constantly ebbing and flowing tide of humanity in jocular mood. The writer remarks, commenting upon his own observations there:

No scene could be more typically British—or more absolutely un-American—than the one presented on Epsom Downs. The night before a swarm of gipsies and hedge-parsons and heaven knows what of English vagabondage had settled upon the Downs. I counted more than 100 gipsy vans, and then gave up from sheer weariness. I had not covered a tenth of the territory. An itinerant parson handed out tracts and took up collections. A score of tipsters, coatless, perspiring, worked valiantly in rings of simple-minded, interested people. Each had thrown his coat upon the ground, and as the half-crowns and shillings came in, each threw the money upon the coat. The most money went to the man who showed the most money. Success begets confidence. A penny tipster was kept so busy marking his cards that his agent fairly beat the people back.

Give your money to Penny Jack.
If you don't win, he'll give it back.

he chanted. Jockey Lashwood, once successful on the English turf, now wearing a bright blue jockey's costume and supporting himself by a crutch because of a missing leg, acted as interpreter for a master of patter who handed out Lashwood's tips at a shilling each.

Scores of bent and maimed and blind men and women felt their way through the crowds begging for pennies. Venders of "lovely cels—here's your sweet-jellied cels—all in jelly, oh!" prest their shivery delicacy upon persons who wouldn't eat an

Cutting Business Costs

...

IN the competitive battle of producing and distributing goods, efficiency is becoming more and more a necessity. In the practical application of efficiency methods, in the reduction of operating costs, few departments yield more readily to betterment than transportation. In the delivery of products to railway, steamship, or consumer many wastes have been stopped.

Motor truck traffic engineers have accomplished wonderful results in economies and increased capacities. In almost every branch of road or street work they are demonstrating high efficiency.

In other departments of service the commercial vehicle is accomplishing remarkable work. A Western railway in process of construction through a wild and mountainous region is being graded entirely with motor trucks. These vehicles are found to be much less expensive than temporary construction tracks. The Coast and Geodetic Survey, Department of Commerce, are now engaged in determining the astronomic latitude of triangulation stations between Barstow, Texas, and the Pacific Coast. Although many of these stations are on mountains 10,000 feet high, the party with its equipment is being transported by a 1½ ton motor truck at half what horse-drawn wagons would cost. In similar work with a motor truck in 1912 it was found that the party could cover 75 to 100 miles per day over indifferent roads including frequent stops.

If you are operating horse-drawn vehicles for your factory or store, it will pay you to investigate the motor truck. It is probable that the self-propelled vehicle will enable you to cut materially the costs of your transportation. Whether or not you think it will, the subject is worth investigating carefully.

To aid our subscribers in making such an investigation, we maintain a Motor Truck Department. Manufacturers and merchants in all important lines of business have consulted us about motor trucks during the past few years. It is the object of our Motor Truck Department to put our subscribers in touch with the best traffic experts, especially with those experts most suited to serve their special needs. Write us, stating your requirements in detail, and we shall be glad to advise you. This service is open to Literary Digest readers and is conducted without charge.

MOTOR TRUCK DEPARTMENT
The Literary Digest

eel even to oblige a friend. Extraordinarily dirty little gipsy children, wearing the cut-down or tied-up dresses of elders, danced for pennies through the throng. One imp of eight or nine years held a mouth-harp and a tambourine with one hand, while he tapped out a dance tune with a single drumstick held in the other. Gipsy women pestered lovers of quiet. A pair of young Cockneys, enjoyably pickled, put their noses together in Weber and Fields' fashion and sang:

H'all abo'; h'all abo'; h'all abo' for h'Alabam.

to the great delight of Americans, who threw them pennies.

Men and women alike stood before the scores of open-air bars, drinking their ale and whisky—and were alike quiet and well behaved. In all the Derby crowd I did not see one indisputably drunken man or woman. Concertina-playing seems to be the one really objectionable habit of the British workingman. Here and there one would discover a dense clump of patient, quiet people, peering interestedly over each other's shoulders. In the center of the ring, his nose about level with the knees of his auditors, sat a dusty minstrel squeezing away at his whining instrument. Concertina-playing may be a bad habit, but it is not a vice. Not one of the concertina specialists was begging for pennies. Burned-cork minstrels, sweating profusely through the black, entranced dolo. Clowns in dusty pierrot costumes worked through the crowds.

Everywhere fakers begged one to "ave a shy at the cokernuts." A parrotlike cry of "Oly chilly" rose at intervals in the crowd, but I could not trace it to its origin for some time. Then I found a small man with a great basin in his hands in which dill pickles swam in a dark mixture. Fried fish at a penny, well larded and dusted, offered sustenance to the inner men.

The Derby race-course, it appears, has rightly been called the worst in Europe. Not one person in fifty can see the start, not one in twenty has more than a glimpse of the back stretch, and the finish is visible to only 10 per cent. of the onlookers. But one is not allowed to forget that there is a race in progress, thanks to the energy and ingenuity of the many bookies. This creature of vicarious existence plies his trade earnestly and in great numbers on every side. Of him we learn:

In the pound-admission enclosure the big bookies accepted only sizable bets. In the open field, outside of the fences, one could get as little as a penny. Four shillings seemed to be the top bet. A shilling was accepted in every book.

Each book-maker had his womanfolk along. Sometimes they sat on top of the van in which these gipsylike minor gamblers move along the country lanes from meeting to meeting. Sometimes prosperity had visited the proprietor.

In that case he had an automobile, in which the ladies sat in Turkishlike seclusion, handing out sandwiches and glasses of ginger beer from time to time to the owner, who barked his prices diligently at the throng. Sometimes there had been a run of bad luck, and then the women, clad

Split a Human Hair into 12 Parts

THEN you will have some idea of the accuracy of the rollers in this big Timken Bearing—for no one roller in any Timken Bearing differs in size from the other rollers in that bearing by so much as one-quarter of the one-thousandth part of an inch.

There is no undersize roller to shirk its full share of load and end-thrust. Nor any oversize roller to bear more than its share of load and wear.

Because the Timken machine shown in the picture automatically sorts the rollers into lots that differ only by that 12th of a human hair.

Around the disc of the machine are little trap doors, one for each exact size, operated electrically. Each roller opens its own door and drops into a canister which is then sealed, and is opened

only on the bench where the parts for bearings of that exact size are put together.

After intense care in manufacture and scores of testings, gaugings and inspections, all Timken rollers come before the court of last appeal, the man who drives the motor car.

Even without such care in the making of every part the Timken Bearing would still last longer than others—give better service—save more money—because of the unique principles of its design.

These gaugings, inspections, testings, add still longer life, still greater satisfaction and more saving of power for the car owner.

Get more inside information about the motor car by writing for the Timken Primers No. C-3 on Bearings, No. C-4 on Axles. Mailed free, postpaid, from either Timken Company.

in the soiled remains of what had been silken finery, sat patiently on the soap-boxes they had carried on their backs the night before the Derby day.

The book-makers themselves were of a different sort than we are accustomed to in the States. Each had his little stand and a flaring placard in colors.

"Politeness and sure pay" was the sign over the book of "The Lady Penciler." Harry Clifford's placards laid stress upon that "sure-pay" feature. So did that of Baron and Ned Heywood, and the "Three Champions," whose names I have unfortunately forgotten. It was quite obvious that "sure pay" has not been an invariable feature of play upon the Derby. Later in the afternoon proof of this surmise was afforded:

From the top of our motor-bus we could see across an intervening valley to a hill, perhaps a quarter of a mile away. Every foot of ground had a man or woman standing on it. By and by we could see a current of movement begin in the crowd, as one sometimes sees a little bunch of steers work crosswise through the herd. Through the glasses we could see policemen trying to defend one man from others who were striking at him. Later we found he was a defaulting book-maker. When he could not pay, his creditors had sacked and finally set fire to his automobile. Those who were too late for this amusement hammered the "welsher."

THE LOSS OF THE "KARLUK"

THE reader who has entertained the thought that, with the discovery of the poles, all the romance of arctic and antarctic exploration is dead, may reassure himself with the news that has lately come from out the North of the fate of the *Karluk* and its crew. Mere discovery of the ends of the earth has not ended polar exploration. Too little is known regarding these regions to permit scientists and explorers to be content as yet. The Stefansson expedition sent out by the Canadian Government, of which the *Karluk* under Captain "Bob" Bartlett, was a part, was an expedition of exploration rather than discovery. Last September the party separated, Stefansson leaving the *Karluk* to hunt caribou ashore near the mouth of the Mackenzie River. The *Karluk*, in the grip of the ice off Point Barrow, near the mouth of the Colville River, remained but twenty-four hours after the departure of the land party. Then a strong east wind caught the floe of which she was a part and swept it off to the westward. According to Captain Bartlett's own account, published in the *New York Times*, the ship was in sight of land from September 23 to October 3. After that its position could only be judged by soundings, by what observations could be managed, and the fact that the general course of the ice-pack was northwest. In almost hourly expectation of a serious break-up of the ice, the party lived partly on the ice and partly on

The Handy Inexpensive Cleaning Device for Every Day Use

IN COTTAGE or palace, no matter what other methods are employed for sweeping carpets or rugs, there still remains the every day necessity for a good, hand propelled carpet sweeper that promptly and efficiently gathers up all dirt and litter without noise, dust or effort.

BISSELL'S

"Cyco" BALL BEARING

the ship, to be ready instantly for whatever might come. In this fashion November and December were passed. Christmas and New Year's day came, and were celebrated heartily with games and "banquets" on the ice. Shortly after this the ship became stationary, and, with the greatly increased pressure upon the craft from the crowding ice, the end was not long in coming. Captain Bartlett describes it as follows:

At 3 o'clock on the morning of January 10 we were awakened from sleep by a sharp report like that of a gun. The ship was trembling and quivering. Going on deck, we found that the ice had opened from the stem of the vessel, running in a westerly direction about 100 yards, where the crack had closed. Soon the ice-sheet started to the side and began moving in an easterly direction, slowly leaving the ship stationary with ice on her port side.

There was no pressure until 7:30 o'clock in the evening. The wind, which in the early part of the day had been light to the north, increased as the day wore on to a strong gale, with blinding snow. At this time a corner of the ice-sheet struck the ship abreast of the engine-room, breaking several of her timber planks. The pressure was not great, but water began to pour into the engine-room at once.

Realizing that the *Karluk* was doomed, we immediately began placing on the ice pemican which had been taken from cases sewn in canvas; also milk, clothing, ammunition, arms, oil, etc. The night was intensely dark. No moon, no stars were visible. The air was filled with driving snow, flying before the wind at fully forty miles an hour. Fortunately, altho the off-side ice continued moving slowly eastward, the pressure had largely lessened by the meeting of the two points astern. If we had received the full pressure of the ice, it would have cut off the bottom of the ship clean and complete.

The men aboard worked heroically, doing as much in one hour as ordinarily in six. Ten thousand pounds of pemican and other provisions were placed on the ice. The ice around the ship was badly broken, but notwithstanding the dangerous condition in the darkness, the men began hauling supplies on sledges to the solid ice-pan a hundred yards away, where loomed the house and the other articles we had previously placed there. Into the house we sent an Eskimo woman with her baby, telling her to make a fire in the stove, in preparation for our arrival and settling there.

We could have saved practically everything from the ship. Realizing, however, the necessities of arctic rations, and that pemican, biscuit, tea, and milk were sufficient, we left the delicacies aboard the ship. Of our personal belongings, very few were saved.

At 10:45 o'clock that night eleven feet of water had got into the engine-room. The ice was holding the ship up for a time, and little water came in. By midnight all the supplies had been placed on solid ice. The coffee-kettle was boiling constantly in the galley.

At this time I sent the men to the shelter house. I remained on the ship until it

Tarvia

Preserves Roads
Prevents Dust—

Mandell Estate,
Hamilton, Mass.
Tarvia-macadam.

Dust costs money—

DUSTY roads are expensive, for the presence of dust means that costly road material is being cast away to the four winds of heaven. Sooner or later it must be replaced at great expense.

Ordinary waterbound macadam is not sufficiently bonded to resist modern traffic. A stronger binder is needed. That is why modern engineers are turning to Tarvia—a coal tar product of great adhesive power, which is used to cement the stone together.

Under heavy loads a tarviated road is somewhat elastic—not brittle—and traffic wears it smoother. The Tarvia also has the effect of making the road surface waterproof and preventing ravelling by rain torrents.

The addition of Tarvia to the macadam costs so little that it is more than balanced by the saving in maintenance expense. The road, instead of being torn up by traffic and blown away by the winds, stays where it is put and the annual repair bill is reduced materially.

Progressive engineers in hundreds of towns are using Tarvia regularly.

Tarvia booklets on request. Address our nearest office.

sank at 4:30 o'clock on the afternoon of
January 11.

The *Karluk* sank in thirty-eight fathoms
of water. The ice surrounding the ship
had kept her afloat heretofore, but when she
was full of water the bow sank first. As
the water began pouring down the main
hatch I jumped from the rail to the ice and
saw the *Karluk* go down.

The weather had now moderated con-
siderably, and much light began to show
to the westward. I stood on the ice,
surrounded by the officers and crew
of the expedition, who lifted their hats,
saying, one and all:

"Adios, *Karluk*!"

We watched the final plunge, with the
blue ensign at her main topmast cutting
the water as she disappeared beneath.

At this spot, which they named Camp
Shipwreck, the party remained for a month.
Then, scouting parties returning with news
of land not far away—Herald and Wrangel
Islands—the party set out. The Captain
sketches very briefly the succeeding ad-
ventures of the party and of himself
alone. For a personal account of what
must have been tremendous hardship and
braving of danger and death, its brevity
is remarkable:

In the latter part of the month all left
camp for land, picking up supplies along the
trail and reaching Wrangel Island on
February 13, landing on an ice spit there.

Here we found plenty of driftwood, and
the Eskimo woman prepared fire for us.
She carried along her baby and the ship's
cat, which had also been saved when we
landed.

On February 17, Monroe and two men
left for Camp Shipwreck, in order to fetch
additional supplies. We now had with us
eighty-six days' provisions for each man of
the party. The eight of our men who had
previously left Camp Shipwreck had not
yet arrived at Wrangel Island at that
time, but we were expecting them daily.

Realizing the necessity of immediate re-
lief for the men on Wrangel Island, I left on
February 18 for the Siberian shore, 100
miles away, accompanied by Eskimos and
Perry, with a sledge and seven dogs. Four
bears had been shot on the trail on our way
to Wrangel, and plenty of bear signs near
the island showed that there was a possi-
bility of an abundance of game.

We reached the mainland, fifty miles
west of Cape North. Gale after gale,
sweeping down upon us and moving the
ice, had delayed us in crossing Long Sound,
and when we reached the mainland only
four of our dogs had survived the trip. We
met with very kind treatment at the hands
of the natives along the coast to East Cape,
where we encountered Baron Kleist. He
greeted us warmly and with great kindness
offered us the hospitality of his house at
Emma Harbor, the chances being greater
that we would meet a whaler there than
elsewhere.

I arrived at Emma Harbor in the middle
of May, when Captain Peterson, of the
whaler *Herman*, hearing of my plight from
the natives, voluntarily gave up his whal-
ing and trading trip and called for me at
Emma Harbor. From there we started
immediately for the American coast. There
was too much ice to permit of our landing
at Nome, so we came on to St. Michael.

Sanitation? Yes! read this

Captain Peterson is certainly to be commended for his kindness and for his prompt action, as well as for the steps he has taken to ease the minds of our friends in America and get through information to the Canadian Government, so that relief may be sent to the crew now marooned on Wrangel Island.

HARVESTING 8,000,000 KANSAS ACRES

WHILE the bumper and superbumper wheat crop in the West is doing its best to dispel the nation's depression in business lines, it is at the same time striving to cure all individual "out-of-works" with insistent and desperate demands for more laborers for the coming harvest. A report from Kansas, given to the New York *Evening Post*, says that the need in that one State includes 42,000 extra men, 6,300 extra teams, and 2,300 cooks. In explanation the account continues:

The average county in the wheat section has a small population. The farms are large, the towns small. Take Pawnee County, for instance, out in southwest Kansas. It has a population of 8,500, or 1,700 families. There are 275,000 acres of wheat to cut and thresh. If every available man in the county could be put at the job, the work would not be done during the short period during which wheat must be handled. Once ripe, the heads shell freely, and the grain must be garnered. As the present crop approached its splendid promise, with what amounts to two crops in one, the farmers began to call for help. This has been developed into a system. With a State Labor Bureau in correspondence with county officers, city clerks, farmers, and township officers, the needs are tabulated. Even the fraternal orders have taken a hand, and have sent back to Indiana, Ohio, and other States to fraternities to send men West. Hundreds of college boys have been enlisted and come to the harvest fields for the experience and to earn vacation money.

The railroads are cooperating, either willingly in acting as agents for the farmers, or willy-nilly as the furnishers of under-car berths and side-door Pullmans to those who do not stop for the formality of ticket-purchasing. In the latter case the railroad, recognizing the extremity, issues orders for lenient treatment of the "deadheads," and when, as not seldom happens, these number sixty or seventy to a single train, the train crew is strongly minded to obey the order. As to the work waiting for these men, we read:

There is no eight-hour limit—unless it be the "eight hours before dinner and eight hours after dinner," that is a current phrase. The 40,000 men in Kansas then will draw over \$100,000 a day for labor alone, to say nothing of the expense in feeding them. Most of this money will be taken out of the State, for, except what is spent in traveling, the harvesters have no

INVESTMENTS AND FINANCE

RAILROAD MEN LAID OFF

VARIOUS statements from time to time have been made as to the number of railroad employees out of work in June, 1914. One of the highest estimates was to the effect that 500,000 railroad men west of the Mississippi River were unemployed. Believing that statement to be a "gross exaggeration," *The Wall Street Journal* made a canvass among the presidents of some forty important railroad systems in all parts of the country, the result being that, instead of finding 500,000 men out of work beyond the Mississippi, not more than half that number were found out of work in the entire country. That estimate included, not only trainmen, station help, engineering assistants, and clerks, but construction forces. *The Journal's* returns were obtained from thirty-four important roads, operating well over half the steam mileage of the country. Following is the table of prints of figures for this year compared with those for 1913:

	1913	1914	Changes
Number of roads	34	34	
Mileage operated	136,951	135,930 Inc.	1,021
Number of employees	1,021,336	1,142,803 Dec.	119,557
No. emp. per mile	7.47	8.41 Dec.	0.93

It will be seen from these figures that the thirty-four roads from which the figures were obtained report 119,557 fewer men employed, or a decrease of about ten per cent, since last year. With these figures applied to the entire country, which has a mileage of approximately double the mileage of the thirty-four roads, the total of unemployed railway men for 1914 would be 232,500, which again is approximately a decline of ten per cent. It is to be noted that among the thirty-four roads making returns, three important systems—the Great Northern, Union Pacific, and Southern Pacific—are not included. The Great Northern is now employing a few more men than it did last year, while the Union Pacific and Southern Pacific are known to have not greatly reduced their forces. Of the Pennsylvania it is to be remarked that in its reported reduction of 38,000 men, some considerable part of the 38,000 represent working time that had been taken from men who were actually at work, but on shorter hours.

THE NEXT STEPS IN THE BANKING SYSTEM

President Wilson having sent to the Senate on Monday, June 15, his nominations of the five appointive members of the Federal Reserve Board, "the constructive machinery of the new banking system can now begin to move," says the *New York Evening Post*. These nominations, of course, have first to be confirmed by the Senate, but, with this done, the next successive steps will be:

"Designation of a governor from the five appointees; organization of the Board; its selection of one-third of the directors for each of the twelve regional banks; the choice, by the member banks of each district, of the six other members on the Board of its reserve bank; organization of the reserve bank boards; their arrangement for headquarters and for office staffs; the calling for the subscription, by member banks in the district, to the stock of its reserve bank. This will pave the way to the reduction in reserve requirements at every individual member bank; the fixing of each regional bank's official discount rate, the beginning of rediscount of commercial paper,

and the issue, on application by the banks, of the new Federal Reserve notes.

"Whether all this can be accomplished in time for the early autumn 'harvest movement' of currency and credits is an uncertain question. Complicated experiments of the sort are apt to be slow in getting started. In this case, ten or twelve weeks constitute a period full short for the numerous successive processes just recited, each of which must await the completion of others.

"Two practically interesting questions are: Will the facilities of the new system be imperatively needed in this coming harvest season, and are they needed to control the present gold export movement? To the first question, in view of the dull trade, inactive stock exchanges, and large bank surpluses, the answer is, No. To the second, the answer is that, if the system were now in operation, in the face of the large gold exports, the New York regional bank would probably already have put its official rediscount rate above the open market, with a view to the gradual control of the foreign exchanges."

CHANGES UNDER THE NEW TARIFF

Figures prepared by the Department of Commerce in Washington for the present fiscal year to April 30—that is, for ten months of this fiscal year ending June 30—show what has been the actual working of the new tariff law when in practical operation. The figures are summarized in a letter to *The Journal of Commerce*, whose correspondent points out that they "were not altogether satisfactory," because the new tariff did not become operative until October 4, so that three of these months—July, August, and September—are months during which the country was living under the old tariff. The adoption of the new tariff had become evident, however, by July 1, and hence "the movement of goods during the three months in question was directly influenced by the new rates, while the months immediately after the adoption of the tariff were a period during which goods which had been stored came in more freely, owing to their prompt release." He believes that "on the whole the comparison is reasonably fair" and that it "throws considerable light on the situation under the new tariff." He calls special attention to the figures affecting foodstuffs. Here the changes that have taken place are notable. Following is a table:

	(000 Omitted)	
	1913	1914
Corn	2,285	2,457
Wheat	1,068	1,043
Rice, cleaned	535	1,043
Total breadstuffs	13,020	30,683
Fresh meats		10,550
Bacon and hams		1,150
Cheese and substitutes	7,683	9,302
Total meat and dairy products	12,037	28,185
Olive-oil (edible)	5,815	6,444
Cocoa	14,672	18,064

The correspondent remarks that the articles in this table have been selected at random without reference to the duties paid under the old and the new tariff, his object being to show that "some staple food products, previously not imported at all or imported in relatively small quantities, have increased under the present tariff arrangement." He believes these items are "reasonably representative of the whole." The important thing about them is that they "show the food supply, made available under the tariff, has very greatly en-

larged, and that, for whatever reason, the dependence of the United States exclusively on its own domestic agricultural resources has been considerably relieved, resort being now had to many other fields of production that were previously not employed as a source of support." Turning to manufactured goods, the correspondent finds that the movement has been quite different; in fact, that it is "full of very curious interest," and that in "many lines importations have increased only very moderately, or not at all, under the changed conditions of to-day." Following is a table showing importations under the old and new rates for ten months of this year and last:

(000 Omitted)		
	1913	1914
Iron ore.....	\$5,706	\$2,518
Pig iron.....	5,164	1,361
Structural iron.....	190	312
Machinery.....	6,533	4,475
Tinplate.....	238	1,287
Total iron and steel and manufactures.....	27,162	26,119
Total lead.....	3,011	1,653
Total leather and manufactures.....	16,215	21,592
Total paper.....	5,715	5,722
Printing paper.....	4,619	8,978
Total wool.....	32,555	40,702
Carpet (woolen).....	4,012	3,721
Ureos goods.....	2,884	2,376
Total manufactures of wool.....	14,026	25,802
Total manufactures of cotton.....	56,263	61,773

One of the curious things pointed out is that "in some lines of manufacture, where materials were severely cut in the tariff, there has been very little increase in importations." This is notably true in iron and steel products. In woolen cloths, "the movement was irregular, some lines increasing materially, while others failed to do so." In the aggregate, the increase in manufactured woolen goods amounted to nearly twelve million dollars, but, on the other hand, "the growth in unmanufactured wools appears to have been considerably less than expected." The same is true of some other commodities on which the tariff was cut; they failed to show any increase.

A Boston correspondent of *The Journal of Commerce*, writing on June 22, presented some interesting data as to present conditions in the wool and woolen business of New England. While not by any means "a runaway market," conditions for wool "have been maintained on a very firm basis," and with manufacturers, "machinery as a whole is fairly well employed." Figures summarizing returns from mills representing "a very large proportion of the machinery of the entire country" show that nearly 82 per cent. of the worsted spinning spindles "are active now as compared with 75 per cent. three months ago, and 74 per cent. six months ago." Woolen-mill returns, however, "show a greater proportion of idle machinery than the worsted end of the business."

THE DISTRIBUTION OF WEALTH WIDER THAN SUPPOSED

The writer for *The Wall Street Journal* who signs the name "Holland" understands that collections of the income tax are showing a wider distribution of wealth in this country than has generally been supposed. Following are some of his comments:

"Many of the very wealthy men have no idea what their actual net income is. The president of one of the largest of the American industrial organizations said recently that he thought he knew reasonably well what his income was and had been for a long period of years. But when he set to work to establish the income upon which by law a Federal tax could be imposed he discovered that he practically had

Fishermen! A Wonderful New Fish Catching Bait
USE ONE LIVE MINNOW ALL DAY
This is the new, live minnow bait that is making such a great record for itself, that is the talk of the country; exceeds all other artificial bait. Strong, clear, magnifying glass tube, holding a live minnow. Wonderful power of attracting fish lies in the fact that, when in water, the glass apparently disappears, leaving minnow clearly visible and greatly magnified. Minnow has fresh water; stays alive; never exhausted; can be used all day. Experienced fishermen tell us that it is the most wonderful bait they have ever used. **Detroit Glass Minnow Tube Co., 67 Lafayette Blvd. W., Detroit, Mich.**

GRAND CANYON OF THE YELLOWSTONE

no income. The exemptions and the obligations of which the income tax takes notice and for which it gives allowance actually reduced his income so that he had only a small amount to pay.

Early in March there prevailed a strong suspicion that the presumably very large incomes of which citizens were in possession would be found to be far below the amount estimated by those who drafted the income-tax bill. Furthermore, the belief constantly gained ground that, relatively speaking, much the greater part of the tax received by the income-tax collector would be found to have come from that great body of American citizens who were, last year, in possession of moderately small incomes, but in excess of the amount exempted by law by anywhere from three to seven or eight thousand dollars. Incomes of this kind are readily and accurately ascertainable. Many of them are obtained by salaries. The possessors of them do not as a general thing incur obligations which could lawfully be deducted from incomes.

The main feature, however, to be discovered in the official statement will soon tell. The aggregate amount of taxes collected upon incomes will very likely lead to the disclosure that there is a wider distribution of wealth than has been commonly presumed to be the case and that swollen or undue incomes are confined to very few persons.

RAILWAY DIVIDENDS SUSPENDED

During the fourteen months to June 20, ten railroads that rank as important suspended payment of dividends and three others reduced the amount of their payments. The last was the St. Louis Southwestern, which omitted its dividend on the preferred stock. Following is a table showing the omissions and reductions in dividends in these fourteen months:

Road	Former Rate	Present Rate	Former Payment	Present Payment
Missouri, Kansas & T. pf. 4%			\$5,200,000	
St. L. Southwestern pf. 4%			795,716	
Col. Southern 1st pf. 4%			310,000	
Col. Southern 2d pf. 4%			340,000	
Norfolk Southern 2%			320,000	
Panhandle pf. 5%	4%		1,373,906	\$1,000,125
Panhandle com. 5%	3%		1,558,657	1,115,191
Nickle Plate com. 4%			560,000	
New Haven 6%			10,801,020	
Boston & Maine pf. 6%			195,968	
Boston & Maine com. 4%			1,560,215	
St. L. & San Fr. 1st pf. 4%			100,738	
Big Four pf. 5%			500,000	
Nat'l Ryw Mex. 1st pf. 4%			2,306,160	
Chesapeake & Ohio 5%	4%		3,130,630	2,511,704
Illinois Central 7%	5%		7,650,720	5,464,800
Total			\$32,475,096	\$10,100,820

On June 24 the Panhandle omitted its quarterly dividend on the common stock and reduced the amount on the preferred to one-half of one per cent.

A Technical Term. "You do not speak to him?"

"No," replied the scholarly girl. "When I passed him I gave him the geological survey."

"The geological survey!"

"Yes. What is commonly known as the stony stare."—*Washington Star*.

Taken At His Word. A suburban minister, during his discourse one Sunday morning, said: "In each blade of grass there is a sermon." The following day one of his flock discovered the good man pushing a lawn-mower about, and paused to say: "Well, parson, I'm glad to see you engaged in cutting your sermons short."—*Philadelphia Public Ledger*.

Bountiful Crops
 and
Beautiful Grounds
 Are Always Assured by Using
Campbell Automatic Irrigation Sprinklers

WHY LOSE YOUR CROPS OR LET YOUR GROUNDS BURN UP, WHEN YOU CAN GET RAIN WHEN YOU WANT IT AND LIKE YOU WANT IT, BY USING THIS WONDERFUL INVENTION?

Placed on 3/4-inch stand pipes 7 feet high, attached to an underground pipe system, and 4 feet apart (requiring about 22 to the acre), these sprinklers, with only 20 pounds pressure, will distribute perfectly and evenly an inch of water in the form of fine rain in four hours. Price \$3.00 each, postpaid, or \$30.00 per dozen, F. O. B. Jacksonville.

SPECIAL INTRODUCTORY OFFER—Send us money order for \$1.50, mentioning this publication, and we will mail you a sample sprinkler and our booklet, "MODERN IRRIGATION." One sprinkler only to each applicant at this price. Offer expires October 1, 1914.

PERSONAL GLIMPSES

(Continued from page 37)

expense personally. Likewise, it is all currency, for the farmer finds his checks of little value to strangers. One tried it, and was met with the question: "How am I going to get the money? No one knows me in this State." So the banks must furnish currency, and they are making large drafts on their reserve agents to meet this need.

The class of men coming West for the harvest is far above that of the average tramp. It includes workmen from the lumber camps, factory men seeking a bit of outdoor work with good wages, college boys, and small farmers from adjoining States. The employment agencies handle the larger portion out of Kansas City, and they go in groups to the little Western towns. Farmers in automobiles, wagons, and buggies wait for them at the stations, and cook-shacks are ready in the fields to serve meals. While on the face of it, as seen in newspaper reports, the handling of the army of men appears a haphazard affair, really it is systematized through long years of wheat-raising, and the workers are distributed with promptness.

The men are for the most part unfamiliar with harvest work, but they are given the routine hand labor, while experienced men handle the binders and headers. In addition to the imported labor all available local help is busy, and the towns are for the time deserted of able-bodied laborers.

The gathering of 8,000,000 acres of wheat in Kansas, for instance, is not all done at one time. The work begins on the southern border, and three or four weeks elapse before the army of workers reaches the Nebraska line. The wheat ripens slowly, the lower latitudes first turning yellow. This means economy of time and effort, for the men who have begun this week will go with the ripening of the wheat northward until they reach the northern limit, thus getting a month or more of steady work. The peculiarity of this year's wheat is that the straw is heavy and binders will be used more freely than in most years.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. The LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

THE SPICE OF LIFE

Try It.—A—"Time flies."
B—"I can't. They're too quick for me."—*Christian Register*.

Maniacal.—OWNER OF CAR—"Why did you leave your last place?"
CHAUFFEUR—"The guy I worked for went crazy. Started shingling his house when his car needed new tires."—*Puck*.

Happy Mortal.—FIRST TRAVELER—"Why is that pompous fellow strutting about so absurdly?"
SECOND TRAVELER—"He found some ham in his railway sandwich."—*Sacred Heart Review*.

Not the Same.—MRS. EXE—"I'm going down-town this morning."
EXE—"Shopping, my dear?"
MRS. EXE—"No, I haven't time for that; just to buy some things that I need."—*Boston Transcript*.

Courtesy Returned.—Mr. Lloyd-George, after distributing prizes at a school, said he hoped the children would have a good record when he came again. Thereupon they rose and with one accord said, "Same to you, sir."—*Argonaut*.

Strain Alleviated.—"Are you going to Europe soon?" asked one New York girl.
"No," replied the other. "Now that pa is out of local politics and high finance, I don't think we'll have to go to Europe so often."—*Washington Star*.

Circumstances Alter Cases.—LAWYER—"Madam, I'm sorry to say that I don't see the ghost of a chance for you to break your uncle's will."

CLIENT—"Well, to be frank with you, I don't see the ghost of a chance to pay you for what you've already done if the will isn't broken."

LAWYER—"H'm! On second thought, madam, I think the will can be broken."—*Boston Transcript*.

A Patriotic Suggestion.—In the following advertisement clipped from a recent issue of the *London Times* is a chance to get an island cheap:

Seion of Noble House has ISLAND for SALE. Wild scenery and precipitous cliffs; single gun on adjacent mainland would dominate only possible place of disembarkation. Ideal for colonization by Suffragettes. The advertiser is Conservative he would gladly come to bargain terms with present government or high-minded philanthropist with country's weal at heart.—Box C-469, *The Times*.

Pass the Vinegar.—A gaily gowned and garrulous house-maid sat down by an acquaintance on a trolley and at once said: "Hello, Sadie! Where you livin' now?"
"Nowheres," was the reply.
"How's that?"
"I'm married."
"You ain't!"
"Sure thing. Look at that!"

She held up her ungloved left hand in triumph; for there on the third finger was a shining new wedding-ring.

Staring at it in wonder for a moment, the other girl asked, "Well, who got stung?"—*Associated Sunday Magazines*.

Probably Not.—"They say those Mexican peons are absolutely useless."

"Yes; I don't believe they're worth the paper they're printed on."—*Buffalo Express*.

Division of Labor.—CITY BOARDER—"I suppose you hatch all these chickens yourself?"

FARMER—"No; we've got hens here for that purpose."—*Judge*.

Close.—"An' you were at MacDougal's last night—what kind o' mahn is he?"

"Laebral wi' his whisky—but the quality o' it's that indeefrent I verra near left some!"—*Boston Transcript*.

Informing Him.—SHE—"If you insist upon knowing, there are two reasons why I can't marry you."

HE—"And they are?"

SHE—"Yourself and another man."—*Judge*.

The Idea.—THE CADDIE-MASTER (to a green-keeper, who has had a mishap with a load of mold)—"Ere, stow that lang-widge. Wot d'yer mean by it—heavin' yerself as if yer was a full-blown member of the club?"—*Sketch*.

Spare the Rod.—LITTLE CLARENCE—"Pa, that man going yonder can't hear it thunder."

MR. CALLIPERS—"Is he deaf?"

LITTLE CLARENCE—"No, sir; it isn't thundering."—*Christian Register*.

Horrible.—WILLIS—"I am organizing a regiment for service in this war that will make them all sit up and take notice."

GILLIS—"Good men, eh?"

WILLIS—"Regular blood-curdlers. It is composed entirely of men who have been stung on Mexican mining schemes."—*Puck*.

Catty.—GLADYS—Jack really has a soft spot in his heart for me.

MURIEL—"How do you know?"

GLADYS—"He says he is always thinking of me."

MURIEL—"Why, a man doesn't think with his heart. The soft spot must be in his head."—*Judge*.

Well Grazed.—Robbie's grandfather was a veteran of the Civil War, and in talking to his little grandson about the battles he said: "Nearly a generation and a half ago, Robbie, my head was grazed by a bullet in the battle of Chickamauga."

Robbie looked at the bald pate of his grandsire attentively and said: "Not much grazing there now, is there?"—*Pittsburg Chronicle-Telegraph*.

It Worked.—A young lady took down the receiver and discovered that the telephone was in use. "I just put on a pan of beans for dinner," she heard one woman complacently informing another.

She hung up the receiver, and waited. Three times she waited, and then, exasperated, she broke into the conversation.

"Madam, I smell your beans burning," she announced crisply. A horrified scream greeted the remark, and the young lady was able to put in her call.—*Christian Endeavor World*.

COMPANY**

Trenton, New Jersey, U.S.A.

CURRENT EVENTS

Mexico

June 19.—Following a visit at the White House of the Argentine Minister Nuon, President Wilson declares his refusal to modify his decision that a pronounced Constitutionalist must be named as Provisional President of Mexico.

June 22.—Formal negotiations at Niagara Falls are declared in recess, pending the hoped-for informal conference of the Carranza, Huerta, and American delegates.

June 23.—Carranza delegates, passing through New Orleans, are said to refuse to consider a meeting with Huerta representatives.

June 24.—A protocol of the agreements reached so far between the United States and Mexico is signed by the Niagara mediators. In one clause the United States agrees not to claim a war indemnity or other international satisfaction from Mexico. Mexico's internal troubles are left to be settled by mediators representing Huerta and the Constitutionals. A dispatch from Torreon reports the capture of Zacatecas by the rebels, with a loss of over 2,000.

Foreign

June 18.—Premier Asquith, alarmed by a threatened suffragette hunger strike on the steps of the House of Commons, agrees to receive a deputation.

June 19.—Twenty-five lawyers who protested against the Bells trial are sentenced to prison in Russia.

June 20.—As the result of a collision between the Austrian military dirigible *Koertling*, of the *Parseval* type, and a Farman biplane nine men are killed. The aircraft were engaged in a mimic battle, as part of the Austrian Army maneuvers.

June 21.—King George confers an earldom on Lord Kitchener.

Baroness von Suttner, famous peace advocate and winner of the Nobel Peace Prize, dies in Vienna.

June 22.—Thousands die in China, in heavy floods in the West River region.

June 24.—Paris postmen, who have been on strike and who barricaded themselves in the General Post Office, surrender because of hunger and go back to their work.

Domestic

WASHINGTON

June 19.—The amount of money in the banks of the nation that lies available for farm-land loans is estimated at \$500,000,000.

June 20.—George T. Marye, Jr., of San Francisco, is selected for the post of Ambassador to Russia.

The President makes public extracts from letters received from business men in which he finds his theory of "psychological" depression upheld.

June 22.—The Supreme Court, in its ruling in the intermountain rate case, declares the "long and short haul" clause of the Commerce Act constitutional and confirms the authority of the Interstate Commerce Commission to fix "blanket" or "zone" rates.

It also rules that oil pipe-lines are common carriers, and subject to regulation by the Interstate Commerce Commission.

Among other decisions the Supreme Court confirms to transcontinental railroads the title to oil lands to the value of \$700,000,000, but reprimands the Government for allowing the railroads to establish a right to the same.

June 23.—The House approves the proposal to sell the Idaho and Mississippi to Greece, and to build with the proceeds a superdreadnought.

GENERAL

June 18.—Ex-Senator Frank Hiscock dies suddenly in Syracuse, N. Y.

June 23.—The Curtiss seaplane *America*, intended for transatlantic flight, is successfully maneuvered at Keuka Lake, N. Y., in its first ascent.

When seceding union miners storm the union headquarters at Butte, Montana, armed disputes shoot and kill one miner and wound two bystanders.

June 24.—Colonel Roosevelt arrives in New York on his return from Spain.

An unprecedented storm throughout Wisconsin takes a toll of twelve lives, over fifty people injured, and a property loss estimated at \$1,000,000, exclusive of the damage to growing crops.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall's New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"E. T. R." Westminster, Md.—"Can you give me some information concerning the legend of the 'Three Monkeys,' small images of which are offered for sale in our oriental stores?"

The legend is Japanese. The three monkeys are the *Koshin* and are the attendants of *Sarada-hiko*, the god of the road. Each monkey symbolizes a maxim in the Shinto cult. The maxim for the one whose eyes are blindfolded is "See no evil"; that for the one whose ears are closed is "Hear no evil"; and that for the one whose lips are sealed is "Speak no evil." In Japanese the word *Koshin* designates a minister of state or officer of merit. The word *Sarada-hiko* is a combination of the Japanese *Saru*, "ape"; *da*, a contraction of *de*, "by," and *aru*, "be"; and *hiko*, a title of honor, added to the name of a god or man, which may mean "child of the sun," from *hi*, "sun," and *ko*, "child." *Ko* has many other meanings, such as excellence, filial piety, obedience, handsome, exalted, etc.

"W. H. C." Sacramento, Cal.—"1. Please give a brief biographical sketch of *Joan of Arc*, also pronunciation of the name. 2. Pronunciation of the word or words *Hech Hech*. 3. Pronunciation of the word *bagilli*. 4. Has the word *won't*, in the sense of *would not* or *will not*, any grammatical standing?"

1. Joan of Arc was born January 6, 1412, in the village of Domremy, Vosges department, France. She succeeded in convincing the Dauphin that she had received a divine mission to deliver her country from the English, assumed male attire, and, donning armor, marched at the head of 6,000 men to the relief of Orleans. On April 20, 1429, she threw herself into the city then besieged by the English, and after fighting for fifteen days, raised the siege, and compelled the enemy to retreat. Thus she rekindled the national ardor, the French spirit awoke, and within a week the English were driven from the principal positions they held on the Loire. In July Joan led the Dauphin to Reims, where he was crowned (July 17). She continued to accompany the French Army, being present in many engagements, and in 1430 threw herself into Compiègne, then being besieged by the Burgundians. In a sally made May 24, she was taken prisoner and sold by a Burgundian officer, John of Luxembourg, to the English for 10,000 livres. Taken to Rouen, the headquarters of the English, she was delivered to the Inquisition at the instance of the University of Paris, and after a long trial, disgraced by every form of shameful brutality, she was condemned to be burned at the stake. Joan of Arc received her martyr's crown May 30, 1431, when she went to her doom. Her name is pronounced: *jo'ən* ("o" as in *no* and "a" as in *sofa*), of (ov), *Ark* (as if spelled *ark*). 2. *hech hech'i* (ch as in *chin*). 3. *ba-sil'oi* (first "a" as in *sofa* and "al" as in *afale*). 4. Yes, it is sanctioned by good usage.

"L. K." Brooklyn, N. Y.—"Which is correct: 'To-morrow will be Sunday,' or 'To-morrow is Sunday'?"

Both are right. "To-morrow will be Sunday," or "To-morrow is Sunday." The standard of usage in matters of this kind is established by authors who are acknowledged writers of good English, and there are supporters of both forms.

"M. R." Rochester, N. Y.—"Kindly advise me as to the correctness of the use of the word *boughten*."

The word "*boughten*" is a localism used to distinguish goods purchased in a store or a shop from those that are home-made. Inasmuch as the shorter word—*bought*—expresses the idea correctly and without ambiguity, the Lexicographer sees no reason for perpetuating the longer and more confusing "*boughten*." The imperfect and past participle of *buy* is *bought*, not *boughten*. Why not use it?

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

TOPICS OF THE DAY

Copyrighted by the American Press Association

SARAJEVO, THE BOSNIAN CAPITAL, SCENE OF THE ASSASSINATION.

AFTER ASSASSINATION—WHAT?

THE FIRST SENSATIONS of horror roused by the assassination of Archduke Francis Ferdinand, heir to Austria's throne, and of his consort, the Duchess of Hohenberg, at Sarajevo, Bosnia, are quickly followed in the minds of many editors by a necessary consideration of what may be the consequences of this "shocking and futile crime." They recall the Archduke as a man of "vast ambitions," whose aim, as the *Hartford Times* says, "was to make Austria a commanding Power among the nations of Europe, and a headstrong nature made him reckless of the methods he pursued for that end." His dream, cable dispatches inform us, was what is known in Austria-Hungary as "trialism." This, according to a London correspondent of the *New York Times*, means a reconstitution of the Empire "with three instead of two populations, one of them predominantly Slav, just as one is now predominantly German and the other predominantly Magyar." What the same writer describes as "a necessary corollary of trialism" is the inclusion of the Slavonic races of the Balkans to increase the Slav element, and he notes as a curious example of the irony of fate the fact that the Archduke was struck down by a "youthful enthusiast" who also had his dream, which

was of "a greater Serbia" that would "unite under one scepter Servians of the present kingdom of that name and their Slavonic brethren of Bosnia, Herzegovina, Dalmatia, and Croatia."

Even if the attempt of the assassin, Gavrio Prinzips, had failed, as had the previous attack on the same day of the bomb-thrower, Gabrinovic, the conspiracy against the lives of the Archduke and his wife was so well arranged, say the cable reports, that it would have been impossible for them to escape from Bosnia alive, since bombs have been found in various places that the distinguished personages would have visited in Sarajevo, where they were guests of the people. As to the possible political effects of the tragedy, another writer in the *New York Times* remarks:

"The great exponent of a Magyar-German-Slav Empire is dead. Austria-Hungary has to-day a population of over 50,000,000, thus classified: 30,500,000 Cisleithanians and 20,000,000 Transleithanians. The former are divided as follows: Germans, 10,000,000; Slavs, 18,000,000; Latins, 1,000,000. Transleithania, or Hungary, has about 20,000,000 inhabitants, including about 100,000 Germans scattered through Presburg, Temesvar, and Transylvania.

"In other words, about one-fourth of the entire population

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses must always be given.* **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnall Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter by Google

is German, one-fourth Slav, and one-half Magyar. The first have already come under the Pan-Teutonic influences of Berlin, the second under the Panslavonic influences of St. Petersburg. There remain only the Magyars, who have usually been found ready to take care of themselves.

"There are formidable reasons why intervention from either Germany or Russia may arrive in the present crisis unless the tradition of the late Archduke's triune empire be conserved and strengthened by united action at Vienna and Budapest.

"Both in Germany and in Austria herself there has long been a desire for German intervention. Germany needs the agricultural products of German-Austria and also free access to the Adriatic. Austrian Germans are no longer the controlling influence in Austria-Hungary; they have lost confidence in themselves, but not in the principles of Pan-Germanism as construed in Berlin.

"This same is true of the Austrian Slavs in regard to the principles of Panslavism as expressed in St. Petersburg, and, in a milder form, in Belgrade, Sofia, and Bucharest.

"The situation caused by the revolver in the hands of the Servian student is one of infinite possibilities."

As to the provocation for the conspiracy against the Archduke, the *Brooklyn Eagle* says it is easily to be traced to the intense hatred the Bosnians bear toward the Austrian monarchy, altho their country thrives under Austrian rule. How this political status came to be is thus related by the same journal:

"The Treaty of Berlin, negotiated in 1878, permitted Austria-Hungary to occupy Bosnia and Herzegovina nominally in order that a disturbed territory should be pacified, but really because the dual kingdom demanded room for expansion eastward. The occupation was resented by the people as an alien rule imposed without their consent, and the new government was established by General Philippovic only after hard fighting and many executions under military law. Bosnia was 'pacified' in about the same way that Austria, in 1848, pacified Lombardy after the insurrection in Milan. In the former case as in the latter, intense bitterness against the conquerors remained, a bitterness increased during the insurrection of 1881-82, and again when Austria-Hungary formally annexed Bosnia in 1908, regardless of the letter, if not of the spirit, of the Treaty of Berlin. Doubtless the conspirators who plotted this atrocious and useless murder thought that they were avenging the patriots who fell at Serajevo and Bihac, thirty-six years ago; in reality they have done nothing but strengthen the determination of the Austro-Hungarian Government to fasten its rule more securely than ever upon their province. The murder of an heir to the imperial throne has no more effect upon the continuation of alien

government in Bosnia than the murder of Alexander II. had upon the continuation of the Romanoff dynasty in Russia."

But this is in doubt, thinks the *New York Herald*, which foresees the inevitable and not distant term to the days of Francis Joseph, and wonders whether "the two widely differing nations which he has ruled with such skill" can be held together by the present heir, Archduke Charles Francis Joseph, nephew of the murdered Francis Ferdinand. This young man is probably

abler than his dead uncle, remarks the *New York Evening Mail*, and "the assassination might even be regarded as a dynastic gain for the Hapsburgs" if it were not for the fact that "the deed cuts a deeper cleavage of hatred between the Slavic element of the Empire on one hand and the German and Magyar elements on the other, and to that extent hastens the downfall of the great bureaucratic despotism at Vienna."

In this connection the *Chicago Tribune* says that Austria-Hungary is, "if not a disintegrating, at least a declining, Empire"; while the *New York Press* states that "for many years the Austrian Empire has had no reason to exist," and adds the prediction that "it will not continue for a great while." Yet the *Washington Times* maintains that:

"There is every reason, to-day, to anticipate that the dual kingdom will hold together, and that from time to time it will be more firmly united by reason of the essential community of interests among its people. The

murder of the heir to the throne brings another heir into the lime-light; but that is all. The House of Hapsburg will continue to wear the imperial regalia in Vienna and the regal dignity of Budapest."

The same journal, moreover, points out that "for a generation wisecracks have shaken their heads and protested that Austria-Hungary would fall to pieces whenever Francis Joseph passed on," and it notes that the wisecracks have been in error. To this statement the *New York World* agrees, remarking that "threatened nations live long." Citing some such "mistaken prophecies," the *New York Evening Post* observes:

"But the Empire still stayed on the map. It even grew larger and more powerful and apparently more stable. At one time it was supposed that Pan-Germanism would prove a dissolvent. Early in Kaiser William's reign there was much talk of the predominantly German provinces of Austria gravitating to Berlin. But all this has long since dropt below the

THE MURDERED ARCHDUKE, HIS CONSORT AND CHILDREN.

The late heir to the Austrian throne was considered in international politics as "a man of dangerous ambitions," whose life-dream was a "triune empire."

horizon. We hear much more at present of Pan-Slavism than we do of Pan-Germanism. And the real concern of European Chancelleries, in the presence of this Austrian tragedy, is more with personal and dynastic changes which may follow in Vienna than with any possibility that Austria will be shaken out of her orbit; more, above all, with the race jealousies and conflicts beyond the Austrian frontier, and with the renewed tension between Greece and Turkey, than with any thought that Bosnia will make any serious attempt to rise against Austrian rule."

Of the immediate effect of the death of Archduke Francis Ferdinand upon the concert of the Powers in Europe, the *New York Journal of Commerce* says that there does not appear to be much reason for apprehension, while it offers this portrait of the heir apparent:

"The new Crown Prince, the Archduke Charles Francis, son of the younger brother of Francis Ferdinand, is a young man of twenty-seven, married to a Bourbon princess, and is said to be as mild and ingratiating as his uncle was stern and forbidding. He has been a favorite of the old Emperor and popular with the court at Vienna. Of his ability as a statesman there seems not to be much said, but it is yet to be tested, and very much will depend upon the advisers by whom he is surrounded."

In one particular Archduke Charles Francis possesses a positive advantage over his predecessor, the *Boston Transcript* notes, for he is married to an Italian Bourbon princess, and "his children are not barred from inheritance of his political rights and privileges." The press devote columns to the romantic marriage of the Archduke Francis Ferdinand to Sophia Chotek, lady-in-waiting to Archduchess Isabella, who confidently expected the Archduke to marry her daughter. Of the results of this unexpected match, a writer in the *New York Sun* tells us that Isabella's daughter became a hospital nun after "a most unfortunate matrimonial career," while as for the Archduke and his consort, Countess Chotek—

"Emperor Francis Joseph, in response to the insistent pleading of his heir, had consented to this morganatic union, but not until he had exacted two conditions. The Archduke promised that his bride should never become Empress and that none of his children, should any be born, would lay claim to the throne. In Magyar law, however, the alliance was a valid one. Whether Empress of Austria or not, she would have had the right to the throne of Hungary. Francis Joseph's edict had no validity at Budapest.

"The Archduke's wife was accused of having inspired many of her husband's political 'indiscretions.' She was a Czech, as has been said, and the Czechs are Federalists. The Archduke's violent incursions into politics revealed him as an opponent of the Magyar ascendancy. Yet from her marriage the Duchess at least kept up her appearance of self-effacement. Outwardly she was resigned to the anomalies of her position. She encouraged her husband in his dislike of publicity. Of her qualities of heart and brain none entertained the slightest doubt.

"Five years after her marriage to Francis Ferdinand the aged Emperor gave her the title of 'Durchlaucht.' Four years later Francis Joseph went so far as to confer upon her the title of Duchess of Hohenberg, with the privilege of being addressed as 'Highness.' An imperial decree issued at that time set forth that on the occasion of official ceremonies her place should be immediately after that of the archduchesses. On one occasion, indeed, she was placed ahead of them. At the time of the visit of Crown Prince Frederick William of Germany to Vienna, she occupied the seat of honor between Francis Joseph and the Crown Prince.

"It was generally believed in Vienna that on the death of Francis Joseph the first official act of Francis Ferdinand would be to make his wife Empress of Austria, this in spite of his solemn promise to his uncle. The Austrian court has so long been without an empress that the elevation of the Duchess of Hohenberg would have been welcomed by the people who at the time of her marriage fought so bitterly against her.

"The Duchess was a tall, dark-haired woman of striking beauty, with keen, piercing black eyes. On her visit to England last winter, with her husband, the London gossips told of her one bad habit, smoking long black

cigars. The truth of this statement, of course, can not be proved."

So one more tragedy is added to "the somber record of the House of Hapsburg," comments the *New York Sun* editorially, and it enumerates "the mystery of Meyerling, the disappearance of John Orth, the cruel taking off of the Empress Elizabeth," while it remarks *apropos* of "the political inspiration" of the Archduke's assassination, "nothing can be sadder in his fate than that his own country and the world accept it as a relief." On this point the *Springfield Republican* says "that altogether his prospective reign did not promise to be one of peace, so far as foreign relations are concerned." But, on the other hand, he had "come to be recognized as a forceful personality who might under favorable conditions do much for an anomalous empire which depends so greatly on a personality."

ARCHDUKE CHARLES FRANCIS AND FAMILY.

The new heir to the Austrian throne is twenty-seven. He is said to be able and popular and "is not credited with any overweening ideas of Austrian supremacy."

MORE MEXICAN COMPLEXITIES

FRESH COMPLEXITIES rather discourage hopes of an early settlement of the Mexican troubles either through the Niagara Falls protocol or the steady advance of the Constitutionalist armies, observes the *Springfield Republican*. There is the reported discord between Carranza and Villa, which holds the possibility that "the world may soon be the witness of a master-stroke that will signify Villa's supreme leadership of the revolutionary side, or at least the temporary shattering of the revolutionary cause by internecine fighting." There come from Mexico City reports of alarm at the approach of Zapata and of warnings to British residents to leave the city. And at this juncture, notes *The Republican*, the New York *Herald* publishes "a series of confidential letters stolen from the office files" of Capt. Sherburne G. Hopkins, a Washington attorney of H. C. Pierce, the oil magnate, "revealing Mr. Pierce's activity in trying to induce Carranza to promote his railroad interests in northern Mexico." They also introduce Mr. John Lind "in a disagreeable way." Most Administration supporters can see nothing very serious in what Mr. Lind is reported to have said, and find in the allegations of "big-business" support for the Constitutionlists nothing worse than a natural desire of capitalists to protect their own interests by siding with the strongest battalions. But even among friends of the Administration there are some who would like these things explained, while habitual critics are horrified at the "sordid" disclosures. There are many calls for Congressional investigation, and Representative Kahn (Rep., Cal.) has submitted a resolution in the House calling for full information regarding Mr. Lind's reported conversation. According to so friendly a paper as the New York *Evening Post*, the most important matter for the Wilson Administration in the Hopkins letters is the representation of John Lind's opposition "to Carranza's joining in the mediation proceeding with a view to putting an end to Mexico's troubles."

"Should this be substantiated it would expose Mr. Lind to a charge of disloyalty to the Wilson Administration, to say nothing of the embarrassment in which it puts the latter. Captain Hopkins also quoted Mr. Lind as asserting that Mr. Wilson 'hesitated to raise the embargo [on arms] at this time while mediation negotiations were pending,' but that he, Lind, could give assurances that if arms were taken in by schooners from Cuba, 'no obstacle would be placed in the way by Washington.' This alone would seem to warrant Congressional inquiry, since it places the Wilson Administration in the position of playing fast and loose in the matter of importation of arms."

The only reply of Mr. Lind is that people who steal letters will forge them, but that "as far as the impression is conveyed in these letters that I am in sympathy with the Constitutionalist cause, that is true." This, of course, does not satisfy the New York *Evening Mail* (Prog.), which thinks "Mr. Lind should be called to Washington at once to explain what really amounts to disloyalty to the Government he was paid to serve." The Boston *Transcript* (Rep.) agrees as to Mr. Lind, but believes he had the backing of his superiors, and it is "disgusted" with "the double-dealing, sneaking, Pecksniffian course of the Administration in Mexico." Mr. Lind is, however, defended by the *Springfield Republican*, which says:

"The Hopkins letters simply represent Lind as saying in 'private conversation' that while he approved Carranza's course in consenting to entertain mediation proposals, he did not believe Carranza should concede a military armistice, and that 'Lind is opposed to mediation or compromise.' What Lind said about the exportation of arms by way of Cuba to Mexico can be defended as having been wholly consistent with the rights of the Constitutionlists under international law."

But Mr. Lind occupies a comparatively small space in the series of letters printed in *The Herald*. A brief narrative drawn from the various reports, accusations, and warning, which fill his correspondence, is thus sketched by *The Evening Post*:

"Captain Hopkins's patriotic soul—like his retainer—makes him the champion of the American oil interests as against the British, headed by Lord Cowdray. . . . To Carranza, be it noted, Captain Hopkins made no concealment that he was in the pay of Mr. Pierce, and in his behalf he urged Carranza to reorganize the National Railways in his possession in the northern States, 'as a separate system, apart and distinct from the lines in the possession of the Huerta Government.'"

"Rapidly Captain Hopkins rose to a place in Carranza's confidence, in which he not only obtained the appointment of 'his friend, Mr. Pani,' to take charge of the railways, but became apparently an important adviser to the First Chief. Unfortunately for the Pierce-Hopkins railway plans, General Villa refused to permit Mr. Pani to take hold; there are still other evidences that the friction between the two leaders may have had an origin in some such business transactions. Meanwhile, Captain Hopkins was busy influencing the American press to point out that the three Huerta delegates to the Mediation Conference were all agents of Lord Cowdray."

The letters prove, to the satisfaction of *The Herald*, that "the real cradle of Mexican liberty has been revealed"—it "is Wall Street." The Brooklyn *Eagle* (Dem.) has lost its "illusions" about Mexico's civil war. The letters prove, says the ironic Chicago *Herald* (Ind.), what every one suspected, that "at the elbow of the chiefs on both sides of the struggle in Mexico, on most familiar terms, are representatives of great interests, full of zeal for great principles, and proffering, from time to time, high-minded and disinterested advice from which it is only natural they should expect to reap much incidental benefit." And a number of Republican dailies take much the same view. On the other hand, there is the opinion of those represented by the New York *World* (Dem.), that the letters, "instead of indicating conspiracy or corruption, reveal natural solicitude for property long menaced and a reasonable partizanship favorable to the victorious faction having that property in its keeping."

JAPANESE "RIGHTS" IN AMERICA

THE POSSIBILITIES wrapt up in our dispute with Japan give uncommon earnestness to the comment of our press on the published correspondence between the two Governments on the California Antialien Land Law. Some observers see in the Japanese situation difficulties more serious than those we are confronting in Mexico, while others express the hope that the disagreement will be calmly adjusted before The Hague Tribunal of Arbitration. Many disclose a tone of resentment toward Japan, as for instance, the Baltimore *Sun*, which calls "this matter of Asiatic immigration" a ticklish question and "not one concerning this country alone." It cites the refusal of the Canadian Government to permit the landing of a ship-load of Sikhs from India, altho they are British subjects, and suggests that when Japan "gets through quarreling with us" about the problem, it may continue with Canada, Australia, and New Zealand, and wind up with Great Britain, its ally, "which must be held more or less responsible for the conduct of its colonies." No less downright in its attitude is the New York *World*, which professes to discover in the correspondence "some Japanese subtlety and a great deal of Japanese aggressiveness and error," while it maintains that Japan is contending not against the California Antialien Land Law of 1913, but against its own treaty with the United States of 1911. Still, remarks this newspaper, as it commends the Administration's "conciliatory" tone, "if Japan means citizenship when it says land laws, it should be compelled to say so," and it declares that all Viscount Chinda says about "treaty rights, the rights of property, and good neighborhood" may be reduced ultimately to the real grievance that the Japanese are denied American citizenship.

The California press pointed out when the Land Law was passed that the treaty gave the Japanese no right to own or

Copyrighted, 1914, by "The Boston Journal"

FIRE-SWEPT SALEM—SEEN FROM AN AEROPLANE.

This picture shows about half of the district burned by the fire which swept Salem, Mass., June 25. It raged for 15 hours, aided by a high wind, an inadequate water-supply, and the flimsy construction of many of the buildings. Factories, the residences of the wealthy, and the tenement-houses of laborers were impartially devoured by the flames, the most of Salem's historic buildings were saved. Only four deaths are attributed directly to the fire. But over 10,000 people were rendered homeless, and 9,000 are out of work. The property-loss is put at \$12,000,000. Generous aid came from near-by cities, and the State militia came to the help of the local authorities in keeping order and organizing relief.

lease land for agriculture, but only for commercial purposes. This part of the treaty runs:

"The citizens or subjects of each of the high contracting parties shall have liberty to enter, travel, and reside in the territories of the other, to carry on trade, wholesale and retail, to own or lease and occupy houses, manufactories, warehouses, and shops, to employ agents of their choice, to lease land for residential and commercial purposes, and generally to do anything incident to or necessary for trade upon the same terms as native citizens or subjects, submitting themselves to the laws and regulations there established."

This may be compared with the Land Law, which reads:

"Section 1.—All aliens eligible to citizenship under the laws of the United States may acquire, possess, enjoy, transmit, and inherit real property, or any interest therein in this State, in the same manner and to the same extent as citizens of the United States, except as otherwise provided by the laws of this State.

"Section 2.—All aliens other than those mentioned in Section 1 of this act may acquire, possess, enjoy, and transfer real property, or any interest therein in this State, in the manner and to the extent and for the purposes prescribed by any treaty now existing between the Government of the United States and the nation or country of which such alien is a citizen or subject, and not otherwise, and may, in addition thereto, lease lands in this State for agricultural purposes for a term not exceeding three years."

The effect of this legislation on the mind of Japan, discriminating as it does against aliens not "eligible to citizenship," is plain from the opening paragraphs of Viscount Chinda's first

note of protest, dated May 9, 1913, in which he sets forth at length Tokyo's arguments against the law. We read:

"In the opinion of the Imperial Government, the act in question is essentially unfair and discriminatory, and it is impossible to ignore the fact that it was primarily directed against my countrymen. Accordingly, this protest is based upon the proposition that the measure is unjust and inequitable, and that it is not only prejudicial to the existing rights of Japanese subjects, but is inconsistent with the provisions of the treaty actually in force between Japan and the United States, and is also opposed to the spirit of fundamental principles of amity and good understanding upon which the conventional relations of the two countries depend."

Turning over such reproachful phrases as "unfair" and "discriminatory," the *Pittsburg Chronicle Telegraph* exhibits a state of opinion not dissimilar to that of the *Baltimore American* and *New York World*, and asks: "Why doesn't Japan attempt to bully Great Britain?" And the *Washington Post* claims that as we acknowledge Japan's right "to exclude such people as may be undesirable for any reason whatever," so must we always maintain that right on our own behalf.

The rumor that Secretary Bryan hopes to settle the dispute by submitting it to arbitration at The Hague moves the *Philadelphia Inquirer* to observe that it could not be done without the assent of the Senate, and "never will that assent be given," because "the real question is one of domestic policy, which the American people must and will reserve for their own exclusive

determination." Japan might not object to this plan. *The Christian Science Monitor* observes, but—

"The United States, if formally given the chance to assent to this proposition or to negative it, will be put in a tight place. In theory and by all its own precedents it is under obligation to give distinction and prestige to The Hague tribunal whenever it can. It has agreed, in the abstract, to arbitrate issues between Japan and itself, when diplomacy fails. Over against this stands public opinion of the Pacific coast, critical of any challenge of sectional control of a problem which is deemed best understood, so it is argued, by persons who have dealt with it at first hand. Were Washington and Tokyo free to settle this controversy, there would be no need of resorting to The Hague. It is the dual responsibility of the American system, with the

"I HOPE IT POURS!"

—Harding in the *Brooklyn Eagle*

conflict between States and the nation in handling problems involving aliens' and immigrants' rights, that makes the friction."

On the other hand, the *New York Evening Post* thinks the arbitration idea is well worth consideration in that "it would at least serve the purpose of gaining time, which, in such a difficulty as this, might well prove to be all that was needed for its practical settlement." Much more confident is the *Washington Times*, which says that The Hague is "the logical and proper place" for the controversy, and that "it is not to be doubted both nations will gladly accept the results of the arbitrament."

As a random instance of California opinion, we may note the quiet emphasis of the *Oakland Enquirer's* statement that "the fact that we have reciprocal treaty relationships with Japan governing international questions and commercial dealings, particularly since that treaty was made while Japanese citizenship in this country was denied, negatives the contention that any 'vested rights' to such privilege now exist, no matter how 'mortifying to the Government and the people of Japan' this fact is." Or again, we read in the *San Francisco Chronicle* that there is nothing new "in the way of argument" in the correspondence, while it adds that "both sides contend that they are right, but until there are fresh developments the matter is not to be made a subject even for arbitration."

SIGNIFICANCE OF THE CLAFLIN FAILURE

ON THE SAME DAY came the President's prediction of a coming boom in business and the announcement of what is described as "the largest commercial failure in the country's history." This was a most significant coincidence to those who believe the Wilson policies responsible for the Clafin failure, and who look upon it as sufficient proof that the President is at best misinformed about business conditions. Yet several newspapers hasten to tell, as does the *Boston Post*, how "perfectly evident" it is "that neither the tariff nor any other legislation by the present Congress has had anything to do with it," or to point out, with the *New York Globe*, that the Clafin suspension was due to "particular rather than general conditions and in nowise conflicts with President Wilson's optimistic utterances to the Virginia editors." And it should be noted that the most authoritative financial writers lay the chief stress upon these "particular" conditions in explaining the Clafin catastrophe, and feel confident that it contains no ominous portent for business in general. One cause is emphasized in the official statement issued by the Clafin Company, which says:

"The unprecedented shifting of trade centers in New York has caused great loss to many interests. In the case of the H. B. Clafin Company, the up-town movement of business has seriously curtailed our wholesale profits and has compelled us to rely mainly on the profits from financing retail stores throughout the country. Their rapidly expanding business has occasioned large capital requirements, which we have not been able to meet. A receivership has therefore become necessary pending a readjustment of the affairs of the company."

But while the influence of New York's "up-town movement" is freely admitted, the financial writers do not find that cause sufficient in itself for the Clafin downfall. Some of them point out that the country banks, which held most of the Clafin paper, had become less accommodating since they were awaiting the changes under the new Currency Law. But the *New York Times Annalist* sums up the opinions of a host of editors, bankers, and business men when it attributes the failure partly to the elimination of the middleman and says:

"The changes in merchandising methods which have tended constantly to bring the producer and the consumer closer together, the natural westward movement of the jobbing trade as the center of population has moved westward, and the inherent financial weakness of a scheme of banking and merchandising which called constantly for heavier borrowings without a commensurate increase in the concern's capital, all combined to undermine the solvency of this concern, which has long held foremost place."

The chief effort of the Clafin Company to meet altered conditions in the dry-goods trade, says *The Annalist*, was by invading the retail field and buying a string of stores scattered throughout the United States and Canada. But this was of no avail, for several reasons. As the *New York Journal of Commerce* notes, the stores were not compelled to buy from the Clafin Company, and they often "preferred not to buy from the wholesale house bearing the Clafin name." Then other retailers in these various cities "naturally did not care to patronize a jobbing house which was financially backing competitors, and the Clafin Company undoubtedly lost a large business in this way, which was not offset by gains from the purchases by the stores it was supposed to control in every particular." Further, we read, "the Clafin name became associated with 'trusts,' and retailers in cities where there were no Clafin stores" would not "buy from Clafin because he was a dry-goods trust magnate." Still more important, to judge from the amount of editorial comment on it, was the fact, as *The Annalist* puts it, that the great inducement to retailers, "aside from common ownership, was that the Clafin Company became practically their bankers, and it was

this phase of the arrangement that pulled down the structure." "The quite unanimous comment, in both financial and commercial circles," says a writer on the New York *Evening Post's* staff, "has been that the collapse was a clear result of over-extension on the basis of insufficient capital." In the first place, the companies controlled by Clafin would secure funds by notes drawn on the H. B. Clafin Company, indorsed by the Clafin Company, and then discounted by the banks, which considered the Clafin name security enough. So, of the \$34,000,000 indebtedness of the company, \$30,000,000 is in the form of notes of the subsidiary companies indorsed by Clafin. And the immediate cause of the crash, thinks *The Dry-Goods Economist*, was the inability to meet notes brought back upon the indorser. The company is said to have assets amounting to \$44,000,000, and the receivers expect to pay all claims and reorganize the firm on a solid basis. In addition to the "tangle of financial relationships," there is, as *The Dry-Goods Economist* explains, an "exceedingly complicated" ownership relation. First, the H. B. Clafin Company controls its chain of retail stores. Then the majority of the Clafin Company's stock is held by the Associated Merchants Company, itself owning a group of important retail stores, including several in New York. Then the United Dry-Goods Company, in turn, owns control of the Associated Merchants Company, together with another distinct group of stores.

So the Clafin firm went down, as *The Wall Street Journal* explains it, because the combination of wholesale and retail business "imposed upon it a financial burden heavier than it could carry." The New York *World's* head-line phrase "Morganized Dry-Goods," a Boston *Transcript* writer's "New-Havenizing Dry-Goods," tell what these papers and such authorities as Samuel Untermyer and Louis D. Brandeis think of the Clafin system. "We've got the money: let the little fellows go in for efficiency," is the *Transcript* writer's expression of the theory it went on. "It is the history of the New Haven Company in the railroad world repeated in the dry-goods world," says Mr. Untermyer. Banks lent not on the merits of the enterprise, but on the credit of its backers. And Mr. Untermyer is inclined to think that "the ramifications of these holding companies have become too complicated for the ordinary banker or business man to understand. It is high time they were suppressed." Mr. Brandeis observes:

"Clafin had the ability to run one, two, or maybe half a dozen stores, but when his syndicate grew to thirty, it was too big for him. Mr. Morgan's death was not responsible for the failure. Had he lived, the system could not have lasted more than six months, nor could the New Haven have lasted had Morgan lived."

A Socialist paper like the New York *Call* naturally declares that "the Clafin failure, like the Siegel failure and the Lorimer bank crash, is purely a symptom of capitalistic disintegration and rottenness."

The Democratic Administration is found partly to blame by the writer of a financial review in the New York *Sun*, who speaks of the failure as resulting "directly from the impossibility of carrying along an unwieldy, sprawling, and somewhat unsound organization against the disintegrating influences of politically agitated hard times." He sees two hopeful signs: the Clafin receivership is a "feature of the closing stage of a cycle of de-

pression," and the disturbance and depression it symbolizes "will have their political consequences in the vote of the country for the election of practically minded men to office." The Democratic Administration is also denounced as directly or indirectly responsible for the Clafin failure, through its tariff and trust policies, in the editorial columns of papers like the New York *Press* (Prog.) and *Tribune* (Rep.), Boston *Transcript* (Rep.), Philadelphia *Public Ledger* (Ind. Rep.), and Pittsburgh *Gazette-Times* (Rep.), and by the New York *American's* (Ind.) financial editor. From across the water the Berlin *Lokal Anzeiger* tells President Wilson that the failure has for him "the full significance of the handwriting on the wall."

In his recent Pittsburgh speech ex-President Roosevelt joins the attack on the Wilson Administration, declaring that while "not the slightest progress has been made toward solving the trust question," the "business community has been harassed and harried to no purpose," and that its tariff policy "has done grave injury to the business community and the farming community, and has caused suffering to the wage-workers, and the whole policy of the Administration has been one to cause our people in business, our people on the farms, our people with dinner-pails, to look toward the future with grave concern and apprehension."

But such "grave concern and apprehension" is no part of the mental outlook of the editors of Democratic papers like the New York *World*, Houston *Post*, Oklahoma City *Oklahoman*, Baltimore *Sun*, and Savannah *News*; they back up the President in his determination to pass the trust bills, and believe he knows what he is talking about when he predicts a coming boom in business. On the day the Clafin failure was announced, and, it has been stated, with knowledge of the event, President Wilson told a visiting group of Virginia editors:

"Here in Washington, through the Bureau of Commerce and other instrumentalities that are at our disposal and through a correspondence which comes into us from all parts of the nation, we are perhaps in a position to judge of the actual condition of business better than those can judge who are at any other single point in the country; and I want to say to you that, as a matter of fact, the signs of a very strong business revival are becoming more and more evident from day to day. . . ."

"When the program is finished, it is finished; the interrogation points are rubbed off the slate; business is given its constitution of freedom and is bidden to go forward under that constitution. And just as soon as it gets that leave and freedom there will be a boom of business in this country such as we have never witnessed in the United States."

JOHN CLAFIN.

Head of the largest wholesale dry-goods house in America, whose failure is variously attributed by the press to New York's up-town movement, the elimination of the middleman, a faulty system of financing, the new Currency Law, and the policies of the Wilson Administration.

JUDGE SPEER'S SCOTCH VERDICT

WE FIND DISAPPROVAL expressed by many newspapers at what is virtually the legendary Scotch verdict of "not guilty, but don't do it again," pronounced against Judge Emory Speer, of the Southern District of Georgia, by the Democratic majority report of the House Judiciary Subcommittee investigating the charges against him. In fact, one observer, the *Providence Journal* (Ind.), goes still further and very warmly commends the courageous note of the Republican minority report, which, according to press dispatches, "gives the jurist a clean bill of health," describes the inquiry as "cruelly unjust and unfair," and asserts that no attempt was made to defend the judge against "mere slander and abuse that could serve no other purpose than to disgrace and humiliate him." Moreover, the cynical opinion is occasionally met with that one effect of all the subcommittee's labor is a gladdening of heart to "those who welcome any circumstance tending to strengthen the movement for the recall of the judges," while in some quarters it is urged for Judge Speer that now the report passes to the full committee, for action before the adjournment of Congress, the aim should be "to get at the truth by legal evidence, with a view either to his complete exoneration or his trial in the Court of Impeachment."

The charges against Judge Speer, press reports recall, are nineteen in number and include allowance of excessive trustee fees to a friend, use of his official position to advance his son-in-law, domestic use of government-paid employees, dissipation of bankrupt estates through needless expense, and arbitrary methods in court procedure. The judgment of the majority report on these accusations is summed up as follows:

"The subcommittee regrets its inability either to recommend a complete acquittal of Judge Speer of all culpability so far as these charges are concerned, on the one hand, or an impeachment on the other. And yet it is persuaded that the competent legal evidence at hand is not sufficient to procure a conviction at the hands of the Senate.

"But it does feel that the record presents a series of legal oppressions and shows an abuse of judicial discretion which, tho falling short of impeachable offenses, demand condemnation and criticism.

"If Judge Speer's judicial acts in the future are marked by the rigorous and inflexible harshness shown by this record, those

charges hang as a portentous cloud over his court, impairing his usefulness, impeding the administration of justice, and endangering the integrity of American institutions."

Considering the findings of the subcommittee against Judge Speer, the *St. Louis Republic* (Dem.) is moved to declare that they "attempt to put that jurist in a twilight zone between the darkness of impeachable guilt and the sunlight of official virtue,"

and adds, in testimony to the unfairness of the verdict:

"Under such an indictment the presumption of guilt will inevitably attach to him, and yet there is no forum to which he can appeal, no judge before whom he can defend himself. The report is neither one thing nor the other. . . .

"In arriving at its conclusions the subcommittee says it availed itself of hearsay testimony. Its reason for not going to the primary sources of information is that there are persons believed to have knowledge of facts discreditable to the accused judge who do not wish to testify because they fear his wrath.

"If there are any such persons they should be found and interrogated. Every means should be exhausted to get the truth from them, and the greater their fear of appearing against the judge the greater the reason for insisting upon their appearance. Is a judge suspected of covering his offenses by terrorizing the people to be sent back to the bench under a cloud, but still a judge? The idea is intolerable."

The general tone of the report, notes the *Columbus Ohio State Journal* (Ind.) disappointedly, shows "more of a desire to let the judge off easy than to try him for conduct unworthy of a judge," but the *Providence Journal* (Ind.) considers that "a great wrong has manifestly been committed, and with the connivance of Congress, or some Congressmen." Then it proceeds to express the hope

that "the strange attack" on Judge Speer is not due to the fact that he is a Republican who has presided in a Democratic district for twenty-nine years, while the *Topeka Capital* (Rep.) points its idea of the whole moral of the investigation in these words:

"In short, the Judge Speer case is a reenforcement of the argument for terms for Federal district judges. No President would reappoint Judge Speer in view of the testimony of the House Committee, so long as there are competent lawyers in his district on whom to draw for judicial material. Appointment of judges is probably the best method, but appointment for life is counting too much on human nature. Appointment for fixed terms would be a good amendment to the Constitution, while that venerable framework is in the way of being remodeled and modernized."

JUDGE EMORY SPEER.

MR. REDMOND—"Oh, Mr. Asquith, sorry for the Lord's sake don't be after drowning it!"
—*Pall Mall Gazette* (London).

MORE DISTRESS FOR IRELAND.

ANOTHER IRISH ARMY

THE LATEST MOVEMENT in the Home Rule controversy comes from Mr. John Redmond, who has expressed his approval of the newly formed army of the Nationalist Volunteers, and makes suggestions for handling them. It is true that up to two months ago the Nationalist leader thought the Volunteer movement a little premature, but now he is convinced that it is necessary by armed force to "vindicate and safeguard the Home Rule cause." While hesitation and vacillation had for some time seemed to dominate the leaders of the new movement, Mr. Redmond has inspired the Volunteers with resolution by indorsing this warlike demonstration, which the Nationalists in general hail with enthusiasm. But division between two sections of the Home Rule party is reported as imminent in Dublin. All Nationalists are not in favor of the Volunteer movement, a result which Mr. Redmond earnestly deprecates. In a letter to the press he gives his own view of the situation as follows:

"Up to two months ago I felt that the Volunteer movement was somewhat premature, but the effect of Sir Edward Carson's threats upon public opinion in England, the House of Commons, and the Government, occurrences at the Curragh camp, and the successful gun-running in Ulster vitally altered the position, and the Irish party took steps about six weeks ago to inform their friends and supporters in the country that in their opinion

it was desirable to support the Volunteer movement, with the result that within the last six weeks the movement has spread like prairie fire, and all the Nationalists of Ireland will shortly be enrolled."

Ireland was recently described in the House of Lords as "an armed camp," and the *London Times* gives the following table as confirmatory of the phrase. There are now in Ireland:

Regular Forces.....	24,400
Royal Irish Constabulary.....	10,400
National Volunteers.....	80,000
Ulster Volunteers.....	84,000

The Times says that while England has long been debating how to raise an English army, she has not turned to Ireland, whose military spirit is a fact of history. To quote the words which point out Dublin as an example to London:

"Current events in Ireland expose the folly and the weakness of the decision which has prevented us from extending to Ireland the military organization, such as it is, of Great Britain. These events have also so disclosed the military possibilities of Ireland. We in Great Britain, with our forty-one million people, and with all the resources of civilization at our backs, have not been able to raise in seven years as many Volunteers as Ireland, with her five million people, and against the intentions of the Government, has been able to raise in about as many months. The Lord Chancellor calls all the Irish Volunteers illegal and unconstitutional. So undoubtedly they are. It is a lasting reflection upon the Government

THE TRIUMPH OF THE VOLUNTARY SYSTEM.

LORD HALDANE—"Grossly illegal and utterly unconstitutional!—as I said the other day at Oxford; but to the heart of an ex-War-Lord, how beautiful!"
—*Punch* (London).

that their creation should ever have been permitted. But at the same time the Irish Volunteers deserve this credit—namely, that with every obstacle thrown in their way, and with not a shilling of public money paid to them, they are doing better than the Territorials, who have been petted and pampered by all sorts and conditions of men, and cost us three and a half millions of good money annually. Ulster, just now, is the only district in the British Isles which no foreign enemy would venture to attack. The rest of Ireland aspires to the same privileged position. The people of Ireland have a cause which they consider worth sacrifice and effort; and the possession of such a cause is worth all other motives for effort in the world."

The comment of the general London press is altogether an echo of party opinion. The Unionist *Morning Post* (London) remarks complacently that the Asquith ministry is now in a dilemma, and we read:

"What is the result of Liberal rule? Ireland is divided into armed and hostile camps, and at any moment some incident may give the signal for civil war between forces whose political enmity would be embittered by the fierce passions of racial and religious animosity. To such a pass have things come that it is difficult to see how there can be any road out of the entanglement which will not be stained with blood. Even Liberals have now ceased to talk of Ulster bluff. They know that any attempt to drive the Irish Loyalists under the heel of a Nationalist Parliament must lead to bloodshed on a scale that would appal even the most bellicose of their professional pacifists. On the other hand, if the Government fail to grant Home Rule, or consent to the exclusion of Ulster, the Nationalist Volunteers threaten to take the field. From a military point of view their resistance might not prove very formidable. They lack the leadership, the discipline, the organization, and the equipment, and, above all, the determined spirit of the Ulstermen. But they could vent their wrath on the scattered minority in the Southern and Western provinces, and any one who remembers the horrible outrages that marked the land war in the eighties will not expect Nationalists, raging at the failure of their hopes and maddened by racial and religious fanaticism, to show much mercy to their helpless foes. And if vengeance is wreaked on the Loyalists in Nationalist Ireland, there is certain to be a savage war of reprisals in the North. Thus there seems a very fair prospect that the fruits of Liberal policy will be bloodshed, sorrow, and suffering in every part of the country, and that Ireland will be cursed for a generation with a legacy of bitter memories and hatreds which will divide her people more effectually than if the two sections were placed on opposite sides of the Irish Sea."

The above is a good specimen of Unionist comment, but *The Daily Chronicle* and such Liberal papers as *The Daily News* and its London congeners speak in a different tone. *The News* observes:

"On the general position the emergence of the Volunteer movement has had a striking effect. It has changed the atmosphere in Ulster as much as in Parliament. The attitude of Ulster to Nationalist Ireland has always been largely one of contempt. This attitude has vanished before the startling demonstration of the past month, and the whole character of the controversy is changed. There is respect where there was formerly only scorn. It is not impossible that this new feeling will have a profound effect on the situation. Evidence accumulates that there is nowhere any desire for exclusion, and that the tendency is all in the direction of a settlement on the basis of large administrative concessions to Ulster and of substantial advantages in representation to the Protestants. We have never

believed in civil war. We believe in it less to-day than ever we did, for the National Volunteers have made it less thinkable. The future of that movement and of the similar movement in Ulster will, we hope, be in the direction of union, not on the basis of antagonism to this country, but for the establishment of a great Territorial force in Ireland."

The Daily Chronicle (London) remarks:

"The new force has arisen as it were by magic. Its spontaneity is its most remarkable feature. For the past two years Nationalist Ireland has been singularly quiet and restrained. Its placidity was as remarkable as the self-imposed silence of the Irish Members in the House of Commons. All the while drilling and arming went on in Ulster; statesmen, Privy Counsellors, deputy lieutenants, and magistrates openly boasted that they were organizing a force to defy the law. The Tory press in this country published with wearisome iteration extravagant articles in laudation of the Covenanting Army, and scandalous efforts were made by the party of law and order to use this force for the purpose of overawing Parliament and defying the authority of the Crown. These examples of lawlessness in high places did not go unheeded in Ireland. And at last very quietly and with incredible swiftness the Nationalists determined that they, too, would band themselves together in a military force to preserve the new-won liberties of Ireland. Unlike Sir Edward Carson, who inspired and directed the formation of the Covenanting force, Mr. Redmond sought to check the Nationalist Volunteer movement. He failed to do so, because of the intense popular feeling that has been aroused in Ireland by the armed movement in Ulster. The Nationalist Volunteers have, so to speak, sprung from the very ground. They may yet prove a force to be reckoned with. How can the Tory party, which has been inciting to rebellion in Ulster, deal with them?"

In reference to the bickerings, heart-burnings, and threatened disruption of the Irish Volunteer League caused by the struggle of two factions for the control of the new army, the *Times's* political correspondent writes from Dublin

that Mr. Redmond has realized that faction is threatening his party. He has written a letter to the press in which he acknowledged that in the controlling committee of the Volunteers, a sort of Nationalist War Office, numbering twenty-five in all, the majority are not members of the Irish party, while "in the rank and file of the Irish Volunteers at least 95 per cent. are supporters of the Irish party and its policy." The Irish leader fears that the Volunteers may swamp the Nationalists, and says:

"This is a condition of things which plainly can not continue. The rank and file of the Volunteers and the responsible leaders of the Irish people are entitled, and indeed are bound, to demand some security that an attempt shall not be made in the name of the Volunteers to dictate policy to the National party, who as the elected representatives of the people are charged with the responsibility of deciding on the policy best calculated to bring the National movement to success. Moreover, a military organization is of its very nature so grave and serious an undertaking that every responsible Nationalist in the country who supports it is entitled to the more substantial guarantees against any possible imprudence."

The importance of the Irish Volunteer movement may be judged from the twenty-five eminent men of reputation in almost every walk of life who form the Irish War Office and have shown a certain independence of Mr. Redmond.

GEORGE FRED WILLIAMS.
Our Minister to Greece, who scores the Great Powers of Europe for their Albanian policy.

ALBANIA'S PLIGHT

THE SCATHING CRITICISM made by our Minister to Greece upon the "epochal scandal of anarchy, incompetence, hypocrisy, and murder" at Durazzo reminds some editors of Sir Lionel Carden's reported strictures on our Mexican policy and recalls to others the advice Colonel Roosevelt gave the British on the correct government for Egypt. No one denies that Albania is a long way from being a paradise, and all the papers in Europe are filled with accounts of its sufferings, but Europe thinks it "shirt-sleeve diplomacy" for a diplomat to come right out and lecture the European concert. Yet the Latin satirist says that "indignation drives the man of sensibility into poetry," and this must account for the sensational, altho perhaps accurate, view of the situation in Albania which has been published under the title, "An Open Statement," by Mr. George Fred Williams, United States Minister to Greece and Montenegro. His main contention is that Albania should be governed by Albanians, that Home Rule, in short, should be granted. At present anarchy and confusion prevail in Durazzo. As he says of his inquiries in that capital:

"Five ostensible governments were in sight: First, the six Great Powers with all the power; second, the commission with control of the civil administration and finance; third, the Holland gendarmerie with control of the military; fourth, the Prince with any powers remaining; fifth, the Ministry with no powers. Each one of these governments was fighting every other, saving the first, which apparently is so discordant within itself that it has abandoned all the rest to their fate. All are cursing the Powers for their discord and helplessness, and are expecting at any moment to be driven out of Durazzo.

"I found a state of anarchy, and that the sovereignty of Albania remains where it belongs—in the people of the country. I found a Prince calling himself a King with no powers, no territory, and no subjects, except his wife and children."

Of the way in which Prince von Wied has so far maintained his position, by setting up one section of his subjects against another, Mr. Williams observes:

"The people of an inoffensive nation are being murdered in cold blood; the so-called Government of Albania is merely a state of anarchy. I had read the statements of the press treating the Durazzo Government as a serious subject and attempting to give it dignity by ridiculous falsehoods, and I deem it to be my duty to expose it as a screaming farce performed before a suffering and bleeding people.

"The Wied Government has shown skill and success in one respect only: It has been able to prevail upon the various religious and racial forces of Albania to set upon each other with murderous purpose. Hundreds of Albanian lives have thus been sacrificed at the hands of Albanians."

The character of Prince von Wied and the difficulties which encompass him are set forth more in detail by the German press, and we read in the *Vossische Zeitung* (Berlin) that William of Wied is a timid, helpless, and bewildered administrator. Hence all his troubles, declares this paper. He has been panic-stricken, we are told, by the revolt of his subjects, and while he may

have loyalty and sincerity, such qualities alone are not enough to equip a king of Albania. A strong hand and a spirit akin to recklessness are needed for that game. It is true that he has an armed force at his disposal.

"Yet the Prince fears that he can not rely on his own army, which may relapse into riot and disorder. He fears that the commander of these forces may misuse his power as Essad did. In fact, what is there that he does not fear? He forgets that no enterprise such as his can be undertaken without peril—that no one can even sit at his own fireside without running a risk of some kind or other."

It is evident, we read further, that William will not take an independent initiative. He stands between two foreign counselors, Italy and Austria. Each professes to be his friend, like *Codrin* and *Short*, while both are regarded with suspicion by the rest of Europe. Says the German writer:

"The Italian papers have been filled with lying and laughable items over the Albanian uprising. They have been ready to say that the danger has arisen from Austrian intrigues, while the rescue of the Prince was an exploit of the Italian Ambassador at Durazzo. As a matter of fact, it was the Italians who did their very best to increase the panic in Durazzo and induced the Prince, with his Princess, to take refuge on board an Italian ship of war. The Ambassador of Italy, Baron Aliotti, impressed upon the Prince that under the circumstances, as Ambassador of Italy, he could no longer assume the responsibility of guaranteeing William's life, and that the presence of the Prince at the approach of the revolt would only infuriate them to more shedding of blood. . . .

"If the Italians hypocritically, and William of Wied sincerely, dreaded the peril with too much anxiety, this does not diminish the impression made upon Europe by the helplessness and cowardice of the Mpret. It can not be denied that even on the Austrian side the peril was exaggerated. Nevertheless, this does not lessen the impression of helpless cowardice presented by the leading personage in the incident. He saw in the beginning of a feeble peasant revolt a terrible calamity which threatened the existence of the Albanian kingdom."

The Prince should be more independent, should get rid of Austrian and Italian war-ships and rely upon himself with an unsuspecting confidence in the loyalty of his Albanian mountaineers, says the German writer, adding:

"Through half-measures, through the promulgation of orders a moment afterward to be revoked, through feeble, dilatory, and suspicious activity, it has been brought to pass that in so short a period the Prince's throne in Albania has almost fallen. This has happened, not by the fault of the people, not by the fault of their leaders, but simply from the failure of the Prince to exhibit decision and energetic action and to hold in his own hand quietly and firmly the rod of government without relying upon foreign counselors and foreign body-guards. Instead of doing this, he allows a ship to be anchored in his harbor in order that he may at any moment take to flight. If Prince William wishes to accomplish the work which he has undertaken to do in Albania, he must forget that his person is under the protection of the Powers, he must become an Albanian and with his Albanians must stand or fall."—Translation made for THE LITERARY DIGEST.

THE HELPFUL FLEET OFF DURAZZO.

"Have no fear, your Majesty! Reign peacefully! Whenever anything goes wrong, we will take you and your throne aboard."

JAPAN'S PRECARIOUS POSITION

INDIGNATION is expressed by the Japanese newspapers at the American attitude revealed by the publication of the Japanese-American correspondence on Japanese immigration into our Pacific-coast States, and some of them urge their Government to find a remedy for what they style an "insulting" situation. So the cable reports, and the mails will bring us their more detailed complaint later. In the meantime we find a discussion of Japan's position in the *Paris Soleil*, which believes that Japan has taken her seat in the circle of Great Powers a little prematurely and may have to retire to a more modest position. In adopting Western civilization, we are told, Japan, which was by no means prepared for such changes, imported two very dangerous institutions, parliamentarism and industrialism, which have brought upon her nothing but suffering and danger. The conflict of parties in her parliamentary government is so serious as to threaten the disintegration of the nation. Industrialism and competition, says the *Soleil*, make necessary the exploitation of infant- and woman-labor. The writer of this article quotes from a recent publication of Mr. Eugene Brieux, "Au Japon, par Java, La Chine, La Corée." He tells us that this French traveler has visited the factories of Japan, and has seen at Osaka unhappy little girls of twelve plying the loom, from which they do not lift either their hands or their eyes for twelve hours of the day. In Japan, he declares, there are 350,000 working girls under twenty. Each day, after their work is done, they clean up the shop, sleep two or three in the same bed, and have no holiday excepting once in fifteen days. Let us quote the conclusions at which Mr. Brieux arrives:

"Japan has got to the end of her physical strength. She seems to be exhausted. The military expenses of the country are out of all proportion to her wealth. This has been endured

with a true heroism, silent, unrecognized, willingly dissimulated through a pride which has enabled the people to add to the ordinary burdens of life those taxes imposed in order that iron-clads may be built, cannons and rifles purchased, and a formidable army maintained on a war footing. Japan's victories over China and Russia did not enrich her treasury."

Socialism, unemployment, and even an anarchic rage against the reigning sovereign have been some of the results of Japan's imitation of Western habits and usages. To quote further from Mr. Brieux:

"Japan is hungry; she is sick. The development of her industries has created socialism, and abject poverty has aroused the spirit of revolt. In Tokyo alone the number of the unemployed often exceeds one hundred thousand. There are certain signs that lead us to think that an ill-wind is beginning to blow over the institutions and the moral principles which have given its strength to this country. For instance, a violent popular demonstration took place before the Imperial palace and a train which was carrying the Mikado was fired upon. Even the military virtues of the country are being impaired. According to a newspaper of Osaka, in a single year more than 16,000 young men have endeavored to shirk military service."

But corruption in Japan goes deeper still and permeates even the moral sphere of Japanese life, and we read:

"Faith vanishes and with it morality. The corruption of the students of either sex is an avowed fact, according to a Japanese paper. Those who have escaped this corruption are totally lacking in energy and character."

Mr. Brieux, who is an artist as well as a writer, notices with grief what he somewhat invidiously styles "the Americanization and disfigurement" of the country scenery. There are no rosy tints in his forecast of Japan's future. Revolution, assassinations, and self-abandonment to the instinctive passions are bound to bring Japan down to the level of the worst states in the world viewed in their basest aspects. While Mr. Brieux does not

LONGINGS FOR PEACE.

OUR MEXICAN DILEMMA IN CARICATURE.

dwell upon Japanese domestic politics, he remarks that the old political virtues of Japan as maintained by the ancient clans are now rarely found to exist. They have been eaten out, enfeebled, and soured by the parliamentarism which there, as elsewhere, scatters the special seeds of corruption. He says that the naval scandal shows that the naval authorities are in the pay of the German ironmasters. He then touches upon the dangers of Japan's geographical position:

"Japan is environed by powerful enemies—the imperialist United States, autocratic Russia, and China ruled by a dictator. Little Japan, democratic and forgetful of her past, has terrible neighbors. It must necessarily be that some day or other she must learn, must in fact borrow from them, that experience of life which she now claims with such courage, bravado, recklessness, and dash."—*Translation made for THE LITERARY DIGEST.*

GERMANY'S WORLD-WAR FOR TRADE

"FULL STEAM AHEAD!" shouted Dr. Philip Heineken, Director-General of the North German Lloyd, as he closed a panegyric on the Kaiser as the supreme architect of German sea-power, both naval and mercantile.

We see what is meant by "Full Steam Ahead!" when we are told that Germany is placing 50,000- and 60,000-ton vessels in the North Atlantic at the rate of two or three a year, says Mr. Frederic William Wile, in the *London Daily Mail*. A German commercial invasion of New Zealand ports is also impending, we are told. German freight-vessels of the finest modern type have banished obsolete cargo-boats from South American service, and the lion's share of trade with Brazil and Argentina has already fallen to Germany. Big steamships in groups of seven are being laid down for the Australian and Far-Eastern trades with Germany. This writer thinks that the expansion of German shipping is no less important to British interests than the development of the Kaiser's Navy. He proceeds:

"The German mercantile marine had its very mainspring in the determination to emancipate German trade from slavish dependence on British vessels. That humiliating condition was not effectually remedied until Bismarck inaugurated his great policy of vigorous government support for shipping and export trade, consisting of ship subsidies, protective tariffs, acquisition of colonies, and conquest of new markets."

The merchant ships of Germany are to be like the spies sent into the Promised Land to find out new trade avenues and new means of enlarging Germany's mercantile activities:

"The significant thing about the German mercantile marine is that it is not merely a trade-carrier, but a trade-finder, a pioneer in the highest sense of that oft-misused term. The ships of Hamburg and Bremen do not lie lazily at anchor at home or in foreign ports waiting for trade to turn up like some haughty chauffeur on a cab-rank. They make it their business to create trade. That is why Herr Ballin organized an 'independent' German exhibit for the Panama-Pacific Exposition when the German Government officially declined to do so. That is why he offered to transport German wares to and from San

Francisco free of charge, and to carry British exhibits on the same terms, if desired. That is why the Hamburg-American and the North German Lloyd lines are in the forefront of the new associations being formed month by month for market exploitation in every quarter of the globe. German shippers believe implicitly that 'trade follows the flag.' It is always their flag—the German merchant emblem—which is carried in front of the German commercial army. The naval ensign is never far behind."

This progress in Germany's trade relations abroad is fostered by the personal interest of the Kaiser himself, and we read:

"To the Kaiser the mercantile marine is as dear as his Navy itself. He attends the launchings of mammoth liners and takes trial trips in them. He congratulates the 'Hapag' and the Lloyd on every new achievement—the opening of a service, the attainment of a speed record, the noteworthy act of a captain. He showers honors upon Herr Ballin and Herr Heineken, serves as peacemaker when their lines quarrel, and graces Hamburg and Bremen often and regularly with his presence. He dispatches Admiral Prince Henry of Prussia on the maiden voyage of the liner de luxe which is to inaugurate a new epoch in Germany's designs on South American trade, assigns him the simultaneous mission of touring Argentina, Chile, and Brazil, and orders Germany's two newest dreadnoughts to cruise in South American waters at the same time."

Mr. Wile closes with the following striking statistics:

"Figures, people say, talk. Never have they told a more eloquent story than the statistical record of German shipping. In 1900 the Kaiser's mercantile marine totaled 2,495,389 tons. To-day it is more than double—5,050,000 tons—and is the second largest in the world. The German mercantile marine is, of course, far behind Great Britain's tonnage of roundly 10,500,000, but it has increased 20 per cent. since 1910, as

against Great Britain's increase of 7.4 per cent.

"Including the 62,000-ton 'bigger sister' of the *Vaterland* and *Imperator* . . . and seventeen other ocean-going vessels now on the stocks (which include three 21,000-ton ships for the South American trade), the Hamburg-American Line has a tonnage of 1,360,360, contained in 196 ocean-going vessels. In 1886, when Herr Ballin joined the 'Hapag,' as the Hamburg-American Line is called, its capital was £750,000 and gross profits were £125,000. To-day the capital is £9,000,000, and in 1913 the line earned £2,926,050. While the recent general meeting was voting to increase the capital from £7,500,000 to £9,000,000—it had been quintupled between 1897 and 1913—a shareholder suggested that at the present rate the company's capital in 1927 would be £25,000,000. 'I hope so,' quietly rejoined Herr Ballin, 'for we may be sure in that event that conditions will make such a capital extremely useful.'

"The North German Lloyd's ocean fleet of 101 vessels accounts for gross tonnage of 982,857, including two liners of 28,000 and 35,000 tons soon to enter the transatlantic service, and fourteen vessels being built for the Australian and Far-Eastern trades. In 1888 the Lloyd's capital was £1,000,000. It is now £6,250,000.

"The Hamburg-South-American Line (controlled by the 'Hapag') owns a fleet of thirty-seven liners, soon to include two 19,000-ton vessels. The Hansa Line of Bremen, which concentrates on India and the Far East, operates sixty-three ocean vessels with a tonnage of 419,258, and is building fifteen new ships. The Hansa pays a 20 per cent. dividend, a striking testimonial of the success with which German shipping is at work on the other side of the world."

SCIENCE AND INVENTION

FINISH OF THE POUGHKEEPSIE REGATTA: COLUMBIA FIRST, PENNSYLVANIA SECOND, CORNELL THIRD.

PHYSIOLOGY OF BOAT-RACING

THE MEMBERS of the winning crew in a boat-race feel that they have demonstrated their mastery over their bodies—much as the successful passage of an examination demonstrates mastery over the mind. The result is a "unique feeling of control," beside which any mere gain in muscular strength sinks into insignificance. This is the opinion of a German physiologist, Mr. A. Lehrbecher, and is the result of measurements and observations of the members of one of the academic rowing clubs at Wurzburg. Such violent exercise as rowing in a race has been in disfavor among physiologists of late, and these experiments may do something to rehabilitate it. In reviewing Lehrbecher's work, *The Journal of the American Medical Association* (Chicago) remarks editorially that we have surprisingly little definite information about "the specific influence of bodily exercise on the human mechanism." Lehrbecher's investigations bring out some interesting facts, particularly timely at this regatta season, one or two of which are unexpected. To quote in substance:

"A surprising feature in Lehrbecher's measurements is the failure to demonstrate a considerable increase in the size of the muscles of various regions in the course of a two-months' training. Familiar observation and the physiologic teaching of the present day lead one to expect pronounced development in the arm, for example, when this is subjected to vigorous exercise. Several factors may have entered into the absence of evidence of increased proportions in the musculature of these German oarsmen. Hypertrophy of the muscles may have been compensated for in the total volume of the limbs and other parts measured by the disappearance of surplus fat. Furthermore, it should be borne in mind that rowing does not confine its demands to limited groups of muscles, which is the case in many other sports such as boxing or fencing. In skilful rowing the arms are drawn into participation far less than the inexpert layman is wont to believe; on the other hand, the abdominal muscles and the legs are called on to assume a not inconsiderable share of the special effort.

"All students of the physiology of exercise are agreed that the acceleration of the pulse attending a definite exertion grows less and less with training.

"The subtle influence on the nervous system of training for a decisive competitive event is recognized by those immediately concerned as an element liable to determine success or failure, but is rarely considered from the broader point of view of its effect on the welfare of the person concerned. Most candidates show more or less 'nervousness' and increased irritability toward the end of a period of training, and this mental condition is well known to the experts. It has been counted as favorable in the case of college athletes that their scholastic duties act to divert attention in some measure from the 'nerve-straining' features of athletic training. The same factor of distraction has been held to account for the often unexpected success of crews composed of business men who devote only their leisure moments to the somewhat monotonous rigor of training and practise.

"The conclusions of a physiologic observer who has followed season of training with unbiased expert eyes are worthy of consideration. The possible dangers of competitive

rowing are not concealed by him. Even with careful supervision, overexertion of the heart, nervous exhaustion, and other untoward symptoms may arise. Such features can be averted by intelligent guidance; in other words, by training under the eye of a competent medical adviser rather than a muscular giant or an athletic trickster. Speaking from a personal experience, Lehrbecher frankly says that the choicest reward of the great effort of six weeks' preparation is not the absolute gain in muscular strength or bodily mastery, but rather a unique feeling of control over an organism that is equal to the greatest exertions. The feeling of having participated in a regatta is not greatly unlike the sense of satisfaction which attends the successful completion of an examination. The one demonstrates the mastery of the body, the other that of the mind. We are warned, however, of an additional duty rarely fulfilled by the present system of athletic competitions. It is the necessity of providing for some acceptable continuance of activity so that the derived gain of a season's training will not change to loss and the well-trained person revert to the other extreme of unhygienic living."

EVERYTHING OF PAPER-PULP—Every week or two a few additions are made to the list of things that may be manufactured out of paper. It looks as if a paper world might materialize in a not far distant future. Says a contributor to *Prometheus* (Leipzig), No. 34:

"It is very doubtful whether another material so universally useful as paper-pulp is to be found. Car-wheels of paper made a great sensation years ago, but paper belting and cog-wheels are now well known, as are paper garments, which are now used in great quantities in the Chicago City Hospital, being burned afterward. Even paper stockings and towels have been used in America, and paper towels are used on the South German railway sleeping-cars. . . . In America, water-proof rain-coats are made of paper that can be folded up and put in one's pocket, . . . while the Japanese coolie (Japan is the land where walls and windows are made of paper) can buy a paper waterproof for a few cents and wear it a year. Barrels, pails, bathtubs, cooking utensils, and wash-boards of paper are to be found in many houses. Floor coverings and wall hangings of paper are nothing new, while paper gas-pipes are not seldom met. Paper insulating material, imitation leather, and threads and fabrics of the same material follow without number. Sails are something new in the way of paper articles, while hygienic paper drinking-cups and bottles that can be thrown away as soon as used are employed in greater and greater numbers. Paper-pulp and paper of all kinds have won out as packing material, from the finest examples of the industrial carton to the coarse paper-bag for weights of a hundred pounds or more. Lately paper-pulp has appeared as a substitute for wood in carpentry, especially in ship-building, where lightness is all-important. Boards, laths, etc., of paper pulp which can easily be prest into shape, are much cheaper than those of wood, as are plastic ornaments of all kinds. Such imitation boards of paper-pulp can easily be fastened together with paper screws—the newest things in paper-pulp. . . . These short records seem to indicate the early use of paper-pulp in an almost universal field."—*Translation made for THE LITERARY DIGEST.*

TWO-STORY FARMING

THE STORY of how farmers in France, Italy, and Spain grow two crops at once on the same land is told under this heading in *The Century Magazine* (July)

by J. Russell Smith. One of Mr. Smith's "two stories" is up in the air, on the branches of trees, while the other is on the ground. In other words, what he advocates is the growing of fruit- or nut-trees in the same field with grain or vegetables. He believes that we can utilize the plan in this country to our advantage, altho he admits that difference of conditions will prevent servile imitation of the European farmers in the matter of crops. It is true that crops may be seen growing beneath the branches of some American orchards, but the practise is regarded with disfavor by many agricultural experts. As Mr. Smith explains, the European plan is to space the trees widely, so that the crops below and above do not interfere with each other. He writes in substance:

"A mighty frost swept the Mediterranean last spring about the time the almonds were in bloom. It wiped away the possibilities of many a crop as clean as a sponge wipes a chalk problem from a blackboard. Two months later I found the almond-farmers of Majorca in a cheerful mood, very cheerful, indeed, when it is remembered that the almond covers a much larger proportion of their territory than the apple does in any county of New York, Virginia, or Oregon. These island farmers had cyclone-cellars, so to speak, and into this refuge they had dodged when the whirlwinds of frost struck them. They were two-story

had all their eggs in one basket, so that one blow smashed their hopes for a harvest that year, and actually threw many into bankruptcy.

"Approximately nine-tenths of the arable area of Majorca, one of the Spanish islands in the Mediterranean, is planted out to crop-yielding trees. That makes one-story agriculture.

Illustration by courtesy of "The Century Magazine"

TYPICAL TWO-STORY FARM IN MAJORCA.—WHEAT BENEATH, ALMONDS ABOVE.

When the frost destroyed one crop, the farmers fell back on the second.

Then, beneath the trees grain is grown. That makes the second story, which may properly be likened to the cyclone-cellar.

"In the average cases it works out that the grain crops pay the cost of the operation, and the tree crops come along and make the profits. The failure of the almonds, or the off years with the carobs or olives, therefore, leaves no deficits, and the years of good-tree harvests are the years of profit. If, as is at times the case in the best-regulated lands, there is a shortage in the grain crop, it has more than an even chance of being equalized that same season by the tree harvest.

"No one should be deceived into thinking that they get 100 per cent. grain crop and also 100 per cent. tree crop. That would be too good to be true, too much like eating your cake and having it. The trees send their roots down into the sub-soil, and their tops into the upper air. The small grain attends to the surface, and does most of its growing in the winter, when the rains come and the trees are resting. Between them the two stories of this agriculture make more income than either story could have done by itself. Then, too, the cultivation and fertilization of the grain are an unquestioned benefit to the trees, which thus become, in a sense, a by-product of the grain-growing.

"The farmers of southwestern France annually send to this country millions of pounds of choice Persian (so-called English) walnuts, and yet there are not ten orchards in the whole region. A French farmer gave me this explanation:

"If we planted the trees in regular rows, close together, we could grow nothing beneath them, for they cast a dense

shade; but if we scatter them about the fields, there is plenty of light, and wheat will grow close to the trees."

"The Italian farmers long ago adopted the two-story agriculture by planting rows of mulberry-trees across their wheat-fields, and then having grape-vines climb up the mulberry-tree

MR. HOG EARNING HIS BOARD ON THE FIRST FLOOR.

Rooting up the remnants of a sweet-potato crop in a young pecan orchard.

farmers, and when the frost destroyed one crop, they fell back on the second. They had losses, but not disaster. Their profits were gone, but not their living. Thus they could afford to be cheerful. A similar frost in the orange districts of Florida or California has literally thrown whole communities into mourning, because the people were one-story farmers. They

Take the same field which would yield and fill from the worms that feed on the soil—*the pig*.

Mr. Smith asserts that what we need in America is a two-story agriculture. The principle he says is a good one, and we must adapt it to American conditions. That we can do so he has no doubt. It is merely a matter of combining elements that we are already familiar with separately. Take, for instance, the peewee and the pig, which he regards as the combination that will lead the way in American "two-story" work. He says:

"One of the important characteristics of farm-efficiency experts is the fact that a pig is used for something besides eating and being eaten. He can work. For the last hundred years we have been regarding the pig as a sort of star waiter whom we should have been regarding him as a harvest hand. The days of porcine luxury are passing, and on a steadily increasing number of farms the pig may be classified among those having gainful occupation. The point is that instead of idly feeding the pig in small enclosures, where he eats what we with human labor bring him, we turn him into the field to gather for himself.

"The really new part of it is the fact that we have worked out successions of quick-growing crops like oats and vetch, barley and vetch, cow-peas, soy-beans, alfalfa, sweet potatoes, peanuts, Japanese cane, crimson clover, red clover, and the old standby of corn, so that the farmer does little more than plow and plant, and drive his pigs from field to field to harvest the crops as they ripen. As soon as the pigs leave the first field, the farmer plows it up and plants the next crop and so on. When the pig goes from the fourth or fifth, it is to market, and the farmer puts a big deposit in the bank, for his labor bill has been small. He has used no reaper. He has not had the pains of making hay, no harvest rush. The pigs walked round and harvested for him, and thought it quite a lark at that."

This, of course, is merely an isolated example. Mr. Smith is sure that the "two-story" principle will work with us in all sorts of ways and needs only a little study and experiment:

"We have a great machine for the promotion of agriculture: a United States department, thirty or forty State departments,

"TWILIGHT SLEEPS" AND MEDICAL PUBLICITY

WIDE-SPREAD CRITICISM, among medical men, has been directed against the article in *McClure's Magazine* (quoted in our issue of June 6) regarding a method for producing painless childbirth by anesthesia. Apparently it is not denied that the so-called "twilight sleep" has been successfully employed by Drs. Krönig and Gauss, of Freiburg, Germany, but the laudatory tone of the article is condemned as advertising puffery, and the inferences that the method is an entirely new discovery, that it is safe under all circumstances, and that one must go to Freiburg to take advantage of it, are asserted to be false. In response to several queries by medical men regarding the status of this form of anesthesia, the editor of *The Journal of the American Medical Association* (Chicago, June 6) calls the article "sensational and misleading," and adds:

"The public on reading this article would naturally infer that this method of analgesia was something new. As a matter of fact, our readers, of course, know that the suggestion for the use of a combination of scopolamin (hyoscin) and morphin was made over twelve years ago, and was put to a pretty thorough test, especially in Germany. While it is not altogether obsolete, it has been practically discarded.

"Another natural inference would be that an obstetrician would be negligent of his patients' rights if he withheld the scopolamin-morphin method in his labor cases. The facts are that this method has been thoroughly investigated, tried, and found wanting, because of the danger connected with it. Even the most enthusiastic among its German advocates have emphasized its danger, and have stated that it should not be used except in hospitals, where constant, careful watching is possible.

"The *McClure's* article seems to have been written, however, especially to emphasize the remarkable results obtained in Freiburg by Krönig and Gauss. As a matter of fact, the Freiburg method differs but slightly from that originally suggested. By the Freiburg method one dose of morphin is given, whereas the scopolamin is repeated as indicated—the indication being, not pain, but memory.

"The impression gained from a review of the literature is that the present method of obstetric anesthesia by scopolamin and morphin is not safe for the child and not always safe or successful for the mother. The time may come when the hope expressed in 1911 by Lequeux may be fulfilled, that further clinical investigations cautiously conducted will secure a harmless agent with which to lessen or abolish altogether the pains of labor; but that time has not yet arrived."

Besides this, the same paper has the following to say editorially, under the caption "McClure's Mistake":

"The present effervescence of medical interest in this subject is excited by an outburst of enthusiasm concerning the treatment as applied at Freiburg, by Krönig and Gauss, published in the June issue of *McClure's*. The article appears under the signature of two women, evidently not medical authorities, and contains frequent quotations of statements credited to Krönig and Gauss. In an address delivered by Krönig before various societies when here last November, published in the May issue of *Surgery,*

Gynecology, and Obstetrics, statements are made almost identical with some of those in the *McClure's* article. We hesitate to believe that either Krönig or Gauss would instigate or endorse such a sensational puff for themselves, but so clear does the evidence appear that this impression is almost forced on us. If the publication was sanctioned by either or both of them it indicates an advertising initiative which bids fair to

THE "AERIAL OMNIBUS" THAT CARRIES SIXTEEN PASSENGERS.

forty-six agricultural colleges, over fifty agricultural experiment stations, and two hundred substations. Most of these seem never to have heard of a two-story agriculture. They should go into the woods and byways and get all these promising wild things, form of them an awkward squad, shape them up, and give us a score of new tree crops to make the upper part of a two-story agriculture that will feed both man and beast."

rival Friedmann. It is needless to explain to physicians that many of the statements contained in the *McClure's* article are ridiculous. As usual, not the physician, but the credulous and innocent public will be harmed by this unfortunate exploitation."

The fact that the method of Krönig and Gauss is neither new nor confined to Germany is dwelt upon in *The American Journal of Clinical Medicine* (Chicago, July) as follows:

"The article is an interesting one, yet many thousands of women in this country, who neither have the opportunity to go to Europe nor the inclination to achieve the éclat of such a pilgrimage, have been enjoying, in their own homes, for a number of years, the satisfying experience of painless labor under the influence of hypodermic injections of hyoscin and morphin.

"The procedure already is well known to thousands of physicians in the United States, unostentatiously practised by them for at least a decade, and long ago passed out of the experimental stage into an established routine of the lying-in room. But it needed that such a beneficent innovation should be postmarked from a German center of medical activity and that a few Europomaniacs should undertake a pilgrimage to some clinic in far-off Germany, to give it the transatlantic flavor necessary for journalistic exploitation here. . . .

"We trust that nothing we have said here will be construed as intended to belittle the work of Gauss and Krönig. These men are doing splendid work, and for this we take off our hats to them. But, to suggest that they have a monopoly on this painless childbirth business by means of scopolamin (or hyoscin) and morphin—that is to laugh."

The matter is treated in a somewhat lighter and more popular vein, but with a due regard for medical verity and medical ethics, by Dr. F. A. Churchill, of Seattle, in *The Town Crier*, of that city, under the title of "Obstetrics as a Best Seller." Says Dr. Churchill:

"Ask any medical man of your acquaintance who has had considerable experience in this work, what he thinks of the *McClure's* article. He will disappoint you; he will refuse to be impressed. 'Scopolamin? Why, there is nothing new or startling about that. I understand it finds favor with the Germans; but here we use something we consider a good deal better and safer in hyoscin hydrobromide combined with morphin and cactin.'

"What! Do you have the Twilight Sleep here too?"

"Well, I don't know anything about fancy names; but I do know that by means of these drugs we produce an amnesia the same as your friends in *McClure's* describe—and with a lot less fuss."

"Do you use the memory tests and—and all that, the same as Krönig and Gauss?"

"Of course. That is the only way in which we can determine when the patient is just at the right stage of semiconsciousness."

"Why don't American doctors use scopolamin?"

"Because scopolamin can be made in two ways. One kind is honest enough; but the other has a very low rotary power and by reason of impurities is apt to be very dangerous. Furthermore, the action of hyoscin upon various organs and functions is much different from that of the other drug, which since its discovery in 1889 caused much dissatisfaction among American scientists by its variability and uncertainty. . . .

"It is a pity that pseudoscientific journalists can't investigate facts a little more thoroughly before plunging into deeps such as *Meedames*—or *Meedamoiselles*—Tracy and Loupp of the *McClure's* staff have entered. . . . Perhaps many women will be induced to make a trip abroad at a critical period of their lives, not to mention possible financial hardship or the fact that their children will be foreign-born; and the magazine finds itself in a position which I am sure it heartily abhors—of seeming disloyalty to the United States."

An incident that may have given a slightly sharper cutting-edge to this medical criticism of *McClure's* is the fact that the

British professional press has just been condemning undue medical publicity as a peculiarly American thing—a charge bitterly resented by our own physicians, says *The Journal of the American Medical Association* (Chicago, June 20):

"Following the publication of the 'Family Medical Encyclopedia' in England, . . . a storm of protest arose in the

THE RUSSIAN AERIAL CARRYALL IN FLIGHT.

British Medical Association at the publication of a list of contributors in such a book intended for the public. This type of medical advertising was severely condemned and likened to 'the fever of self-advertisement which characterizes the American profession from tip to toe.' In response to demands on the part of numerous members, the Council of the British Medical Association has promulgated certain rules concerning the publication of medical books intended for the laity. . . . Our correspondent says: 'It must be borne in mind that the professional rule against advertising is much more stringent in this country than in America.' He voices, no doubt, the general impression of the foreign physician concerning American medical practitioners. When are these insults to cease? Can our foreign contemporaries point to a single incident in which medical men of America of equal rank with the English physicians concerned have loaned their names to such an outrageous enterprise? Can they point to a single American, connected with a reputable clinic who would authorize and countenance the publication of such an obvious and misleading puff as was sanctioned by Drs. Krönig and Gauss in a recent issue of *McClure's*? Certainly, so far as we can determine, they will be unable to find one. The wise sanitarian will disinfect his own premises before naming as unclean the domicile of his neighbors."

AN AERIAL OMNIBUS—The enormous biplane invented by Igor Sikorsky, a Russian, has carried sixteen passengers and a pilot on a short flight, and eight passengers and a pilot on a flight that lasted two hours and six minutes, according to *The World's Work* (New York, July). Says this magazine:

"The wings spread 114 feet, and the body and tail are 60 feet long. Besides the pilot's quarters, the 'airbus' contains an observation balcony, a wash room, and an enclosed passengers' cabin, that is lighted by electricity, heated by gas, and furnished with chairs. The machine is driven by four 100-horse-power motors, and with this power-supply has been driven at a speed of sixty-six miles an hour. But the inventor's designs call for a fifth motor, which will probably increase this speed. Each motor can be started independently of the others, and all are controlled from the driver's seat by compressed air. The great spread of the wings increases the lifting power of the machine. The airbus, empty, weighs 8,250 pounds, and it has carried more than a ton of additional weight. This carrying capacity makes the airbus of great utility in war. The Russian Government has ordered four more biplanes of this type for the use of the army. This order is part of Russia's large increase in aeronautical equipment, which already includes more than 300 aeroplanes and which will be increased by 1,000 more within two years."

LETTERS AND ART

SECRETARY LANE'S SPEECH

THE VERSATILITY of the man thought likely by some observers to be President Wilson's choice for the first vacancy on the Supreme Court bench was recently shown in a sphere outside of jurisprudence. Secretary Franklin K. Lane made a speech on Flag Day that leads the *New York Evening Post* to observe that "it is not often that the hard-working head of a Department—and a Department preeminently devoted to economic tasks—makes a venture so original and so successful in the domain of oratory." In two successive weeks recently the Supreme Court has rendered four decisions defining and clarifying the relations between interstate railroads and the Interstate Commerce Commission and the rights of the Commission in naming rates. In all four of these cases, says *The Evening Post*, "the decisions of the Interstate Commerce Commission, written by Franklin K. Lane, now Secretary of the Interior, when he was a member of the Interstate Commerce Commission, have been fully sustained and affirmed, and virtually on the same grounds taken by Mr. Lane in writing the decisions of the Interstate Commerce Commission." The Flag-Day speech was addressed to no higher tribunal than the clerks of his Department. And the same paper observes that it contains "no bathos and no cant." Moreover, "incredible as it may seem, the very word 'service' is not to be found in it, from end to end." This is the speech in full:

"This morning, as I passed into the Land Office, the flag dropt me a most cordial salutation, and from its rippling folds I heard it say: 'Good morning, Mr. Flag-maker.'

"'I beg your pardon, Old Glory,' I said, 'you are mistaken. I am not the President of the United States, nor the Vice-President, nor a member of Congress, nor even a General in the Army. I am only a Government clerk.'

"'I greet you again, Mr. Flag-maker,' replied the gay voice. 'I know you well. You are the man who worked in the swelter of yesterday straightening out the tangle of that farmer's homestead in Idaho.'

"'No, I am not,' I was forced to confess.

"'Well, perhaps you are the one who discovered the mistake in that Indian contract in Oklahoma?'

"'No, wrong again,' I said.

"'Well, you helped to clear that patent for the hopeful inventor in New York, or pushed the opening of that new ditch in Colorado, or made that mine in Illinois more safe, or brought relief to the old soldier in Wyoming. No matter, whichever one of these beneficent individuals you may happen to be, I give you greeting, Mr. Flag-maker.'

"I was about to pass on, feeling that I was being mocked, when the flag stooped me with these words:

"'You know, the world knows, that yesterday the President spoke a word that made happier the future of ten million peons in Mexico, but that act looms no larger on the flag than the struggle which the boy in Georgia is making to win the corn-club prize this summer. Yesterday the Congress spoke a word which will open the door of Alaska, but a mother in Michigan worked from sunrise until far into the night to give her boy an education. She, too, is making the flag. Yesterday we made a new law to prevent financial panics; yesterday, no doubt a school-teacher in Ohio taught his first letters to a boy who will

write a song that will give cheer to the millions of our race. We are all making the flag.'

"'But,' I said, impatiently, 'these people were only working.'

"Then came a great shout from the flag.

"'Let me tell you who I am. The work that we do is the making of the real flag. I am not the flag, not at all. I am but its shadow. I am whatever you make me, nothing more. I am

your belief in yourself, your dream of what a people may become. I live a changing life, a life of moods and passions, of heart-breaks and tired muscles. Sometimes I am strong with pride, when men do an honest work, fitting the rails together truly. Sometimes I droop, for then purpose has gone from me, and cynically I play the coward. Sometimes I am loud, garish, and full of that ego that blasts judgment. But always I am all that you hope to be and have the courage to try for. I am song and fear, struggle and panic, and ennobling hope. I am the day's work of the weakest man and the largest dream of the most daring. I am the Constitution and the courts, statutes and statute-makers, soldier and dreadnought, drayman and street-sweep, cook, counselor, and clerk. I am the battle of yesterday and the mistake of to-morrow. I am the mystery of the men who do without knowing why. I am the clutch of an idea and the reasoned purpose of resolution. I am no more than what you believe me to be, and I am all that you believe I can be. I am what you make me, nothing more. I swing before your eyes as a bright gleam of color, a symbol of yourself, the pictured suggestion of that big thing which makes this nation. My stars and my stripes are your dreams and your labors. They are bright with cheer, brilliant with courage, firm with faith, because you have made them so out of your hearts, for you are the makers of the flag, and it is well that you glory in the making.'

FRANKLIN K. LANE,

Who recently apotheosized the flag in a speech of "no bathos and no cant."

There have been many demands for copies of Mr. Lane's speech since knowledge of it got abroad.

A NURSE OF GENIUS

AN ANGEL ministering to genius, is the phrase used by the *London Nation* to describe the late Theodore Watts-Dunton, who died on June 6. The phrase recalls his lifelong devotion to Swinburne and his friendship for Rossetti and others of the Chelsea circle. "He belonged to the class who, with unselfish devotion, undertake the care of greatness, and by the weight of their charge obliterate their own distinction." But the writer doubts whether such devotion is justified—"whether it would not be finer in the end to let genius go its own gait, even to death or destruction, than to keep it hovering in suspended animation, inert and useless as an invalid upon our esplanades." A writer in the *Manchester Guardian* puts the situation concretely:

"It was difficult in this century to think of him living on in that commonplace house on Putney Hill with all his memories and incommunicable thoughts of those rich and splendid caves of the nineteenth century of which it has been his privilege to hold the key. Looking back from our day, 'caves' is the word that has, as postimpressionist disputants say, the best association values here. The secrecy, exclusiveness, and half-

sinister atmosphere of Queen's House, Chelsea, with the shadow of chloral over its illustrious chief, the collection of exotic art treasures inside and outside, the strange creatures that pleased and excited the whims of Rossetti's troubled mind. Then Watts-Dunton's association with Swinburne at The Pines, with the splendid wild, romantic life of the mind turning over the imaginings of all the dead poets and adventuring through their lands. And all that the world could see was an old gray gentleman in an ordinary villa, whose only adventure was to shock Suburbia by walking to the 'Green Man' and drinking a pot of beer. Watts-Dunton was the spectator and partaker in both these strange lives. It could not have been all happiness or even pleasantness. To-night one remembers chiefly that it was a poet and a talented man of letters who was proud to give half a lifetime of love and service to the two frail giants of his time."

The writer in *The Nation* thinks that perhaps "the wide-spread knowledge of it . . . obscured the fame due to a thin but shining vein of genius that lay embedded in fine abilities and a keenly intelligent nature, observant of the moving world in spite of literary and charming seclusion." Speaking of his positive achievement:

"Week by week for about twenty-five years, Watts-Dunton's essays set the note in the leading organ of Victorian criticism (*The Athenæum*). It was criticism in the great style, if not in the grand. He never quite reached Matthew Arnold's sharp outline of definition, sureness of judgment, or power of creating a vivid and lasting phrase. He seldom attempted the rhetorical and stupendous criticism, sometimes so amusing in Macaulay, and always amazing or flabbergasting in the surge and thunder of Swinburne's oceanic utterances. As a rule, his discussions were quiet, reasonable, and perceptive. For delivering us from the swashbuckling, cut-and-lash methods of the earlier generation, we owe him an incalculable debt. If we turn up the articles of famous reviews during the first half of last century, it seems incredible that such stuff once passed for criticism at all—such insolence, such bluster, above all, such sorry blindness.

"Watts-Dunton's fault lay all on the other side. Sometimes he was too deliberate, often too diffuse. He would wander round and round the subject without quite getting there or showing us the way. Like an Oxford don, he was sometimes so polite to error as to forget the truth. Latterly, he often returned to an old-fashioned manner, and made his criticism a dissertation on the subject rather than an estimate of the book. But at his best, there he stood, giving us of his best week by week, without signature or appeal for fame—an industrious man of unusual literary knowledge and an inborn sense of beauty highly developed by selection; cautious in admitting new or startling forms, but constantly on the lookout for any sign of possible promise along the well-established lines. 'I have always tried,' he used to say, 'to find the best in every book I have criticized.' How great and rapid a change! In the generation before him it was the critic's function to find the worst."

Swinburne returned the devotion of Watts-Dunton with an estimate that caused some unmannerly slurs. He described his friend as "the first critic of our time—perhaps the largest-minded and surest-sighted of any age." If one reads the essay on "Poetry" that Watts-Dunton wrote for the "Encyclopedia Britannica" one "will probably think the praise not much beyond the truth."

"It is a remarkable piece of work. A vast subject had to be treated within definite limits—a subject that had been discussed and illustrated by the finest minds up and down two thousand years. Knowledge of history, of European and even Asiatic literature, and of the best criticism, was essential as a basis, but there was no place for its display as knowledge. It must

be hidden, as it were, underground. Its existence could be known only from the strong outline of the superstructure, with here and there a hinted reference, or a suggestion to those who knew what the knowledge meant. The result is a vital and personal work, quite a different thing from what one expects in a great encyclopedia of knowledge—let us say, in a German encyclopedia, for instance. How easily one can imagine those arid and dreary pages—the dates, the succession of 'periods,' the lists of names, the scientific divisions, the complex definitions, the numbered references, and all the intolerable weight of indistinctive and unprofitable information! To read such an article would be enough to sicken the poets themselves of their thankless trade. But to read Watts-Dunton's treatise brings an elevation of spirit. It almost inspires. By a personal, an almost emotional quality, sometimes to be found in the best English and French criticism, it rises from science to the literature of power.

"The treatise is well known; its definitions and conceptions have passed into common property. 'Absolute poetry is the concrete and artistic expression of the human mind in emotional and rhythmical language'—the Futurist poets may question the limitations 'rhythmical' as unsuited to the new emotions of our noisy times; but the definition holds, and from it we pass on to the discussion of its terms—'absolute,' 'concrete,' 'artistic,' 'emotional,' and 'rhythmical' itself. On those lines, for the most part, the essay runs, with judgments and distinctions calm, reasonable, supported by simple and familiar instances, but yet inspiring, touched by a kind of passion, as tho genius itself were at work with the critic's hand. The insistence on concrete

form, the exclusion of all that is merely abstract, informative, or typical from the highest or 'absolute' poetry, the exclusion also of all 'word-painting,' the account of the two angels of Sincerity and Conscience which must accompany the poet on either hand—these are among the deepest motives of the work, and there is no need for further praise."

HIGH LIGHTS OF THE DRAMATIC YEAR

RIGHT ON THE HEELS of something like chagrin over the failure of "Adele" in London, because it is there declared "American," comes the word of an optimistic manager that America will be written all over the London theatrical map next year. Thus Mr. William A. Brady is reported in the *New York Times*. The time is coming, he avers, "when companies, when through in New York, will play in London just the same as they do in Chicago, Boston, and Philadelphia." As a support to his prophecy, he tells us that London next season will see "The Yellow Ticket," "The Misleading Lady," "Too Many Cooks," "Under Cover," "Seven Keys to Baldpate," "The Things that Count," "A Pair of Sixes," "Nobody's Widow," the Winter Garden Show, "The Girl from Rector's," and "Tante." These are supposedly the skimmings from our past season, and it will be profitable, perhaps, tho by no means a sure prognostication of their London future, to see what our reviewers think of the things brought forth. "A rather discouraging season . . . without much question," says Mr. W. P. Eaton in the *Chicago Herald*, showing he would not bank heavily on a London future. Taking the season by and large:

"No new playwright has appeared who seems destined to close the gap much between literature and our stage, for Mr. Craven, honest and natural tho he is, has not sufficient intellectual distinction.

"No new actor or actress has appeared.

"And our New York public seems further than ever from

caring for anything serious or whimsical or distinguished by literary deftness and charm. We have lost the solid masses from our playhouses here—and yet we still dictate to the country.

"The situation is becoming more intolerable—and the day of [the municipal theater independent of Broadway is being hastened."

The successful plays, he tells us, have probably made as much money for their promoters as they would have done at any other time; but the unsuccessful ones and those on the border-line between success and failure have probably fared worse than usual. He surveys some of them:

"The popular success of the season, above all others, was 'Grumpy,' with Cyril Maude. Its receipts never fell below \$11,000 a week, and sometimes reached \$15,000. Wallack's Theater, one of the oldest on Broadway, and supposedly too far 'down-town' now, had the laugh on its newer rivals.

"'Grumpy' is not an important play, however—merely good entertainment, like an Anna Katherine Green story, galvanized into life by the mellow art of Mr. Maude. Two other plays which ran 'Grumpy' close are 'Potash and Perlmutter,' which is part sentiment, part photographic realism, and on the whole voracious enough as a picture of Yiddish character to rank it high in critical regard; and 'Seven Keys to Baldpate,' Mr. Cohan's 'mystery-farce,' made from Earl Biggers's novel. Both these plays are still going.

"In the spring two more native works, 'A Pair of Sixes,' a rapid-fire farce by Edward Peples, and 'Too Many Cooks,' a unique and fresh comedy written and acted by Frank Craven, were produced, and became certain successes in a night. 'A Pair of Sixes' is the kind of farce which has no nationality, except as its rapid-fire development, its breezy humor, and its care for a certain surface reality brand it as American. The same may, perhaps, be said of 'Seven Keys to Baldpate.' Mr. Craven's play, however, and 'Potash and Perlmutter' are both products of actual conditions in the life about us, and are for that reason much more significant.

"Perhaps it is significant, also, of our national temperament as theatergoers that all four of these most successful rivals of 'Grumpy' are essentially comic in their appeal.

"Of the shorter engagements played during the season unquestionably the most successful was that of Forbes-Robertson, especially on nights when 'Hamlet' was the bill. However, as this was the great actor's farewell to our stage the fact is easily accounted for, and we can not lay too flattering unction to our souls.

"Miss Anglin's revival of 'Lady Windermere's Fan' . . . was a surprise to every one. It followed three weeks of rather poor business in Shakespeare, and might have been expected to share the fate of numerous other attempts to revive the plays of the eighties and nineties of the last century. But it didn't. The public has flocked to it. Its modernity and smartness seem to jibe with the temper of the times.

"Two other surprises were the failures of 'General John Regan' and 'The Great Adventure,' both huge successes in England. The latter was badly miscast here, but the former wasn't (tho it might have been done better). New York, however, rejected the merry Irish comedy, and later the country followed suit. Can it be that our sense of humor is not so great as we would have the world believe?"

Another critic who neglects the pecuniary arguments of success gives his schedule of ten best plays in the order of their merit. As nearly all of them came to us from Europe, it will not be expected that any of Mr. George Jean Nathan's list should return from us to London. In *The Smart Set* he writes:

"Exclusive of what may be analyzed satisfactorily as frank farce, and failing to discover a play of sufficient merit to occupy the tenth position, I submit an idea of the relative worth of the nine best new full-length dramatic presentations of the theatrical year recently closed:

1. General John Regan (Birmingham)
2. Where Ignorance Is Bliss (Molnar)
3. The Legend of Leonora (Barrie)
4. Change (Francis)
5. The Great Adventure (Bennett)
6. The Younger Generation (Houghton)
7. The Marriage Game (Flexner)
8. Too Many Cooks (Craven)
9. A Thousand Years Ago (Mackaye)
10. ————— (—————)

"'Seven Keys to Baldpate,' by Cohan out of Biggers, flashes forth sharply as the season's best farce, with 'The Misleading Lady' in second position."

Mr. Nathan surveys the performances of the season's "un-starred and unfeatured actors" and mentions ten in the order named as seeming to him the best:

1. Arnold Daly (in "General John Regan")
2. Frank Reicher (in "The Secret")
3. R. A. Hopkins (in "Change")
4. Lennox Pawle (in "Beauty and the Barge" and "Grumpy")
5. Aubrey Smith (in "The Legend of Leonora")
6. Pedro de Cordoba (in "Othello"—Faversham edition)
7. Stanley Drewitt (in "The Younger Generation")
8. Edwin Arden (in "To-day")
9. W. G. Fay (in "General John Regan")
10. Sydney Booth (in "The Truth")

Ten women whom the electric lights did not blazon are mentioned:

1. Rita Jolivet (in "Where Ignorance Is Bliss")
2. Emily Stevens (in "To-day")
3. Florence Reed (in "The Yellow Ticket" and "The Girl and the Pennant")
4. Grace Elliston (in "Ourselves")
5. Florine Arnold (in "The Things That Count")

Mr. Nathan adds:

"In justification of my selections of the season's most noteworthy plays—noteworthy, that is, in comparison with the other presentations—I believe I need indulge in small argument. The pieces I have named seem to me, from the soundest critical standpoint, to be far in the van of their fellows. With the possible exception of Mr. Mackaye's 'Thousand Years Ago,' against the inclusion of which in the list there might be lifted a valid voice (I myself know seven or eight good arguments against its presence in the catalog—however, I can analyze no other piece of the season into the ninth position), the plays selected stand forth from the ranks in the matter of wit, scrivening grace, comparative thematic ingenuity and fertility, philosophical air, dramatic and literary meat and general interest. . . .

"Inasmuch as the mind of the public regularly regards as the best plays those plays which enjoy the largest financial success, I duly anticipate, as is the annual occurrence at this time, the receipt of innumerable letters of protest against the validity of my choices. From Wilmington, Delaware, I shall receive the usual four letters assuring me that 'Where Ignorance Is Bliss' certainly can not be so good a play as 'Potash and Perlmutter,' for instance, because 'Where Ignorance Is Bliss' ran only a week and was then dispatched to the storehouse, while 'Potash and Perlmutter' has been running all season. From Springfield, Illinois, a half-dozen letters will prove to me that 'Change,' which was a dead failure, can not possibly be nearly so commendable a play, on the very face of things, as 'To-day,' which was one of the longest-run achievers of the year. And from Salt Lake City I shall get the usual three letters telling me that I assuredly can not know what I am talking about when I include 'The Great Adventure' (a failure) in the list and omit 'A Temperamental Journey' (a success), particularly as both these plays had the same theme. Of course these letters will make me feel very sad and properly ashamed of myself."

"To revert momentarily to the oft-spanked question of the public's monogamous taste in drama and, especially, its critical confusion of the good play with the financially successful play, a matter absurdly simple of explanation. So simple, indeed, that I have . . . frequently employed it as a subterfuge to conceal my temporary lack of other, better, and fresher critical ideas. The American public, as we all of us at this late hour know by rote, is ever on the side of wealth. In law, in politics, society and in art, the native public—particularly the ~~element of it~~—roots consistently for the rich party. The exceptions are negligible in the running up of the general estimate. The greatest American dramatist is that dramatist who has made the most money out of his plays! The best play is the play that sells out the ticket-rack for the greatest number of weeks! Art = \$ and \$ = art."

THE EFFECT OF ITALY

IT WAS LONG AGO that Roger Ascham said that an "Italianate Englishman was a devil incarnate." After four centuries Mr. Oliver Madox Hueffer tries to match it or outdo it by describing the German who has yielded to the spell of Italy as "an animated confectionery pig." So many Americans go to Italy that it would be well, perhaps, if Mr. Hueffer—who is now among us writing to the English press about the Mexican imbroglio—would try to analyze Italy's effect on the sentimentalists of the New World. Upon Germans he thinks the effect "simply deplorable." And being a German, or partly so himself, tho he descends on one side of the family from the English painter Ford Madox Brown, he takes the liberty of saying so. Italy, he goes on, renders the Germans "greasily sentimental, as if they had bathed themselves in macaroni; it renders them vegetably materialistic, as if the only thing that mattered in life were oranges." This outburst is inspired by a recent novel by Vernon Lee called "Louis Norbert"—a book he "doesn't like tho he has to admire it." He doesn't like Vernon Lee because she is so "Italianate." Her works seem to offer him "a sterilized atmosphere like that to be found in the work called 'John Inglesant' or in the writings of the late Walter Pater." In *The Outlook* (London) he tells us why he thinks he has the right to say such things:

"I have the right to say these things, because I think I can boast of being the only created member of the human race who has been to Rome without going to see the Forum, the Coliseum, or any picture-gallery, or anything else but the white-tiled tunnel on the Quirinal, some inner rooms of the Vatican, the interior of my own hotel, and a very bad music-hall. This is a record at once heroic and one of extreme cowardice. Because I was deadly afraid. I tell you I trembled for my immortal soul. Because I was a German coming straight from Germany,

Certainly I intend finally to yield to the seductions of the dangerous country. It is my ambition to pass the last ten years of my life in Florence, or somewhere of that sort; to write sentimental ballads of sorts; and, because of the fame that those ballads will bring me, I hope to be buried, in the first place, under the shadow of the pyramid of Caius Cestius. Later I hope to be transported, amid the applause of nations, to my final resting-place in Westminster Abbey. That is an ambition like another, and one very proper for a writer who is destined ultimately to write sugary ballads upon the banks of the Arno. I hope it may be pardoned me."

If he were an Englishman, he reflects, he would be either much less or much more frightened. "It would depend upon whether I should like to become a devil incarnate or not."

"Some men do; some menden't. For, whereas the effect of Italy upon the German is to render him a slobbering sentimentalist, its effect upon the English mind is something much more subtle and something much more dangerous. I am talking now of the English mind, and there are very few English minds. The English without minds who feel called to go to Italy just end in wearing blue-flannel collars, gowns made of cotton serge, amber necklaces, and Preraffaelite attitudes. And they don't matter; they aren't even a nuisance, as my own countrymen are. But when it comes to an English mind—and of course I'm thinking of Vernon Lee—the problem of Italianization at once grows into something much more formidable. I don't mean to say that I like it; frankly, I don't. I almost wish that every Englishman of intellect who feels a call to go to Italy might be drowned in crossing the Channel or at least killed in a railway accident just short of Milan. Milan won't do him much harm. And poor old Italy itself feels just like this. That is why you have Futurists. It is tired, poor thing, of mincing around among corner-lots and battle-fields. But the effect of Italy upon the English mind is certainly not to render it more sentimental.

"I suppose really the Italian climate is an intensifier of character. Sentimentalists like myself it renders abominably sentimental; the cold, cynical, selfish, and restrained English mind (and the English mind is really always all these things) it renders colder, more cynical, more selfish, and more restrained. Italy, in fact, turns the thinking Englishman into something like the Jesuit of picturesque fiction. Of course that is an exaggeration; but the tendency is there.

"Wandering among the beautiful groves, meditating among the so graceful ruins, the Englishman acquires something of the truly classical frame of mind along with something of an ingenuity that is purely devilish. Vernon Lee, for instance, strikes me as being something much more of a wizard than a comforting human being upon whose shoulders one might want to cry. Because I take it that the test of a really satisfactory intimacy is the possession by either party of such a shoulder.

"I don't know why living in Italy should have that effect upon the English mind. I suppose it is the mere confusion of objects and of aspects that does the trick. All the contrasts, all the civilizations crumbling one into another, in layer upon layer among the most beautiful of all landscapes, must render you more cynical if you have a turn for cynicism."

he thinks that Italy makes the Germans "greasily sentimental."

a long sojourn in that land which is very disagreeable to him, tho it is lovely enough to visit. But I knew that if I let Italy get her claws into me that would be the end of me. For the rest of my days I should slobberingly prefer Sienna to the Lungstrasse in Cologne, or even to Coventry Street at 11.15 p.m.

RELIGION AND SOCIAL SERVICE

THE WHITE ANGEL OF OUR SLUMS

WHEN A LITTLE GIRL, Miss Eva Booth, the daughter of the founder of the Salvation Army, went into the East End of London, and earned the title of "the White Angel." She bears the title of "the Commander" of the American forces now, but "her character is still that of the White Angel." "She is the organizer, the thinker, the social reformer, the strict and yet sympathetic commander," says Mr. Harold Begbie in the *London Daily Chronicle*; "but to the President of the United States, to the governors of cities, and to the broken-hearted multitude of American slums she is still what she was to her sorrowful sisters in East London years ago, the White Angel." To Mr. Begbie, the difference between our slums and those of England were set forth by Miss Booth, who found, to begin with, that the outstanding feature here is "the pressure of an infinitely greater population." As she puts it:

"You literally feel the sense of numbers. Wherever you go in American cities you are conscious of these millions struggling to exist. Then there is the question of climatic extremes. You have no idea what heat means till you live in American slums during a heat wave. That heat drives people mad—if not in mind, in spirit; they are maddened in spirit without losing their reason. Oh, it is dreadful, the heat, among the dense masses of the slums. And in winter, down goes the thermometer, starving people drop dead of cold—killed by cold, not by hunger. Then there is another great difference, the foreign element. We get in our slums over there the knife people. Do you know what I mean?—those races from Europe who carry a knife and use it in argument—lawless, passionate, violent people. This means that our slums are more dramatic than yours. In England misery is deprest. In America its blood is up. You never get one general atmosphere, even as you never get one general language. To visit a slum in America is to come into contact with the passions and vehemence of the whole world. It is extraordinarily interesting, amazingly vital, however sad and dreadful. One can not lose heart in the slums of America. It is a fight for life."

One does not find "the pathos of the home worker" in America, she distinguishes. "There is sweating, and very abominable sweating, but it is done in the factories":

"The poverty is appalling. You ought to see the bread-lines over there; it's a sight never to be forgotten. We have emergency relief depots all over the States. How many people, do you suppose, sleep every night in what we call our Poor Men's Hotel, what you call here Salvation Army Shelters? Seventeen thousand! Every night we take care of 17,000 men who would be otherwise sleeping in bridge ~~residences~~ or with their heads under carts. One of these hotels, a memorial to my dear father, holds 670 beds.

"Poverty in America is very severe. Nothing, you see, is cheap. The most common necessities of life are dear, very dear. And the emigrants pour in from every country of the world, bringing fresh penury and new destitution to swell the terrible sum of the old. Life is a struggle over there for many, many thousands of people—a frightful struggle. Then the children

of the poor. Oh! how they suffer. In twelve months we played with, fed, drest, washed, kissed, and cuddled 42,000 of these poor babes. The ghastly, ghastly suffering! We found a babe once, two or three years old, in a chicken-coop in a cellar; for nearly three weeks afterward it never uttered a sound, not one sound, not even an Ur; its food had to be thrown to it on the ground before it would eat; when any of us entered its room it would get behind things—behind a chair, a sofa, or under a table; the doctors told us its reason was fatally damaged. No! That child is now a bonnie, laughing, blue-eyed lass. The police brought to us once a child the calves of whose legs had been gnawed by rats. Oh, it is indescribable, the misery of these famishing little children! But when you see them in our nurseries, then you say no work touches this work of saving the babes. You can't pay for the love a child wants! There's something the dollar bill can't buy, and that's devotion. My beautiful women out there are like the angels of God; they don't merely do their work, they love doing it. And the rich

know this. That's why we are popular; that's why they help us."

Miss Booth speaks of the work among prisoners, such work as the old General and the present one have struggled with the English Government to introduce:

"We are less conservative in the States! Why, what do you think?—we have got Salvation Army corps in prison composed entirely of prisoners serving their sentences! Isn't that fine? Isn't that hopeful? I received numerous letters of sympathy from prisoners when my dear father died. How they loved him! In one prison alone we have got a corps of 75 soldiers; the State itself made them a present of a full set of brass instruments; the chaplain of the prison is one of its envoys; and the prisoner in command is a man serving a life sentence.

"You see the States are wise. They know it is in their own interest to reform and change the lives of their worst citizens. We are freely admitted. We go into the cells. We hold services. We take our hands and our flags into jail, and we tell the worst of the worst, the lowest of the low, that they can be changed, absolutely and for eternity, in the twinkling of an eye. That's hope. That's truth. That's love. There are 200,000 prisoners in America, and every one of them needs hope, truth, and love. Why doesn't the English Government let my brother do that over here?"

Miss Booth sees no need of any change in the original method of the Army. She wants to keep the uniform, the flag, and the band, but as the work spreads among the races of the

COMMANDER EVA BOOTH.

Who observes that "to visit a slum in America is to come into contact with the passions and vehemence of the whole world."

world she is willing to sacrifice to local feeling all but one thing:

"My father gave latitude to every country; he did not desire to make English Salvationists of all the world; but he never yielded an inch on the two essentials of a new birth and a life of devotion. You must have that everywhere. A change of heart, liberation from the thralldom of the world, and then a life of unselfish service. My brother, the present General, commands this immense world wide Army, and he is not only a man of holiness, but he has a genius for organization, a statesmanlike mind; we shall go on conquering and conquering—each separate country giving its particular emphasis; but the Army as a whole stands for the one eternal fact which my father declared to all the nations of the earth—a change of heart, a new birth, liberation and salvation from all that injures, disfigures, and destroys. Oh, yes, we want our flag of victory and our band of triumph!"

HOLLAND'S RELIGIOUS AWAKENING

A RELIGIOUS REVIVAL wholly due to considerations of political and social expediency is a Holland discovery reported by a special correspondent of the *New York Evening Post* at The Hague. In the rekindling of religious ardor, he notes, furthermore, "a steady growth of Zionism and Theosophy" throughout the land, and cites as the latest curious development of the renaissance the founding, at Amsterdam, of the Religious Union of Political Democrats, in which "the religious element in a general sense only is brought to the fore, as to this Democratic Union belong people of well-nigh every creed and church." The writer

had lapsed into such depths that many of the "liberal"-minded never bothered to have a religious ceremony at marriage or a baptismal service for their children. Of the entire population, we read, one-third is Catholic, about 100,000 are Jews, and the

ASIATICS IN THE SALVATION ARMY.
Japanese paraders in the great street parade in London at the Salvation Army Congress.

remainder is made up of Protestants of various denominations, or of persons adhering to no creed. In this connection the writer recalls that the Catholics were "deprived of the free exercise of their religion during the eighty years' war (1609)," and that their hierarchy was not relegalized until 1853. Why those Protestants who resented the Catholic restoration eventually allied themselves in politics with the Catholics is thus disclosed:

"A few years went by, and in the ranks of both Calvinists and Catholics dissatisfaction grew with some liberal laws, especially with those pertaining to education. Liberalism had founded the 'neutral state school,' 'one school for the entire nation,' 'bringing up the children to all Christian and social virtues,' as the Constitution demands. And so neutral they made this state school that 'Christian virtues were to be taught without hurting the feelings of the Jew.' Of course, such teaching was too lukewarm for fervently religious people, who insist that in a Christian country education should be leavened by the principles of their own special creed. This drew together the Roman Catholics and Calvinists, and made them overlook, for a time, their own deep-going differences. 'Down with the neutral school,' was their cry, and with that they won three elections and were successful in gaining their free, i.e., denominational state-aided, school."

The growth of materialism, too, caused a reaction in favor of religion, and another factor conducive to the religious awakening, we are informed, is the deeply re-

ligious nature of Holland's Queen, who as court exemplar has made churchgoing fashionable, and the writer adds:

"It is not necessary to attribute this 'fashion' to mere hypocrisy, altho it was obviously the case in many instances. It became worse, however, under the Kuyper administration, when

JAVANESE SALVATIONISTS.
Who made another picturesque group in the London street parade.

is careful to point out in the first place that while "religious questions and differences" have always been prominent features in the history of the Dutch nation, it "could hardly be called a churchgoing one." Indeed, until the present change, we are informed, except for the Catholics and Jews, religious observance

not a single important post, and a great number of minor ones, proved attainable to people who were not known as practising Christians. Then a multitude of people suddenly were converted to the 'better life,' and so became fit for the posts they coveted.

"In the meantime the Liberals, whether they went to church themselves or not, always had held that religion is a private affair and that everybody must know for himself whether or not he will have religion. The new course somewhat surprised them. The Dissenters, or Doleants, as the followers of Dr. Kuyper are called, Calvinists as they prefer to call themselves, caused a sort of revival. The indefatigable endeavors and the assiduous preaching of their leaders during so many years at last took effect outside their own circles also. Among the Liberals many were brought to reflection. Seeing the devotion of the Calvinists and their strength to carry on what had seemed a hopeless struggle during half a century, the Liberals began to return to the churches they had neglected for a time and also to allow religion again to influence their daily lives."

LIFE-SAVING HINTS FOR THE POOR

NEW YORK has started one system of social service that shows, according to *The Churchman*, "a very evident symptom that a new era of realization is dawning, in which for 'communities in their corporate capacity, as much as for individuals, the obligation of service will be recognized, and the world-old miserable excuse of 'Am I my brother's keeper?' will no longer be held sufficient to justify a callous obliviousness of social responsibility and social duty." Other cities in which tenement buildings have been or may be allowed to be built might well follow this example, declares the *Churchman* writer, who proceeds to summarize the scheme:

"For the instruction and enlightenment of the ignorant and unthinking among the city's poor, the Tenement-House Department has printed a simple and well-illustrated pamphlet of some thirty pages, asking very pertinent and pointed questions, and indicating by pictures what the answers ought to be, if the citizen address wants to avoid the waste and misery of sickness and the perils of fire:

"Do you want to get sick?"

"Do you want to lose a day's pay?"

"Do you want to risk losing your job?"

"Do you want to pay doctors' and undertakers' bills?" for instance, are queries which go right to the self-interest of the worker, and practically compel his attention, which will then be held by the following crisp demands, calculated to arouse in him (or her, especially her) some feeling of responsibility for the doings of the other dwellers in the building, and some interest in its general condition.

"DO YOU KNOW THESE THINGS?"

"If a fire broke out in your house, what would you do?"

"Do you know how to go down a fire-escape?"

"Do you know how to get to the roof?"

"Do you know whether you can get from your own roof to the next house?"

"Are there clothes-lines, boxes, flower-pots, tubs, or anything else on the fire-escape which would hinder you?"

"Do you know how to get from your yard to the street or the next yard?"

"Do you know where the nearest fire-alarm box is and how to ring it?"

"Do you think it is time for you to find out?"

"Then, accompanying pictures of littered fire-escapes, filthy lavatories, choked stairways, and other usual sights of the tenement districts, are clear and clearly printed directions, more pictures—of things as they ought to be, this time—and emphatic recommendations not to rent rooms in any house in which these ideals are transgressed. These pamphlets are to be distributed by the hundred thousand until the Commission feels satisfied that at least every tenement-dwelling family in the city has got one.

"Commissioner John J. Murphy has detailed a special woman inspector to undertake this work during the summer months in the congested districts of the East Side. Block by block, house by house, door to door, she will go visiting each family, explaining to the mother what the pamphlet is about and how it will help her. This is pioneer work, and a very good work, too."

CATHOLIC VIEW OF PROTESTANT BIBLE-DISTRIBUTION

THE PROTESTANT TREATMENT of Catholic lands as fields for missionary endeavor on the same basis as heathen countries has always roused resentment among those who look to Rome for spiritual guidance. Part of the Protestant plea for funds for Bible-distribution is the claim that "Rome keeps the Bible from its people," and that if the people are only given the chance to read the Scriptures the field will be prepared for the efforts of the missionary. Catholic feeling on this matter finds expression in *America*, the leading Jesuit organ in this country, in an article by Walter Dwight, S.J., who notes the boast of the British and American Bible Societies that in the past year they distributed over 14,000,000 copies of the Word. Many of these were in such Catholic countries as France, Italy, Spain, and Portugal. The huge figures chiefly impress this Catholic writer with the folly of benefactors who fail to inquire what becomes of them all. He writes:

"The Word of God is now being read in more than four hundred different languages. Think of that! Owing largely to my generosity the Gospel light is breaking on the darkened minds of millions of pagans and papists who would otherwise be lost! These are, perhaps, the reflections that have comforted the last hours of many a liberal benefactor of the Bible Societies. But these pious Protestants, of course, have little evidence that anything like what they are so fond of believing has actually taken place. On the contrary, there is no reason for concluding that in the Orient conditions have much changed since 1862, when Marshall, in his 'Christian Missions,' exposed without mercy the base uses to which the heathen puts millions of the Bibles that are sent to him from England and America. Marshall quotes a Protestant archdeacon, for instance, who writes:

"The causes of the eagerness, which has sometimes been evinced, to obtain the sacred volume can not be traced to a thirst for the word of life, but to the secular purposes, the unhallowed uses, to which the holy Word of God, left in their hands, has been turned, and which are absolutely shocking to any Christian feeling."

"Wrapping up groceries, papering walls, lining slippers, are some of the uses Orientals found for Bibles. As for the 440,000 copies of the Scriptures distributed in France, Italy, Spain, and Portugal during one year by the British and Foreign Bible Society, this lavish diffusion of the 'pure Gospel' in those benighted countries does not seem to have resulted, as yet, in their conversion, for an appreciable number of the Latins in southern Europe are still clinging to the 'old superstitions.'"

Mr. Dwight utters his belief that "the foundation on which these Bible Societies rest and the impelling motive also that makes Protestants support them so generously is, of course, the old fallacy that everybody is competent to interpret for himself the hardest book to understand that was ever written, and to find therein a guide of faith and a rule of life."

"How unsound this principle is has been shown, to take but one instance, by revision committees representing the best scholarship of the world, who can not at all agree about the exact English equivalent of a Greek or Hebrew word on which the meaning of an important passage altogether depends. But the principle becomes a downright absurdity when there is question of handing a crudely translated copy of the Scriptures to the heathen with an exhortation to find for himself in the book the message of salvation. If even St. Paul's Greek-speaking contemporaries found in his letters 'certain things hard to be understood,' what can an oriental pagan, ignorant, perhaps, of his own written language, possibly make out of a Chinese New Testament?"

"While these Societies are distributing abroad, to the confusion of the heathen, innumerable copies of the Bible, their religious brethren at home are busy tearing the book to pieces and robbing its pages of all authority. Large portions are rejected as spurious. Inspiration is denied to what remains. Young men are ordained ministers who do not believe in the Virgin Birth and Corporal Resurrection of Our Divine Lord. In the chairs of Protestant universities are seated the most ruthless destroyers of the Bible's sacred character. Inconsistency, however, was never a more striking note of Protestantism than it is to-day."

CURRENT POETRY

YOUTH is the season for verse-making, according to popular tradition, but the students of American colleges and universities have not seemed to give this tradition much support. All the more welcome, therefore, is evidence that poetry and youth have not parted company, and the volume of "Wesleyan Verse" that comes from the press of the college on the Connecticut River is a pleasant surprise; for it contains verse that is sincere, spirited, musical, and all of the poems were written while their authors were undergraduates at Wesleyan University. Especially interesting are the examples of the early work of that true poet, the late Frederic Lawrence Knowles. Here is one of them—a little song as charming as it is simple:

The April Boy

BY FREDERIC LAWRENCE KNOWLES

As I went through the April world
To watch my violets blow,
I met a child I long had loved,
Whose heart was pure as snow.

"Come hither, little White-of-Soul,
Now tell me how you fare!"
He ran to me, he sprang at me,
The sun was in his hair.

His eyes were laughing like his lips,
He had an April look;
His feet were wet as ocean shells
From wading in the brook.

And Nature, too, became a child:
As far as eye could see
The world was one big romping-ground
For Earth, the Boy, and Me!

I quite forgot my violets,
His eyes were both so blue;
His merry lips that prest my own
Were Mayflowers moist with dew.

And as we took the road to town,
The little lad and I,
He seemed to hold the whole of spring
And brush the winter by.

The birds all knew him, that I'm sure,
They ne'er sang thus for me;
The budding branches seemed to reach
To kiss each dimpled knee.

And when I left him near his home,
"Good-by, big man," he said;
"Good-by, Sir April," I returned,
He shouted, laughed, and fled.

Some day an enterprising publisher will bring out an anthology of the best poems inspired by aviation. It will contain Florence Earle Coates's "The Unconquered Air," of course, and George Sterling's "The Black Vulture." Also it may contain this dignified elegy, which we take from the weekly edition of the *London Times*:

Gustav Hamel

IN MEMORIAM

BY D. C.

The sun into whose beams he flew had shed
Its gold and glory rippling through his hair,
His eyes were the clear blue of northern skies
And seemed to look beyond us and be fed
With cloudy visions: plainly written there
The fate which he foresaw but could not fear
Shone like a prophecy to anxious eyes.

As easy as offering
a cup of tea

And far more wholesome and nourishing.

Wouldn't your afternoon guests appreciate a cup of tomato bouillon prepared from

YOUNGSTOWN, OHIO

HY-RIB SIDINGS, PARTITIONS, ETC.
POLO GROUNDS, NEW YORK

He was too careless of all earthly things,
Who made the bosom of the clouds his nest,
He strove not with his kind, deigned not to share
Their loves and hatreds, on heroic wings
He soared above them on some higher quest
Than they could dream of; and when loneliest
He gazed around for dangers new to dare.

The winds of heaven were his charioteers,
He led the cohort of the sky, and dared
The elements, and the rebellious air
Knew him for long her master, and his ears
Heard thunderous melodies, and gladly heard.
He knew the roads of heaven like a bird,
And like a bird he fell, and none knew where.

The murderous dawn broke on the waves, death
white,
Nature forgets her crimes, makes no amend,
But we who live and laugh, safe, shameful we,
Will bear in memory that last fierce fight,
Fought by our fine, indomitable friend,
The glorious battle to the bitter end,
Alone with the blind wind and brutal sea.

Recently we quoted from *Blackwood's Magazine* a splendid sea ballad by Mr. G. Fox Smith. We are glad to find, in the *Pall Mall Magazine*, another specimen of this brilliant craftsman's ability to put into melodious verse his love for the ocean and the ships that move thereon. "Rio Grande" is not strikingly original; certain phrases in it surely are reminiscent of Mr. Rudyard Kipling's early verse, but it is strong and sincere, and the lines have a captivating lilt.

Rio Grande

By G. Fox Smith

There lies a ship at her moorings out there on
yonder stream,
Her lines upon the water are lovely like a dream,
And like a dream she'll slip away with the first
dawning gleam,
For she's bound for Rio Grande with the morn-
ing tide,—
Ay, she's bound for Rio Grande, and it's with her
I would be,
And every rope aboard of her is singing to be free;
Oh, good-by to your sweetheart dear and good-
by to your bride,
If you're bound for Rio Grande with the morning
tide!

I heard the sea-gulls piping round, and all they
seemed to say
Was: "Come you out, young sailorman, it's time
to come away;
Oh, heave your donkey's breakfast in, there isn't
time to stay
If you're bound for Rio Grande with the morning
tide,—
If you're bound for Rio Grande way and oceans
two or three,
And ports a-plenty up and down for likely lads to
see,
All across the seas, Johnnie, round the world so
wide,
Going down to Rio Grande with the morning tide."

The lights in Paddy Ryan's bar are shining on the
shore;
Did your friends good-by, Johnnie, pay you now
your score,
For you don't want the sight or smell o' the harbor
any more
When you're bound for Rio Grande with the
morning tide
And "away my rolling river!" . . . for the sun's
put out the stars
A-tangle in her royal shrouds, and the frost is on
her spars,
And the deep-sea hunger's hold of her and not to
be denied
Going out to Rio Grande with the morning tide!

BRING BEAUTY TO YOUR HOME

We are all lovers of beautiful furni-
ture—Furniture that embodies character
and art.

Macey Library Cases in Period Styles
—Sheraton, Chippendale, Colonial, Art-
craft,—have all the requisites of fine furni-
ture—beauty of design, individuality of the
great masters, and utility, the modern re-
quisites of good furniture.

So clever is the design and construction
of the Macey Library Cases that the
sectional feature is not apparent.

They will add distinctive beauty to your
library.

Let us send you our style-book, giving
complete illustrations and prices, also sug-
gestions on modern libraries.

The Macey Co., 1526 Division Avenue, S. E.,
Grand Rapids, Mich., Designers and Makers
of Library Cases and Filing Appliances.

Macey LIBRARY CASES

Do Not Look Sectional—
But They Are

SHERATON

Here is a joyous little love-song, full of the very spirit of youth. The refrain is exquisite. We take it from *Lippincott's Magazine*.

Click o' the Latch

BY NANCY BYRD TURNER

The silence holds for it, taut and true;
The young moon stays for it, wistful white;
Winds that whimpered the sunset through,
Sigh for it, low and light.

Click o' the latch, and he'll come home,—
A stir in the dusk at the little gate.
Hush, my heart, and be still, my heart,—
Surely it's sweet to wait!

The tall skies lean for it, listening—
Never a star but lends an ear—
The passionate porch-flowers stop and cling,
Parting their leaves to hear.

Click o' the latch, and him come home,—
A step on the flags, a snatch of song.
Hurry, my heart, be swift, my heart,—
How did we wait so long!

There is youth in this poem, too, but it is youth contemplative, introspective. Like all of Miss Davis's work, "Sorrow's Shadow" is delicate, yet strong, thoroughly human, yet suggestive of something beyond humanity. It appeared in *Harper's Magazine*.

Sorrow's Shadow

BY FANNIE STEARNS DAVIS

Some days, when I am drest in shimmer-stuff,
With yellow roses at my breast and hair;
When just the air and sunlight seem enough
To make the whole world delicately rare;
When people love me, and I them, and all
My heart is like a hill-brook's liting call:

Then, if I pass Her, in her dim black dress,
With heavy eyelids darkened by old tears,
I feel a sudden clutch of loneliness:
I stare down vistas of unsparkling years,
And there behold myself, clad close in black,
With tired brows, thin hands, and aching back.

Oh, Sorrow's Shadow! let me be awhile!
Wreck not my happy yellow roses; set
No watch upon my sudden cry and smile.
Why should I not forget—ah, half-forget!—
That Sorrow's Self will meet me some strange day,
And take my hand, nor let me dance away?

From *Harper's Magazine* we take this brief study in emotion. Mr. Morton's skill justifies him in venturing to use a theme that has attracted some of the world's greatest poets.

Loss

BY DAVID MORTON

Nay, but the clean-lipped, merry rain
Will drip from drenched leaf and bough,
And greet the glad green grass again,
As it is doing now:

And light will live upon the hill,
And great trees sway along the wind:
The stars will crowd above them still
When night grows warm and kind.

The shining seasons still will keep
Their trysts—and shall I never know?
O heart of me, how shall we sleep
When this is so?

The Man-Made Man's Dish

Van Camp's is Baked Beans as men like them. Beans nutty and mellow and whole. Pork tender and juicy. A sauce with a tang.

Men prefer Van Camp's to home-baked beans, which are mushy and broken and crisped. They immensely prefer them to ready-baked beans, prepared in homelike ways.

The evidence is this:

Restaurants and lunch rooms which cater to men are now buying Van Camp's. Thousands of such places, which once baked their own beans, now let our chefs bake them—just to please the men.

And a million housewives, who once did their own baking, are now serving Van Camp's—because men folks enjoy them.

VAN CAMP'S
PORK & BEANS BAKED WITH
TOMATO SAUCE
Also Baked Without the Sauce

10, 15 and 20 Cents Per Can

You can prove this preference—so you'll never forget it—by serving one dish of Van Camp's. Put it up to the man, and then ask for his verdict.

And be glad of his choice. Van Camp's ends for you all the bother of home baking. It enables you to carry ready meals on the shelf.

It supplies you a delicacy—a hearty dish made dainty. You can serve it five times where you served the old kind once.

It costs you but three cents per serving.

No old-style baked beans—whether home-baked or canned—will meet your ideals when you once know Van Camp's. Now, in hot weather—when you want ready-cooked dishes—is the time to find this out.

Buy a can of Van Camp's Beans to try. If you do not find them the best you ever ate, your grocer will refund your money.

Cut Your Coal Costs By Burning Bituminous Coal Smokelessly

A dollar spent for Bituminous coal actually buys more heat than a dollar spent for Anthracite. That fact is proven by government reports showing the heat values of various hard and soft coals.

If you install a Kewanee Smokeless Firebox Boiler you won't need to burn high priced coal, to dodge a smoke ordinance, because a Kewanee Smokeless will burn the cheapest of soft coals smokelessly. Hence a Kewanee Smokeless will save you fuel money by allowing you to use cheaper coal. Here is another fact.

Gauss-Langenberg Hat Co., St. Louis
Kewanee Smokeless Firebox Boiler Installed

KEWANEE Smokeless Firebox Boilers

will take from cheap, soft coal and use for heat making purposes a bigger percentage of the heat in that fuel than the ordinary straight draft boiler can get from Anthracite.

That means a Kewanee saves you money in two ways. It permits you to use cheaper fuel—and it is a more efficient boiler. We want to tell you of specific cases where these boilers have cut coal costs.

Our booklet "Cutting Coal Costs" is of interest to you who buy coal. Let us send you a copy.

PERSONAL GLIMPSES

JOHN CLAFIN

THE absence of wide-spread disaster following the Clafin crash finds its explanation, perhaps, in the personality of John Clafin himself. That the failure did not have evil results for business and finance as a whole was due to more than conditions. The man at the helm may have had something to do with it, and if the force of the commercial elements compelled him to head up into the wind for a while, why, many a good man has done the same thing. The New York Evening Post finds John Clafin's principal characteristics to be an innate modesty, a quiet strength, remarkable grasp of the multitudinous conditions of the mercantile trade of the country, love of outdoor life of the strenuous type, conservatism, and optimism. The writer says of him:

Through his innate modesty and objection to publicity, Mr. Clafin was known by sight to comparatively few New Yorkers, altho his name has been associated for years with many of the most important charitable and civic enterprises in this city, and is a byword in every American hamlet. He rarely granted interviews, and his aversion to being photographed is such that a picture recently published was the first likeness of the man reproduced in years. The brown-bearded, gentle-mannered, soft-spoken, and, above all, clear-thinking merchant is known almost exclusively outside of his immediate business circles by his works.

One of the reasons why Mr. Clafin appears personally so rarely in the limelight is that he sticks to his desk in the offices at 224 Church Street as closely as any bank clerk. He is said to put in an appearance at an early hour with regularity, and it has been his habit to receive reports which tell what is going on in the business world not only of New York, but of the rest of the country. In grasping and digesting these reports he is credited with a capacity which is the wonder of his subordinates.

His reports, whether from Texas or the Northwestern States, have been gathered in about as the Weather Bureau at Washington collects data from its forecasters. And as the weather men with this information before them are enabled to make fair guesses as to future weather, Mr. Clafin has long been looked upon as a man who knows general trade conditions in the United States for any particular day, and likewise what its prospects are for a future day or a future month.

It was this knowledge which Mr. Clafin drew upon when he made suggestions to the Senate Committee, which were widely criticized because they came so near to agreeing with the arguments urged at the same time by the bankers of the country. In denying that he had been coached or instructed by New York bankers before testifying at Washington, Mr. Clafin took occasion to assert that he had never been in the habit of receiving instructions from any one, and that he had viewed the matter of currency reform purely from a mer-

cantile standpoint. His independence of judgment and initiative and the whole-souled way with which he throws himself into whatever for the time being compels his interest have been distinguishing marks of the man since early manhood.

Few worthy charitable enterprises failed to receive his support, and public movements and questions of public welfare have always gained his attention. When the valuable library of the late Prof. Simon Newcomb, the astronomer, was sold, Mr. Claflin bought it to present to the College of the City of New York, his alma mater. And when, recently, the Siegel failure threw out of work large numbers of employees, Mr. Claflin came to their rescue by finding places for them in the New York stores which belonged to the United Dry Goods Companies.

On public questions he was outspoken. At a dinner of the Railway Business Association, a few years ago, he was one of the first seriously to champion the cause of the railroads in their efforts to secure an increase in freight-rates. As an exponent of banking reform, he was president of the New York State branch of the National Citizens' League for the Promotion of a Sound Banking System. The growth of his business and its wide ramifications have caused a restriction of his outside activities, and recently he was compelled to give up the presidency of the Chamber of Commerce.

Mr. Claflin received his education in the public schools of New York and in the City College. At twenty, after returning from a year abroad, he was taken into his father's office, and three years later became a partner in the firm. His first great test came in the panic of '73, when the company underwent a severe strain due to an overload of temporarily worthless paper. This was weathered successfully, and the younger Claflin commenced his preparation for taking over the whole business. In 1885, his father died, and soon after Mr. Claflin organized a new firm, the H. B. Claflin Company, which in due time took over the old concern. On the day that this was done, we are told, Mr. Claflin announced that his old employees and customers had shown such implicit faith in him and his business that the stock of the new company had already been largely oversubscribed. Of Mr. Claflin's own interests we learn further:

It was while still a young man that Mr. Claflin formed the habit of taking the extended and strenuous vacations which have carried him over most of the globe. For two months every year he would explore some out-of-the-way part of the earth, covering in these jaunts the least-known sections of the Rocky Mountains, Mexico, and remote countries of Europe and Asia. His crossing of the South-American Continent in 1877 was an adventurous achievement. From the Pacific coast, at latitude 10 degrees south, he crossed to the Atlantic, at the equator, encountering many savage Indian tribes en route. He made the journey with a single companion over a line never followed

Nature in Harness

AS water is the cheapest and best motive power for machinery, so the sun is the most efficient source of *human* energy.

Streaming through the wide clearness of Fenestra Solid Steel Windows, it multiplies the motive-power of your workers without one cent of running cost.

Fenestra
SOLID STEEL WINDOWS

Besides this increased production, Fenestra conserves human life and limb because of the penetrating daylight which enables your men to *see* as they work. In blunders saved, in accidents prevented, the value of Fenestra is *incalculable*.

They afford valuable fire-insurance, are wind and weather-proof, and require no expense for upkeep.

Putting the sun in Fenestra harness gives you 48% more light, 14% more ventilation and 14% decreased cost, as against wooden windows. Is there any good reason for missing such advantages?

before by a white man. Part of the trip was made in canoes on the Madeira River and the Amazon, and at times the small party traveled on foot or on muleback through the same sort of country recently explored by Colonel Roosevelt.

Mr. Clafin calls himself an independent Republican, and, while he takes no active part in political affairs, his views are constantly sought by those participating in legislation. At the time of the Pujio inquiry, his assertion that there was no "money trust" received much prominence. He refused to see the dangers from interlocking directorates, which he characterized as an element of strength, and, after the depression of a few years ago, he was conspicuous in predicting that business conditions were due to improve rapidly. He has always been conservative and optimistic in his public utterances.

A MODERN DESERTED VILLAGE

IN a recent news item we read a new version of the celebrated "Deserted Village." Rather more, perhaps, are we reminded of those towns in the old countries that lay in the zones of the long, bitter wars, from which all young life was drawn, and of whose inhabitants none were left save women and children, the aged, feeble, and worthless. Such a town is Hoxie, Kansas. The melancholy of its deserted state is, however, alleviated by the certainty that its men-folk will return in due time, to take up the tasks which they let fall when the call came to them, the Cincinnati of the Wheat, to go forth to defend their homes. The defenders will soon be victors, the foe will fall in its multitudes before them, and they will return scatheless to their families and their accustomed tasks. The following comment on this phenomenon is presented by the Grand Rapids Press:

There is nothing effete about Hoxie, Kan. Hoxie is the county-seat of Sheridan County, and boasts a total population of 500 men, women, and children. At present it has less than a hundred, mostly children under ten and veterans over eighty. The rest of the village is away visiting and harvesting.

This is how Hoxie broke into the day's news as a deserted village. Farmers thereabout hired the usual complement of city-broke, casual laborers as harvest hands. But a spell of hot weather engulfed Sheridan County and the imported hands wilted like lilies in a drought. They quit, they fitted for cooler climes. Then the farmers, gazing disconsolate upon their broad acres of full-ripe wheat, bethought of Hoxie and its noble five hundred. They sent envoys to Hoxie to rend the air of that busy hive with cries of "Help! help!"

And Hoxie did not falter. Hoxie could not afford to; it is a farmers' town and a bountiful harvest means local prosperity. Hoxie's merchants, barbers, lawyers, dentists, and doctors—horse and man—depend on the farmers. Hoxie answered the summons. Merchants closed their stores and herded their clerks to the wheat-fields. Barbers decorated their windows with

signs reading "Shave and haircuts on Saturdays only." The editor placed his wife in charge of the shop. The county officials locked the court-house doors. Men of lore and men of trade trudged coatless to those rural vales where they would do the most good. A delegation with a cow-bell went around and woke up the retired farmers, bidding them renew once more their youthful skill. And with the men-folk went a fair sprinkling of farmers' daughters who had not forgotten how to sit a reaper, thereby proving that feminism is not entirely confined to the cities.

Hoxie solved its pressing problem in the most practical way. Hoxieites went back to the land in a body. And, besides saving the crop, the experience will do them good. A change of occupation is as beneficial as a vacation for most people. And it is encouraging, in these days when so many folk are saying that the body politic is split up into classes, to run across so stirring an example of community interest, so hearty a reply to the cry for help, such willingness to help each other over the rough places. The spirit of Hoxie would go far toward ridding many larger places of the jealousies which disturb them.

CIVIC HOUSE-CLEANING IN NEW YORK

TO those who have asked what woman's place in the modern civilization shall be, and what sort of work she is fitted to do, one woman in New York City has returned a fitting and convincing reply in her report recently submitted to Mayor Mitchel. The woman is Miss Katharine B. Davis, whose task for the past six months as Commissioner of Correction has been that of giving New York a thorough and much-needed house-cleaning. At such work women have always been better than men. Miss Davis has not discovered any new and strange field for women's endeavors; she has merely enlarged and extended the traditional duties of the housewife, whose business for many centuries has been to make the home a fit place to live in. In coming to New York, where men house-keepers have for a long time been sweeping the dust into corners; where they have let the spiders spin comfortably, providing they were not too easily noticed; where they have lost, wasted, and thrown away the lives, wealth, and health of their citizens, because they were bad house-keepers—in coming here she has found, says the *New York World*, "a woman's work," has set about it as a woman does, with a passionate conviction of the righteousness of cleanliness and order; and she has demonstrated beyond criticism her fitness for her office. As we read:

In six months her broom and mop have at least cleared away enough dirt to let us all see how bad it was.

In the past, prisoners in New York have been too much regarded as opportunities for others. Miss Davis seems more con-

Take a Detroit Electric Vacation

Why not take a common-sense vacation this summer—in the most common-sense way possible? Why limit your vacation to weeks or months when there is a way to extend it over a number of years?

Or, to put it another way, would you rather have a few weeks' vacation away from home or a continuous vacation at home—with a Detroit Electric to help you and your family enjoy life?

A Pleasure Every Day in the Year

The convenience, pleasure and usefulness of the Detroit Electric Special stays with you from one end of the year to the other—and for years to come. This fall when theatres open and the social season is on, you would not trade your Detroit Electric for the memory of a dozen vacation trips. And this summer—right now—it is just the car for trips about the city, runs to the country club, the golf links, tennis

courts, the swimming places, it is an asset for pleasure every day.

Every Member of the Family Enjoys the Detroit Electric

The Detroit Electric is a car that every man likes to drive and a car that every member of the family can drive. It has justly earned its

title of "Society's Town Car" by reason of the fact that every third electric car sold today is a Detroit Electric. Here is an electric that

offers you the utmost in style and luxury, in power and hill climbing ability, in economy and lightness. It is a thoroughly common-sense electric, built and backed by the largest manufacturers of electric pleasure cars in the world and sold at \$2550.

Write us and get special information on this Detroit Electric model. See the nearest Detroit Electric dealer for a demonstration in this, the lowest priced, high grade electric ever built.

FISKE & COMPANY, Inc.
1904 Arena Building N. Y. City

Tapestry Brick

cerned in giving them a chance for themselves. The rage of grafters and drug-sellers that lived off the prisoners does not move her. She is sending women to the Queens Prison, where they can be put to work. As many boys as small means make possible she is putting on the prison farm, where they can learn something. She is trying the honor system. Charitable people have faith in her ability to get results, and subscribe money for experiments in human reform without waiting for the Board of Estimate to provide funds.

Blood tests are resorted to to ward off false suits against the city. Finger-prints are to be used to prevent such scandals of substitution as have occurred in the past. In another woman's job, that of cooking, food is supplied at smaller cost that will probably turn out better.

It would not be surprising if prisoners who really wish to run straight when they get out should rather like the new régime in the city dungeons. As for hopeless old-timers, what they think about it is of considerably less consequence.

The Post points out even more of her work that attests triumphantly to her success:

To our friends who shook their heads gravely when it was announced that the Mayor intended to appoint a woman Commissioner of Correction, we respectfully commend Dr. Davis's first report. It covers a period of nearly six months, and proves that Dr. Davis, besides being thoroughly competent on the correctional side, is a good business woman. As a result of her study of dietaries and systems of supplying foods, she has cut \$36,000 out of the new budget; she has saved \$1,900 on the estimated cost of repairing the penitentiary workshops, and by arrangement with the Dock Department is securing repairs to the boats of her department at a considerably lower figure. Changes in the heating, ventilating, and light plants will save the city about \$30,000 in 1915, and so it goes. More noteworthy than dollars and cents saved are, of course, her reforms of administration. She has done more in six months to stop the use of drugs in our prisons than had been done in years. Through her efforts the indeterminate sentence and honor systems have been introduced; and for the first time, thanks to her, there is a complete record of the movement of prisoners and an accurate census of the various institutions. It is really amazing what has been accomplished in so short a time. Suffragists who have insisted that good women housekeepers were needed in our public service have a powerful argument in the person of the official who is properly entitled the Honorable Katharine B. Davis.

Nor is this all. There is a part of her accomplishment that can not be read from the statistical report. Even more important, says *The Tribune*, than these various deeds which may be counted to her credit publicly is the spirit which she has brought into her department—"a spirit, as the Mayor declared, which makes it really a Department of Correction instead of a Department of Prisons. . . . It is a good work that Miss Davis has done, and if the

"The Kitchenless Home"

has not arrived—neither has the iceless refrigerator nor the fireless furnace—but the cookless kitchen, with comfort and contentment, is a possibility in every home where the housewife knows the culinary uses and food value of

Shredded Wheat

With these crisp "little loaves" of ready-cooked cereal in the home you are ready for the unexpected guest, for the uncertainties of domestic service, for every emergency of household management. No worry or drudgery—we do the cooking for you in our two-million-dollar, sunlit bakery.

Being ready-cooked and ready-to-serve it is so easy to prepare in a few moments a delicious, nourishing meal with Shredded Wheat Biscuit and fresh raspberries or other fruits. Heat one or more biscuits in the oven to restore crispness; then cover with berries and serve with sugar and cream.

Mayor had to go to a woman to get it done, his judgment in doing so and his choice of the woman to do it are to be highly commended."

THE GRADUATE'S EPHEBIC OATH

WHILE the average, new-fledged college graduate is more humble than the cartoonists would have us think, there is still, underlying his timidity and awe of the outside world, a decided streak of naive conceit. Witness to this the popularity of the newly revived "ephebic oath" of ancient Greece, which in several colleges this year has been incorporated in the usual ceremonies of commencement. This, explains the *Pittsburg Gazette Times*, is the oath of good citizenship that the *ephebi*, or youths just entering upon manhood, swore in the temple as a preliminary to their two years of military training. Renewed for our *ephebi* of the mortar-board and sheepskin, the oath has been well received. It is a modest avowal, suited to the quiet aspect that the graduate would have himself present, but there is a potency of promise in it that is mightily pleasing to his secret vanity. He is able to rejoice in his vow, to swear it with fine passion, and to picture dimly to himself the mighty forces that these words of his may be loosing upon the fatuous and unsuspecting civilization of a decade or two hence. The chorus of the oath rings out across the campus, fades, is lost upon the ear—and what then? It is the voice of those who stand at the gate of the world and cry, "Open, in the name of Youth!" The gate swings back; pell-mell they invade the great arena; but in the struggle that follows will they have the strength to recall their promise made? The writer continues:

Every community has urgent need of more active participation by its educated men in public affairs. Often the severest critics when anything goes wrong, members of the educated class too frequently hold aloof from exercising their influence in politics. Too busy or too tired to vote, to do their part in the selection of the right men for office, they are vigorous enough in finding fault after the event. The Greeks had a neat name for the man who failed to bear his share of public responsibility. It was *idios*, whence comes our word *idiot*. Trench, in his "Study of Words," tells us that the term came to signify a rude, ignorant, unskilled, intellectually unexercised person, "this derived or secondary sense bearing witness to a conviction woven deep into the Greek mind that contact with public life was indispensable to the right development of the intellect." To-day to call a man who takes no interest in politics, even to the extent of refraining from attendance at the polls, an *idiot*, would invite immediate hostilities, but it must be admitted the old Greeks were not so far out in their use of language.

The Howard Watch

THE predominance of the HOWARD Watch among yachting men illustrates some interesting conditions in American business and professional life.

There is in this country no exclusively yachting class, as such. Practically every American yachtsman is a man of affairs, who finds his greatest relaxation on the water, and who takes his HOWARD Watch with him when he goes aboard.

The thing that makes him a yachtsman and an American

disposes him to like the HOWARD Watch—with its fine traditions, its trim, racy lines, and its way of showing its clean American heels to the talent of the watch-making world.

The wonderful character of the HOWARD Watch is that it meets men of so many different kinds and occupations on their own ground. Men in commerce, in the technical industries, in the professions, in official life.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is fixed at the factory and a printed ticket attached from the 17-jewel (*double roller*) in a *Crescent Extra* or *Boss Extra* gold-filled case at \$40, to the 23-jewel in 18K gold case at \$170—and the EDWARD HOWARD model at \$350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it. Drop us a post card, Dept. O, and we'll send you a copy.

Lee PUNCTURE-PROOF Pneumatic Tires

100%

Puncture-Proof

Did the dealer who sold you your last pneumatic tires give you this guarantee?

Not unless the tires he sold you were **Lee Puncture-Proof Pneumatics**.

You never heard of such a guarantee on any other pneumatic tires, did you?

If we merely *claimed* this added service you might say: "I'll take that with a grain of salt."

But you can't—in fairness to yourself—he skeptical when we back our statement with the guarantee: "Puncture-proof or you get every extra penny you paid."

That guarantee is detailed in Leaflet "L," free for the asking.

Meanwhile, look up "Lee Tires" in your 'phone book and tell our local man what size you want. Also whether regular tread or "Zig-Zag" Non-Skid.

"A FUNERAL IN THE SKY"

THERE is something awe-inspiring and tremendous in the mental picture called up by the words "A Funeral in the Sky," heading the news story of the funeral given the nine Austrian victims of the dirigible *Koertling*. The throng of great-winged aeroplanes, sweeping clearly outlined overhead, black-draped and stately in motion, constituted a fitting tribute to those who had lost their lives in the exploration of the air. The *Philadelphia Press* comments as follows:

Vienna witnessed the most remarkable funeral ceremonies ever performed in the history of civilization when the nine victims of the recent mid-air collision between an aeroplane and a dirigible were buried on Wednesday. Whoever planned those ceremonies possess an imagination beyond the ordinary and a keen sense of the fitness of things.

Soaring above the usual funeral procession of carriages and automobiles was an escort of twenty aeroplanes, flying mourning flags. During the interment services the fleet of air-craft circled slowly around and around the cemetery. And only when the bodies had been lowered into their graves did they fly away in an impressive, slow-moving column, as was fitting for mourners returning from a cemetery.

The fighting-man has his own form of burial service; so has the sailor; and now the ideal ceremony for the dead flying-man has been inaugurated. Doubtless it will be adopted the world over. The idea is too apt, too poetic, too impressive, not to take hold.

A GREAT MORO CHIEFTAIN

FROM the obscurity of Sindangan comes notice of the death of Datu Rajamuda Mandi. Sindangan, by the way, is in the province of Zamboanga, on Mindanao, the southernmost of the Philippine Islands; and Datu Rajamuda Mandi was once chief of all the Moros, a very great man in his time. In the days when Americans were getting their first experiences of what it meant to have these oriental islands on their hands, says the *Louisville Courier-Journal*, Rajamuda was well known to them, and distinguished himself as the friendly enemy of the United States. In those days he was possess of a fine physique and looked the part he played. We read:

Like Red Cloud, the war chief of the Sioux, whom he is said to have resembled in stature, strength of physique, and features, the Moro chieftain acquainted himself with the strength of the United States and recognized the futility of resisting an irresistible power. As a true conservationist he set about acting as mediator between the ignorant Moros who wished to die fighting and the civilized Power which wished to avoid fighting wherever matters could be otherwise arranged. He was a capable politician and a man who had the welfare of his warlike people at

Banish Drudgery from Your Auto Washing

Price \$3 Complete

Save Time—Save Water, Energy and Temper

Send \$3 For Your SANITAX Fountain Auto Brush Today

Don't try to wash your automobile in the messy, tedious, old-fashioned way, with sponge or hose—get a SANITAX. This efficient device attached to any ordinary hose removes all the dust, dirt and mud from the car like magic. Automatic in action, simply constructed. It cannot get out of order and will outlast a hundred sponges.

Satisfaction Guaranteed

SANITAX Fountain Auto Brushes—already in use by the leading garages, are endorsed as the most efficient and satisfactory auto-washing device obtainable. The most useful and practical addition to garage equipment. Send us dealer's name and \$3.00 and we will deliver this Auto Washer all charges paid. Satisfaction guaranteed, or money refunded. Don't Throw Away Your Worn Tires

For over three years French and German motorists have been getting from 10,000 to 15,000 miles out of their tires by "half-soling" them with Steel Studed Treads.

In eight months 20,000 American motorists have followed their example and are saving \$50. to \$200. a year in tire expense.

We ship on approval without a cent deposit, prepay the express and allow you to be the judge.

Durable Treads double the life of your tires and are sold under a signed guarantee for 5000 miles without puncture. Applied in your own garage in thirty minutes.

SPECIAL DISCOUNT offered to motorists in new territory on first shipment direct from factory. A postal will get full information and sample within a week. State size of tires.

Don't wait—write today. Address nearest factory office **THE COLORADO TIRE & LEATHER CO.** 1320 Karpen Bldg., Chicago, Ill. 1120 Acme St., Denver, Colo.

heart. He lived to see the Moros, or the greater part of them, lay aside arms and enter into the spirit of the peaceful reconstruction of the Philippines under American authority. He saw more done for the natives by the Americans than the Spanish did for them during their long period as rulers of the archipelago.

Three years ago a "Moro Province Fair" was held, in the interest of promoting more cordial relationship between the Americans and their Moslem brown brothers in the southern islands. Datu Rajamuda Mandi attended the fair and made a speech in which he called upon all Moros to follow the paths of peace. His speech, as published in the *Manila Cable-news-American*, was, in part, as follows:

"We are gathered here at the call of the Moro provinces to aid in making this event a success. We represent many tribes and many people of different dress, different beliefs and customs—but we all unite in support of the Government of the Moro provinces, and of our Father, the Governor of the Moro province.

"We all desire education for our children, that they may know how to obey the law, and how to gain prosperity and wealth. It is necessary for the Government to have patience with our great ignorance and inexperience in the ways of the American. We are ready to learn."

THE SUICIDE CLUB REDIVIVUS

IT is not often that history repeats itself with sufficient accuracy to be readily recognized by the casual onlooker, and particularly seldom is this true of fiction-history. Yet the columns of the *London Standard* give notice of such an occasion, taking place in broad daylight in a London street. We read:

At high noon a young man, clad in faultless evening dress, and followed by two uniformed attendants, paraded Coventry Street and Leicester Square offering cream tarts gratis to all and sundry. Crowds gathered round him, and his stock was soon depleted. Some doubtless merely took one out of curiosity; others perhaps welcomed the chance of a free meal; but more still, recalling Robert Louis Stevenson's opening story in the "New Arabian Nights," hoped, like Prince Florizel and Colonel Geraldine, that the incident was but the prelude to some exciting adventure.

And so in truth it was. An adventure, too, in which one and all might play a part, even if only that of spectators. For when the young man had collected a sufficient crowd round him, his attendants distributed his card, on which was inscribed:

THE YOUNG MAN WITH THE CREAM TARTS
SUICIDE CLUB

Box Court, W.

P.T.O.

On the other side was written:

"In giving you this cream tart, which I think you will enjoy, I am enacting the incident from Robert Louis Stevenson's 'Suicide Club' for the — Kinematograph Company (Limited)."

The production of the complete film will be eagerly anticipated.

"Thank Heaven For the 2 Extra Savage Shots!"

AIMS EASY AS
POINTING
YOUR FINGER

10
Shots
Quick

IF your wife is left alone she may some day say that, and you will echo it from the bottom of your heart.

She may use up five or six bullets, shooting through the door or window, and then turn unexpectedly to face another burglar, the pal, who has been inside all the time.

Ten shots are better than eight when you are attacked by more than one burglar—when you have to let go several shots out of the window to call the police—when the burglars' hiding place is unknown, and you have to send bullets biffing and banging to rout them out.

Get a 10-shot Savage. Otherwise you may some day find yourself with a pistol in your hand empty.

You can tell at a glance or touch if the Savage is loaded; also if cocked. No other automatic guards against the old excuse "didn't know it was loaded." You pull the trigger fast or slow—once for each shot. .32 and .380 caliber.

Send today for booklet by Sheridan—for 20 years head of New York City detectives—"What to Do if you Hear a Burglar."

A Brand New Savage Rifle

The new Savage .22 Tubular Repeater has all the original Savage features—hammerless, trombone action, solid breech, solid top, side ejection, etc. Price \$12. Send for circular.

A reader of *The Wall Street Journal* recently made inquiry of the editor as to which of the prominent railway and industrial stocks were now most suitable for a business man's investments. He desired a list of those which were "paying dividends sufficient to take care of interest-carrying charges and upon which dividends were not likely to be cut, with security of principal, and a likelihood of an advance in the next few years." The editor in reply declared that it was "impossible to state that dividends would not be cut on particular stocks, or that the principal of an investment in them was assured." At the same time, the following list was named by him as "reasonably safe":

Railroads	Capital Stock Outstanding	Div. Rate	Earn. on Stock	Yield
Atchafalpa pf.	\$114,199,500	5 1/2	19.3	4.95%
Atl. C. L. com.	67,555,000	7	11.3	5.80

WHY SUCH HEAVY DECLINES IN RUSSIAN STOCKS?

During the past half-year or more, such heavy declines occurred in the quoted prices of Russian stocks that something like a crisis arose. It has been thought not unlikely that some of these declines would go further. They were reported by a Berlin correspondent of the *New York Times* *Annalist* a month ago to be "still causing uneasiness in the financial centers of Europe." Especially was this true in Paris. To some extent, it was true also in Germany, but the direct interest of Germans in Russian securities is small compared with that of the French. Such interest as Germans have differs substantially from that of the French, who "hold immense amounts of Russian industrials and railway stocks," none of which, with one exception, is listed in Berlin. Berlin is concerned chiefly with Russian bank stocks and with government and municipal loans. Many Russian industrial shares have recently been quoted in Paris at from 100 to 200 points below the high levels reached in 1913, while Russian bank stocks have declined scarcely more than 30 points in any one case. As to the causes of the tremendous fall in Russian industrial and railway stocks, the writer in *The Annalist* says:

"The causes are to be found partly at Paris and partly within Russia itself. The enormous losses of the French public in South-American securities—estimated on a recent date at more than \$200,000,000—have seriously impaired the strength of the French market; and this was only accentuated by the heavy issues of new securities in France. This caused very heavy selling of Russians at Paris at a time when the St. Petersburg authorities were exerting themselves to maintain prices at an artificially high level. The French selling made it necessary for the Russians to buy heavily, as there was no other market to absorb what Paris was selling.

"One of the most striking effects of the movement was to prove the artificial character of the financial position in Russia. Ever since the war with Japan the Russian Government has been exerting itself for the economic regeneration of the Empire; and the banks have been seconding its efforts. The State finances were put upon a sound footing through increased revenues, and the budgets left large balances at the disposal of the Government. Vast railway projects were taken in hand or planned; great irrigation systems in Transcaucasia were begun with a view to rendering the Russian cotton industry independent of American supplies; the tide of immigration was to be checked and diverted to Siberia. Moreover, foreign money was needed for fostering Russia's industrial and commercial development—much foreign money; hence the impression must be created that the

prosperity of the country had been left untouched by the reaction that set in everywhere else more than a year ago. There was, in fact, a certain justification for the implied claim that Russia was immune from business depression. The iron industry, for example, has continued to this day to present a striking contrast to that of all other countries: mills and furnaces have kept at work to their full capacity, and only recently the Duma decided to admit a certain quantity of pig iron free of duty, in order to supply a demand which the home furnaces were not able to meet. The excellent grain crops of the last few years have also undoubtedly gone far toward placing Russia upon a sound footing in the international markets.

"The Government, however, made the mistake of lending liberally to the farmers in order to help them to hoard their 1913 crop of wheat and rye for higher prices. It is largely owing to this fact that Russia's export trade has for months been unusually light; during the first eight months of the current fiscal year the country's active balance of trade decreased not less than \$100,000,000 as compared with 1911.

"Not only did the Government lend freely upon grain, but it caused the Imperial Bank to build elevators for storing it, and it is trying to eliminate the middleman from the grain trade. The Government also encouraged the bringing out of new securities; and it is now generally admitted that the Russian market has been fairly swamped with the new issues of the past months. On the St. Petersburg Stock Exchange, too, the Government exerted its influence through the Imperial Bank to keep up boom conditions. Operators who sold short were 'spotted' as guilty of discreditable manipulations; and the Imperial Bank even punished at least one such firm by cutting off its credit."

Another cause, and one in which anti-Semitism has figured, is named by this correspondent as having "operated against the St. Petersburg market." This project, to which the Government has given much attention, is one for "nationalizing" Russian financial organizations—"nationalizing" being another word for "purging" corporations and other large concerns of Jews and Jewish influence. Under its operation Russians only would be left in control of such organizations.

In Berlin and Vienna financial circles and on the Berlin Bourse the proposal has been taken seriously. It became a factor in depressing Russian stocks. It was also taken seriously in Russia itself; for at a conference of bankers in St. Petersburg with the Government financiers the "nationalization" scheme was referred to as a potent cause in bringing about the critical situation of the Russian financial market. An official denial was then made that the Government contemplated taking such a step. In the opinion of the *Annalist* correspondent, denial "probably means only that the project has been abandoned rather than that it had not been contemplated."

Whatever the facts, the proposal has met with severe criticisms. The manager of a large bank in Kiev is quoted as saying that "the new rules will put a complete stop to the establishment of new enterprises, for Jews will cease to supply capital since they are deprived of all voice in the management of the business." He adds that "the Jews, thanks to their initiative, have played a preponderant part in the economic development of southwest Russia." Representatives of great industries are quoted as

Don't take a Chance Against Accident

You think that your chance of being injured is small. Your habits are regular; you go to business about the same time in the morning and return in the evening almost like clock-work. Your employment isn't hazardous. You think that accidents are confined to traveling men and those who seemingly put themselves in the way of injury. The truth is that a conductor on a passenger train is safer at his work than a physician on his rounds. He is seldom hurt and is in the preferred classes of accident insurance "risks." Thousands of accidents happen in the streets and in homes. Your liability to injury is one against six. Ten men in seventy are hurt every year. Cold statistics prove that.

A very large percentage of injuries are received in unusual ways and places. A woman in Philadelphia was badly hurt not long ago by stepping on a rope trailing behind a truck. She stepped in a loop, was thrown, dragged, and broken bones resulted. This happening was an item of news in every Philadelphia paper. It is one of thousands of simple accidents.

Your earning capacity depends upon continuity. If you are disabled by accident, how long will your house pay your salary? If it pays you for three months and a broken leg keeps you at home for a half-year, how will you finance the cost of being laid up? You will use your savings, of course. How long would it take to replace them?

You do need accident insurance, you see. You need it as much as you need fire insurance, because you are quite as liable to meet with injury, as you are to fire loss. If you had considered accident insurance from this point of view, you wouldn't have put off

buying a policy so long. Would you? But it isn't too late, and you'll get quick action from us.

The accident policy for you is our new **Equity-Value Policy**, because it provides for larger indemnity at a smaller cost than any other accident policy known. Insurance for \$10,000 against accidental death costs \$35 a year* and pays \$50 a week for an unlimited period for total disability and \$20 per week for partial disability. This policy pays a weekly indemnity of \$50 for thirty per cent less than the premium charged for other policies giving the same indemnity.

The **Equity-Value Policy** pays full principal for loss of both hands or feet, sight of both eyes, or of one hand and one foot; \$7500, of either hand or foot or sight of one eye. It pays \$5000 for loss of either leg or right arm; either foot or right hand, \$3333.33; left hand, \$2500; either eye, \$2000; thumb and index finger of right hand, \$2000; of left hand, \$1666.67. Fill in the coupon and mail it for complete information.

"How to Invest Money Wisely"

EVEN the smallest investor will find this volume a mine of information and valuable advice. Written by Mr. John Moody, the acknowledged authority on the subject, it shows how, by adopting intelligent methods of selection, losses can be avoided and absolute safety secured. Price \$2 net.

Send for a copy today

MOODY'S INVESTMENT SERVICE
35 Nassau Street New York

having expressed similar views, some of them saying the proposal is an impossibility. M. Yves Guyot, a former French Cabinet minister, has declared that "commerce and industry, based on free competition, are incapable of surviving such experiments. The absurdity of these measures is so manifest, so incontrovertible, that I would call them still-born. They can not exist in practical life."

The writer in *The Annalist* hears that the German financial community "fears that the crisis will extend to the general business of Russia if it continues much longer." Berlin bankers who have informed themselves about conditions believe, however, that "the manufacturing industries of the country are still on a sound basis," the metal trades and the electrical industry "are enjoying great prosperity," they learn, and the textile industries "have latterly improved their position." Agricultural prospects are also good, and in spite of the overstraining of credits, "none of the big banks is believed to be in danger."

FREIGHT COSTS AND TRAIN-LOADS

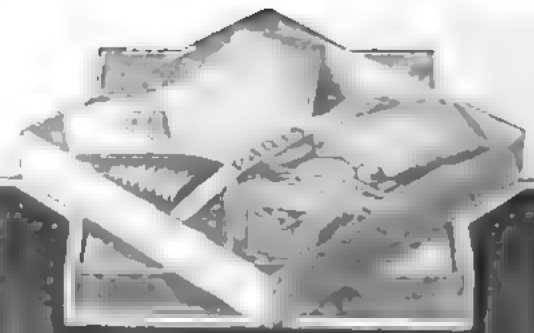

It was contended, in a recent statement issued by the Lehigh Valley Railroad, that the cost of hauling freight during the past fifteen years had doubled. The railroad had tried to meet this increase by using larger cars, longer trains, and more careful railroad methods; that is, they met it in so far as they could. The Lehigh Valley contends that its efforts have failed, by a considerable margin, to overcome the increase.

Another interesting fact brought out at one of the hearings before the Interstate Commerce Commission pertained to increases in train-loads, due to the introduction of more powerful locomotives and the elimination of heavy grades and curves. Mr. Brandeis cited striking facts bearing on increases in train-loads. It appears that "the average load per loaded car" for 1903 was 19 tons, whereas in 1912 it was 22.8 tons, or an increase of about 19 per cent., while during the same period the average load of a freight train was increased from 312 tons to 501 tons. These figures pertain to the country in general. Specific statements affecting particular roads were made. Some of these follow:

"On the Pennsylvania Lines East the loaded freight-car was increased 15 per cent. between 1903 and 1912, and during the same period the average train-load was increased from 491.4 tons to 613.5 tons, or 24 per cent.

"The Baltimore & Ohio Railroad increased its average load per loaded car from 21.1 tons in 1903 to 26.7 tons in 1913, or 25 per cent., and its average train-load was increased from 418 tons to 605.81 tons, or 55 per cent., during the same period. On the Baltimore & Ohio, from 1910 to 1913 the ton-miles increased 18.6 per cent., while freight-train mileage decreased 15 per cent. The average capacity and the average load of freight-cars were each increased about 10.8 per cent. on the Baltimore & Ohio, and the consumption of coal per 100 ton-miles decreased 9 per cent., so that while the price of coal was higher in 1913 than in 1910, the coal cost per ton-mile in freight service was overcome.

"The New York Central increased its car-load 17 per cent. between 1903 and 1912 and its average train-load was advanced 18 per cent. The Norfolk & Western at the same time increased its car-load 20 per cent. and the train-load 42 per cent."

THE SPICE OF LIFE

A Test.—UPLIFTER—"I can see good in all things."

PAT—"Can you see good in a fog?"—*Judge.*

Might Be Worse.—Diogenes was looking for an honest man.

"What luck?" asked the wayfarer.

"Oh, pretty fair," replied Diogenes. "I still have my lantern."—*Life.*

This is a Mean One.—HEMMANDHAW—"Is there any way to make the women dress decently?"

Mrs. HEMMANDHAW—"Certainly there is."

"Well, what is it?"

"Kill off the men."—*Youngstown Telegram.*

These June Brides.—"Ma'am, here's a man at the door with a parcel for you."

"What is it, Bridget?"

"It's a fish, ma'am, and it's marked C. O. D."

"Then make the man take it straight back to the dealer. I ordered trout."—*Kansas City Star.*

Awakened.—BILLY—"Do you believe in signs?"

MILLY—"Yes, indeed."

BILLY—"Well, last night I dreamed you were madly in love with me. What is that a sign of?"

MILLY—"That's a sign you were dreaming."—*Penn State Proth.*

The Minimum Wage.—Little James, while at a neighbor's, was given a piece of bread and butter, and politely said "Thank you."

"That's right, James," said the lady; "I like to hear little boys say 'Thank you.'"

"Well," rejoined James, "if you want to hear me say it again, you might put some jam on it."—*Washington Post.*

What's In a Name?—"What is the name of your automobile?"

"I don't know."

"You don't know? What do your folks call it?"

"Oh, as to that, father always says 'The Mortgage'; brother Tom calls it 'The Fake'; mother, 'My Limousine'; sister, 'Our Car'; grandma, 'That Peril'; the chauffeur, 'Some Freak'; and our neighbors, 'The Limit.'"—*Life.*

Of Two Evils . . .—The little boy was evidently a firm believer in the old adage, "Of two evils choose the least." Turning a corner at full speed he collided with the minister.

"Where are you running to, my little man?" asked the minister, when he had regained his breath.

"Home!" panted the boy. "Ma's going to spank me."

"What!" gasped the astonished minister. "Are you eager to have your mother spank you that you run home so fast?"

"No," shouted the boy over his shoulder as he resumed his homeward flight, "but if I don't get there before pa he'll do it!"—*Minneapolis Journal.*

Why Aren't Stenographers Better Paid?

Why are most stenographers getting only \$6 to \$15 a week—while others get \$20 to \$30?

Eight words tell the story. It's nothing in the world but *lack of speed and accuracy on the typewriter* that is keeping salaries down—that is robbing most stenographers of the pay they ought to get.

Think a minute. What is a stenographer paid for? Isn't it for a *finished product*—for the *quantity and quality* of letters or other type-written matter you can turn out in a day?

No matter how good you are at shorthand—no matter how faithful you are—no matter how hard or long you work—you can never expect much increase in pay until you get *speed and accuracy* on the typewriter.

All Typewriter Users Will Benefit

Even if you use a typewriter only as a convenience to yourself, *Trained Finger speed* will pay—it will save valuable time—will enable you to concentrate your mind on *what* you are writing instead of on the keyboard. Our free book shows how many men and women who formerly could write with only one finger on each hand—and many who had never before used a typewriter at all—quickly became expert "touch" writers.

Trained Fingers Earn \$25 to \$30 a Week

A dozen years of mere practice will never give you speed. You've got to have *trained fingers*—you must be able to strike the right key without looking at the keyboard and without thinking about it, just as a pianist plays the piano—you've got to become a genuine *touch* writer instead of a *right* writer.

The *Tulloss Touch System*—a revolutionary improvement over anything taught in business schools—makes this wonderfully simple and easy. Just by spare time practice—without interfering with your regular work—you can easily become an expert touch writer in a few weeks—can increase your speed to 75 to 90 words a minute—can absolutely free your work from errors—can add \$10 to \$20 a week to your present salary, exactly as thousands of others have done. And you will find the lessons as fascinating as playing a game.

Entire Course On Trial

You don't have to guess what the *Tulloss* course will do for you. You can take the entire course *on trial*—it won't cost you a single cent if you aren't thoroughly satisfied with results. We give you an absolute guarantee.

48-Page Book Free

Isn't it Worth a Stamp to Find Out?

If you have a spark of ambition in you—if you want to make your work easier—if you want more money in your pay envelope, you won't wait a single minute before sending for our free book of proof. It tells all about the *Tulloss* course—explains the revolutionary improve-

163 Stenographers got \$10,779 increase in pay

One was raised \$2,000 a year; another \$1,000; another \$500; 1 letters from each of the sixteen giving the whole story, also letters from hundreds of others who are now getting increased pay, will be found in our free book.

ment over all other systems—how you can get it on trial—how even middle-aged men, who had never used a typewriter, quickly acquired speed—and gives actual letters from hundreds of students telling how they have had their pay raised from \$10 to \$1,000 a year as a result of taking the course.

Waterproofing—Dampproofing—Technical Points

Can It Be Done?—GERALDINE—"I will marry you on one condition."

GERALD—"And what is that?"

GERALDINE—"That our marriage shall not be allowed to interrupt our friendship."
—Judge.

As Usual.—ENGLISHMAN—"The suffragettes saluted the Prime Minister this morning."

AMERICAN—"Did they fire twenty-one guns?"

ENGLISHMAN—"No; houses."—Life.

The Limit.—"She is simply mad on the subject of germs, and sterilizes or filters everything in the house."

"How does she get along with her family?"

"Oh, even her relations are strained."
Philadelphia Public Ledger.

Why.—"And you wouldn't begin a journey on Friday?"

"Not I."

"I can't understand how you can have faith in such a silly superstition."

"No superstition about it. Saturday's my pay day."—Minneapolis Journal.

Easy.—GEORGIA LAWYER (to colored prisoner)—"Well, Ras, as you want me to defend you, have you any money?"

RASTUS—"No; but I've got a mule and a few chickens, and a hog or two."

LAWYER—"Those will do very nicely. Now, let's see—what do they accuse you of stealing?"

RASTUS—"Oh, a mule and a few chickens, and a hog or two."—Kansas City Star.

How It Works

A boat and a beach and a summer resort,
A man and a maid and a moon;
Soft and sweet nothings, and then at the real

Psychological moment a spoon.

A whisper, a promise, and summer is o'er,
And they part in hysterio despair—
(But neither returns in the following June,
For fear that the other is there.)

—Exchange.

And This from London.—"William," asked the teacher of a rosy-faced lad, "can you tell me who George Washington was?"

"Yes, ma'am," was the quick reply.

"He was an American gen'ral."

"Quite right," replied the teacher.

"And can you tell us what George Washington was remarkable for?"

"Yes, ma'am," replied the little boy.

"He was remarkable because he was an American and told the truth."—Tit-Bits.

Canny.—As Sandy holed out on the first green his friend from over the border asked:

"And how many strokes did you take?"

"Eight," replied the Scot.

"Ah," said the Englishman, "I took seven; so that's my hole."

The Scotsman ventured no reply; but when on the second green the Englishman repeated his former question, and made inquiry as to the number of strokes taken by his opponent, the latter nodded his head, and, with an expression of infinite wisdom on his face, gently murmured:

"Nay, nay, my mannie; this time it's my turn to ask first."—Answers.

CURRENT EVENTS

Mexico

June 26.—Alfredo Breceda, the private secretary of General Carranza, arrives in Washington with the announcement that the Constitutionalists will carry out their military campaign regardless of mediation.

June 27.—Captain Breceda issues a statement in which he pictures General Felipe Angeles as an arch-conspirator engaged in antagonizing Carranza and Villa, and mentions Secretary Bryan's special consular agent, George C. Carothers, as encouraging and abetting this division.

June 29.—General Villa is reported to have abandoned his southern campaign and to be leading his army north.

Sir Lionel Carden, the British Minister in Mexico City, issues a warning to all British citizens in that city, bidding them leave the country immediately.

Foreign

June 25.—British suffragettes fire a church near Belfast.

June 26.—The British militants refuse to agree to a truce proposed by the British Government.

June 27.—Suffragettes who bombard the King and Queen in London with bundles of pamphlets are rushed by the street crowd. They are protected from serious danger by the police.

George Fred Williams, our Minister to Greece, issues a statement deploring conditions in Albania, criticizing the Albanian policy of the Powers, and hinting at a plan to unite the nation and "end a reign of murder."

June 28.—The Archduke Francis Ferdinand, heir to the throne of Austria-Hungary, and his morganatic wife, the Duchess of Hohenburg, are assassinated in Sarajevo, the capital of Bosnia, by a Serb student.

Captain Russell, commanding the American gunboat *Machias*, silences with a few shots the guns of President Bordas, which were engaged in bombarding the city of Puerto Plata, Santo Domingo. Captain Russell had previously warned Bordas's forces, having orders from Washington to protect American and foreign life and property in Santo Domingo.

June 29.—A French dirigible establishes a new record by carrying eight passengers and the pilot on a continuous flight lasting 35 hours and 20 minutes. Aeroplane records are broken by a German, Landmann, in a military Albatross biplane, who flies continuously for 21 hours and 49 minutes, alighting only when his fuel is exhausted.

June 30.—In riots resulting from the assassination of the Archduke Francis Ferdinand, two hundred Serbs are killed at Master, Herzegovina.

A fire set by suffragettes in South London results in a loss of \$100,000.

Ulster Volunteers, fully equipped for war, appear on the streets of Belfast.

Domestic

WASHINGTON

June 27.—The Navy Department plans a school for training in aviation, to be located at Pensacola, Florida.

June 28.—The War Department plans to offer purses aggregating \$30,000 to the inventors of the three best aeroplanes, each to be built of a distinctive type.

Admiral Dewey is invited, by Secretary Daniels, to command his old flagship, the *Olympia*, in the Panama pageant next March.

June 29.—The President promises in the future to fill all posts held by colored men by men of the same race only.

Surgeon-General Blue is ordered to New Orleans to take charge of the campaign there against bubonic plague.

June 30.—President Wilson refuses a petition, presented by a delegation of women at the White House, urging him to aid in the passing of the suffrage resolution before Congress.

GENERAL

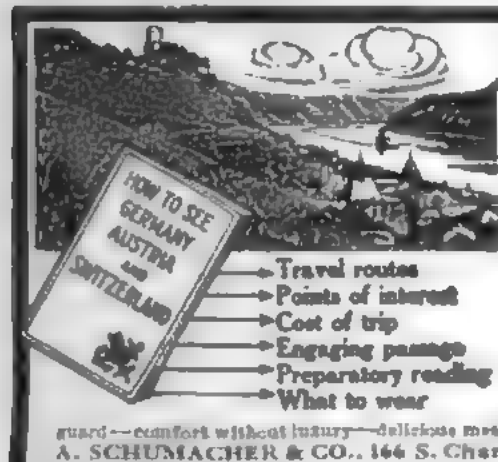

June 25.—Receivers are named at New York for the dry-goods house of H. B. Claflin Company, with liabilities estimated at \$30,000,000.

A disastrous fire in Salem, Massachusetts, destroys the greater part of the city, with a loss estimated at \$12,000,000. Ten thousand houses are destroyed and 200 people are reported missing.

June 30.—The United States Express Company retires from business.

July 1.—Mt. Lassen bursts into eruption for the fourteenth time since May, with such violence that volcanic ashes are carried to a distance of thirteen miles.

The light six ply walls of Indestructo Trunks are as strong as 2½ inches of solid wood

ONE reason why Indestructo trunks are so popular is because they are so strong.

They are light, but five times as strong as ordinary trunks.

The trunk walls are made of six thin layers of close grained, tough wood, each layer of which is laid cross-grain to the next layer and glued together under a pressure of 400 tons.

In the same way the corners are pressed on until the trunk is practically a seamless box, almost unbreakable.

Don't be satisfied with something which looks somewhat the same outside but which in comparison is brittle as a pipe stem.

Indestructo trunks are light, strong thoroughbreds of travel.

Moderate in price, many different kinds to choose from but everyone a strong, long-lived Indestructo.

For five years we guarantee to repair or replace any damaged or lost trunk.

Leather goods also. The Indestructo label is as good as a bond.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"F. H. B., Knoxville, Tenn.—"1. Is it proper for me, in writing an article, to refer to myself in one place as 'the writer' and in another as 'the author'? 2. May I refer to myself in the third person and the first person in the same sentence, as in the following example: 'In accordance with a suggestion made to the writer during his visit, I am doing so and so'? 3. In a paper published jointly by Mr. Smith and Mr. Jones, would this expression be in good taste: 'Mr. Jones has ingeniously coupled the separate parts'? (There is nothing to indicate that the paper was composed by Mr. Smith.) 4. What, if anything, is wrong with this sentence, and how would you express the same idea: 'This material would serve the purpose, however, bearing in mind that a larger quantity of it would be required than of the better grade?'"

1. Yes. 2. No. 3. Yes, if true. 4. 'The sentence is imperfect. Substitute "but" for "however, bearing in mind that."'

"E. W. H., Daytona, Fla.—"Please tell me to what clan in Scotland William Alexander, Earl of Stirling, or his ancestors, belonged. Where could I obtain the genealogy of this family?"

William Alexander belonged to the clan MacAlexander or MacAllister and was descended from John, Lord of the Isles. The genealogy of the family is to be found in *Memorials of the Earl of Stirling and the House of Alexander* (2 vols., 1877), by the Rev. Charles Rogers.

"G. F. H., New York, N. Y.—"Do you consider the name *Alvah* a girl's name, or a name for a boy? I know of one man called *Alvah*, and two of the name *Alvah*. Will you kindly inform me if it would be wrong to give a boy the name *Alvah*, as suggested by some of my friends?"

The name *Alvah* is a masculine personal name of Biblical origin. See Genesis xxxvi, 40, and there is no impropriety in giving it to a boy.

"A. T. D., Perth Amboy, N. J.—"What is the exact wording of the seventeenth amendment to the Constitution of the United States?"

The seventeenth amendment is worded as follows: "1. The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualification requisite for electors of the most numerous branch of the State legislatures. 2. When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: Provided that the Legislature of any State may empower the executive thereof to make temporary appointment until the people fill the vacancies by election as the Legislature may direct. 3. This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution."

"W. R. F., Lower Cabot, Vt.—"Will you kindly give me rules for the correct use of the following words: 'Among' and 'amongst'; 'toward' and 'towards'; 'farther' and 'further'."

If you will consult your NEW STANDARD DICTIONARY, you will see that *among* and *amongst* are used in identically the same way, and also that the words *toward* and *towards* are used in the same manner; therefore, the Lexicographer can not give you any other rule than to use these words in such way that the sense you wish to convey is given by the dictionary. As to *farther* and *further*, *farther* should be used to designate longitudinal distance; *further* to signify quantity or degree. Thus, "How much farther have we to go?" "Proceed no further with that course."

IMPORTANT TO SUBSCRIBERS CONCERNING VACATION CHANGE OF ADDRESS

VOL. XLIX., No. 3

NEW YORK, JULY 18, 1914

WHOLE NUMBER 1265

TOPICS OF THE DAY

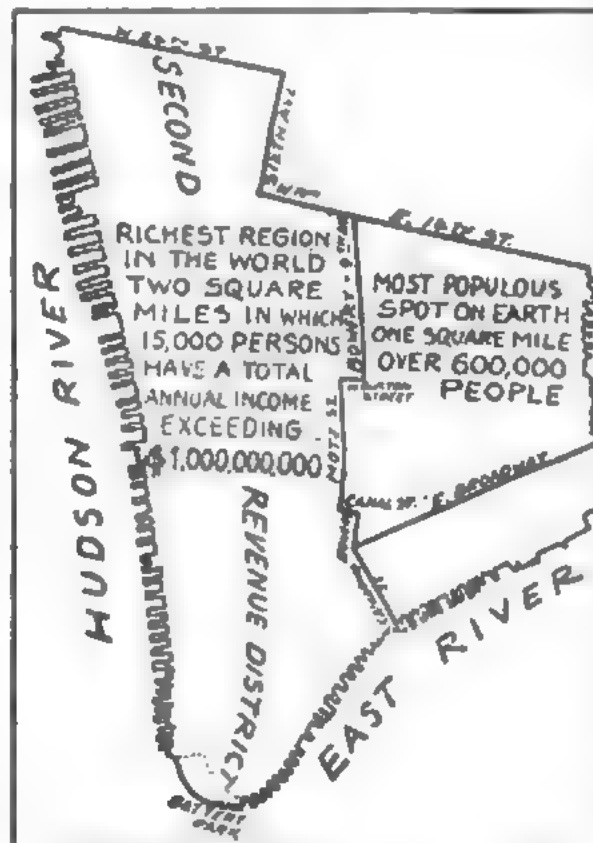

HOW THE DEMOCRATS ARE RUNNING OUR FINANCES

NATIONAL BANKRUPTCY is not thought, even by the Republican press, to be in any immediate prospect after a year's Democratic control of our national finances, yet a survey of the views of all parties on the year's record does not show any great cause, either, for Democratic jubilation. And the *New York Times* (Ind. Dem.), aiming at impartiality, concludes that "on the whole the Government's finances are in good condition, not beyond improvement, to be sure, but comparing well with other years." The Tariff Act has helped the consumer, without hurting business, say the Democratic editors; the Republican and Progressive critics reply that it has had just the opposite effect. The Republican *Boston Transcript* remarks, sadly, that the outcome of the first fiscal year under Democratic rule is "what might be expected to follow when reformers bitten with theory run amuck among the industries of a great nation." Against this may be placed the conclusion of the *New York Journal of Commerce*, after a careful and impartial analysis quoted below, that the Tariff Act has really been of some benefit to the consumer, "with a minimum disturbance of business." The income-tax returns are indeed smaller than was expected. This is a failure which seems to opposition editors a complete justification of all their pessimistic prophecies. But the *Philadelphia Record* thinks the tax has succeeded in supplying "the revenue released in lightening the burden of the consumer," and other Democratic dailies show reasons why it ought to prove of permanent value, in spite of some disappointment of the first few months' trial. Discussion of revenue figures inevitably leads to the question of the depression in business. And so, while the *New York Evening Mail* (Prog.) tells the President that his country "staggers and groans under his industry-paralyzing rule," Chairman Simmons, of the Senate Finance

Committee, informs his colleagues in the course of a debate that

"An investigation will show there have been less disturbance and depression in this country in the past year than has occurred in any other great industrial country in the world. Compared with the known conditions in Canada, the situation in the United States might well be described as a boom in business."

From the *New York Times*.

WHERE EXTREMES MEET.

The Government gets more than one-quarter of its income tax and nearly one-fifth of its combined income and corporation tax from the 2d New York district, here shown. The adjoining section pays almost nothing of either tax.

Secretary McAdoo declares himself "exceedingly gratified with the results for the first fiscal year of the new Tariff and Income-Tax Law." His figures for the year ending on June 30, subject to some revision upon the basis of fuller returns, show total disbursements of \$700,559,248.13, and total receipts aggregating \$734,343,700.20, leaving a surplus of \$33,784,452.07. But, as the press dispatches point out, the surplus will be wiped out by the Panama Canal expenditures, for "during the twelve months \$34,826,941 has been spent on the canal, and when this has been charged off there will be a deficit for the year of \$1,010,058.81 on the books." Eventually, as several editors note, the Treasury will be reimbursed for the Panama expenses by bond sales, to be authorized by Congress. And without waiting for that, says the *Springfield Republican*, Secretary McAdoo "may claim a 'moral surplus' in view of the fact that some \$3,500,000 in income taxes are being held back in order to take

advantage of the ten-days' grace allowed by the Income-Tax Law before penalties can be imposed for non-payment of taxes." Democrats probably agree with the *Brooklyn Eagle* that they "have a right to be proud of the way the revenue law has worked out in this first experimental year." The country should be reassured, thinks the *Indianapolis News*, an independent pro-Wilson paper, for "even with the loss of the sugar duty, there will be no difficulty in meeting all legitimate expenditures." But the expenditures, it reminds its Democratic friends, must

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

be reduced, for the party has made "no attempt to redeem" its pledge of economy.

The one universally acknowledged disappointment is the failure of the income tax to come up to expectations. After a

ANOTHER BUMPER CROP.

—Clubb in the Rochester Herald.

forecast of \$82,000,000, and a later estimate of \$54,000,000, a total receipt of but \$28,000,000 makes a slim showing, tho the corporation tax brings the figures up to \$71,000,000. That there is something in Mr. Underwood's explanation that the tax "represents about six months' income by reason of the fact that it is for less than a year on all taxes and only for three months on the excess rates," is admitted by the *Pittsburg Dispatch* (Rep.), which also believes that many incomes have been inadequately reported. But the *Rochester Post Express* (Rep.) attributes all the disappointment to the inaccuracy of the earlier "guesses." The *Providence Journal* (Ind.) would attribute it to the "serious reduction of incomes since President Wilson was inaugurated"; for "diminished incomes mean a diminished income tax." The *Milwaukee Journal* (Ind.) is inclined to put much of the responsibility for the low return on the Government's inexperience in collecting a tax of this kind. The tax, says the *Springfield Republican*, "will surely yield more revenue as the people become used to its intricacies." It feels certain that the tax has come to stay, for "the political party that hereafter should venture to repeal the income tax and replace it with higher tariff duties on food and clothing would have trouble in surviving the shock of the election returns." It seems to the *New York World* (Dem.) that the tax was a partial failure because attention was paid to it principally in the large centers where the newspapers played it up. And it notes that "New York City as a whole pays more than one-third of the tax, an amount exceeding \$11,000,000, while Philadelphia pays \$2,000,000, Chicago \$1,900,000, and Boston \$1,500,000."

Turning from the income tax to the tariff, we find there has been little difference between the last two years in the customs duties collected at the port of New York. Imports are practically the same for the two years, and exports have decreased \$50,000,000. Secretary Redfield explains that the falling off has been large in exported foodstuffs, and very small in manufactured goods. He would encourage American manufacturers by showing that they are selling almost as much as ever abroad, and have practically no greater foreign competition to meet. Naturally, he adds, the coming large crops will again make us a large seller of foodstuffs abroad. Nevertheless we find a continued belief

in some quarters that the tariff is a menace to business, especially among those hit by the new schedules. Judge Gary lately declared it to be his sober judgment "that the Tariff Law lately passed has adversely affected the business condition of this country." Other steel men are mentioned in *The Wall Street Journal* and the *New York Journal of Commerce* as being of the same opinion, some fearing large imports in the fall and winter, to the detriment of our market. The *Washington Post* (Ind.) prints letters telling of Southern cotton-mills which "can not get near cost for their yarn because there has been a vast increase in imports of yarns and cotton cloths under the new 'Tariff Law.'" And papers like the *New York Evening Mail* (Prog.), *Baltimore Star* (Rep.), *Philadelphia Press* (Rep.), and *San Francisco Chronicle* (Rep.) continue to denounce the Democratic tariff as the source of hard times.

On the other hand, Democratic editors are quoting such bits of trade gossip as the statement in *The Commercial and Financial Chronicle's* dry-goods market report that "manufacturers find that domestic goods could be advanced considerably and still hold their own, now that the full effects of the tariff have become known." And the *Philadelphia Record* concludes that manufacturers in general "have discovered that they were not nearly so much hurt as they were alarmed."

In view of all that has been said, a careful editorial analysis of the results of the tariff in the *New York Journal of Commerce* is worthy of attention. Taking first the effect on the cost of living—

"The total imports since meats were put on the free list were valued at \$10,000,000, compared with none a year ago. It was asserted by many protectionists that no meats would be imported, and by others that so great an importation would occur as to drive American producers to the wall. Neither forecast has been fulfilled. The amount of meat imported has been but a small percentage of the total consumption, yet enough to have a perceptible effect in restraining the tendency to a further advance in the price. Higher home charges would unquestionably bring in still larger quantities. The removal of duties is thus seen in this case at its best, since it acts as an equalizer of prices, yet drives no one out of business and simply operates to prevent monopoly extortion or famine charges.

"Much the same may be said of the movement of grain which, while not affecting the domestic price to any extent hurtful to the

GET OFF THE TRACK!

—Rehse in the New York World.

farmer, has furnished a useful addition to the home supply and has suggested the possibility of an emergency resource within the reach of all. Our imports of breadstuffs during the ten months of the fiscal year were over \$30,000,000, against \$17,-

000,000 for the same period last year, the increase being chiefly in corn. In those classes of subordinate products where duties were high under former acts and where the reduction has been but moderate, as in the case of cocoa and olive-oil, increases

WOODROW—"It'll be fine after you get in."

—Fox in the Chicago Post.

have evidently resulted in supplying a home demand not previously satisfied, and in putting the goods within the reach of many who could not purchase under the old conditions without driving the price to a prohibitive level. The effect here is—so far as made plain—beneficial, and few will criticize the situation as now revealed."

The manufacturing results are found harder to analyze, for in many lines there have been no perceptible changes—

"The imports of iron and steel for the ten months were only \$26,119,000, or about the same as last year. The cotton industry hardly felt the change during the seven months of the new duties, the increase of importations being scarcely over 6 per cent. in gross value of the total importation of \$61,000,000. The same is true of paper, whose manufacturers raised so loud a wail regarding the threat of foreign invasion. Even in printing paper, where the free-trade principle was applied, the growth in importations is admitted by producers to have been insufficient to hurt them, owing to the immense increase in the demand for the product. There is a different situation in a few lines, such as manufactures of wool, where there has been a notable increase during the period in question, carrying the importation of goods from \$14,000,000 to nearly \$26,000,000. Yet staple articles like carpets show a positive decline, while dress goods, formerly most highly taxed, are in lower volume than before. The conclusion drawn by most persons will be that in many if not most branches of manufacture the United States is well able to hold its own against foreign industry. . . . The fact remains that the consumer is not receiving the benefit of a materially lower scale of prices, and that his advantage lies largely in improvement of qualities and in the prevention of further advances. . . .

"Some lines of merchandise show appreciable cuts of price, but they are comparatively few, and this lack of reduction is particularly noticeable in such articles as leather manufactures, where there has been a distinct advance in importations."

The conclusion is that the tariff has thus far "had little real effect upon trade or industry." There has been "a considerable reduction in the burden of tariff taxes," yet the changes are so carefully made as to "impair but little the productiveness of the tariff."

"This is in part a tribute to the expansive power of domestic demand and in part a compliment to the work done in preparing the new schedules. Both as to revenue and as to industrial effects, tariff revision has been accomplished with practically a minimum disturbance to business."

A WHITE HOUSE WELCOME FOR "BIG BUSINESS"

NOW that President Wilson has talked over business conditions with such men as J. P. Morgan, Henry Ford, and the representatives of the Chicago Association of Commerce, and has taken a stand for the encouragement of big business men undertaking public service, the newspapers are all talking about his "change of policy." Some of Mr. Wilson's friends, as the *New York Evening Post* observes, "protest that this means no real change in him." But *The Evening Post's* belief that "it will be received by the country as a radical change" seems justified by the general tone of newspaper comment. Almost every one seems to be pleased, though some opposition editors question the President's motives, and wonder how much real good will be accomplished. Few, if any, make use of the opportunity to attack him for openly consorting with "malefactors of great wealth." Neither the President nor his callers were loquacious regarding their interviews. But all the visitors, if we can believe the Washington correspondents, left the White House in a happy mood. Mr. Morgan's usually immobile face was "wreathed in smiles," Mr. Ford was highly optimistic about business prospects, and the gentlemen from Chicago told of the "considerate and open-minded hearing" they had had. And in the last case the President gave official publication to his feeling "that the conference has been mutually instructive and helpful." These pleasant and profitable conversations with industrial and financial leaders, say the Washington dispatches, are to be continued in the near future.

President Wilson's new policy, manifested in these White House visits, was more clearly defined in a statement issued while the Senate was making up its mind whether it ought to accept his nominations of Paul M. Warburg and Thomas D. Jones to places on the Federal Reserve Board. Senators are troubled by these gentlemen's business affiliations. The Democratic party and the Senate, the President said, know

"that the vast majority of the men connected with what we have come to call big business are honest, incorruptible, and patriotic. The country may be certain that it is clear to members of the Senate, as it is clear to all thoughtful men, that those who have tried to make big business what it ought to be are the men to be

—Hanny in the St. Joseph News-Press.

encouraged and honored whenever they respond without reserve to the call of public service. . . . It is the obvious business of statesmanship at this turning-point in our development to recognize ability and character, wherever it has been displayed.

and unite every force for the upbuilding of legitimate business along the new lines which are now clearly indicated for the future."

These sentiments seem to meet with general editorial approval. The President's statement was commonly interpreted in Washington, says the *New York Evening Post's* correspondent, "as

WIPING AWAY HIS TEARS.

—Kirby in the *New York World*.

a word of cheer to the business world, using the Warburg appointment simply as a peg upon which to hang it." The *New York Sun's* representative thinks it is considered a hopeful sign because "it is the first rebuke that has been administered by the President for indiscriminate attacks upon business men simply because they have succeeded abundantly."

Now what, asks the *New York Tribune* (Rep.), "has suddenly driven the President to make the affectionate advances to business men with which the Warburg appeals and the exchanges with the Chicago delegation bubble over?" It answers by pointing out that "coincidentally with them the newspapers report the secession of a Democratic Congressman from Colorado, wholesale desertions from the party in Louisiana, and grave disaffection all through the Middle West." So *The Tribune* concludes that we have here "a remarkable exhibition of agile political readjustment," tho it hopes for the country's sake that it is genuine and "will bear genuine fruits." So, too, the *Pittsburg Gazette-Times* (Rep.) finds this "remarkable departure" "profoundly suggestive of the possibility that the Administration has got the country and itself into deep water and is hard put to find a safe way out." According to the Socialist *New York Call*, it all goes to show that "T. Woodrow Wilson is developing considerable statesmanship." "He has reached the recognition that modern government is nothing more than a committee of capitalists with power to transact the common business of the ruling class."

Turning from these unfriendly writers, we note that in the *Houston Chronicle's* opinion the President of the United States has again displayed his usual "hard, common sense" and "sense of justice and perception of the proprieties," and has shown that, "honest himself," he "is not afraid to trust others." He is removing the impression "that he is a man inclined to academic views and detached from close contact with actual affairs," says the *New York Globe*, and is showing himself desirous to put himself in "direct contact with the people of the nation whose influence is important and whose opinions are worthy of serious attention." The *New York World* (Dem.), tho it admits that

Mr. Wilson has held himself too much aloof from the advice of business men, considers it the fault of the great business interests. For they have "stubbornly refused to recognize" Mr. Wilson's "sincerity and honesty"; "they have abused Mr. Wilson as if he were the most blatant blatherskite who ever captured a public office." Would it be strange, asks *The World*, "if the President had decided that he could get along without their advice and counsel?" The conclusion of the independent but equally friendly *New York Evening Post* is that the Administration "has been leaning over backward in its desire to avoid either the reality or the appearance of undue influence by business interests, and Mr. Wilson appears to have arrived at the conclusion that the psychological moment has come for the adoption of a different posture." And *The Evening Post* is absolutely certain that the President's new policy is "sound and right."

A number of the President's critics point out that his conferences will be fruitless in one direction, because his business legislation has all been finally determined on. But others argue that there is still time to change the various provisions in the trust bills, and several Washington correspondents think that the visit of the Chicago business men may help to eliminate the definitions of restraint of trade from the Clayton Bill and to modify the Trade Commission Bill.

Such opposition papers as the *Salt Lake Tribune* (Rep.), *Kansas City Journal* (Rep.), *Buffalo Express* (Rep.), *Baltimore News* (Prog.), and *Boston Transcript* (Rep.), can not see how President Wilson's talks with business experts can affect trade conditions. He "can no more make prosperity now merely by talking with business men than he was able to make it before merely by talking with psychologists," is the way the *New York Press* (Prog.) puts it.

Nevertheless the *Washington Post* (Ind.) and *Worcester Gazette* (Ind.) expect good to follow from the White House inter-

THE INVESTIGATION IS ON.

—King in the *Chicago Tribune*.

views, for reasons like those thus outlined by the *Brooklyn Citizen* (Dem.) the day after the Morgan visit:

"Every business man, big or little, will feel a renewal of confidence when he sees that the Administration is not only availing itself of the experience of merchants, manufacturers, bankers, and railroad presidents, with special knowledge of affairs, both at home and abroad, but is bent upon having the legislation and administrative work in which they are concerned shaped in accordance with their judgment of what ought to be

done. The signs multiply that the country is soon to enter upon an era of great material prosperity and one of them was unmistakably given yesterday."

Nor should readers forget the smile on the face of Mr. Morgan or the words of Henry Ford as he left the White House after talking with President Wilson: "Cheer up! I agree with the President that the era of prosperity is coming fast."

ATTACKING THE "PORK-BARREL"

NOT A "BILL," but a "scandal," is the word used to describe the River and Harbor measure of 1914 by the *New York Journal of Commerce* (Fin.), which intimates that the members of the Senate and House, for all their drastic criticism of private business men, "appear to be singularly lacking in delicate scruples about methods and expenditures in the public service." Other observers, among them *Collier's Weekly* and the *Philadelphia Public Ledger*, blame our appropriation system as much as our legislators, and would have waterway improvements in the hands of a commission. This plan is covered by the amendment to the bill offered by Senator Newlands, of Nevada, but the *Indianapolis News*, shrinking before the cost and overplus of commissions, says we would better establish a national budget, and notes that "the United States is practically the only one of the world's great nations without such a system." In any case there seems to be a general and pronounced sentiment against the River and Harbor brand of "pork-barrel" outlay, and some critics go so far as to accuse Republican, Democratic, and Progressive legislators at random of being tarred with the same brush in the attempt to put through a measure "which has no other purpose than to try to buy reelections to Congress by omnibus bribery of the electorate." This "biggest and worst" bill in the history of the country, the press inform us, provides for a total appropriation of \$93,529,475, itemized as follows:

House bill, cash.....	\$43,289,004
House bill, future obligations.....	32,897,871
House sundry civil bill.....	6,900,000
Senate increase.....	10,352,600

The opposition's minority report, introduced by Senator Burton, of Ohio, who is declared in many quarters to be one of the best-informed men, if not the best, in Congress on the subject of waterway improvements, charges the bill with "glaring defects" in the method of appropriations, and urges the following reforms, as quoted in Washington dispatches:

"A careful review of pending projects and the omission of all improvements which are no longer profitable.

"A more careful consideration before the adoption of projects. There should be especial care to avoid lock and dam construction, save in streams which are capable of being made important arteries of commerce.

"A division of expense when exceptional advantages accrue to private property or specific localities, or when the protection of private property is the main object and navigation subordinate.

"The exclusion from the bill of proposed improvements which do not have to do with navigation.

"A general policy of improving the main stream before attention is given to branch streams, and the adjustment of depths and dimensions with a view to a uniform and comprehensive plan for the development of such waterways as can profitably be utilized.

"Such adjustment of relations between railways and waterways as will secure the utilization of routes partly by land and partly by water when cooperation and utilization of both routes can be made profitable as a means of transportation."

Yet some doubt if the bill will be defeated. The *New York Tribune* (Rep.) fears that Senator Burton will "fail again in his attempt to rationalize the River and Harbor Appropriation Bill," because "the average Representative or Senator thinks only of getting the money out of the Treasury and into his district or State." Editorial objections to the "pork-barrel" plan of

making appropriations are made by the *Philadelphia Record* (Dem.), the *Baltimore News* (Prog.), the *Washington Times* (Prog.), and the *Cleveland Plain Dealer* (Ind. Dem.), while the *Detroit News* treats it with scathing irony.

Some of the samples of "pork" discovered make interesting reading. The *Springfield Republican* cites a "typical item":

"Upon a section of the Mississippi River, on which \$17,000,-

THE ANNUAL GORGE.

—Darling in the *Des Moines Register and Leader*.

000) has been expended since 1881, the annual passage of freight is only 250,000 tons. Yet the pending bill carries a further appropriation for the coming year of \$1,000,000 for that section, or at the rate of a Government subsidy of \$4 a ton, while the estimate of the work yet to be done is \$17,250,000."

In the *Chicago Evening Post* (Ind.), too, we find examples of "fat" in the bill that the Senate might "fry out" to advantage:

"Cape Fear River, N. C., on which one steamboat makes a trip twice a week, voted \$38,375.

"Newbegun Creek, N. C., without a settlement on its crooked course; alleged at times to flow backward under the influence of the wind.

"Oklawaha River, Fla., ninety-four miles long, celebrated thus in verse:

We have a crooked creek that has a crooked name,
And grabs a crooked million while in a crooked game.
To make a crooked water-power run up a crooked hill
It crooks your Uncle Samuel through a crooked river bill.

"Representative Frear, of Wisconsin, is the author of the poem. He fought an appropriation of \$733,000 for this river, but it went through."

Such action takes "courage and a rare measure of determination," the *Chicago Tribune* (Prog.) remarks, because—

"All the cynicism and selfish self-interest in both chambers are back of the pork-barrels, and there are few men in either House who are ready to fight, against such overwhelming odds, a fight that has been lost so often before. That is why Representative Frear, of Wisconsin, who fought the shameful waste of the pending River and Harbor Bill, and Senators Burton, Borah, and Kenyon, who are taking up his fight with spirit in the Senate, deserve the applause and prompt support of every newspaper and every citizen without strings or selfish interests."

But it seems to the *Portland Oregonian* (Ind. Rep.) that the "demand for investigation and systemization of river and

Photographs copyrighted by B. F. Loewis.

ONE OF THE ERUPTIONS OF MT. LASSEN, IN CALIFORNIA.

harbor appropriations is made with such force by leading newspapers and by forceful men in Congress that it can not be much longer ignored," and from a technical journal, *The Engineering News*, we gather this presentment of the whole matter:

"How strongly the beneficiaries of the present river and harbor systems are entrenched is proved by the fact that with all the exposures of its iniquities by such men as Senator Burton and President Taft, and many years ago by President Cleveland, to say nothing of many others of prominence, the system still continues to draw money from the national treasury in a flood which increases year by year.

"Sometimes, perhaps, some influential commercial or technical organization may be able to bring about a reform. Until that happens the nation will continue calmly to pour out millions a year into pools and ditches to perpetuate obsolete systems of transportation and benefit a traffic which has disappeared."

THE "PLUCKING BOARD" ON TRIAL

THE "TRAGIC" RESULTS of the "plucking board's" yearly weeding out of naval officers, the fit along with the unfit, rally a large section of the press in approval of the Secretary of the Navy's move to repeal the Navy Personnel Law, because, to quote the *New York World*, "a law that operates so awkwardly defeats its own purpose and condemns itself." Some, however, reply that a board of this kind is necessary to maintain the standard of the service. This year fifteen officers, several of distinguished career, press reports inform us, are involuntarily retired on the recommendation of the "plucking board," and the *Washington Post* publishes a statement of Secretary Daniels that "there was absolutely nothing in the records of any of these officers to show that they were not fitted for any naval service in the matter of habit, temperament, and professional ability." In the view of the *New Haven Journal-Courier* "the general protest against the action of the 'plucking board' would argue that there is something rotten in the state of Denmark," while the *New York Tribune* pictures an officer in command of a ship, "enjoying the confidence and respect of all his subordinates," when without warning he and they read one day in the newspapers that he has been put on the retired list "by virtue of a star-chamber proceeding." Such an experience must be humiliating in the extreme, thinks *The Tribune*, and it adds:

"If officers must be retired in order to accelerate promotion, it would be far juster and humaner to retire them on grounds of which they have foreknowledge. The present system is too arbitrary and tyrannical. It gives too much power to the

'plucking boards.' It subjects worthy officers to possible persecution and offers too much play to the hidden workings of personal prejudice and favoritism."

The "plucking" system is also condemned by the *New York American and Sun*, while the *Jacksonville Florida Times Union* attacks the idea of it thus:

"The idea is to make promotion more rapid, and give naval officers a chance to rise to the higher grades before they get so old as to lose their vigor. But the regular age of retirement is sixty-four years, and a man has not generally lost as much in vigor as he has gained in experience at that age. Emperor William and Field-marshal von Moltke, who commanded the German Army in the war with France, were each over eighty years old at the time, and neither was lacking in vigor."

Examples nearer home are cited by the *Memphis Commercial Appeal*:

"The old men in our Navy have given a good account of themselves. Porter, Farragut, our own Admirals Semmes and Buchanan were along in years during the Civil War. Dewey was around sixty when he fought the Spaniards in Manila. Schley was sixty at Santiago. Captain Mahan, retired, now near eighty, is probably the ablest living authority on sea-power. Sir John Fisher and Lord Beresford were old in years when they were on active duty in the British Navy."

Among other journals that severely arraign the "plucking board" are the *Philadelphia Public Ledger and Record*, the *Baltimore American*, the *Baltimore News*, the *Washington Times*, the *Savannah News*, and the *Atlanta Constitution*. On the other hand, the *Philadelphia Press* bids us bear in mind that "the standard in the Navy is so high that no discredit necessarily attaches to those officers who are thus removed every year from the active list," and it points out that "their retirement simply means that they are not quite so good as the best, and the chief motive for the existence of the 'plucking board,' anyhow, is to remove congestion and aid promotion." On this point we are advised by the *Springfield Republican* that—

"there must be some more or less similar institution, if the Navy is not to be clogged and men of ability prevented from getting to the top. Before the 'plucking board' was established a situation existed such that every graduate of Annapolis, if he could succeed in standing off the undertaker, could count upon becoming an Admiral sooner or later. At that time it was a well-known fact that one or more men had thus, through the mere effect of seniority, been placed in command of ships, altho unequal to such responsibility, to say nothing of the command of fleets which might have come to them."

For an expert opinion we may turn to *The Army and Navy*

Photographs copyrighted by S. P. Loomis

OUR ONLY ACTIVE VOLCANO SOUTH OF ALASKA.

Register (Washington), where we read, on the subject of Congressional interference, that—

"If there is necessity for a 'plucking board,' as a means of creating vacancies for the purpose of maintaining an adequate flow of promotion and the consequent benefits to the naval personnel, it must be permitted to conduct its labors without legislative restriction and the dependence upon the fairness and the wisdom of the judgment of the officers who constitute a board convened to choose the individuals for retirement. Nothing is to be gained by a provision that the selections must be confined to those who are invariably unfit in a minimum degree, since that must impose upon the board a task of comparison not possible from anything in the records, however carefully compiled or conscientiously consulted. There are too many elements entering into a determination of individual worth, relatively judged, to secure an infallibly discriminating selection."

NEW YORK'S COMPENSATION LAW

"MOST LIBERAL to workmen and most severe upon the employer," is the comment of one authority upon the New York State Workmen's Compensation Law, taking effect July 1. Nor does he hesitate to affirm that for "a good while" the operation of it will be "experimental." But the *New York Tribune* thinks otherwise, and says that the effect of the law "may well begin a new era of cooperation between employees and employers," and it adds that "the citizens of New York can congratulate themselves that they have brought their State abreast of the enlightened thought of the world in this important reform." The enforcement of the law is in charge of a Workmen's Compensation Commission, and it affects about 2,000,000 workers and 150,000 employers in forty-two groups of hazardous trades.

Chief among the employments exempt from its provisions are domestic service, farm labor, and mercantile work. Claims are adjusted by the Commission, empowered to bring suit for an employee in case of necessity. On their side the employers are insuring themselves against liability either in the stock insurance companies or in the State Insurance Department. The premiums asked by the State are from 8 to 9 per cent. below the average premiums of private companies, press reports say, and there is a rumor that an additional reduction of 15 per cent. may be made.

Adverse critics of the law, betraying a hope that it will be declared unconstitutional by the courts, cavil at State insurance, as the fund has no guaranty except the \$300,000 which was appropriated for the first year, but a writer in the *Philadelphia*

Public Ledger says that the demand for State insurance indicates that of the total business resultant on the new regulation a share of from 10 to 20 per cent. will go to the State. "This is considered remarkable," he avers, "as no time was afforded for a campaign to show the advantages of insurance with the State." The *New York World* points out that the compensation to workmen "is based on the average weekly wages," and informs us that "it will be 66½ per cent. of such wages, paid during the time of disability." No compensation, however, is to be paid for the first fourteen days, the law provides, as a guard against false claims. In case of death from injury, *The World* continues, and where dependents are left, "30 per cent. of average wages will be paid to the widow during widowhood and 10 per cent. additional for each surviving minor child." Only "lawyers of the corporation class and lawyers of the class known as 'ambulance chasers' will suffer from the new law," concludes *The World*, while "all others concerned will be relieved of either a great injustice or a hampering industrial uncertainty"; but the *New York Journal of Commerce* takes a very different stand, when it says:

"There has been reason enough for an improved system of legislation on this subject, but the tendency has been for it to go too far in the direction of eleemosynary provision for workmen at the expense of employers rather than of equity between men who have contractual or business relations with each other. The system which has just been established in this State is peculiarly complex, and puts the claims of workmen, not simply on a level with their rights as parties to a contract, but on the footing of beneficiaries of enforced philanthropy."

This newspaper foresees, moreover, that the law will not insure "complete escape from litigation," and it notes with regret that—

"This additional expense of conducting business on account of the cost of the compensation system will, like other industrial and commercial expenses, be gradually diffused and will tend to raise the level of prices or reduce the profits of business, either of which will operate as a check upon activity within the jurisdiction of the law. If it proves a greater tax or burden in one State than in those adjoining, the tendency will be for industries and business which can readily shift to cross the boundaries. The economic principles which work through competitive efforts will not cease to operate. Nothing will be gained by a distribution under pressure which results in higher cost and consequently less to be distributed within the area dominated by restriction or burdensome legislation. One benefit may perhaps be counted upon. It may induce better safeguards and greater precautions against the risk of accidents which would be sure to entail an expense that is quite tangible and must be calculated upon."

OUR BANKS INVADING SOUTH AMERICA

EVEN OPPOSITION PAPERS give the Wilson Administration a generous pat on the back as they see our big banks establishing branches in South America under the new Federal Reserve Bank Law. The National City Bank of New York is to establish branches in Rio de Janeiro and Buenos Aires, the report has it, with perhaps another at Valparaiso, and the Republican Pittsburgh Gazette-Times, which has not been blind to Presidential errors, sees trade benefit in the present venture and admits that this "is one highly important innovation that may be placed to the credit of the present Congress and Administration." Many other large banks in our leading cities, so the Washington correspondents report, are seeking authorization to invade the foreign field, and it appears that while Latin America is the favored region, many inquiries are received about other places, including the Far East, especially China. It is perfectly plain why South America should be at the forefront in this new project of commerce, we learn from the Pittsburgh daily, because—

"For years the great need of United States interests doing business in South America has been such banks as it is proposed to set up as soon as the necessary governmental permission has been granted. In the year ended June 30, 1913, we sold American products to the value of more than \$400,000,000 to Brazil and imported therefrom commodities representing \$100,000,000. To Argentina we sold \$52,840,000 and from that Republic imported \$20,463,000, while our sales to China were \$100,000,000 and our imports from there were \$27,000,000. Yet all the banking done in the commercial centers of those countries for Americans was through local institutions or European banks, American money being unknown excepting for minor transactions and then at high exchange rates. Means of communication with South America have been considerably augmented in

recent years, and it is expected the opening of the Panama Canal will result in extension of a trade which in any event presents better promise at this season. With establishment of United States banks a handicap which our manufacturers have been compelled to submit to with as good grace as possible will be removed and they will have facilities equal to those of their competitors from Great Britain, Germany, France, and Portugal."

"One of the chief drawbacks" to the spread of our trade in South America is now removed, agrees the Philadelphia Telegraph. Rep. Wright adds that:

"In spite of the activity of other countries there, it is still an undeveloped field nearer to us than any other undeveloped foreign land, and some of the handicaps formerly experienced will be removed by the establishment of branches of American banks there. Once undertaken, the facilities are very certain to be extended wherever there can be any demand for them, and it is one of the excellent features of the new banking law that it has made it easier to promote such enterprises."

The New York Sun, Ind., which seems to endure more than enjoy the present regime at Washington, observes that the enterprise of the National City Bank "makes use of what is likely to be the principal achievement of the Wilson Administration, the Federal Reserve Act," and it thinks the United States is entering the South-American field at a favorable hour:

"This seems to be a notably propitious time to make the beginning of these banking relations with South American countries that have long been desired. Up to a year or so ago a boom prevailed in the principal South American countries which had been inflated with European capital. To-day depression, following heavy liquidation, has succeeded an exaggerated extension in Brazil and Argentina. Europe is not purveying capital lavishly to its former customers, whose activities it had overestimated, and the entrance of American bankers into South America can be more safely made than at any previous time in recent years."

FOREIGN COMMENT

SIKHS BESIEGING CANADA

THE LAPPINGS of the Asiatic tide upon our western shores remind some writers that almost every country on earth has at some time been overrun by a great racial migration, and that even our own presence here is the result of such a movement. California and British Columbia seemingly have no desire to be the scenes of another event of this sort, and are feverishly raising the barriers as Holland fought the sea. The Asiatics are attempting to move upon South Africa, Australia, and New Zealand as well as upon North America, and in the British possessions the case is complicated by the fact that the immigrants from India are British subjects. Disaffection in India is rampant. Will Canada, as a loyal colony, injure the power of the mother country by offending the pride and prestige of the Hindus and thus deepening their hatred of the British raj? Canada tried to solve the problem by providing that the Hindus could not enter unless they came direct from India, there being no direct steamship line to bring them; but a body of some 350 Sikhs tried to meet the issue by sailing direct from India to Vancouver in the Japanese steamer *Komagata Maru*, led by Gurdit Singh. They arrived on May 23, but were forbidden to land, and since that date have been living on their ship in the harbor, amid great excitement and tension, as we read in the Vancouver papers. A hunger-strike was started, but abandoned, as the Canadians failed to be impressed by its fatal possibilities. A threat was made to burn the ship, on the idea that the people would rescue the passengers; but that, too, seemed uncertain. For several nights a lookout was maintained on the waterfront, to rouse the city to arms if a rumored plan to land should be attempted. On Monday of last week the Court of Appeal decided they could not enter Canada, but this

is not expected to end the Hindu efforts to invade the Dominion. The well-known Sikh journalist of London, Mr. Saint Nihal Singh, presents the situation as follows, in the *London Graphic*:

"I am of the belief that the Sikh settlers in British Columbia have been subjected to hostility through no fault of their own, but simply because they came when British Columbians were in an angry mood toward the Japanese and Chinese immigrants. Being Orientals, the Indians were at once denounced as being as undesirable as the Japanese and Chinese, and the fact that Indians were British subjects was lost sight of. From an imperial point of view the incident must be deplored by all well-wishers of the Empire. A provocative policy assumed by Canada is bound to feed the flames of sedition in India."

The *London Times*,

in justification of the Canadian exclusion of visitors from India, remarks:

"The claims of those who chartered the *Komagata Maru* are based on the assertion that 'British citizenship' involves the right of unrestricted entry into any and every part of the British Dominions. That is the kind of catch-logic which may easily beguile the uninstructed. It should not for a moment mislead any intelligent person who will be at the trouble to think out the meaning of words. It is preposterous because it ignores

the facts. The facts are that free peoples have a right to say whom they will admit into their country, just as free men have a right to say whom they will admit into their house. This right is exercised in practise; it is not merely a theoretical right. It operates quite irrespective of color, so that there are numbers of men—white, and subjects of the Crown—who are excluded from the Dominions. It is useless to say that this should not be. It is."

The feeling of the Vancouver people over this intrusion of Asiatics upon their shores may be seen from the following resolutions passed at a crowded meeting of the citizens:

"That whereas the steamer *Komagata Maru* has been lying in the port of Vancouver from

VISIBLE SIGN OF A PROBLEM THAT VEXES THE BRITISH EMPIRE.
The Japanese steamer with its unwelcome passengers from India lying in Vancouver Harbor. The Canadian courts have decided they cannot land.

GURDIT SINGH (IN GRAY) AND SOME OF HIS SIKHS ON BOARD THEIR SHIP.

the 23d day of May until the present date, with a ship-load of undesirable immigrants demanding admission into the Dominion of Canada;

"And whereas it is the universal opinion of all citizens resident upon the Pacific coast of the Dominion of Canada that the influx of Asiatics is detrimental and hurtful to the best interests of the Dominion, from the standpoint of citizenship, public morals, and labor conditions:

"Be it therefore resolved that this meeting strongly urges upon the Dominion Government the necessity of supporting the efforts of the immigration authorities undertaken toward the rejection of the immigrants aboard the steamer *Komagata Maru* and their immediate deportation;

"And that stringent legislation be enacted whereby such immigration may, in the future, be entirely restricted from admission to the Dominion."

While the Canadian authorities have determined that the Hindu shall not land, the situation on board their ship is thus described in the *Vancouver Sun*:

"Yesterday the ship was a cave of despair. But later in the day the adventurers keyed themselves up to a high pitch of fanatic excitement. A meeting was held, in which Gurdit Singh took no part, at which resolutions were passed. The Hindus are very fond of passing resolutions. As far as could be learned, the resolutions were all warlike. The cloven foot is showing on board the *Komagata Maru*. The big Sikhs, who belong to a warrior race, are growling and blustering threats. The big black-browed fellows are bullying the Japanese officers of the steamer and calling down curses on the heads of the white race. They freely declare that if any attempt is made to move the vessel from her anchorage, they will immediately go to war."

A striking proposal is made by the British Columbia M. P., Mr. H. Stevens, in a speech at Vancouver. He believes that the Indian Government—i.e., the English administration in India—are not anxious that such members of the population as the Sikhs should sail away to Canada, and argues that British Columbia would find her justification in a decree of the India Council. He says:

"I am convinced that the placing of the control of immigration to this country in the hands of the Indian Government would offer the best solution of the difficulties which are now being experienced. The regulations would be made to apply to settlers only, of whom only a certain number would be allowed in each year."

Mr. Stevens charged that the attempt to carry the question from court to court until it reached the Privy Council was a party move, and he added: "We have men on the bench of British Columbia who are willing and ready to give a decision opposed to the will of the people."

Like so many public questions in Canada, Hindu immigration becomes at last the football of party politics, and we read in the *Liberal Sun* (Vancouver) that under a Laurier ministry the *Komagata Maru* would not have been permitted to enter a Canadian harbor. To quote this organ:

"The whole truth, in fact, in regard to the situation here at present is that it has been deliberately created by the Government, which does not wish to turn this ship-load of Hindus back and which hopes that the courts will open the doors to them on the ground that the order in council is *ultra vires*."

The situation derives a more ominous significance from a dispatch sent to the *Toronto Globe* from Vancouver, in which we read that news had come from "a semi-official source" declaring "a second steamer with 350 Hindus aboard" had left for Canada.

HOW TO REPRESS THE SUFFRAGETTES

PUBLIC OPINION in England is becoming so exasperated by the violence, outrages, and daring acts of the militant suffragettes that open conflict is looked for at almost any moment. For instance, we read in the London press that a woman, carrying a bundle of papers and a poster with the words, "A SUFFRAGIST DOPED IN PRISON," was greeted by the bystanders with the cry of "Liar! Liar!" The papers and placard were torn from her hand and scattered in the street. Another woman, when attacked, escaped on a passing bus after being

roughly handled in a crowded thoroughfare and deprived of a similar packet of papers. Several have been rescued from crowds by the police. Churchgoing women, we read, are preparing to deal with suffragist disturbers, and to do so with ungloved hands. A special branch of the Civil Volunteer Force has been formed to take suitable action for the protection of property. The press also report that the militant suffragists, as represented by such organizations as the "Arson Squad," are merely the paid agents of the Woman's Suffrage Association, who gave £50 (\$250) for the mutilation of the "Rokeby Venus."

The many suggestions as to

the right method of repressing the women rioters may be classed as follows:

1. Leaving "hunger-striking" prisoners to die.
2. Deportation.
3. Classifying them as lunatics, criminal or other.

Mr. McKenna, in his long-expected statement in Parliament, said that none of these expedients would be resorted to, but he intimated that the Crown will take civil proceedings against subscribers to the funds of the militant organizations to recover for the damage done by acts of outrage. To quote his words, in part:

"The Government is convinced that much more harm than good would result from leaving the 'hunger-strikers' to die. We shall continue for some time to rely mainly upon the effect of the 'Cat and Mouse' Act and the incessant police harrying to which criminal organizations have been rightly subjected. The 'Cat and Mouse' Act has been in operation just a year and it has been attended with remarkable success. Several women convicted of outrages have given undertakings, none of which has yet been broken, to forsake militant methods. Others have served their sentences in full. . . . The authorities are convinced that they have reduced the trouble to manageable proportions."

Letting them starve to death if they will, however, is advocated in some religious quarters. The Jesuit, Father Bernard Vaughan, approves of letting the suffragette die, if she refuses to take the food provided. He is reported in the London press as saying: "There is nothing ethically wrong in letting them die. Let them start at once and make up for lost time." The Rev. A. J. Waldron, vicar of St. Matthew's, Brixton, coincides, and the Rev. Richard Free, vicar of St. Clement's, Fulham, thinks the proposal a very good one. "I have advocated it for many months," he said. "Let them die." But a writer signing himself "A Spanish Theologian," and therefore evidently of the Roman faith, writes to the London *Evening Standard*, which had invited the discussion, as follows:

"I have read with great surprise Father Bernard Vaughan's

WILL THE DIKE HOLD?

Or will certain interests, under the guise of Imperial needs, flood our country with cheap and unskilled labor?—*Vancouver Sun*.

opinion on the suffragist-starvation problem, which I venture to say is ethically wrong.

"A suffragist, from a Roman Catholic point of view, who goes in for the hunger-strike, commits suicide—which is a mortal sin; and if you, Reverend Father, allow her to die, you are an accomplice of her crime, and therefore before God you are responsible for the loss of her soul.

"But . . . perhaps English theology is based on different principles from Spanish."

The gentle artist, Sir Philip Burne-Jones, also joined in the cry and expressed his opinion, in the same paper, that the women who hack pictures and burn churches should die if they refuse the food offered to them. Afterward he relented, and says that when he wrote his first letter he was incensed at the destruction of the "Rokeby Venus," a deed that was "not the work of a human being: it was literally that of a fiend." This great artist explains himself as follows:

"From that moment I hardened my heart against the poor demented creatures who are capable of such evil, and I felt that if, in their malignant obstinacy, they chose to starve themselves to death—well, that it wouldn't very much matter. The extremely dangerous precedent, also, of prisoners being able to dictate the term of their own punishment (which is what happens under the McKenna Act) was in my mind, so that when I was suddenly asked my opinion on this question, I said, in the bitterness of my heart, 'Let them die.'

"I still feel that if these afflicted beings elect to add suicide to their other crimes, those who are responsible for the administration of the law would have nothing to reproach themselves with should a wretched woman actually die by her own act while undergoing her just sentence.

"Yet the brief form in which I hastily tried to express all this looks so detestable in black and white that I should like to retract those sweeping words, remembering that while there is life there is hope—hope that even such diseased minds may one day be cured and made whole again.

"I would appeal to the Government to keep these miserable women under lock and key, where they will be powerless to inflict injury on others, until such time as the light of reason may return to them; and that they might receive expert medical attendance during this period, I would suggest that nothing seems so well adapted for the purpose as a criminal lunatic asylum."

The *London Standard*, following the example of *The Evening Standard* and *St. James's Gazette*, has obtained the opinion of several leading M. P.'s who seem to have disregarded party

shall support them in this. If the women starve themselves to death the Government should not be blamed."

SIR GILBERT PARKER (Unionist, Gravesend).—"The Government undoubtedly are in a difficulty. As the law stands they can not permit a prisoner who has committed one crime to commit another while in the custody of the State. Suicide under our

An unfortunate clergyman was taken for a suffragette sympathizer at Mr. Lloyd-George's meeting at Denmark Hill a few days ago, and was ducked and roughly handled. —*Graphic* (London).

law is a crime. To my mind Parliament should bring in a bill which would permit the State not to be responsible for the life of a person who deliberately chooses not to take nourishment in prison, at any rate, if that person is sane. If not sane, she should not be in prison. She should be permitted to die if she wishes—as people do every day out of prison. There is no man who can be punished for starving himself to death in his own home, tho he can be for starving others. In any case, the present situation can not continue."

A final touch to the controversy is given by George Bernard Shaw, who replied to the question, "Should the militant hunger-strikers be allowed to die?" by saying:

"As we have neither conviction enough to dare to starve the militants to death nor common sense enough to pledge ourselves to the inevitable reform, there is nothing to be done but to wait until the women provoke a mob to lynch them and the Government hangs a satisfactory number of the mob in expiation. Then the women will get the votes after the last inch of mischief and suffering has been squeezed out of a situation which several civilized, reasonable countries have already disposed of without the slightest trouble. That's England all over."

A suffragist, Mrs. Brackenbury, writes to the *London Times* this bit of sarcasm on the "let-them-die" plan:

"Mrs. Pankhurst's sister died the day after she was released from Holloway. It was in the good old days six years ago, when there was no air in the prison cells and the food did not agree with a delicate woman. Others died; no doubt they sought notoriety, but now their names are forgotten.

"Must our fine young men give up their shooting, fishing, golfing, cricket, racing, to say nothing of billiards, hunting, and other pleasures, and turn guardians of churches and property till women get the vote? Let the women die by all means, but to save our young men from such a terrible sacrifice let justice be done, and give the women the vote!"

THE PLAGUE OF MICE.

consideration in giving their views. Leading Opposition members are thus quoted:

THE MARQUIS OF TULLIHARDINE (Unionist, Perthshire, W.).—"The Government, who are responsible for the maintenance of the law, ought to take steps at once to see that it is obeyed. We

DEFECTS OF THE TWO IRISH ARMIES

THE MERITS and demerits of the two Irish armies encamped against each other, one in Dublin the other in Belfast, are fully considered by H. Hamilton Fyfe (Unionist) and Lindsay Crawford (Home Ruler). These two gentlemen profess complete impartiality in their estimate of

THE CONVERGING TRAINS.

—*Pell Mail Gazette* (London).

the Ulster and Dublin political-military brigades, and their essays are free from personal criticism of either Mr. John Redmond or Sir Edward Carson. They of course pay particular attention to the volunteer soldiers whose political battle-cry is opposed to their own, and generously point out their foes' weaknesses. To state both sides in one sentence, the Orangemen are accused of being too dour and the Nationalists of being too amiable. Again, the Belfast army is said to be under petticoat leadership, while the Dublin army has no leaders at all. Mr. Lindsay, who boasts of being "a Protestant and Home-Ruler," thus describes in *The Daily Chronicle* (London) the appearance of the army of Belfast:

"At Antrim, Clondeboy, Limavady, and Belfast I had an opportunity to see the 'army' on which Carson relies to wring concessions from the Government. Stern-faced, dour, and lacking a sense of humor, the Ulster Volunteers take themselves more seriously than their leaders. These men get their political education from Tory speeches, and what religious knowledge they possess from 'anniversary sermons.' Their political mentors belong to the age of William the Conqueror; their spiritual advisers revel in the fierce conflicts of the Old Testament period, of the days of Joshua, when Jewish war correspondents reported that the enemy had been 'smitten hip and thigh even unto the going down of the sun.'

"The dour Ulster Scot has no safety-valve except hard work. The only laugh I observed was that exchanged between Sir Edward Carson and General Sir George Richardson. It was the laugh of two men who knew they were fooling somebody. Put into words it meant, 'How long must we be forced to keep up this farce?'"

A more serious charge is brought against the Ulster army. It is altogether under petticoat government, he avers. Speaking of precedence given at a review to titled men and women of the "Ulster Bourbons," as he calls them, he writes:

"Critics have complained of petticoat influence at the War Office. The Ulster Volunteers are run by duchesses and countesses. No parade was possible during Easter week until Tory dames of high degree had arranged the program. The poor dupes were standing on the parade-ground for hours at Antrim, Clondeboy, and Belfast Castle, while feudal lords and high-born dames were lunching at the castle. At Belfast Castle, the Bishop and Presbyterian chaplains waited in their ecclesiastical and academic robes for thirty minutes for the ceremony of the consecration of colors, while Tory leaders lingered over wine and nuts.

"The same faces appeared at every parade—the feudal lords, the duchesses and countesses, the Londonderrys and Beresfords—the traveling delegates of Tory die-hardism posing as the champions and leaders of Ulster Protestantism. On every parade-ground a platform was erected, reserved for the Family Compact. The common people were herded behind a barricade and Volunteer police patrolled in front to see that 'the squire and his relations' were secure against intrusion."

The final conclusion he arrives at with regard to "Carsonism" and its rival movement is thus stated:

"Carson has let loose forces which he can no longer control. The south is awake and arming. Six weeks have witnessed a fatal drift in Irish affairs. The venue has been changed from Belfast to Dublin."

Hamilton Fyfe, writing in *The Daily Mail* (London), gives the *tu quoque* to these remarks, altho he does not refer to the article in *The Chronicle*. When he first met the Irish Nationalist Volunteers "they had neither squad- nor section-leaders." They were commanded by "a little man." "I could see that the men were laughing at him among themselves." This gives him an occasion to compare the countenances of the armies of the North and South Volunteers in the following vivid terms. The Nationalist Volunteers—

"were a decent lot of men, not very young. Of course they had no soldierly bearing, for they had been drilled only a few times. But they stepped out briskly along the road and did their best not to get tangled up at the words of command. What struck me most was their amiable air of being out for the evening. If I had to draw a picture of a typical Ulster Volunteer (after seeing a good many thousand of them), I should give him a hard, gravity look, the steely eye of a fanatic, and expression of self-confident self-control. Since that April evening I have seen some thousands of Nationalist Volunteers also. A composite portrait in this case would show a good-humored face, the face of

NUMBERS AND LOCATION OF THE RIVAL IRISH ARMIES.

—*Daily Mail* (London).

a man who might be talked into doing things, and who, if he were well directed, might do them well. But not the face of one who would start a movement or die for a cause.

He adds that the most unfortunate, even fatal, defect in the Nationalist military organization is that they have no military leader such as the Ulster Volunteers have found.

SCIENCE AND INVENTION

REMAKING A CITY

TO ADAPT its streets to ordinary business needs, Jersey City, industrially a part of New York, is being practically remade, so far as its facilities for traffic are concerned, under the auspices of a local organization of business men. Arno Dosch, who tells the story in *System* (Chicago,

convenience, and the wagons no longer need to encroach on the car-tracks, leaving free a passage for more rapid transit. The traffic began to flow freely, and now a blockade on that street is uncommon.

"The paving on the street was also bad, and, while that would appear to be the concern of the city engineer, the traffic engineer was able to show the wastefulness of bad paving. He proved in a few general figures that an uneven street where the traffic is heavy is one of the most expensive things a city can have. It limits the size of loads and increases the power necessary to move the loads.

"Here, again, was a question where all the business men were interested. They had not considered the possible savings to each that would come through cooperation in improving traffic conditions. But now they perceived that this was a matter affecting the profits of their individual concerns, and forthwith made a test of how much bad paving added to the cost of handling goods. They selected a half-mile of street, which was at that time badly paved with granite blocks. A wagon with a five-ton load, under test, covered the distance, with a great deal of wear and tear, in something

over fifteen minutes. A few blocks away, where the street had been repaved with new granite blocks on a concrete foundation, a similar wagon with six-ton load covered the same distance in eleven minutes.

"Making no account of the extra wear and tear on the horses in the first instance, the four minutes' saving in time was calcu-

A SMOKELESS SWITCH-ENGINE

It is a powerful motor-truck with rubber tires and can travel anywhere

June), believes that the experience of this one city is typical of the needs of many others, and of what might be done to relieve them. After inducing the ferry companies to improve their slips and the trolley companies to reroute their cars to keep pace with conditions that had altered the currents of traffic, they finally concluded that the city itself was not constructed in such a way as to facilitate modern business, and they proceeded to make it over. Says Mr. Dosch:

"The first step consisted in widening one street by four feet. This seems like a small task, but traffic takes account of small matters, as well as large. The street in question, Montgomery Street, leads directly down through the business section. As in most cities, it was laid out without reference to the street-car tracks which came later or the extra room demanded by the wide motor-trucks of today. For the traffic which now uses it, there was not quite enough room on either side of the car-track for two rows of vehicles. A wagon standing at the curb diverted all traffic over upon the car-track. The cars had to wait for the trucks, and the trucks had to wait for the cars. During business hours there was a constant state of blockade.

"By widening the street four feet, however, each sidewalk was only narrowed two feet, which has not proved to be an in-

lated to be worth five cents, and the difference in load one cent, a total of six cents for the four minutes, not counting the wear and tear. On that basis the twenty-three hundred wagons which use that street daily are now saving \$138 a day. For a year of

A VERY EXPENSIVE THOROUGHFARE.

Jersey City found that bad pavements cost more in the end than good ones.

working days that means a saving of \$41,400, due to a single half-mile stretch of good street.

"Among the traffic incongruities the business men of Jersey City had been putting up with for years, there were many blocks of asphalt pavement where only heavy teaming was done. Slipping and falling horses were common occurrences, but the individual inconvenience was put up with because there was no central body through which all the business men could act. In one place there was a small incline leading to a spur-track for milk-trains which had caused trouble for years, tho the inconvenience could have been removed at any time for a sum less than the cost of the delays and the injuries to horses and wagons for any one week."

The next thing that the business men of Jersey City found was that it was taking practically no advantage of its many railroads. They cut the city into strips, and were not used to tie these strips together. The business men are now surveying a connecting railroad, which will have spurs in all the lower streets, placing every plant practically on every railroad that makes Jersey City its terminus. We read further:

"One of the dangers these business men and manufacturers have feared has been opposition to the proposed spur-tracks, but one railroad which has spur-tracks now in the center of the city has avoided all difficulty by an unusual type of switch-engine. It is a powerful motor-truck with rubber tires and can travel anywhere. It is not dependent on switches and picks up and drops freight-cars with rapidity and ease. The objections which are ordinarily raised against having switch-engines in the streets have never been raised against this gasoline-engine. It is no more offensive than an automobile, and the cars it moves about are not much bigger than some modern motor-trucks. The fact that they are on tracks has not militated against them.

"There is a traffic lesson here which also might have wise application. In almost every city the full possibilities of spur-tracks are not taken advantage of. This is usually because many concerns find it worth while being close to the center of the city, and there grows up a wholesale and manufacturing district that is too far into the center of the city for the use of switch-engines. Hence the hauling has to be done entirely by truck at heavy expense. This could be eliminated in most cases by the duplication of motor-locomotives such as the one in use in Jersey City. It has proved so satisfactory that it will probably be the type adopted for use on the connecting railroad.

"The result of the investigation into traffic conditions by the business men of Jersey City will have the effect finally of changing a half-resident, half-manufacturing community into one entirely devoted to manufacturing, with transportation costs reduced to the lowest possible figure."

THE PRICE OF RADIUM—Just now, says a writer in *The British Medical Journal* (London, June 13), there is a great demand for radium, and the price for immediate delivery ranges from \$80 per milligram upward:

"Contracts for delivery in the early months of 1915 have been entered into at a price as low as \$67.50 per milligram, and there is a widely prevalent belief that there may be a great fall in the price during the next two years. It is interesting to note that for some time after its discovery radium could be procured at less than one-tenth of its present price. The demand for radium to be used for medical purposes has hitherto absorbed the output, and has led to rates being quoted which are excessive and altogether artificial. The large profits obtained have, however, stimulated search for uranium ores in various countries, notably in America, and as there are unlimited quantities of low-grade uranium rocks available, it would appear to be merely a question of time before radium will be placed on the market at a price bearing a reasonable ratio to the cost of its production."

ANESTHESIA BY PRESSURE

ANY ONE whose foot or arm has "gone to sleep" knows that pressure may produce numbness. That it may be used to produce surgical anesthesia is asserted by Dr. William H. FitzGerald, head of the nose and throat department of the St. Francis Hospital, of Hartford, Connecticut. We quote from an article contributed to *The Journal of the American Osteopathic Association* by Dr. R. Kendrick Smith, of

Boston. Dr. FitzGerald is not an osteopath, but it is charged by Dr. Smith that regular medical publications have refused to notice his discoveries. Dentists, however, Dr. Smith says, have recognized and welcomed these methods. At a recent convention of the Connecticut Dental Association, Dr. FitzGerald demonstrated his treatment with great success, showing that it was possible to extract teeth painlessly without using any other method of anesthesia than pressure upon a nerve with a blunt piece of metal. To quote Dr. Smith's article:

"Dr. FitzGerald . . . has been working for five years on the clinical demonstration of his theory of reflex-pressure anesthesia and is able to show results, but frankly admits that he can not explain how it is accomplished. There is no possible explanation for it in our present knowledge of anatomy and physiology, but Dr. Bowers, who has watched Dr. FitzGerald's work for some time, suggested to me that just as there are ultramicroscopic bacteria, there may be ultramicroscopic connections in the body analogous to those which we call nerves.

"Dr. FitzGerald administers his reflex-pressure anesthesia by grasping the second phalanx of a finger or toe between his thumb and finger, and holding it firmly close to the distal end for about one minute. During this time his grasp is on the lateral aspects. Then for another minute he presses similarly

upon the dorsal and plantar aspects. The degree of pressure is just short of pain. The patient promptly says that the finger feels numb, and he traces the progress of a wave of numbness extending gradually upward the entire height of the body. When the numbness passes the location of the pain for which the anesthesia is being administered, the suffering ceases, and when the area to be operated upon by dentistry or minor surgery is reached by the numb wave, surgery may be instituted without pain. He uses the right hand or foot for the right lateral half of the body above, and the left for the other side. The dividing line between the two areas is sharply defined. The thumb will anesthetize the two incisors on its own side, the forefinger the first bicuspid, the second finger the next two, the third finger the next, and the little finger the last ones. These anesthetics always proceed upward. He uses the thumb and fingers for dental work, but for minor surgery or for a larger area he advises bimanual pressure on the radius and ulna at the wrist.

"One very significant feature of his work is that, as he admitted to me personally, it really doesn't make any difference whether the pressure is applied to fingers or other parts of the body, provided it is made upon bony prominences. He says it must never be done upon any other structures. He says there is no conspicuous bony prominence which will not give reflex-pressure anesthesia upon pressure.

"The duration of the pressure is from one to three minutes. Then it is removed, and the anesthesia lasts for about half an hour, altho the pressure can be repeated at any time, if necessary. He says that operators unfamiliar with the technique may not get the result at once, and should persevere until they do, as he insists that it can never fail if it is correctly administered. . . .

"The most startling part of the FitzGerald discoveries we have held back to mention last. He claims to have located about 300 different spots in the mouth, nose, throat, and upon the tongue where pressure applied for a moment or two with the

DR. FITZGERALD.

Who uses simple pressure, "just short of pain," on the finger or toe to produce anesthesia for dentistry.

finger or with a blunt probe wound with cotton will produce anesthesia in some definite but remote portion of the body. He has mapped out his areas so far that he now includes the entire body."

It is not only for anesthesia alone, however, that these pressures are made. Dr. FitzGerald claims that there is a curative influence as well. Dr. Edwin F. Bowers, in an article contributed recently to *The Associated Sunday Magazines*, a syndicated supplement, describes various cases of sore throat, bronchitis, and even of tuberculosis and abnormal growth, which he says have been benefited by this method of pressure.

LIVE INDIA-RUBBER MEN

THE MODERN MAN may have part of his tissues replaced with india-rubber and still perform all of his organic functions. Obviously there must be a limit to this replacement, but just how far it may be carried we do not know. Probably it would be too much to expect a man to live with a rubber heart or rubber lungs, but rubber blood-vessels and rubber intestines have been shown to be practicable to a certain extent. A writer who communicates to *Cosmos* (Paris, May 14) the results of some recent work on the subject calls attention to the fact that rubber is specially adapted to this purpose, since it is a colloid, like the substance of the human tissues whose place it may be called upon to take. Says this writer:

"To repair losses of tissues or organs, there are two surgical methods, the grafting of a living tissue—cartilage, bone, or fat—and the introduction of an inert piece of metal or some other substance.

"In this latter method, when the replacement is internal, that is to say, when the inert piece is introduced into the midst of the tissues, it is necessary that it should be aseptic; if there are microbial infection and suppuration, the foreign body is infallibly eliminated little by little. It is also useful that the foreign body should be endowed with certain qualities—physical, mechanical, and chemical. Among utilizable metals silver, platinum, gold, aluminum and copper give good results, but silver is tolerated best, and it has even been observed that conjunctive tissue adheres well to its surface. Other inert substances that are well received by the living tissues are paraffin and india-rubber.

"The blood is one of the most alterable substances of the organism and will hardly bear contact of any kind, except that of the interior surface of veins and arteries, without coagulating; yet there are two substances in contact with which coagulation takes place only with extreme slowness—paraffin and caoutchouc. In the case of paraffin its harmlessness depends on the chemical inertness indicated by its name, *parum affinis* [having slight affinity]; as for caoutchouc it owes the quality doubtless to its colloidal nature, which assimilates it chemically to the colloids of which the living organism is composed.

"At any rate, in 1909, Dr. Sullivan, an American physician, performed the experiment of replacing with a rubber tube the biliary ducts of a dog between the hepatic canal and the duodenum. Since this time, Wilms and Brewer have used this process in man, in a case of destruction of the bile-duct, and with apparent success; but others have not succeeded, which is easily understood, since the foreign body, not being protected from microbial infection, must have been eliminated with fatal results.

"In 1910, Tuffier and Carrel, having removed in a dog a piece

of the wall of the abdominal aorta measuring about $1 \times \frac{1}{2}$ inch, replaced it by a thin sheet of rubber carefully sutured; and fifteen months later it was proved that this had held perfectly and that living tissue had covered both faces of the rubber sheet.

"Dr. Delbet reported to the Academy of Medicine, at its session on March 10, two rubber grafts made by him. In the first, an extensor tendon had adhered to a phalange; Dr. Delbet placed a thin sheet of rubber between the bone and the tendon, which thus recovered its functions and retained them for eight months. Another time a thick sheet of rubber served to repair the torn abdominal wall of a patient afflicted with hernia.

"The *Gazette des Hôpitaux* (April 28) notes the use of rubber in another form—that of *nova carne*, or 'new flesh,' so called by the Italian surgeon Fieschi. Incorporating with the tissues that porous rubber called 'rubber sponge,' Fieschi depended on the 'sympathy' between the two elements to effect their fusion by penetration of the living element into the cavities of the inert substance, thus building new tissue. Experiment, and afterward clinical results, proved the exactitude of this conception. Sterilized bits of rubber sponge, introduced into the peritoneal cavity, or placed between the muscles of dogs or rabbits, were enveloped and penetrated by 'granulated tissue,' without any injurious reaction. In two operations for hernia of the thigh, the closing of the aperture was brought about, simply and very effectively, by a tampon of this same kind of rubber. After a year's time the patients were still in good condition, and the tampons had not changed place, as was shown by x-ray photographs."—Translation made for THE LITERARY DIGEST.

A GYROSCOPIC AUTO

AN AUTOMOBILE of standard size, running on two tandem wheels like a bicycle, and kept in balance by a gyroscope, has been invented by a Russian named Schilowsky and is described by V. Forbin in *La Nature* (Paris, June 13). Mr. Forbin notes that neither the much-heralded gyroscopic railway of Louis Brennan nor the improvements

made on it by Scherl, the Berlin editor, have ever been put into use as commercially practicable. He has hopes for this new modification, and gives in detail his reasons for them. Schilowsky's monorail differs little in appearance from its predecessors, his changes in the mechanism not being ordinarily visible. In addition, however, he has built, on the same principle, the motor-car

THE GYROSCOPIC AUTO. BALANCING ITSELF ON TWO WHEELS.

noted above, which would appear to be a new departure. Says Mr. Forbin:

"The characteristic principles of this vehicle are as follows:

"1. The gasoline motor of the car also operates the gyroscope, whose weight is only one-tenth of that of the vehicle.

"2. The energy consumed by the gyroscope is $1\frac{1}{4}$ horsepower.

"3. The disk turns at the rate of 1,200 revolutions a minute.

"4. The gyroscope takes up little room and requires no manual control.

"5. By using flanged wheels instead of pneumatic tires, the vehicle can be used on one of the rails of a railroad track.

"Such a vehicle presents great advantages:

"1. Absolute suppression of lateral shocks on the worst roads, accompanied by a notable diminution of fatigue for the passengers and of wear for the car and its parts. The durability of the motor is increased, and lighter materials may be used in the construction of the car.

"2. The tractive effort is diminished, consequently there is an

economy of energy and of fuel. With capacity for an equal load, a less powerful motor may be used.

"3. The bicycle automobile runs easily over the narrowest roads.

"4. The gyroscopic stabilization allows the vehicle to take horizontal curves at high speed.

"We have seen the bicycle automobile run in the environs of London over good and bad roads alike, carrying six passengers, including the inventor and his chauffeur; and we admired the ease—the animal intelligence—with which the heavy machine regained its balance, without the intervention of its driver, whenever a curve or an inequality of the road disturbed its equilibrium."—*Translation made for THE LITERARY DIGEST.*

OLD AGE AS A DRYING PROCESS

THE POETICAL COMPARISON of youth to a juicy bough and old age to a withered branch would appear to have in it quite as much truth as poetry, if we are to believe Prof. G. Marinesco, of the University of Bucharest, who writes in the *Revue Scientifique* (Paris, May 30) on "The Chemico-Colloidal Mechanism of Senility." Growing old, Professor Marinesco thinks, is in large part a chemical process and consists chiefly in the dehydration of the tissues—their deprivation of water, or, as we should say, their "drying up." Our flesh is made up mostly of chemical compounds of the colloid type, consisting of jellylike or glue-like substances that do not crystallize; and this type of substances, Professor Marinesco says, grow "old" chemically, whether they form part of a living body or not. Aging, then, is a process that we can not get away from, because it is inherent in the chemical constitution of the substances of which our bodies are composed. Says this writer:

"Altho most authors have made more or less study of the histological problems of old age, they have neglected its chemical side almost completely, and they have totally ignored the changes in the colloidal state of the cells. Nevertheless, physical chemistry has made progress enough for us to attack the problem of old age in its light. We know to-day that all colloids, organic or inorganic, have a vital curve, and consequently follow in their evolution a fixed trajectory more or less similar to that of the living elements. . . .

"The growing old of the colloids is a general phenomenon which is observed equally well in globulins, in albumin serum, in carbohydrates, and in lipoids. The recent investigations of Samec have shown that in the aging of the colloids we have to do with a process of dehydration of the colloidal granules, resulting in a reduction of their volume and in their agglomeration, followed by precipitation and even by the beginning of agglutination; also the degree of dispersion of the granulations diminishes."

Other experiments show that these jellylike compounds may grow fibrous or stringy as they age, that diffusion through them becomes more difficult, and that their chemical properties undergo changes. These changes, the writer would have us note, are precisely those that take place in living organisms when they grow old. He continues:

"Different observers have shown that there is a dehydration of animal tissues, beginning as early as the embryonic life. . . . Donaldson has proved a progressive diminution of water in the rat's brain. . . . Kutanin has demonstrated that not only is there more water in young animals than in adults, but also that the quantity of nitrogen and phosphorus diminishes with age. This is true . . . equally from the standpoint of phylogeny. In batrachians and fishes, whose brain contains much water, there is also more phosphorus than in mammals."

Since as the colloid grows older it becomes less fluid and more viscous, it offers more resistance to diffusion; the chemical processes of life take place in it with more difficulty; nutrition is blocked and growth is stopt—a stage that is reached rather early in the human body. But when a man has stopt growing he has already begun to age, chemically at least. Again, the activity of the component granules of a cell depends largely on

the relative extent of their surfaces, where such activity is localized. But as the granules age, they agglomerate, forming larger units, with relatively smaller surfaces—another circumstance that accounts for the lowered activity of the older organisms. To quote further:

"These facts and considerations show with the last degree of evidence that old age, like death, is fatally written in the vital curve of the colloids and implicitly in the evolution of the cells. Old age, like death, is a natural and necessary phenomenon, and the hypotheses of authors who see in the phenomena of old age a remediable accident are in discord with the universal law governing the life of the colloids.

"Of course, exterior causes play a great part in the processes of age and death, but setting aside the fact of common observation that we can not completely avoid the harmful action of these external agents, and supposing that this were possible in the continual progress of science, we can not admit that the animal or vegetable organism would then become immortal; for birth, growth, age, and death represent normal and necessary phases of the cycle of life. . . .

"To our way of looking at things, there may be opposed the experiments of Carrel on the permanent life of the tissues. . . . [But] we can draw no conclusion, from experiments made by Carrel in glass vessels, regarding what goes on in the organism. In fact, this latter is connected with a definite volume, with a nearly constant form, that reaches its maximum at a certain age beyond which growth is no longer possible. . . . The attempts at rejuvenation that have been made on spinal ganglions cultivated in glass have prevented the disappearance of the nerve-cells at the end of a certain time; and evidently these, because of their high functional differentiation, are incapable of proliferation."—*Translation made for THE LITERARY DIGEST.*

THE MALIGNED OYSTER

THERE has been an increasing disposition of late to attribute the origin of much of the winter typhoid fever in certain districts to the pollution of oysters and clams by sewage. In the minds of some, the oyster runs a close second to the house-fly as a carrier of disease. The bivalve can not be "swatted" like the fly, but it can be more successfully avoided, and there is no doubt that many lovers of this article of food have banished it from their tables through fear of typhoid. According to *The Journal of the American Medical Association* (Chicago), this fear is not very well founded. It says:

"It is time to ascertain whether this attitude toward the oyster is justified by the facts. Oysters are a highly prized article of diet wherever they are obtainable. Despite the increasing enforcement of rigid regulations concerning the vending of oysters that are free from pollution according to the standards of such representative bodies as the Bureau of Chemistry of the United States Department of Agriculture and the Rhode Island Shell-Fish Commission, the prejudice against this food-product has, justly or unjustly, increased in many quarters. To consider only the alleged responsibility of the oyster in the causation of winter typhoid, we may ask what its biological habits are at this season. Gorham has shown that during cold weather oysters rest or hibernate; the ciliary movement ceases and feeding does not occur, and the oysters become practically free from sewage organisms, even when lying on sewage-polluted beds.

"As such facts seem to throw some doubt on the wisdom of attributing winter typhoid to the oyster, Joseph has made a bacteriological study of the oysters sold in Baltimore. The aim of this investigation, conducted in the Laboratory of Hygiene and Bacteriology at the Johns Hopkins University, was to ascertain whether the oysters sold in one of the most prominent markets for these products in the United States contain organisms derived from the intestinal tract, and whether their content in bacteria varies with the seasons of the year.

"Obviously, the presence of microorganisms characteristic of water was to be expected; and these have no significance in this connection. The bacterial findings indicated that the oysters sold in Baltimore are in general free from sewage contamination. Those few lots which would be condemned by the most rigid standards were obtained at times of the year when the weather was quite warm—a fact of no little significance in view of the tendency to prolong the oyster-eating season beyond the limits of the colder months."

SCOURGES THAT ARE ALWAYS WITH US

THAT GREAT EPIDEMICS—influenza, Asiatic cholera, plague—are rarely propagated from without, but rather develop within the countries that they devastate, is the opinion of Dr. J. Héricourt, who writes on the subject in *La Science et la Vie* (Paris). When an epidemic has burned itself out, which it does usually by attacking the whole population, so that no more substance is left for it to feed upon, it leaves behind it many obscure or weakened cases, and these in turn, when the proper time has come, develop into another epidemic, whose real source is rarely recognized. We frantically quarantine incoming vessels in an attempt to escape some scourge that is growing up among and from our own neighbors and friends. This, at any rate, is the belief of Dr. Héricourt. He does not deny that an infectious disease may be carried from one land to another, but he says that when a great epidemic springs up all at once we must look to some less obvious cause. He writes:

"No one can seriously maintain that the extinction of the great epidemics, like those of cholera and grip, have ever been the result of the measures of public hygiene that have been opposed to them.

"Doubtless modern sanitary authorities, armed with perfected methods, . . . have been able to check certain local epidemics at their outset, and even to put an end to epidemics raging in more or less extended communities.

"Thus some typhoid-fever outbreaks in camps or barracks, or even in cities, have been quickly suppressed by discontinuing the use of contaminated water. . . . Thus, also, vaccination, practised as widely as possible in a population threatened with smallpox, has put a stop to its progress. . . . But if the disease has been allowed to go beyond its early stages, . . . then it is but an illusion to believe in the effectiveness of the means at the disposal of our sanitarians.

"And nevertheless great epidemics . . . end by stopping of themselves, as the great epidemics of plague did in past centuries, and the great epidemics of cholera in more recent years, when protective measures were absolutely valueless. . . .

"Now all these epidemics were stopt, and rapidly stopt; and it is interesting to seek the cause of this phenomenon, which does not seem to have struck observers, and which is nevertheless astonishing; for we can not explain it by pointing to the removal of individuals from the causes of infection or the chances of contagion. . . .

"Surrounded by enemies more or less invisible and impalpable; breathing in contaminated dust with the air; drinking polluted water, or at least using it in the toilet and in the preparation of food; exposed to the stings and bites of microbe-carrying insects—the inhabitants of a city where an epidemic disease has gained a foothold, after passing through its first stages, can not hope to escape.

"Hardly less than contagion, direct or indirect, secondary foci multiply because attenuated cases, escaping observation and the consequent defensive measures, also multiply in geometrical ratio, the epidemic spreading rapidly like a grease-spot.

"Now, it is precisely because of the production and multiplication of these attenuated cases that epidemics come to an end. . . . These weakened cases are infinitely more numerous than the serious attacks that are observed by physicians and recorded in statistics. Probably no one escapes them, and when all the inhabitants of a city, all the members of any kind of a group, have undergone one of these weakened attacks of the epidemic disease, . . . the epidemic seems to end spontaneously. It really stops because the fire has consumed all the combustible material—because all the infectible substance has been infected.

'Not all died, but all were stricken,'

says the fabulist very truly in regard to the plague. Now this is the history of all great epidemics, where those fatally attacked are always relatively few, compared with those who are ill, and still more with those who are apparently untouched."

It is a general law, the writer goes on to say, that a first attack of a germ disease produces, in the organism that undergoes it, defenses that cause a state of immunity against a new attack. This state of immunity may be more or less durable, more or

less accentuated; but it exists with all diseases—even with those in which it is generally not acknowledged. To quote again:

"It is certain that plague, cholera, and diphtheria do not confer, by one attack, immunity to another. But the reason of this lies in the short duration of the immunity. It really exists, and is such that in the course of an epidemic second attacks are extremely rare and altogether exceptional.

"On the other hand, as attenuated cases, from the point of view of immunity, are quite as valuable as serious ones, it happens that at the end of some time all the population is vaccinated."

This is how epidemics are stayed. How does it happen, then, that they are revived? The one phenomenon is a direct cause of the other, Dr. Héricourt tells us. The weak or "benign" cases are responsible for both. They survive the epidemic and persist for years unrecognized, until a fresh population is ready for the propagation of the disease. They are like the "pilot-light" of a gas-jet, which awaits only the turning on of the gas to produce an explosion. Thus, ordinary grippe is the "leavings" of the terrible epidemic influenza, which it is bound to bring about again, in its turn, when the germs assume a virulent form and find their fertile soil again awaiting them. The same is true, the writer tells us, of such diseases as cholera, typhus, and yellow fever. Mild cases of both, he asserts, are ever with us, and these will set off the next explosive outbreak when the time is ripe for it. He goes on:

"It would seem, then, that we should have done with the classic and subtle distinctions between grippe and influenza, ordinary and Asiatic cholera, leprosy and leproid affections, just as we have already given up making a distinction between typhoid and mucous fever, between tuberculosis and scrofula. . . .

"The spreading among civilized people of the news of a single case of an epidemic disease, considered as a scourge coming from without, will become a thing of another age; the doctrine of attenuated diseases, which has made great progress in the past ten years, . . . will become a matter of the most common information."—*Translation made for THE LITERARY DIGEST.*

A LETTER FROM DR. KRÖNIG

THE LATEST CONTRIBUTION to the "twilight sleep" discussion is a letter from Dr. Krönig, of Freiburg, one of the doctors so warmly praised in the article in the June *McClure's*, summarized in our issue of June 6. The comment of the medical press on it was given last week, and some of them, it will be remembered, scored the Freiburg doctors pretty severely on the supposition that they had fathered this "boom" for their clinic. But one Cincinnati physician, Dr. William Gillespie, in writing a severe arraignment of the article to *The Lancet-Clinic*, of that city, suggested that a marked copy be sent to the Freiburg doctors. This was done, and Dr. Strohhach, of *The Lancet-Clinic*, sends us Dr. Krönig's reply. Here it is:

"TO THE EDITOR:

"With regard to the published correspondence in No. 22 of *The Lancet-Clinic*, permit me to make the following remarks:

"To the authoress of the article in question, which appeared in *McClure's Magazine*, the desired material was refused by the clinic. Thereupon she purchased the same on her own account. The photographs, too, were used without the knowledge and without the permission of the clinic.

"Our energetic protest against the article, which was laid before us in manuscript form, was in vain, because the matter was already in the press.

"Whoever knows my clinic will grant that it is not the custom there to approve popular publications of such a sort.

"With respect to the many errors in facts, I can only call attention to the many scientific publications which have, in the past, come from my clinic about the same question.

"DR. KRÖNIG.

"FREIBURG, GERMANY, June 16, 1914."

LETTERS AND ART

THE ART OF TWO MUTES

WHAT SHOULD IT MEAN to a painter to hear nothing of the babble of studios, and waste no time in futile chatter himself? There are two brothers of northern Spain who face the world with the limitations of the deaf and dumb, and who seem to use their remaining sense of sight to all the more intense purpose. Their name is Zubiaurre,

much are those wide-spreading yellow skirts a matter of preference that even the rich village girls who have been sent off to Madrid or Paris to school resume the traditional dress on their return to the province. The *charro* would despise one of his race who urbanized himself. And similarly, when they gather in the public plaza to sing the wild, inspiring ballads of their ancestors to the ancient weird music of *dulzaina* or *tamboril*, they would look coldly upon one who allowed rain or wind or biting cold to drive him from the performance until it had endured at least six hours. That is what the traditions of his country mean to a *charro*.

"The mosaic floor of river pebbles in a Zubiaurre picture you may see in the humblest northern dwelling. Every cottage, too, has that shelf of wonderfully glazed, gorgeous peasant pottery—something peculiarly local and distinctive, and which you would search for in vain in the shops of the large cities. No mere ostentation of still-life virtuosity, this introduction of small objects; they are ubiquitous in the humble life of northern Spain. The painter has merely taken the material at hand and brought it under the domination of a composition sense as unaffectedly primitive as the elements it composes. That is why flowers and fruit and faience are as much in place in a Zubiaurre canvas as stiff little wild flowers in the foreground of a Gothic tapestry."

The father of these painters is a distinguished musician, head of the Madrid Conservatory and director of the Royal Chapel. He is also a savant. Valentin was born in 1879; his brother is three years younger. Both naturally turned to painting, and "because they were always together, and because what they have put into and taken out of life is almost identical, it seems natural that their work should be spoken of collectively." Then they are both limited to the eye for their knowledge of the world about them:

Valentin and Ramón, and they hail from the Basque country. "No one would pretend to say that deafness is a blessing," says Mildred Stapley in the *July Craftsman*, but "one is still free to question whether without it the Zubiaurres would be so Spanish in their art." Like their fellow countryman, Zuloaga, they might, so speculates this writer, feel the lure of the artistic fraternities of Paris but for the hampering visitation of nature. Would they indeed have been able to devote themselves so whole-heartedly to Spain? "With closer contact with cosmopolitan art life, might they not, in this day of deviations from long-accepted standards, have attempted to translate the mystic beauty of their own medieval towns and types by some method so assertive as to outweigh, in itself, the quiet, quaint claims of the subject-matter?" We read on:

"They give us the very essence of Spanish tradition. Their figures, in quaint setting of undulating valley and hill, of rude stone bridges and firmly planted little stucco dwellings, carry conviction that they are the true sons of the soil, interpreted for us by one of their own brethren. They are seen with unswerving realism, yet with the realism made tender by artistic originality. To one familiar with Spain nothing seems posed for the occasion or influenced by the memory of things seen elsewhere.

"Those *charros* whom they paint, for instance; you may see them in any village of old Leon toward the Portuguese border—tall, straight men and women of the plain who continue to wear the barbarically brilliant costumes of their ancestors. So

"And the Zubiaurre eye, if it were not their chief point of contact with life, would it see so powerfully? Would it seize so unerringly the subtlest gradations of light and fathom the mystery of shadow? Would it run riot in a mass of warm, rich color, and suddenly offset this by a daring, large blank area of cool greenish-white? Would it master so successfully the trick of textures, lingering as lovingly on the leathery face of a Basque fisherman or a Castilian peasant as on the velvety surface of a peach? Idle questions, one may say; and the brothers themselves might be readiest to disavow any indebtedness to their supposed deprivation; but I can not help suspecting that it has been a factor in keeping them with their own people, and for this reason it may well be pronounced a blessing in disguise.

"The Zubiaurres are doing for Spain what was done for Holland in that wonderful century when innumerable artists set themselves the task of immortalizing her landscape, her domestic life, her kermess frolics. No painter was similarly occupied in Spain in that day. Spain was then shaping her Sevillian group of religious painters and one—albeit the greatest—portraitist. But of *genre* painters, strictly speaking, she had none. No one depicted all those details of the daily life of simple people that lent color and human interest to the life of bygone days in Spain; but precisely because it is the one country of Europe where provincial customs and costumes and *ferias* and processions have hardly changed since then, it is still possible for native artists of clear vision and untouched by fashionable creeds and sects to make up these arrears to the Spanish school. That is what the Zubiaurres seem to be doing.

"Their painting is nothing more than the virile technique that was good enough for the old masters applied to the purpose of recording that daily life with which the painter has been familiar

A YOUNG ASTURIAN.

From a painting by Ramón de Zubiaurre.

The two Zubiaurres are deaf and dumb and give their art whole-heartedly to Spain.

from his earliest moments. It is Spanish phenomena scrupulously observed by men highly gifted with the dramatic sense. And the dramatic sense, Romanticists to the contrary, can submit to fact, and by doing so it may arrive at rare pictorial expression. It gets poetic charm, for instance, without the usual nebulous blur over nature, but through the almost uncanny clearness of the keen Castilian air; and it achieves archaic charm without copying the primitives, but by merely accentuating those elements in rural life which, among these conservative folk of northern Spain, are the same as when the old masters of *genre* wrought in Holland."

Spain to the outsider chiefly means "sunny, orange-scented Andalusia," the land pictured by Sorolla, the Spanish painter best known in America. But to the Spaniard, asserts this writer, "Spain means rather the grim northern provinces of Castile and Leon"; and the work of these brothers—

"is the Spain of the Spaniard unaffected by the much over-worked golden glamour of the south. For artists in Spain or out, it is a rich esthetic feast. For the layman who knows the country only through fiction it must be a revelation. It carries proof that Spain grows the apple as well as the orange. The apple, indeed, is the seal to a Zubiaurre painting almost as inevitably as the cherry-blossom is to a Japanese print.

"As a distinguished Spanish critic recently expressed it in a protest against certain artists who seek inspiration in the south: 'If the impetuous Valencian recalls by his sunny canvas the golden orange and purple grape of Mediterranean regions, the meditative Castilian recalls by the cooler but more richly graduated tones of his the apple of the north; the apple is bitter to southern palates, but we of the north know that it is an excellent fruit, carrying in its bosom a nepenthe for those who dwell in wineless lands.'"

STEVENSON'S BORROWED PLOT

THE RIGHT AND WRONG of appropriating literary goods have never been worked out with the exactitude that marks the appropriation of cash or chickens, so that when individual cases come up each seems to be judged on its own merits. The latest one involves none other than R. L. S. himself, and the charge whittles down to the accusation that while he really did credit the source of one of his best plots, he did it tardily, unwillingly, and vaguely. The story in question is his "Bottle Imp," chosen as "the best short story" by one voting on that question in the *New York Sun*. A *Sun* editorial writer remarks that this brings up the subject of "the canons of artistic conscience, the ethics of appropriation and adaptation, and the equities of ownership." This refers to the previous authorship, acknowledged in some of Stevenson's editions of the "Bottle Imp" by "the redoubtable B. Smith," whose product may be found within "that very unliterary product, the English drama of the early part of the [nineteenth] century." "The root idea is there and identical," acknowledges Stevenson, "and yet I believe I have made it a new thing." Even this "slender admission," it is pointed out, does not appear with the Samoan version in which form Stevenson's story was first published, nor in what is virtually the first English form running "in successive Sunday editions of the *New York Herald* between February 8 and March 1, 1891." It is possible to see by various references in the "Letters," points out the writer, "how much the borrowed 'Bottle Imp' counted in the eyes of Stevenson's literary vanity":

"It was the main foundation of his claim to the cherished name of Tustala, or Teller of Tales, which the natives were taught to apply to him. And we find him, in August, 1893, writing in characteristic, if rather affected, fashion to Conan Doyle:

"Nay, and more, I who write to you have had the indiscretion to perpetuate a trifling piece of fiction entitled 'The Bottle Imp.' Parties who come up to visit my unpretentious

mansion, after having admired the ceilings by Vanderputty and the tapestry by Gobbling, manifest toward the end a certain uneasiness which proves them to be fellows of infinite delicacy. They may be seen to shrug a brown shoulder, to roll up a speaking eye, and at last the secret bursts from them, 'Where is the bottle?'"

"Again, in Balfour's 'Life,' describing Vailima:

"In one corner [of the living-room] was a large safe, which, being continually replenished from San Francisco, rarely contained any large amount of money at a time, but was supposed by the natives to be the prison of the Bottle Imp, the source of all Stevenson's fortune."

"A most extraordinary and unconscious revelation of the sensitiveness of Stevenson's personal attitude in the matter of acknowledging obligation for the Bottle Imp idea is contained in a letter of December 3, 1892, to Sidney Colvin about the arrangement of the book including 'The Bottle Imp,' for which he seems afterward to have received \$8,000. Even the hazy reference to 'that very unliterary product, the English drama

SEGOVIAN TYPES.

By Valentin de Zubiaurre.

They are of the north, that is more beloved by the Spaniard than by the visitor to Spain who prefers the "sunny, orange-scented Andalusia."

of the early part of the century,' and to 'the redoubtable B. Smith,' in Stevenson's explanatory note seems to have struck his self-pride as too specific a confession of indebtedness. For he wrote:

"The 'Bottle Imp' was the *pièce de résistance* for my volume 'Island Nights Entertainments.' However, that volume might never have got done; and I send you two others in case they should be in time.

"First have the 'Beach of Falsea.'"

"Then a fresh false title, 'Island Nights Entertainments;' and then,

"The 'Bottle Imp;' a cue from an old melodrama.

"The 'Isle of Voices.'"

"The 'Waif Woman;' a cue from a saga.

"Of course these two others are not up to the mark of 'The Bottle Imp,' but they each have a certain merit, and they fit in style. By saying 'a cue from an old melodrama' after the B. I. you can get rid of my note. If this is in time, it will be splendid, and will make quite a volume."

A heavier charge is prepared for the admirers of Stevenson than the foregoing, for the writer declares that the student of origins may go for more than the "cue" for the "Bottle Imp"

to a volume published in London in 1823, "Popular Tales and Romances of the Northern Nations"—"mostly stories of diablerie, Moravian, Thuringian, and Hartz Mountain legends." The second tale of the first volume, "The Bottle Imp," had not previously appeared in English. A correspondent of *The Sun* supplies the information, subsequent to the publication of the editorial, that the original author of the tale is the Baron de Lamotte-Fouqué, author of "Undine." The editorial proceeds:

"It is by no means an unliterary product, for it has a style and charm of its own, altho not R. L. S.'s style and charm. The title is the same, the supernatural idea which is the motive of the plot is the same, the mechanism of development is the same, the dénouement is practically the same, even to the mechanical expedient of half-heller coins instead of centimes; particular phases of small incident and emotion are the same. Time, place, and circumstances are changed, and the consummate stylist adds his special touch.

"This is no case for applying the deadly parallel; Stevenson was too resourceful an artist ever to lay himself open to the charge of textual plagiarism. His hero is *Kiawe*, the Hawaiian; the original is *Richard*, the young German merchant in Venice. Stevenson's navigator in possession of the fateful bottle is the Kanaka *Lopaka*; in the original it is the Spanish sea captain. The struggle with a woman to determine the possession of the demon in the vial, which gave all the owner wished, but must be sold to another for less money than the price for which it was acquired at the penalty of eternal damnation, is selfish in the original, with *Richard's* courtesan mistress, *Lucretia*; in the adaptation it is altruistic, with the noble wife *Kokua*. The solution by final disposition for a smaller coin than the supposed fateful minimum is managed practically in the same way. Stevenson puts off his bottle, with its burden of an inevitable hell, on a reckless reprobate whose character has damned him already; in the original the final sufferer is a person whose soul is lost already by a previous transaction with Satan. The entire framework, however, and many of the incidents, important and insignificant, have been boldly appropriated by the author of the second 'Bottle Imp.' The points of contact are so many and so striking that we doubt if anybody can read the two tales one after the other and retain much respect for the sincerity of either Stevenson's note as printed or his proposed credit line about the alleged 'old melodrama.'

"Stevenson's chameleon talent took color from that on which it fed or rested. Appreciation, keen perception of value to his own literary projects, appropriation, assimilation, and metamorphosis by adornment were the order of the process. So we find his delightful pages shining in turn with the light of Dumas, of Nathaniel Hawthorne, of Hoffmann, of Sir Walter, of Poe, of whatever and no matter how various the geniuses temporarily occupying and impregnating his facile mind. Under whatever influence he wrote he was Stevenson to the extent of his own very remarkable powers of invention."

The editorial, it seems, has set on other literary delvers; and one from Brooklyn, "J. R.," writes to *The Sun*:

"Stevenson had all the rare talents you credit him with; he lacked, however, creative faculty. Hence the necessity for him

of constant inspiration by other writers. You mention some of these, and might have added Balzac. Read the latter's 'Bachelor's Establishment' and Stevenson's 'Master of Ballantrae' in immediate succession and see how the Scotsman, by eliminating *Flore*, changing the Jacobite roysterer into a Bonapartist, making several minor alterations and dressing it all up in his own graceful style, has produced a tale that young and old may enjoy, even tho it appears somewhat flimsy and artificial by the side of the Frenchman's mighty creation."

NOT "BERTHA M. CLAY"

THE MYSTERIES of the feminine pseudonym seem likely to remain mysteries so far as they concern the late Thomas W. Hanshew. At the time of his death, in March of this year, it was widely asserted that he was one of the authors of books that purported to be done by "Bertha M. Clay." Interested parties have followed these allegations

with denials, in spite of the Scriptural assertion that all men are clay. Among the denials is that of the publishers of the "Bertha M. Clay" series, who admit that after the death of Charlotte M. Braeme, the original writer, her works were continued by various hands. Some of these were masculine writers gifted with the same facility for the "feminine touch" that was possessed by William Sharp in the famous "Fiona McLeod" series. It seems that we shall have to release Mr. Hanshew from the "Bertha M. Clay" imputation, tho the New York Times quotes a publisher's authority for saying that Mr. Hanshew wrote stories that were signed "Char-

lotte May Kingsley." The writer in *The Times* adds:

"Hanshew was the author of many ideas strikingly new. And Bertha M. Clay—whoever she was—was by no means without the gifts of the true story-teller.

"There are those who would condemn Bertha M. Clay unread and sneer at all this pother about her identity. There are those stern critics to whom every weekly story-paper, every five- or ten-cent novel, brave in its red and green cover, is anathema. But some of us look back not without sentimental affection to our memories of Ned Buntline, Peter Pad, Sylvanus J. Cobb, Old Scout, and the chroniclers of the adventures of Old King Brady and his family of detectives.

"It was real pleasure that these books gave—and still give—not educational, of course, not 'cultural'—but real and—it must be said—absolutely wholesome. It is well to remember the apologia of the late Harlan P. Halsey, who started the famous 'Old Sleuth' series and was, in Mayor Low's days, a member of the Brooklyn Board of Education. It is 'Old Sleuth' who speaks—it might well be the ghost or the company of ghosts, of Bertha M. Clay:

"There is not a single word in any story that I have written that could be objected to by the most rigid moralist. All my stories have had a good moral precept to teach, and I will venture to say, out of the mass of matter that I have turned out, a thick volume of moral suasion could be extracted.

FISHERMEN OF ONDARROA, NEAR SAN SEBASTIAN.

By Ramón de Zubiaurre.

"The apple is the seal to a Zubiaurre painting almost as inevitably as the cherry-blossom is to a Japanese print."

"The trouble lies in the fact that a few bad writers have come into the ranks of cheap literature, and because of their misleading work a blanket judgment has been thrown over all. The objections are always made by those who have not read the works, but who get their ideas from the comic papers."

NO "ANTI-AMERICAN BIAS" IN LONDON

IT IS BOSH to say that American plays fail in London just because they are American, we are comfortingly told by one of their experts on matters theatrical. The case of "Adèle," the American musical comedy which established one tradition for the London Gaiety Theater—that of the shortest run—gets an English search-light thrown by *The Pall Mall Gazette*. With some warmth the dramatic critic of that paper declares that "this is not the first time that an American impresario or press-agent has ascribed the failure of a visit to London to our prejudiced critics and a general anti-American bias; and it seems about time to answer such statements, grotesquely wide of the truth as they are." Mr. Bickerton, "the impresario," told a *Pall Mall* interviewer that the piece failed because of adverse criticisms and their effect upon the public. "Many of the papers, he said, seemed to resent the breach in the traditions of the Gaiety, and in some quarters he feels that his company have been attacked because they are Americans." The company, it is quite true, was mainly American, tho its leading man, Mr. Hal Forde, and at least two others, were English. Mr. Forde, on his return to America, told the papers here that he was blamed by some English critics for not talking straight "American," and for an "affected English accent." Mr. "H. M. W.," who signs dramatic criticism for *The Pall Mall Gazette*, writes:

"In the case of 'Adèle,' the press seemed to me to be exceedingly kind. After all, the production was considerably below the level of the Gaiety in some respects which the *cléantèle* of that house regard as rather important, notably those of scenery, choruses, and general decoration. If Mr. Bickerton could compare his first night in these respects with an average Gaiety first night he would have realized this. Yet very little was said on the subject by the critics. On the other hand, most of them praised the plot and the music very warmly, and, so far as one could judge, they all acclaimed the young lady who impersonated the title-part. Mr. Bickerton may remember that when the curtain fell on the third act on the first night there was a good deal of 'booing' in the pit and gallery. Does he attribute that, also, to anti-American bias? Or does he admit that it may have been an honest, if not very polite, expression of the opinion that the production did not entirely come up to London West-End standards?"

"After the Marlowe-Sothorn season at the Strand Theater, in the early summer of 1907, similar statements were made by a gentleman connected with the management. He, too, accused the press of anti-American bias. There was not the slightest evidence of it. Indeed, there could not be, for, as I shall prove presently, no such thing exists in the press of this city. There were, however, differences of opinion as to the acting of Miss Marlowe and Mr. Sothorn. Some of us were delighted with them, and with all the work they did during that season, and were especially grateful to them for their beautiful production of 'The Sunken Bell.' Others ranked them less highly, and in one newspaper appreciations appeared which were certainly unworthy of being addressed to artists of such rank and such gifts; but then, these were the work of a writer who took his own line sincerely enough in his way, and anti-American bias certainly had nothing whatever to do with his observations."

"All this talk about anti-American bias in London is sheer nonsense," declares this critic, who cites what he takes as evidence to the contrary:

"We never hear of it except from persons who have been associated with pieces which have not suited the tastes of London playgoers. Has Mr. Bickerton ever heard of the history of the Daly Company in London? How again and again they visited us, to be received with ever-increasing affection? How we recognized the genius of Ada Rehan even before New York had recognized it, and stamped her one of the great actresses of her

time? Has he ever heard of the reception Edwin Booth had at the Lyceum, or of the way in which we took to our hearts such players as Minnie Palmer, Edna May, William Gillette, Rose Stahl, and many others that could be named? How much anti-American bias was there in the six hundred nights run of 'The Belle of New York,' or in the welcome more recently given to the play and the performers in 'Mrs. Wiggs of the Cabbage Patch,' which ran for hundreds of performances in London, and then went on a no less successful tour of the English provinces? And how can any one talk about an anti-American bias in London when, at this very moment, an interesting American farce is being given by American actors at the Queen's Theater, 'Potash and Perlmutter,' and is proving one of the few successes of the season, while a number of American players in 'The Belle of Bond Street,' at the Adelphi, have already made themselves popular favorites?

"It does not follow that everything which is a success in America must therefore be a success in London, any more than it follows that everything we like must also be liked in New York. But we no more 'bar' a thing because it is American than New York 'bars' one because it is English. On the contrary, the general feeling in London when an American production is announced is that it will be something well done and worth seeing. The first-night audience assembles in a spirit of eager and confident expectancy and the heartiest good will, and, when those feelings are justified, its enthusiasm is unbounded. When they are not, the audience separate a great deal sadder, and a great deal more surprised, than when they leave after the deplorably more numerous occasions when something entirely 'made in England' has proved itself silly and dull and a weariness of the flesh."

The London correspondent of the *New York Tribune* reports that the abrupt termination of "Adèle" "foreshadows the beginning of the end of the American invasion of the London stage, in the opinion of managers, actors, and playgoers." This is so opposed to the opinions of Mr. Brady that we quoted last week as to furnish food for reflection:

"Two years ago one only need say one was an American to get an engagement at a good salary in the music-halls, and even the more conservative theaters were clamoring for New York players, singers, dancers, song-writers, chorus-girls, and entire productions."

"Nowadays, except for a few stars, transatlantic Thespians are concealing their nationality as much as possible, and ten vaudeville contracts with Americans are finishing or being canceled to one being signed. The constant antagonism of the English to 'ragtime revues' with a Broadway atmosphere has so influenced managers that the latter are afraid even to permit the American flag on the stage any more.

"Julia Sanderson told the *Tribune* correspondent with a little shiver that it was her particular wish not to play in London just now. Even big stars, such as Elsie Janis, Ethel Levey, and Ina Claire, are carefully using an English accent for fear of offending London ears, and Sam Bernard in his curtain speech emphasizes his Birmingham birth. Ragtime has become unpopular except for one-step dancing.

"The new Hippodrome revue is not to be written by Lewis Hirsch, whose tunes have been the biggest hits of the last two years, and will be wholly English. Mr. Hirsch is writing two other shows, but he concedes he must abstain from syncopation and supply the English rather than the American touch to his music. He says he will be glad of the change and is pleased that the American 'hams' who have dominated the lesser music-halls are at the end of their string."

"London now naturally regards all American acts with suspicion," says Mr. Hirsch, "because in the wake of the real artists came an army of incompetents, men who could not get a job in the New York movies, but who were engaged here because the American theatrical invasion was then at its flood-tide."

"Shirley Kellogg, wife of Albert de Courville, and one of the stars of his 'Hullo Tango' revue, gives it as her opinion that Americans will still be successful in London as individuals, but not because they are from Broadway, which fact assured their success in the immediate past, and that musical shows with the Broadway hall-mark are at present doomed from the start."

"An American resident in London who has attended every first night for several years past prophesied to the *Tribune* correspondent this week that not a single transatlantic player except stars of the first magnitude will be here next season."

RELIGION AND SOCIAL SERVICE

FAILING TO SILENCE THE RECTOR

THE VESTRY of a church in southern Ohio are reported to have taken offense at the preaching of Socialistic doctrines by their rector, and, failing to silence him, have practically played the rôle of Samson in pulling the temple down over their heads. What is the most interesting aspect of the case, perhaps, is the fact that the sermon that raised the storm is declared by the Bishop of the diocese to be no more than an expounding of the platform of social justice adopted by the General Convention. The Bishop sustains the rector, the vestrymen are obdurate in their demands for his removal, and, failing that, have resigned from their posts, withdrawn their families and their support from the church, and practically wiped out the Sunday-school. The church is in Middletown, Ohio, and its rector, the Rev. J. H. Yates, a newcomer from the diocese of Albany. He is under thirty. So we learn from *The Living Church* (Prot. Epis., Milwaukee), which gives further details of the case:

"When Bishop Reese arrived he was handed the resignation of the entire body of vestrymen, who declared their grievance to be the sermon referred to. Asking for a copy of that sermon, Bishop Reese found it a vigorous application of the teaching of Jesus Christ toward moral and industrial conditions; but, according to the Bishop, political Socialism was nowhere advocated as a panacea for the present unrest; neither could it be said that the sermon introduced political partizanship into the pulpit. Bishop Reese thereupon reminded the vestry that the rector was not there to preach what they liked, nor had he taken his ordination vows to them, and declared frankly that so long as the rector was true to the faith of the Church, moral in his character, and did not use the pulpit for the purpose of preaching political or economic opinions, he could not, and would not, be removed. The rector has a right to stay, continued the Bishop, and the Church would guarantee his right under those conditions to preach the truth as he saw it.

"Attempts were made then and afterward to obtain the consent of the vestrymen to recall their resignation, but without avail. At the parish meeting early in May they refused to allow themselves to be reelected. They were succeeded by five new men, three of whom are workers in the rolling-mill. The former vestrymen then left the church, withdrew their subscriptions, and urged all others like-minded to do the same. This action reduced the subscription list about two-thirds; took away about thirty-nine communicants, and practically wiped out the Sunday-school. A few days later the Dayton convocation, within whose limits the parish of Middletown is situated, and through which an appropriation of \$300 from diocesan funds for the Middletown parish is voted, passed a resolution sustaining the position of the Bishop Coadjutor and the rector, upon the showing that was laid before them. The convocation voted 'sympathy and financial support in the situation that has arisen there.' The action was unanimous.

"The Bishop Coadjutor made another visit to the parish early in June, and found that even with the withdrawal of nearly half of the former congregation, the present congregation was better than usual, tho composed of poor people. The Bishop again urged the return of the disaffected ex-vestrymen and people, but to no avail. He explained to them the difference between the Church as a voluntary organization hiring a man to preach, and the Church as a divine institution, a spiritual birthright, and an inheritance to which they were organically related. To leave it as they did, he said, was to put themselves outside of those spiritual and sacramental influences which were theirs irrespective of the preaching of the minister. If Mr. Yates was to be removed, it must be by legal and canonical means, and not merely at the request of discontented people who had voluntarily left the Church. So far as we know, his plan has been without effect.

"Apparently, however, the deadlock is complete, and the offended parishioners refuse to return."

Editorially *The Living Church* comments on one of the rather larger implications of the situation as it is thus presented:

"When General Convention adopted its platform of Social Justice, in the resolutions on the subject, not only were the clergy empowered to expound those resolutions as stating the official position of the Church, but it also became the duty of the Church corporately to protect the clergy in doing so. If a priest is to be penalized by his vestry for proclaiming the Church's position on this subject, of what value are the resolutions? Where, then, is the corporate responsibility of the Church?

"When the Bishop Coadjutor of Southern Ohio takes the ground that the rector of a parish is answerable to his Bishop and not to his vestry or his congregation for the matter of his sermons, he stands on absolutely impregnable ground. It would be a monstrous thing for a vestry to be able to silence a priest whose utterance is within the due liberty of the Church; much more, if his utterance were substantially required in expounding an official declaration of the Church.

"On the one hand, the clergy may well exercise caution in their manner of expounding the Church's declaration, carefully distinguishing between the Church's view and their own deductions from that view. On the other, the laity may well be indulgent with a sermon that may possibly err somewhere in its logic. Rare, indeed, is the preacher who can never be convicted of uttering some sentence that reflects rather his own personal opinion on some subject than the official teaching of the Church."

SETTING THE PREACHER A NEW TEST

PUT A PREACHER on the same basis as a magazine-writer and "how many preachers would be able to sell enough sermons to make a living?" This is a query raised by the Rev. W. C. Poole, of Wilmington, Del., who has no desire to plead for the sensational, or yellow, sermon, but "to modernize and elevate the efficiency of the sermon so that there will be a demand for it." In *The Homiletic Review* (July), he suggests that preachers try magazine-writing for the improvement of their sermons. It would be a new court of judgment for them, and the results might be surprising as well as improving:

"Their congregations have to accept their sermons whether they want to or not, but editors do not have to send back checks for manuscripts their readers do not want. The preacher may claim that a sermon is not to be compared with a magazine manuscript. Certainly he will not deny that he is divinely commissioned to be a 'fisher of men.' But what wise fisherman would go fishing without first carefully choosing the kind of bait to interest the fish he is trying to catch? Should the one who fishes for men do less?

"A standard question in opening a business proposition is, 'Can I interest you?' Millions of dollars are paid to writers of advertisements so to phrase every sentence as to get the attention and interest of the reader. The ten-cent stores know it is absolutely necessary to interest the crowd to sell their goods. Tourist agencies spend millions annually to get people interested. Who pays a dollar for anything which does not interest him? How long will people come to church if the church and music and sermon fail to create interest in them?

"It is not so much the question of getting the crowd which might go to some other church, but it is the greater question of getting the people who will not go to any church if not interested. I can get the crowds by supplying their needs for this world and the next. The Master did not do this to get the crowds, for he never stooped to anything unworthy of the Son of God; but, to phrase it differently, the crowd came because he met their immediate and future needs. What could be more sensational and effective to draw a crowd than working miracles? The newspapers report how thousands tried to get near to Dr. Friedmann when he was reported to have a cure for the white plague. Jesus fed the multitudes, not with ice-cream after those big meals, but with food when they were hungry, and the miracle he wrought did not lessen the interest.

"If the great preachers have not catered to the taste of the

people they served, and given them what interested them, they did better by making them interested in the sermons they preached, which produced the same results. Thousands of preachers to-day are just as good in heart as Martin Luther, John Calvin, John Knox, John Wesley, Thomas Chalmers, Mr. Spurgeon, Mr. Beecher, or Mr. Moody, but all of their goodness avails nothing because they fail to interest the people in their sermons. Could any of our great men have served their day without interesting the people of their day and generation? Could Mr. Moody have achieved the mighty results for good if he had failed to do this?"

CATHOLIC MISSIONS EXPLAINED

IT WILL BE of interest to many, probably, that the review dealing with work among non-Christian peoples, issued by the Continuation Committee of the World Missionary Conference in Edinburgh, 1910, should ask a Catholic writer to explain the missionary activities of his church. This writer, F. Schwager, S.V.D., therefore, undertakes, as he declares, "to deal with certain controversial questions from the Roman Catholic standpoint, and incidentally to call attention to some erroneous ideas which are not infrequently to be found in Protestant missionary literature." A fundamental misunderstanding of Catholic missions by Protestant writers, to begin with, is the idea that "Roman Catholic missions have exclusively, or at any rate, primarily, in view the expansion of the Church." Nothing could be more untrue, he asserts in *The International Review of Missions* (Edinburgh). "What the Roman Catholic missionary primarily strives for is the recognition, love, and worship of the Triune God," declares this writer; and the second aim is the salvation of souls. The expansion of the Church is not set down as an aim of missionary activity, tho it flows from it naturally "in the sense that the Church is an instrument appointed, as Roman Catholics believe, so far as its essential nature is concerned, by Christ himself, for the accomplishment of the two great primary aims of missions." We read:

"In this sense Professor Schmidlin, of the University of Münster, is right in describing the ecclesiastical and hierarchic character of Roman Catholic missions as their distinguishing characteristic. He asserts that 'Roman Catholic missions connect the preaching of the Gospel inseparably with organic union with the Church—with a Church, that is to say, which is visibly organized and hierarchically graded; not through any craving for power or because incorporation in the Church is regarded as the sole and exclusive object of missionary work, but because in their view the Christianity which they proclaim is by divine appointment embodied concretely in the visible kingdom of God on earth.' Even the Protestant bodies have hitherto transplanted to the mission field, as a matter of course, their own form of church organization so far as they believe it to have scriptural authority. It is all the more intelligible that the oldest of the Christian Churches should hand on to its converts the institutional forms which it believes to have been ordained by Christ."

The Catholic Church differs from the Protestant in not concurring with one principle laid down at the World Missionary Conference at Edinburgh. There it was stated that Christian missions should not necessarily aim "to transplant to the country in which they labor that form or type of Christianity which is prevalent in the lands from which they have come, but to lodge in the hearts of the people the fundamental truths of Christianity," laying less emphasis upon the distinctive views of any one branch of the Christian Church. On the other hand—

"Roman Catholic missionaries regard themselves as bound in their preaching by the saying of our Lord: 'Teaching them to observe all things whatsoever I commanded you.' They therefore do not feel that they are justified in distinguishing between truths that are vital and those that are not vital. What they recognize as having been revealed by God, that they must and will proclaim. The dogmas which have already been enunciated by the Church, and those elements of church government and

worship which are bound up with dogma, are therefore for us Roman Catholics outside the range of discussion."

Since the native clergy are regarded as incorporated into the hierarchy of the Church, their careful training is imperative:

"They must be thoroughly familiar not only with the various branches of theology, but also with the church life of historical Christianity. It is well known that Roman Catholic missions devote to the training of the native clergy an amount of labor, time, and care that may be taken as a standard, without implying that under certain circumstances less exacting demands may be quite legitimate. In the mission which I know best, in south Shantung, the education of a Chinese priest requires fifteen or sixteen years. But Roman Catholic missions are not satisfied with this. With a view to providing for each diocese at least a small band of native priests possessing the highest possible education, the Jesuits have established a general seminary for higher theological studies in Beirut for the whole of western Asia, and in Kandy for the whole of India, and the Dominicans a similar institution for the Philippines. The work of the individual theological seminaries in each diocese is supplemented with great advantage by the teaching of these institutions. It is obvious that at the present day, especially when the inrush of European civilization makes increasing demands on the native clergy, no better way can be found to prepare for the gradual self-government of missionary dioceses."

Those who make the criticism that Roman Catholic missions intrude into Protestant mission fields forget that "in all Roman Catholic countries of Europe and America, Protestant missionaries carry on a systematic propaganda among Roman Catholics; and further, that in the Levant, Farther India, China, Korea, and the Philippines, Protestant missionaries have in countless instances occupied towns or districts in which Roman Catholic missions have long been at work, sometimes for centuries." Going on:

"A convinced Roman Catholic can not regard the Protestant Churches as being on the same plane as the Roman Church, and, however deep his personal love for Protestants may be, can not hold any kind of ecclesiastical fellowship with them. I desire to assure our brethren in the Protestant denominations that we are far from having any intention of slighting them personally, and that our attitude arises from a clearly recognized conscientious sense of duty. Roman Catholics are firmly convinced that Christ himself established the apostolic teaching office in the Roman Catholic Church, with the Pope at its head as the shepherd of the whole flock of Jesus (John xxi. 15-17), on behalf of the entire human race, and that he gave to this Church alone the right and the duty of proclaiming the gospel to the whole world. If they were not to act in accordance with this conviction, they would be guilty of a grievous sin against their own conscience, and therefore also against our common divine Lord."

When we think ourselves into the standpoint of another and respect real differences, we shall not, says the writer, quoting a Catholic authority, find difficulty in understanding that "mere cooperation and simple amalgamation represent an impracticable ideal." Further:

"We shall no longer take offense, but, on the contrary, regard it as estimable when each side strives, with all its might, to discharge its responsibility for winning as many heathen as possible for its faith and for its Church; and however painful the experience may be to see our opponents enjoying greater success and better prospects in this competition, we shall not allow our regret on this score to lead us, without sufficient reason, to suspect their methods of work or their devotion to the cause of peace, or to sound without more ado the trumpet for battle. . . . Nor, indeed, will Protestant missionaries have any ground for complaint if in exceptional cases, when an opportunity presents itself of its own accord, Roman Catholics extend their efforts even to Protestants."

Definite agreements between Roman Catholics and Protestants for the division of territory appear to find less and less favor with both sides, he adds. "The experiences of recent years have shown that it is just such agreements that most readily give rise to fresh misunderstandings and disputes, and that they thus do not conduce to peace."

THE REBIRTH OF MODERNISM

THE PROPHECY that from the catacombs "a new Christianity" will appear in due time, which shall be "not less remarkable than that which was born in the same darkness long ago," is confidently uttered by a contributor to *The Hibbert Journal*, who seems to belong to that wing of the Anglican Church that calls itself Catholic. He makes the prediction in an article in which he admits the failure of Modernism, the movement within the very walls of the Church to question traditional beliefs. He is careful to declare, nevertheless, that Modernism differs sharply from other forms of liberalism in religion in "its respect for the Catholic and corporate experience of the Church." While conceding that Modernism has failed, the writer maintains that even its failure is "of greater value to the world than the success of more facile solutions of our religious problems," because "new statements" and "new positions" proceed from the spirit that was in it. As Modernism's successor he introduces Post-Modernism, choosing the name not because it comes after Modernism, "but rather as implying that it has some likeness . . . to the school of art which is called Post-Impressionism." He tells us:

"The attempt to suppress Modernism has been successful, as religious persecution generally is, just in proportion to its thoroughness. In the Roman Church abroad, with neither an educated lay opinion nor a popular press sufficiently interested or powerful to resist it, Authority has succeeded in at any rate driving the Modernists underground. At home [in England] it had a harder task with Tyrrell, and has not ventured to touch that academic Tolstoy, Baron von Hügel. But Modernism is not dead. Abroad, great things are preparing underground, and in due time there will reissue from the catacombs a new Christianity not less remarkable than that which was born in the same darkness long ago. At home not a few of the faithful are inwardly in revolt. But they are held in check by that politic and very British principle of liberty of opinion, which allows them to think whatever they like so long as they do not express it.

"In the English Church there has been a steady progress toward Liberalism in theology and in religion—a progress not adequately represented by any one party or society, as neo-Tractarianism has been represented (indeed overrepresented) by the English Church Union. But there have only been individuals who could be called Modernists in the strict sense of the word—young High Churchmen, for the most part, rescued from traditionalism either by an interest in modern theology, or by contact with educated laymen. They are distinguished from the main body of Liberal theologians, who are generally broad rather than high in their Church views, by their feeling for the society, for its sacraments, and for its traditions."

Criticism does not apply itself to theological opinions alone, he reminds us, but affects also religious practises in many cases, while the Modernist, who is criticizing others, must himself labor all the time under the pressure of public opinion. He can not stand still, however. He must move forward, wondering, we read, "whether his attempts to reconstruct his beliefs will ever end, or can logically end, in anything which can be properly called a Christian position." The writer continues:

"It is to this phase of reconstruction, in which many who were once Modernists now find themselves, and to which they naturally wish to give all the security and permanence that may be possible, that we may give the name of Post-Modernism. . . . What the Post-Impressionist holds is that our power of reproducing nature, and even our power of seeing it as it is, has been perverted by conventional methods of expression; and consequently he endeavors to find new forms which shall truly express what is really there. Similarly, the Post-Modernist is trying to find a scheme of forms which shall express the real and directly felt values of spiritual things, not perverted and obscured by their conventional embodiments. It is the effect of criticism to show that things are not quite as they have been represented. It is the duty of institutionalism, through a particular institution—in this case the Catholic Church—to say that the traditional representations were the best that could be produced, under the circumstances, and to insist that it is more

important (and also more possible) to devise a scheme of forms which shall be intelligible than one which shall be absolutely true. The Post-Modernist tries to satisfy both these claims.

"How is it to be done? The Post-Impressionist adopts a style as far removed as possible from the colored photograph which is the ideal of conventional art. By disregarding the conventional expressions he hopes to liberate the underlying ideas. His ideal artist is the man of the world who sees and expresses things like a child. The Post-Modernist, too, must put the whole content of experience into his faith; yet his ideal is to believe simply and truly, as does a child, who has not yet learned the conventions which its parents teach it.

"That is curiously like the faith that Christ himself held and taught.

"But we must not let this attractive analogy obscure what is, after all, the essence of Modernism, as distinct from other forms of Liberalism in religion—namely, its respect for the Catholic and corporate experience of the Church. If, on one side, Post-Modernism stands for a thoroughgoing Liberalism, on the other it stands for a rational Conservatism."

The full Catholic position, we read then, according to Baron von Hügel, "one of the most distinguished of Modernists," demands loyalty to "three kinds of experiences—critical, institutional, and mystical." Having defined Post-Modernism under each of these heads, the writer concludes:

"The old *modus vivendi* between Liberalism in theology and Conservatism in religion has broken down. The *raison d'être* of Post-Modernism is to escape from the double-mindedness of Modernism by being thorough in its criticism—by extending it to religion as well as theology, to Catholic feeling as well as to Catholic tradition. It has criticized the external traditions of Christianity: it must criticize its internal presuppositions. And I do not doubt for a moment that there will emerge from this criticism, as from that, a rational account of the faith, worthy of all reverence and trust.

"That is Post-Modernism. It is, no doubt, a position which lays itself open to attack by deliberately courting criticism of the foundations of Christianity, and indeed of religion. But that is surely wiser than to spend one's time—as many seem to do—in defending a series of sand castles against the incoming tide."

SUMMER HOLIDAYS AND JEWISH SABBATHS—The action of a group of the largest New York department stores in closing all day Saturday as well as Sunday during July and August is, of course, a boon for the workers. And the editor of *The Hebrew Standard* thinks that the employers will also benefit, since "a certain amount of leisure, from an economic standpoint, begets a greater amount of efficiency." But the new departure has a particular interest for devout Jews, he continues. For, "if, assuming that the Jewish workers in the establishments named, these, our coreligionists, will punctiliously observe their Sabbath when the opportunity for this observance is at hand, why can not the Jewish Sabbath in course of time be made a complete day of rest for them throughout the year?" One concern, this editor hears, intends "to lengthen these rest periods for employees as the years roll around, and thus eventually its employees need labor only five days a week." Which leads to these observations:

"The economic significance of this announcement stands admitted; from the sectarian Jewish point of view, it is equally important. For, with the Sabbath set apart as a full day of rest, our Reform friends will have no excuse for dilating on the 'economic necessities' compelling our Reform brethren in faith in this country to give up their observance of the traditional Sabbath. The glittering generalities and high-sounding phrases emitted by the Reformers in this, their pastime of defending their attitude of iconoclasm toward Judaism's holiest truths, will be valueless, because useless.

"And if the foregoing remarks apply peculiarly to the workers in department stores, why should not the same condition of affairs prevail for the benefit of the operatives in factories? For them a working week implies so-and-so many hours of work, and these hours could as easily be distributed over the Monday, Tuesday, Wednesday, Thursday, and Friday of the week as over these days and the Saturday as well. Economically they would be better off, too!"

CURRENT POETRY

POETRY is like music in many respects, and particularly in this, that the line between amateur and professional is not sharply drawn. Like music, poetry may be made by those whose chief interest is in some more lucrative pursuit. And, like the amateur musician, the amateur poet frequently gives genuine pleasure to himself and his friends. "Little Verse for a Little Clan" (privately printed) evidently is intended for circulation among the friends of its author, who modestly makes himself known only by the initials F. D. W. But several of his poems are so gracefully worded, so full of beautiful ideas, so evidently sincere, that they deserve the attention of all to whom poetry appeals. The poem which we quote below is by no means perfect, but several of the stanzas—particularly the sixth and eleventh—are exquisite, and the loveliness of the theme is undeniable.

My Garden

By F. D. W.

I have a garden in a secret place,
Where many golden hours I walk,
And banquet with beloveds, face to face,
And hear the heavenly Plectides talk.

Full high above the world its tree-tops catch
And bear the lustrous stars for fruit;
And low as shepherds' cottage eaves of thatch,
It leans to hear the blackbird's flute.

Amid a dusk of dewy bloom it lies,
Where fits an elfish-winged stream;
And four ways meet the downward bending skies,
Enveloped in an azure dream.

By cloud-upbudded stairs I climb to it,
On rainbow arcs of rosy maze,
And view its thousand avenues allit
With light beyond the Light of Days.

And there on rippling grass, where zephyrs play,
The mirthful Graces pause and run,
Immersed in sunshine of immortal day,
Immortal maidens, still unwon.

Beneath the jeweled trees of burnished leaves,
Flame-cinctured, with their gold inwrought,
Ride forth the white-a-visored knights in greaves
To find the Lady of Shalott.

There all day long hides lonely Bird-alone,
And weaves her web of magic ply;
While Ariadne to her lute doth moan
That love from love must part and die.

Dear Omar, too, the purple of his song
Doth cast wine-red upon the rose,
And clasps his slender Cypress over long
Ere forth the moon to darkness goes.

And, ah, the nightingale, that shifts his note
From sad to bright, from bright to sad,
Hark! how his unappeased sorrows float
Up to the joys that make him mad!

So, night and day, about my garden close,
The unimagined Wizard builds
The dainty architecture of the rose,
And smiling gods upon the hills.

His loom he threads with silver summer dawns;
His pattern draws from clouds and skies;
And for his colors takes the moonlit lawns;
The leaves, the lakes, the lover's eyes.

And as his subtle shuttle darts between
The wonder gone and that to be,

The radiant presence of the thing unseen
Leaps forth for seeing hearts to see.

O wondrous is my garden in its bloom,
Where Time's devouring wing delays,
And poised Hours their tranced steps resume,
In doubt if they be Years, or Days.

We confess our ignorance of the meaning of the line "And bedlam hides all villainy." But this is all that mars our enjoyment of Mr. Wright's interpretation of the country's summer-time call to weary city people. We take it from *Munsey's Magazine*.

The Call in the Fog

By RICHARDSON WRIGHT

Into the surge of London Town
Comes the call of a Kentish down—
"The hawthorn blossoms soon will set,
The wild pink, vetch, the violet!"
Then the dripping fog that lowers
Over London's streets and towers
Wraps us round and round.

Out of the heart of a Devon dell,
Where thundered once Drake's caravel,
The word is passed, a sad refrain—
"Oh, leave the crowd, come back again!"
Then the human tides that flow
Underneath the lamplight's glow
Drown the Devon spell.

We struggle through the crowded street,
The fog makes ghosts of men we meet,
Pale streaks of fire, the trains shoot by,
And bedlam hides all villainy.
Oh, for summer days once more,
Purple downs and rocky shore,
And the high cliff path to our feet!

Not even the most obstinate poetic rebel can resist the charm of a well-constructed sonnet. This (from the *London Academy*) is the most nearly perfect sonnet that has appeared in a magazine for a long time.

"Say Not the Struggle Naught Availeth"

By A. F. G.

What tho the destined goal seem faint and far?
The patience and the toil are not in vain.
What thou hast given in love thou shalt regain
If not on earth, on some diviner star.
Sometimes, as through a portal left ajar,
The soul peers outward with illumined eyes
To a dim shore it leaps to recognize
Where the first fountains of its being are.

And, if the worker seem to work for naught,
At worst his life is but a small disease:
Fretting the breast of Time, that Death may cure;
God, with a hand most pitiful and sure,
Leads him at last, through death, to a fair peace
By death's birth-labor not too dearly bought.

From *Munsey's Magazine* we take the following poem. There are splendid pictures in the first two stanzas, and the climax is absolutely delightful.

Far More Fair

By SARAH N. CLEGHORN

More fair than sunrise mountains
In folded veils of light,
Or trails in silver birches
Engreened and mossed from sight:

More fair than new-mown meadows
Where sliding waters flow,
Or purple clouds of thunder
Where torrents stream below:

Than rolling, southward valleys
With tasseled maize in bloom,
Or northward pines enterraced
In dark and rearing plume;
Than showery west empearling
A dewy distance gray:
Than drifted plains by starlight
Or rising moons of May:

I saw a fairer picture,
Outshining fields and skies:
I saw, one happy morning,
A child from fever rise.
I would that I were Raffael
To paint that lovely sight:
I saw him pick a daisy
With wasted fingers white.

Everything that Miss Edith Thomas writes has distinction and grace. The following poem (from the *New York Sun*) is a little too colloquial to be effective throughout, the rhythm is in some stanzas annoyingly rough, but the sentiment is refreshing and the Pension Félice is sketched with sympathy and skill suggesting the Thackeray of "The Cane-Bottomed Chair" and "The Ballad of Bouillebaisse."

The Ladies of the Pension

By EDITH M. THOMAS

If I should go back to Paris one day,
The very first thing I'll do,
I'll go to the Pension Félice
(Rue Montesquieu, Number Two).

Bustle and tumult, whatever the time,
So narrow and busy the street!
Past the peering concierge I'll climb,
Sure of the welcome I'll meet.

I shall find those lovely ladies twain,
"Ma tante" and "ma nièce," at the door:
They will give me my "ancient room" again,
As often they've done before.

I shall sit at table with tout le monde,
From Americas, North and South,
From Constantinople, and far beyond,
But French is the word of mouth.

Very bad French ours is sure to be,
But Madame's indulgent smile
Our stammering tongues will quite set free,
Then out of the room we flee.

But stay! At the door we all will halt
And each one say, "Après vous,"
(For who in his manners would be at fault
That Pension Félice knew!)

And now in the salon we all are sat,
Where Madame presides with grace,
And happily still runs on our chat
In its emulative race.

But all of the time I am aware
(This secret I only know)
That little Cécile, "ma nièce," is there,
Tho her face she does not show.

In a corner, behind the piano grand,
Sits Mademoiselle, and paints!
Under her loving and facile hand
Grow pictures of flowers or of saints.

I know that her eager eyes are bright,
And her touch is swift and true,
In that studio corner, out of sight,
Where the moments for art are few!

If I ever get back to Paris, I'll go
To the Pension Félice:
For no gentler souls I anywhere know
Than the two who there held sway

The verb "to shave"

I shave with
Colgate's Shaving Stick

You shave with
Colgate's Rapid-Shave Powder

He shaves with
Colgate's Shaving Cream

We shave with
COLGATE'S
SHAVING LATHER
STICK - POWDER - CREAM

Whether you shave with Stick, Powder or Cream you find the comfort of a quick, plentiful lather that does not "smart" the face—and which needs no mussy "rubbing in" with the fingers.

Economical for—the last $\frac{1}{2}$ inch of the Stick can be put on the new one—the last flake of Powder is as good as the first—the Cream can be squeezed out to the end of the tube.

Follow Colgate's Lather with Colgate's Lilac Imperial Toilet Water and you've learned the verb "to shave."

At your dealer's—or trial size of either lather, and of Lilac Imperial for 12c in stamps.

PERSONAL GLIMPSES

COLLECTING AS A SPORT

THERE is undoubtedly a fascination in collecting, whether it be street-car transfers or orchids, but it is not merely the dull allurements of acquisition. Sir Martin Conway, a celebrated collector, who has written a book called "The Sport of Collecting," says that the collector is a hunter primarily, and that in the pursuit of his hobby he "enjoys the passion of the hunt without the killing, and the trophies are not consumed." One of his adventures was the unearthing of a Roman-Norman castle. He had advertised for an old manor-house or abbey, says the *London Standard*, such as might have been built in the sixteenth century or earlier, and received two replies:

One offered a stuccoed, castellated mansion suitable for a hydro, "a real beast of a building." The other described a true medieval castle in fascinating detail. It had a moat and towers, embattled walls, tilting yard, and dove-cots, and all the appurtenances of the days of chivalry.

It seemed too good to be true, but after it had been cleared of the vegetation of a century, repaired, and restored, it became a charming home, now known as Allington Castle, once inhabited by Sir Thomas Wyatt, and visited by Anne Boleyn, and everything that a romantic, medieval castle should be.

In Sir Martin the spirit of the collector is so happily mingled with that of the adventurer that whether he is more of the one than the other is difficult to say. Buying pictures and curios from well-known auction rooms or shops never appealed to him. He preferred to seek out his treasures and make them doubly his through paying the price of discovery. In his book he tells how once he made a wager with Signor Morelli that he could discover a painting by a certain famous painter. The bet made was only a few dollars, but the fact of the wager was enough to spur him, and, in consequence, he discovered a beautiful specimen, a Christ by Foppa, which has since been seen at many London exhibitions. The Orient was the scene of some of his most pleasurable experiences. *The Standard* retails an amusing occurrence in western Tibet:

On the road he met a Tibetan monk saying his prayers by rotating a wheel as he walked slowly along. He was carrying a copper vessel, in shape like a teapot, with a turquoise mounted on the spout, also a little plate and spoon and a couple of small cymbals, united by a chain and very useful for driving away devils.

He offered them to me (says Sir Martin), and demanded a price in rupees, which I paid him. His things were duly packed into one of our pieces of baggage, and we were about to go forward, when he sat

What—
Another Cup
at Night!
Sure!

You couldn't well drink that much coffee—in fact, with many people one cup at night usually causes wakefulness.

But you can drink as many cups of Postum as you like without interfering with your rest and comfort.

"There's a Reason"

Coffee contains the drug, caffeine, the frequent cause of sleeplessness, nervousness, heart flutter, headache, and numerous other ills.

Thousands have found relief from coffee ills by changing to

POSTUM

Made only of whole wheat and a small per cent of molasses. Postum is a pure food-drink, nourishing and delicious. It is absolutely free from caffeine or any other harmful substance.

The whole family—children and all—drink Postum at any time with perfect comfort.

Postum comes in two forms.

Regular Postum—must be well boiled. 15c and 25c packages.

Instant Postum—a soluble powder—made in the cup with hot water—*instantly!* 30c and 50c tins.

The cost per cup is about the same for both kinds.

"There's a Reason"

POSTUM
—sold by grocers

down and began to weep bitterly. I inquired why he was weeping. He said it was because I was taking away his *manis* (sacred things), which had belonged to his forefathers. I had them unpacked and offered to return them. He was delighted, but would not give back the rupees. He said he wanted to keep both them and his *manis*. I told him to put the rupees on the ground beside his things. He did so. "Now, choose which you will have—the rupees or the *manis*." He picked up the rupees and went his way, again weeping loudly as long as we were within hearing. When I looked back on him from a remoter distance, he appeared to have recovered his peace of mind.

VAGABONDS OF THE PRESS

IF one could but gather together the thousand and one strange incidents, coincidences, and unusual stories that come filtering through a newspaper office in the course of the year, and relate them with a sympathetic pen, what a marvelous "Arabian Nights' Entertainment" would be evolved! It is to the office of the daily, large or small, that the stories come; some to be printed, more to be cut, condensed, or left out altogether. To one who has the seeing eye, many of these waifs of incident and circumstance are as strange and piquant as any ever fabricated by the charming Scheherazade. In "These Shifting Scenes" (New York: George H. Doran Company), Charles Edward Russell, journalist, socialist, and writer, relates a few of the best of the thousand and one stories that have come to him in his many years of newspaper work in New York and elsewhere. He has both the seeing eye and the story-teller's art, as well as a sincere appreciation of the romance of the press. One of his first narrations concerns a folk of an earlier day, now extinct—the tramp compositors, who worked on every paper in the country, stayed nowhere long, were always welcome, were ragged, irresponsible, and dissolute, but withal omniscient in the lore of the composing-room and dexterous beyond belief in their trade. Of all nomads they were the most fortunate, for tho they might scorn a roof and roam barefoot and alone over the world, let them but once come upon a community large enough to possess a daily paper and there they found asylum. There they ranked among employers as highly skilled and valued laborers, and among their fellow workers they were regarded as only a little lower than the kings of the earth. The writer gives the following amusing picture of the peculiar position held by these vagabonds among the torpid herd of the paper's regular composing staff:

Along the front of my father's office and about a foot from the ground was a broad ledge whereof the architectural purpose

NABISCO Sugar Wafers

THESE incomparable sweets are the most universally popular of all dessert confections. Whether served at dinner, afternoon tea or any social gathering, Nabisco Sugar Wafers are equally delightful and appropriate. In ten-cent tins; also in twenty-five-cent tins.

ADORA

Another dessert delight. Wafers of pleasing size and form with a bountiful confectionery filling. Another help to the hostess. In ten-cent tins.

NATIONAL BISCUIT COMPANY

was then and remains with me mysterious, but of which the practical use was toward the summer repose of weary printers. We were a morning paper, and composition began with us at the somewhat unusual hour of half-past two in the afternoon. Before twelve o'clock the printers were wont to appear to distribute type for the day's setting, an operation called in the trade "getting in their cases." Between the time when their cases were filled and half-past two they had usually some space of leisure, which, in fair weather, they passed upon the ledge, for the office stood on the shady side of the street. Then in the group's center could be seen one of my friends from the freight-cars sitting in state as became royalty, grave, impassive, taciturn, gazing straight before him, wrapt in serious thought. To him behold on either side three or four of the local contingent, the pillars of our regular force, turning a respectful attention that they might hear what wisdom should chance to fall from august lips. He was dirty and they were clean; he was ragged and they were whole; he was disreputable and disorderly, and they were of the straight walk. But, lo, how honor peereth in the meanest habit! This frowzy person had traveled; he had lived in New York; in a large familiar way he talked of Ann Street and Park Row; he had seen cities of men and manners, and of his vocation he was marvelously an expert, a magician of the types who made them fly under the bewildering compulsion of his grimy hand.

On the ledge the group feels an impulse to silence, waiting for greatness to speak first. There has been talk of New York, the favorite topic; New York, the newspaper Mekka of those that dared; New York, the far-away shrine of perfect printing, the wonderful metropolis, in the mists of imagination looming great and strange.

"Is old Bill Smith still night editor on *The Herald*?" one ventures at last, willing to show a familiarity with matters metropolitan. The great man shifts his tobacco, turns slowly, and for an instant, upon his questioner a look of gentle pity as of one very patient with the ignorance about him, and once more gazes straight to the fore. Then from the oracle a solemn voice:

"Old Bill Smith's been dead these two years."

At which silence reigns again.

Many of these men came back year after year at about the same time to the same towns. They were awaited with eagerness, as eagerly as one looks forward to some fascinating adventure. They brought with them to the staid little force in the small-town newspaper office a breath from a world outside that each regarded as the land of his desire, but for him as far away and unattainable as any seacoast of Bohemia. So these unsmiling, silent, capable vagabonds of newspaperdom were welcome wherever they might roam, and their periodic rearrivals were watched for with unabated interest. They became as much a part of the towns they

visited as the oldest inhabitant himself. Mr. Russell continues:

Of this tribe was one whose real name had been lost in years of continental wandering, but was known to us as "Scotty." He was past fifty, a sandy man gone gray, and in despite of much liquor and hard living singularly active and even athletic; short, squat, and powerful. He must have begun with a good education, for he knew the classics and once corrected a local clergyman in a quotation from the "Æneid," of which this ragged person was genuinely fond. Of his origin as of his name he was reticent, but it appeared he had served in a Northern regiment in the Civil War and had won distinction, which he had thrown away for drink. I can well understand that his dauntless courage and resourceful mind must have made him a valuable soldier. He had a lieutenancy and was on the road to a command when in some irremediable way his cups tript him. Later he was a military telegraph-operator, I think likely under another name. The war over, the joys of travel claimed him, and when I knew him he was a confirmed wanderer and periodical inebriate.

I was nineteen years old, an apprentice telegraph-editor trying to learn the business from the bottom, and with some impulse of pity or sympathy he chose to take an interest in me, an attention he bestowed upon few. Of an evening when he happened to be sober and not working he was wont to lounge into my office and sit with me and show me the secrets of the copy-reader's art, in which he was particularly adept, having been schooled and seasoned under many masters. For the difficulties of head-writing he had a marvelous facility, and I used to wonder at a man that had such command over apt, pithy, and forceful expressions and had made for his own advantage so little use of it. In time he became communicative, and bit by bit I gathered the thread of his adventures.

After the war he had felt an odd desire to return to the South, and for years he passed or was buffeted from one Southern city to another, the victim usually of some misadventure. He had shared in the establishing of the carpetbag government of South Carolina and had narrowly escaped shooting by the disaffected populace. He had tried to edit a newspaper in Mississippi, and some too candid criticism of local society having aroused a prejudice against him, he approached his office one day to find it possessed by a mob that had thoughtfully brought a rope to hang him. In good time he dodged into a corn-field, where he lay all day, having the rare pleasure of hearing discuss the exact manner of his killing if he should be taken. He had known that eccentric genius, Will H. Kernan, and had set type on the *Okaloosa States*. Once he became sole compositor, proof-reader, and assistant to a man that for prudential reasons published a newspaper from a flat-boat moored in the Mississippi River between two States. The papers when printed were ferried ashore at night and, I think, smuggled into the post-office. Some of the editor's remarks having reached an unendurable frankness, offended fathers and brothers gathered one day on opposite banks of the river and took pot-shots at the boat and its

**"You Can't Forget
To Make
A Colt Safe"**

**Why
First Class
Dealers
Recommend
the Colt**

PRACTICALLY every dealer knows that if all revolvers were made on the same safety principle as the Colt construction, most people who recognize the absolute necessity of a weapon for home protection, but who have fear of a revolver, would buy a revolver. The first class dealer, therefore, will always recommend the Colt.

The Colt Positive Lock (see circle) consists of a bar of solid steel which stands between the face of the hammer and frame; the firing pin, therefore, cannot touch the cartridge until the trigger is *purposely* pulled. The Colt is the *made safe* revolver. When you buy a revolver you should always be guided *first* by its safety; taking that as your cue, you will surely buy a Colt.

To make sure you get a Revolver with this **POSITIVE LOCK**—insist on a **COLT**. Write for Catalog No. 26 and Booklet "How to Shoot."

occupants. The editor, ensconced in the how with two rifles and some revolvers, answered in kind, while Scotty tried to get below the water-line, and well-aimed shots came through the deck-house. Some indications of a long siege appearing on shore, where a rope hung suggestively from a tree-limb, the editor cut the cable at night and drifted out of range.

Scotty's next appearance was in New Orleans, where he had been a witness of the uprising that drove out the carpetbaggers, and where he had even held office, being for twenty-four hours the custodian of some thousands of dollars of the public funds. He escaped by night from New Orleans and made his way to Texas, where he had mind to turn rancher, but stopt on the way to buy a weekly newspaper, for five dollars in gold and an unused ticket to Waco. He found the bargain dear, for the enterprise was plastered with mortgages and the office beset by angry creditors; and he left by the back door, traveling (by freight) to Texarkana. There he managed a shooting-gallery for a man that was compelled by circumstances over which he lacked control to a hurried departure from town, whither he never returned. Scotty found the business uncongenial, bequeathed it without compensation to an exhilarated stranger, and betook himself to the printer's case and freight-trains, whereby he worked gradually and gratefully northward.

At the time of my acquaintance with him he had established a circuit from which he never varied except that once instead of giving his patronage to the railroads he stole a skiff and floated down the Mississippi to New Orleans, a place he greatly esteemed as a winter resort. On the first of March of every year he started for Mobile; thence with the spring he moved upon Atlanta, and so by way of Washington to New York, which he held it to be his Christian duty to see every year and of which he knew every nook and corner. As summer came on he fared toward the golden Northwest, where, he said, the air was better for his lungs. Once, in a fit of athletic enthusiasm, he had undertaken to walk, sleeping of nights in school-houses and barns; but he said the silence and loneliness of the country upset his nerves, the singing of the crickets made him hysterical, and he was brought to perceive the true value of the railroad system of the United States, which enabled the deserving to be transported without exertion and without expense.

It was impossible not to like this rascal, notwithstanding his life, which no doubt traversed all principles of ethics and sound economics. Moreover, there were times, I must needs confess, when the practitioners of sound economics and the rest stood a little abashed in his frayed and disreputable presence. An old woman sold apples and lemonade under the stairs near the office, and of her he was accustomed to make daily purchases—if so be he had funds. None of us ever thought about her; she was like the stairway, she had always been there and always would be; but Scotty was invariably attentive to her. Passing to get a drink he would stop to ask about her rheumatism or about her son. We never knew she had rheumatism or a son until we learned of both through him. The son, it seemed, had turned out badly, and was in a San Francisco hospital. And

then he would buy things of her he did not want and advise her as to what was good for rheumatism, and tell her to cheer up, she had plenty of good friends, and drop a quarter, maybe, into an apple basket. Similarly he interested himself in a business-office clerk that had weak lungs, and would tell him how to make herb tea and poultices for his chest, and caution him solemnly against drink and late hours and bad company. And perhaps that night one of us must needs intercede to get this sage counselor out of the police station. When he was sober he could discourse in choice and polished diction, and when drunk he swore like a steamboat mate. I had reason to believe from some of his remarks that, emulating Jim Bludsoe, he had one wife in Memphis and another in Cincinnati, and he was afraid to go near either. Altogether a sorry hero, I fear; and so much liked among us that annually his departure left the composing-room for a day or two visibly depressed. Like the rest of his order, he invariably fared upon his way penniless and the worse for his habits; and also like the rest he looked with unconcealed disfavor upon everything outside of New York. I can not remember, by the bye, that I ever knew him or any of the others to laugh or be moved to any mirth; doubtless being philosophers and old travelers, they were above such weakness.

If he had been without other sign of honor in our office, that he was allowed an individual slug with his name cast upon it would speak sufficiently of distinction; for while our establishment was small, we had pride in the thought that it was rigidly regular. To those whose pitiable ways of life have never included education in a printing-office I concede here the explanation that the kind of slug I refer to is merely the cast number that a compositor places at the head of the type he has set to identify his product. Beginning at the far end of the room, the first compositor used "Slug One," and thus in sequence to the door. Within the hours of composition even the best-known among us was seldom summoned by his name, nor otherwise than by the number of the slug he used. Thus at intervals the silence of the place would be pierced by the foreman's shrill cry:

"Who's setting on Slug Eight? Well, he wants to come here and close up his matter on the bank." Or:

"Slug Five! Put a three-em dash after that take you got."

Or, belike, one moved to jocoseness would declaim:

"What gentleman is composing this evening under Slug Ten? Will he oblige by performing his duties on these market corrections?"

In no such level of anonymity moved Scotty. Promptly upon his vernal appearance the galley-boy from their winter retreat brought out the slugs marked "Scotty"; promptly upon the autumnal fitting the galley-boy put them away.

These princes of the types and form were not always silent. On occasion, when coaxed by the adulatory attention of the other men, they began their tales of the road, stories of the great ones they had

seen, had met, or had—doubt it him who dared!—intimately known. "He has had some characteristic experience with Horace Greeley, he has had those wonderful hieroglyphs for copy; he has chatted for moments with Charles A. Dana, he has seen the younger Bennett minutely directing his own composing-room, he has picked up in newspaper offices that curious, inside, actual history of events that is always so different from the printed and accepted records." Each had his own stories to tell of the who, what, and why of the newspaper game. No secrets were hidden from them. They knew the true story, the story never printed. Such a one was Scotty. As the writer says:

As with his fellows, when this philosopher talked the topic he most did love it was always New York, whereto I was a rapt and joyous listener. The night being done, the work over, the old single cylinder thundering away in the press-room, the morning visible through dirty window-panes, he would come into my room and sit, sometimes silent, sometimes moved to long flights of descriptive eloquence about his favorite city. He would tip back in his chair, his feet sociably resting on my flat-topped desk, his short, stout legs crossed in comfort, a corn-cob pipe protruding from the grizzled stubble of his round face, a glass of beer within reach, and thus at ease his talk would run on for hours. Toward the ordinary topics of commonplace men he maintained a blasé indifference, declining to descend to turgid levels; but when he spoke of New York his blue eyes lighted, his face, for all its disfigurements, revealed a genuine animation. For the newspaper business as conducted elsewhere than in the metropolis he entertained only contempt; all editors except New York editors were (to use a liberal translation) persons of quite inferior intellect and no consideration. In New York alone was the true art known and practised.

"Did you ever see a good head-line written outside of New York?" he would say. "Now, tell me, did you? Well, neither did anybody else. And look at the way they dish up their stuff there; it isn't newspaper-writing, it's literature. Read that now; isn't that literature? Well, I told you. Now that stuff is all written by artists, by the best writers in the world. Boston? Boston is nothing to New York; it isn't Hoboken, it isn't Rahway, compared to New York. In Boston they're a lot of shoemakers."

Then he would fall to long dissertations on the size and grandeur of New York, on its strange corners and remote byways, the curiosities of the Bowery, the mysterious under-side of New York life, the perilous regions: old Five Points, Hell's Kitchen, Cherry Hill, and the docks, the forests of ship's masts, "and Spanish sailors with bearded lips," and all the witchery of the water-front. And then he would tell of the life of a reporter in New York, its hazards and its chances for glory and profit, and dilate upon notable feats of reporting; for in that extraordinary mind he had stored incident upon incident until he seemed a mine of illustrative lore.

The STORY of the SUN

Or Young Men and Marriage—

By Sir Thomas Clouston, M.D., LL.D.

Marriage is the natural aim of and the ideal state for everybody. A knowledge of the questions that have to be faced later is absolutely essential to mental and physical health and happiness. Dr. Clouston presents a stirring and practical message on the problems of sex, parent hood, etc., in this attractive and reasonably priced volume. 17mo. cloth, 248 pp., \$1.00 net. Average carriage charges 8c extra.

Punk & Wagnalls Company, 251-60 Fourth Ave., New York

He had happened, in some way I can not now recall, to be connected with a phase of the New York Sun's handling of the famous Nathan murder, and he produced from his memory a luminous story of that grizzly and historic crime. And from that he went into a recital of the notable and unsolved mysteries of New York, from the Burden shooting to the "car-hook" murder, the weird places in which some of these had occurred, the strange case of Charley Ross, of which he had made a study, until the broad sunlight streamed in the streets and the day gang came and found us still there.

The soiled and sorry ragamuffin whose ordinary conversation was more interesting than most novels, and whose morals were said on eminent authority to be utterly deplorable, had so often in his travels escaped violent death that he was convinced of a destiny to die of disease, and was far more fearful of drinking contaminated water than of riding on car-trucks. Once as he clung to the bumpers of a freight-car a mad or intoxicated brakeman had fired five revolver shots at him and every shot had elipt or gone through Scotty's hat. Whereupon the brakeman, probably convinced that he had seen a ghost, leapt from the train and was killed.

Several times Scotty had been in train wrecks. Once the car was on fire and he was pinned down by a pile of joist, but two brakemen worked with frenzied zeal until they freed him and saved his life; and then pursued him down the track pelting him with coal for stealing a ride. His walking experiment was made in the summer of 1874, when business was deprest and the country was full of tramps. He joined a colony of these and lived with them in a camp on the Wabash River, near Logansport, if my memory serves me right. He said there were six in the party, and so great was the terror they inspired that the farmers used to come every morning with presents of milk and chickens and bread; but as a matter of fact the tramps were the most harmless of men and had barely the courage to steal watermelons and green corn at night. One had been a clergyman and used to reprove the others for swearing.

His stars deceived Scotty, poor man! What we had warned him of and he had scoffed at came to pass. It was down in southeastern Iowa one wet night. Perhaps he lost his clutch upon the truck or perhaps mercifully he was asleep; but they found him dead on the tracks the next morning. We could better have spared a better man. A meeting was called in our office and we passed a resolution of regret that was more sincere if less formal than some other similar expressions I have known, and it was characteristic of printers that instantly a sum was subscribed to provide decent burial. One of the younger men went to the place to represent us. He had funds enough to buy a lot in a cemetery and even a head-board and a floral wreath, and so the restless spirit came at last to rest. His memory is green with me; I don't doubt it is with others; and if this scanty tribute be tardy it is paid with gratitude, for it was he that filled days and nights with unrestful visions of the outside world and the outlines of reporting as an art.

(Continued on page 122)

"This is the best inner tube I ever used. Notice that valve reinforcement."

Double-Cable-Base
Exclusive Federal Tire Construction

FEDERAL
Inner Tubes

THOUSANDS of experienced motorists are of the same opinion as the man in the picture. They have found high quality and several distinctive points of superiority in Federal Inner Auto Tubes.

The valve reinforcement on Federal Tubes is a marked improvement. It is not cemented to the tube, but vulcanized integral with the tube. It cannot work loose, break away and cause a leak.

Federal Tubes are made of pure para rubber, the finest quality, and built up layer by layer. They are heavy, seamless and flawless. They never stretch out of shape.

Buy inner tubes with as much care as you do casings. Use Federal and get Extra Service.

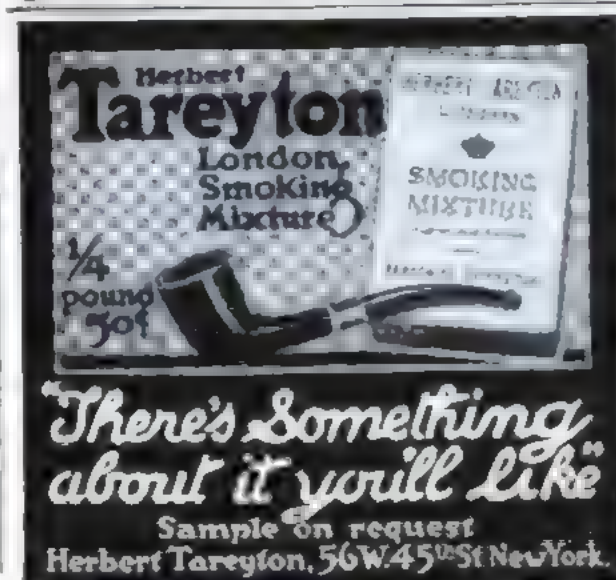

This new construction eliminates rim-cutting, side-wall blow-outs due to broken fabric just above the rim, tube pinching, and the dangerous tire slipping off their rims.

The double cables, imbedded in a soft bead-filler in the base of the tire, anchor the tire firmly to the rim, and the soft bead-filler cannot cut and grind into the side-wall as does a hard, sharp-pointed bead-filler.

Federal Tires are made in straight wall and quick detachable clincher and regular clincher types. All sizes. Plain and Rugged Treads.

The Story of the Ten Associates

Three and a half years ago Ten Men of great affairs organized the Paige-Detroit Motor Car Company.

They were ten men of character and standing in the community—Men whom you can readily look up through your Banker or any Mercantile Records.

Each in his respective line was a leader and many had won national reputations.

Each had builded solidly and enduringly upon the firm foundation of business integrity and fair profits.

They said, "Let us pool our resources; our manufacturing, merchandising and general business experience."

They said, "Let us pool our capital—\$20,000,000 if it is needed."

They said, "Let us be content for a period with no profits, and, at best, small profits."

They said, "Let us combine with our own experience the best engineering talent—the most expert knowledge—that the automobile field has developed."

They said, "Let us build a motor car and a company that will outlive each and all of us."

They said, "Let us build slowly and well—let us build the highest quality at the lowest price."

The PAIGE of Yesterday

The Ten Associates made 300 Paiges three years ago.
This year they will build 13,000.

Paige sales have increased 167.9 per cent in the last two years. This is the greatest growth in the history of the automobile industry for the past two years.

In three years Paige employees have grown from a mere handful of workmen to a veritable army.

In three years Paige dealers have increased from 39 to 1026.

In three years the Paige has grown from a small leased plant to the present mammoth factory with a capacity of 25,000 Paige cars a year.

In three years Paige sales have grown from \$44,000 to \$1,250,000 a month.

Today the Paige-Detroit is operating (as it always has operated) on ample capital backed dollar for dollar by tangible assets. There is no issue of "good will" or preferred stock on which dividends must be earned.

There is not a dollar's worth of bonded indebtedness upon which interest must be paid.

The Ten Associates are putting Paige dividends back into the Paige car.

The astounding growth of the Paige undisputably proves Paige quality. The Public does the buying. The Public, alone, must determine whether sales shall increase or decrease.

So the story of the Ten Associates—the story of the Paige—is more than the victory of ten men.

It is the triumph of a great principle—the principle of sound judgment, of sound, conservative business.

The PAIGE of 1915

The Paige "36" is, in many ways, a contradiction of so-called "Price Class" standards. In and on the Paige are mechanical principles and equipment found in no other cars below the \$3000 mark.

"The best of automobile engineering practice—regardless of cost"—that has been the keynote of Paige construction. And—by rigidly adhering to this principle—Paige cars have

been developed to a point of excellence that has earned them a reputation of being "unusual" motor car values.

The Paige of 1915 is a Paige of still greater refinement—still greater development—yet, the price remains unchanged.

Consider the following features carefully. You will find that they measure up to the Paige standard—"The best of automobile engineering practice—regardless of cost."

The Ten Cardinal Points of PAIGE Supremacy

Paige Motor

Paige motors have earned a reputation that is absolutely unassailable. To appreciate this power plant you must ride behind it—up hill, down dale, through heavy, clinging sand roads and over smooth, oiled boulevards. Under all conditions, the Paige motor runs smoothly, silently and willingly. This motor is the crowning achievement of the Paige engineers—the result of years of development and experiment.

Rear Axle

Our axle is built with excess strength; and the experience of Paige owners proves that it has been remarkably free from trouble. It is the floating type.

There is no noise of gears—no hum when the car is running 20 miles per hour—no roar when it is going 40.

Noiseless Chain Drive

The noiseless chain

drive for magneto, cam and pump shafts of the Paige motor is the greatest single factor in the elimination of mechanical noise. Engineers assert the noiseless chain is 15% more efficient than gears and maintains a mechanical efficiency of 98%. It costs twice as much as timing gears; and this principle is almost exclusively confined to the high priced field.

Cork Insert Multiple Disc Clutch

This type is admittedly the most expensive and most efficient. It is found almost invariably on highest priced cars. The Paige clutch runs in oil, and its velvety action relieves transmission, universal, axle and bearings from sudden and excessive strains.

Gray & Davis Large Unit Electric System

Paige is the only car below \$3000 standardly equipped with the large unit Gray & Davis system. The smaller unit system is designed for cars in the Paige "price class," but we adopted the large and more expensive unit because it charges quicker—has a larger storage battery capacity—and, in its application on the Paige, uses less current in starting. This is a distinct "over value."

Oiling System

The Paige oiling system is automatic, requires no watching or adjustment, and is designed to make the motor as free as possible from carbonization. With this system it is absolutely impossible for a Paige motor to smoke.

Mayo Radiator

The Mayo honeycomb radiator is admittedly the most expensive and efficient built. It pos-

itively eliminates over-heating and it is established that this radiator requires less re-filling than any other. The highest priced cars—Pierce-Arrows—Fords and Locomobiles—equip with the Mayo.

Stewart Carburetor

We believe the Stewart Carburetor the most efficient obtainable. It is simplicity itself in construction—noiseless and positive in action under all weather conditions. There is but one adjustment—a lever on the dash. This adjustment facilitates the strictest economy in gasoline.

Ease of Operation

The accelerator pedal is smooth acting and steady. The lighting switch on the dash permits the turning off and on of the headlights and dimmers. The driver has a clear view of the speedometer, gasoline gauge and ammeter.

Beauty and Luxury

In beauty of design, in dignity and luxury, the Paige is a true aristocrat. The design is a full stream line body with crown fenders. Deep comfortable cushions, side and back, insure the easiest possible riding over even the roughest country roads. The tonneau is big and roomy; there is ample room in the driver's compartment.

The Last Word in Equipment

Large unit Gray & Davis electric lighting and starting system; silk mohair top; jiffy side curtains and top boot; rain-vision ventilating windshield built into body; Stewart revolving dial speedometer; famous Gray & Davis twelve-inch electric head lights, parabolic design, equipped with dimmers, three-inch ruby electric light at rear; demountable rims, one extra; adjustable foot rest; nickel robe rail; tire iron; tire carriers; non-skid tires on rear; license bracket; electric horn; pump; jack; tools and tire repair outfit.

PERSONAL GLIMPSES

(Continued from page 119)

WHEN NEW YORK PERFORMS

IT is seldom now that the stranger finds in New York the exhilarating impression of conglomerate ruthlessness, blood-thirstiness, fatalism, murder, fire, speed, uproar, smoke, smell, and fury that has made it reputed as the greatest city in the world. There are, however, exceptions. Only the other day something of the old, traditional picture of an earthly inferno was revived for a while. One shivering little party of sightseers was treated to more than it had bargained for in the way of local color, and went away, it may be presumed, with all its illusions of New York quite intact. *The Times* tells the story:

Firemen, policemen, and employees of the Consolidated Gas Company swarmed into Times Square and up Seventh Avenue about 1:30 yesterday afternoon to deal with a situation created by a runaway horse, which in a few minutes set that part of town on edge and gave the passengers in a sightseeing automobile a visual demonstration of the terrible things that happen in New York.

The horse, attached to a delivery wagon belonging to an Eighth Avenue grocer had been left standing at the curb at Seventh Avenue and Fifty-second Street. It took fright and started to run down Seventh Avenue, scattering the crowds as it went. Patrolman Herman, of the West Forty-seventh Street Station, ran into the street and tried to stop it, but the horse swerved to one side, throwing Herman down, and ran for a red fire-alarm lamp-post. The animal itself just missed the post, but the wagon hit it and broke it off, which automatically sent in an alarm.

The horse continued down Seventh Avenue at full speed, the noise of its going drawing hundreds from breakfast- and luncheon-tables, and emptying stores and offices into the streets, to join the social gatherings already on the curbs.

At Forty-seventh Street Patrolman Egan, of the Traffic Squad, caught the bridle and hung on. Horse, wagon, and policeman headed straight for a sightseeing automobile in the Times Square safety zone, and it looked for a moment as if there would be a grand smash, fit for any moving-picture camera. The driver of the sightseeing car hastily abandoned it, and the passengers began to jump off on the other side in terror.

Their worst fears were not realized, however. The horse was strong, but he could not carry Egan very far, and the policeman pulled him to a standstill at the side of the automobile.

Just as the throngs were recovering from their alarm there was a wild clanging, a clatter of hoofs, and a shrieking of whistles, and a battalion of fire apparatus, summoned by the breaking of the post, raced up from all directions. Egan and Herman, who were wiping blood from their uniforms, explained what was the matter, and sent three engines, a fire patrol, and two hook-and-ladder companies back to their quarters.

About the time the fire apparatus was

leaving some one discovered that gas was leaking from the pipe in the broken post, and a repair wagon was summoned from the gas-works. The passengers in the sightseeing car thought another fire was imminent when the red wagon, with the banging gong, rolled up, and it was a long time before they could forget their glimpse of the horrors of metropolitan life and give undivided attention to the guide's "On the left we behold."

A DAY WHEN THE LOSER WINS

SHOULD the particular tide of reform that has welled up in the little town of Carmen, Oklahoma, sweep over the whole country, many are the thousands that will have good cause to bless the name of this hitherto unknown hamlet. For this flood brings with it a priceless jetsam in the shape of once-cherished possessions that have been long loved and lost. In brief, Carmen has originated and celebrated "Take-It-Back Day"—one day in the year when each citizen shall make restitution to his neighbor of whatever he has borrowed in the past. The immensity of this conception stuns the reader. Imagine what it might mean to have one day in the year when, without discourtesy, one might rightfully demand that book, those umbrellas, that V. or X., or worse, which, because "Take-It-Back Day" had not yet been invented and was regarded as belonging in the same class with perpetual motion and the millennium, were long ago charged to profit and loss! The news account of this great day is disappointingly brief, but, as the *Kansas City Journal* remarks:

Enough is told to make it clear that "Take-It-Back Day" was an unqualified success. Those who returned borrowed articles grudgingly seem to have concealed their chagrin at being forced to "give up," while the joy of those who got back sugar, flour, lemon-squeezers, rakes, feather beds, and salt which they had loaned long months before was unconfined. The dispatches are significantly silent as to whether any umbrellas were restored to their rightful owners. Perhaps that would be asking too much for the first year, or perhaps the omission is a skilful allusion by implication or common knowledge of human nature to the fact that umbrellas are appropriated rather than borrowed. Be that as it may, however, the fundamental idea of "Take-It-Back Day" is an excellent one, and Carmen deserves all the celebrity which it has acquired. There are limitless possibilities to the scheme, and in time even those who tell fibs on their neighbors may be induced to take them back.

And upon the text of "Take-It-Back" the *Grand Rapids Press* reads an everyday sermonette:

If you have in your possession a book for which the owner has been hunting high and low, take it back. If your neighbor's lawn-mower reposes in your wood-shed, take it back. If in a moment of forgetfulness

The Telephone Emergency

THE stoutest telephone line cannot stand against such a storm as that which swept the Middle Atlantic coast early in the year. Poles were broken off like wooden toothpicks, and wires were left useless in a tangled skein.

It cost the telephone company over a million dollars to repair that damage, an item to be remembered when we talk about how cheaply telephone service may be given.

More than half of the wire mileage of the Bell System is underground out of the way of storms. The expense of underground conduits and cables is warranted for the important trunk lines with numerous wires and for the lines in the congested districts which serve a large number of people.

But for the suburban and rural lines reaching a scattered population and doing a small business in a large area, it is impracticable to dig trenches, build conduits and lay cables in order that each individual wire may be underground.

More important is the problem of service. Overhead wires are necessary for talking a very long distance. It is impossible to talk more than a limited distance underground, although Bell engineers are making a world's record for underground communication.

Parallel to the underground there must also be overhead wires for the long haul, in order that the Bell System may give service universally between distant parts of the country.

you heatedly told your rival what you thought of him, go to him and tell him, man to man, that you did not mean a word of it. If you owe any citizen ten dollars, take it back, even tho the debt be outlawed. And last, but not least, if you have been nourishing a grudge against any man, woman or child in that community, take that grudge back and join hands with the other party in a dance over its grave.

How's that for an idea? Honestly carried out, would it not add a cubit to the civic stature? And if here and there a die-hard were discovered who cherished his antagonisms overmuch, would not partial success in such a program make any town more livable?

The best thing about this idea is that one need not wait for a second to the motion. To-day—without further delay—we can go the rounds taking things back—deeds, words, possessions, hatreds, jealousies, and envies. Life is too short, existence too precarious, and individual differences too slight to warrant the assumption that there is nothing to arbitrate between himself and his neighbor. And neighbor is a mighty comprehensive term; it can be stretched to include all humanity.

A STRANGE TRUE-STORY

NEARLY every one has read or seen played the story of "The Count of Monte Cristo," in which the hero escapes from his dungeon in the Château d'If by taking the place of a dead man. Fantastic and melodramatic fiction tho this is, it is nearly matched by a true-story that is noticed by the Birmingham (Ala.) *Age Herald*. In this case the "hero" side-tracked his captor and secured another man, quite alive and originally in possession of most of his senses, whom he posed as himself. He then, in the rôle of officer in charge, delivered the innocent man to the prison authorities under his (the rightful prisoner's) name, and calmly walked off, free and unmolested. The narrative is presented from the viewpoint of the victim, a Scandinavian sailor named Albert Johannsen, and is as follows:

The story starts in a saloon on the waterfront at Nagasaki, the scene, it will be remembered, of *Madama Butterfly's* tribulations. Three strangers offered to treat Johannsen to drinks. He accepted. When he regained his senses he was at sea on board the American transport-ship *Sheridan*, a prisoner en route to the San Quentin penitentiary. Being unable to speak English, nobody understood when he tried to explain, so he was delivered to the prison authorities as James Rogers, alias Peter Grimes, tried and sentenced to serve three years by the treaty court at Shanghai for forgery. Johannsen's cellmate at San Quentin was a fellow countryman. Through him he got a hearing and was released.

The real Rogers once served a year in San Quentin for forgery. He won the regard of a San Francisco merchant who sent him to China as a clerk on one of his vessels. Rogers was soon posing as the merchant's son and passing bad checks. He was caught, convicted, and sentenced

Dry Feet without Rubbers

In addition to the increase in comfort and health, which comes from wearing Essex Rubber Soles and Heels on your shoes, they also afford you thorough foot protection from the rain and snow. A sudden storm usually results in wet feet. Rubbers are unsightly, heavy and hurt your feet, and usually are not to be found when needed or if at hand are worn and leaky.

Essex Rubber Soles and Heels are Dependable

The leading Shoe Manufacturers will tell you that the reason most all the rubber soled shoes worn in the United States are equipped with Essex Rubber Soles is because they have proved by test that they are best in quality of material, excellence of workmanship, and in style.

Specify Essex whenever you buy rubber soled shoes if you want lasting satisfaction.

BABY'S HEALTH

Dr. Fischer's Practical Advice to Young Mothers

It is during the summer months that every mother, especially the young mother, finds much to worry her in the care of her little one. The ills that warm weather brings are often cause of worry and fear; it is then that the delicate life of your infant needs the most careful watching.

Mothers will find many practical suggestions and much sound advice in Dr. Louis Fischer's book—

"THE HEALTH CARE OF THE BABY"

Dr. Fischer is a well-known specialist and authority in child's diseases, and his book embraces the latest scientific ideas on infant care and feeding, both in health and illness. His advice covers nursing, bathing, clothing, growth, training, teething, general feeding, weaning, artificial feeding, food recipes, rules for ordinary illnesses, for contagious diseases and fevers, accidents, cuts and eyes, medicines, etc., etc.

to three years at San Quentin. He was intrusted to an officer of the court who was to have taken him to Nagasaki and turned him over to the officers of the *Sheridan*. It is believed that Rogers got the officer drunk at Nagasaki, drugged the unsuspecting Johannsen and personally turned him over to a petty officer of the *Sheridan* late at night, together with the legal papers which he had stolen from the drunken deputy.

The well-known saying that truth is stranger than fiction is exemplified nearly every day in the week by newspaper dispatches from every part of the world. Maybe that's one reason why a close reader of newspapers is apt to find the average novel of adventure rather tiresome. He meets with many more fascinating stories in the news, in which there is no lack of "human interest."

TEMPTING FATE

THE timidity or caution of those who are giving up European trips this summer on account of recent maritime mishaps is at least not shared by one man lately mentioned in news dispatches. This man, a stoker, is a survivor of two of the greatest Atlantic catastrophes of the last decade, but he has no thought of giving up the sea on that account. Do you sit up all night because so many people have died in their beds? Well, then, why should he forsake the cradle of the deep? For him, the lightning has struck twice in the same place, and struck hard. He has "tempted Fate" by continuing his trade in the face of what to many might seem a "warning," but what to him is only one of the experiences to be expected at some time or other by those who go down to the sea in ships. The following comment is made by the *London Daily Mail*:

One of the survivors of the *Empress of Ireland*, who reached Glasgow yesterday, was also on the *Titanic* on its first and last voyage. To have come safely through the two greatest of sea tragedies is a strange experience, but this survivor takes it all with fine fortitude. He is a fireman, and his first business will be to go to Liverpool and get another job. We need not suppose that he has any special passion for the sea, or, still more romantically, that the sea lures him in spite of himself. He gets his livelihood on ships, and the sea and past disasters, or future possibilities of disaster, are all accidental incidents of the very ordinary business of earning a livelihood. Of course, your mathematician, with his doctrine of probability, will tell you that the fireman is on the side of mathematics. But it is not mathematics that carries him through. It is just the simple discipline of habit and of duty, the necessity of getting through one's work and the faculty, through that work, of taming one's fancy, that makes life at all practicable. But for these the world of the quietest city would be more full of paralyzing fears than the jungle fullest of wild beasts.

The Joke—He Never Thought of B. V. D.

FANNING, mopping and grimacing, "Phew! how hot," *won't* keep you cool, when the sun grills. B. V. D. *will*. It lifts a burden from your body and weight from your mind. You forget the heat, because you're too busy "enjoying life"—lounging, dancing, a game of golf, a bout at tennis, watching a baseball game. Remember that *not all* "Athletic" Underwear is B. V. D.

For your own welfare, fix the B. V. D. Red Woven Label in your mind and make the salesman *show* it to you. That positively safeguards you. On every B. V. D. garment is sewed

JUST PUBLISHED
An Important New Book
FRANCE
From Behind the Veil
By COUNT PAUL VASSILI

IN THIS VOLUME, written in frank and pungent style, is embodied the author's unrivaled experiences of the inner social and political life of France during the last fifty years. He opens his reminiscences with the meteoric reign of Napoleon the Third and his lovely Andalusian wife, the Empress Eugénie, and closes them "the day before yesterday" as it were.

"There is here much first-hand and entertaining gossip about the celebrities and notoriety of French society during the author's time."—*The Sun*, New York.

"Contains much that is momentous in history, simply and frankly told."—*The Evening Post*, Chicago, Ill.

"No man of the era which closed with the downfall of Napoleon III. had better opportunity for close investigation than did this diplomat, whose missions, mostly of a semi-official nature, were many, taking him to all the courts of Europe."—*The Globe-Democrat*, St. Louis, Mo.

Velie *for* 1915

New Prices, New Stream-Line Design, New Equipment

An entirely new note in body luxury and beauty, mounted on a chassis that includes every feature of real usable value that can be built into an automobile. New comfort for the man who drives his own car. New economy and riding ease that gives you a new idea of the pleasures of touring.

Big, Roomy, Comfortable

The average owner wants to drive his own car. And he wants to be comfortable.

Step into the front seat of any "Velie" model for 1915. Notice the room. On no other car, regardless of size and price, have equal provisions for the comfort of the driver been made. On the majority comfort in the front seat has been sacrificed. In the "Velie" for 1915 the front seat is as luxurious as the rear.

Step through the wide doors to the rear seat. Sit down on the deep, soft cushions. Real, genuine comfort is your first sensation.

Drive over all roads.

Open up the throttle. It makes no difference where you are, you get the same comfort over smooth macadam or rough country roads.

A Car of Real Quality

The deftness of European designers in developing features that add to beauty, comfort and convenience, combined with the skill of Velie engineers in developing features that add to service and ability.

In excellence of materials; in highest grade of equipment; in permanency of style, none can be better.

The new motor-driven tire pump; the graceful top; the big 37x4½-inch tires on the light "Six" with non-skid tires on the rear wheels, are combined as regular equipment only on the Velie.

Model 14—Six-cylinder, 50 h. p. New Price
Five-passenger Touring, **\$2,015**
Four-passenger Torpedo,
Two-passenger Roadster,

Sedan **\$2,715**

Features of Design

- Motor-driven tire pump on Models 12 and 14.
- 37x4½-inch tires on "Big Four" and "Light Six," with non-skid tires for rear.
- 34x4-inch tires on "Light Four."
- Smooth, unbroken body lines.
- Tires at rear, with clean running boards.
- Hightsides; deep, roomy body space.
- Tapering upholstery, blending into body rails.
- Quick-detachable side curtains.
- Double-dimmer headlights.
- Crown fenders.
- Gray & Davis electric starting and lighting.
- Bosch dual ignition.
- Special rain-vision windshield.
- Left steer with center control.
- Warner speedometer.
- Pressure feed, with the gasoline tank at the rear on large cars.

Model 11—Four-cylinder New Price
35 h. p., Five-passenger Touring Car, **\$1,500**

A Light, Economical Car

The successful car for 1915 is going to be light-weight. Velie engineers have secured notably light weight, with superior strength, by the proper use of high grade materials. The manufacturer who argues heavy weight as an indication of strength no longer commands attention.

In view of the exaggerated claims for light weight made by many manufacturers, it might be well for you to take the weight of the Velie under the same conditions as you take the weight of any other car with which you want to make comparison. Then look at the tire sizes on Models 12 and 14. The tires are 37x4½ inches.

The result of big tires on the real light weight Velie is low tire cost.

There is greater mileage from the gasoline, because there is less load to carry. There is less cost for upkeep because weight and strength are in proper proportion.

"Fours" and "Sixes"

Each have their logical place. Among cars of high price and power the "Six" has its advantages.

The line between Velie "Fours" and "Sixes" is a definite, firmly-established basis for proper engineering design. When six-cylinder design has reached a point where a real "Six" at lower price is possible, Velie will build it.

Model 12—Four-cylinder, 45 h. p. New Price
Five-passenger Touring, **\$1,750**
Four-passenger Torpedo,
Two-passenger Roadster,

Sedan **\$2,485**

VELIE MOTOR VEHICLE COMPANY, MOLINE, ILLINOIS

THE SPICE OF LIFE

In Hiding.—"Hips are coming in again."
"Hurray! Now mother can come back from Europe."—*Judge*.

A Late Start.—**AUNT**—"Why, Tommy, when I was your age a lie never passed my lips."

TOMMY—"When did you begin, auntie?"
—*Boston Transcript*.

Try This.—**SPONGER** (meeting acquaintance)—"Do you know, old man, I really believe I'm losing my nerve? I'm getting so I hate to ask any one for a loan. As soon as I saw you I began to tremble."—*Boston Times*.

Strength.—**Dr. Lyman Abbott**, the anti-suffragist, said at an antisuffrage tea in New York:

"They call woman the weaker sex. Yet I have known more than one woman to bend a man's will during his life and break it after his death."—*Washington Star*.

Logical.—**ENTHUSIASTIC PROFESSOR OF PHYSICS** (discussing the organic and inorganic kingdoms)—"Now, if I should shut my eyes—so—and drop my head—so—and should not move, you would say I was a clod. But I move, I leap, I run; then what do you call me?"

VOICE FROM THE REAR—"A clod-hopper!"—*Tit-Bits*.

Good at Figures.—**Sammy** was not prone to overexertion in the classroom; therefore his mother was both surprised and delighted when he came home one noon with the announcement, "I got 100 this morning."

"That's lovely, Sammy!" exclaimed his proud mother, and she kissed him tenderly. "What was it in?"

"Fifty in reading and fifty in 'rithmetic."—*The Multitude*.

A Memorable Occasion.—**Reynold Wolf** tells this one of **Nora Bayes**:

Once Miss Bayes was appearing in a breakfast scene where eggs were being served, and a child sitting in a box made manifest his interest in the food. Stepping down to the footlights she tendered the youngster an egg, but his mother drew back her child with a sign of annoyance.

"You should let the young man take it," said Miss Bayes, quietly. "It is unique for eggs to be passed from this side of the footlights."—*Green Book Magazine*.

Straws.—Latest changes in post-offices, from the official guide:

Established: Woodrow (Col.), Woodrow (Utah), Woodrow (N. M.), Woodrow (Neb.), Woodrow (N. C.), Woodrow (Fla.), Woodrow (Mont.), Woodrow (Ore.), Woodrow (Tex.).

Sanville (Fla.) name changed to Woodrow.

Fremont (Idaho), changed to Woodrow.

Taft (N. C.), discontinued.

Taft (N. D.), discontinued.

Tariffville (Tenn.), discontinued.

Bryan (N. M.), discontinued.

Theodore (Ky.), discontinued.

Wilson (Col.), discontinued.—*New York Evening Sun*.

Complacent.—**Mrs. Eke**—"How does your cook take it when you go into the kitchen and tell her how to do things?"

Mrs. Wye—"Oh, she doesn't mind."—*Boston Transcript*.

Far Worse.—**HORR**—"It must be a terrible thing for an opera-singer to realize he is losing his voice."

POKES—"It's more terrible when he doesn't realize it."—*Judge*.

Chronic.—**SMALL BOY** (to charitable lady)—"Please, mother says she's much better of the complaint wot you gives 'er quinin for; but she's awful ill of the disease wot's cured by port wine and chicken broth."—*Tit-Bits*.

A Weighty Reason.—The old gentleman's wife was getting into a carriage, and he neglected to assist her.

"You are not so gallant, John, as when you were a boy," she exclaimed, in gentle rebuke.

"No," was his ready response, "and you are not so buoyant as when you were a gal!"—*Sacred Heart Review*.

A Horse Laugh.—**MOTORIST** (blocked by load of hay)—"I say, there, pull out and let me by."

FARMER—"Oh, I dunno ez I'm in any hurry."

MOTORIST (angrily)—"You seemed in a hurry to let that other fellow's carriage get past."

FARMER—"That's 'cause his horse wuz eatin' my hay. There hain't no danger o' yew eatin' it, I reckon."—*Springfield Republican*.

A Useful Page.—"Ambassador Page, like most married novelists, treats married life in his books from the inside, as it were," a Washington woman said on her return from Rome.

"At a tea Mr. and Mrs. Page had a ludicrous argument over something or other, and when their misunderstanding was satisfactorily cleared up Mr. Page laughed and said:

"This seems like a chapter that has slipped out of a novel, doesn't it?"

"It seems," Mrs. Page retorted, "more like a chapter that will slip into one."—*Boston Advertiser*.

Mebbe.—There was a certain bishop who had a pleasant habit of chatting with anybody he might meet during his country walks. One day he came across a lad who was looking after some pigs by the roadside, and the bishop paused to ask him what he was doing, that being his usual opening to conversation.

"Moindin' swoine," the lad replied, stolidly.

The bishop nodded his head thoughtfully.

"Ah, is that so?" he commented.

"And how much do you earn a week?"

"Two shillin's," was the reply.

"Only two shillings?" remarked the bishop. Then he continued, pleasantly,

"I, too, am a shepherd, but I get more than two shillings."

The lad looked at him suspiciously for a minute, then he said, slowly:

"Mebbe you gets more swoine nor me to moind."—*Tit-Bits*.

BOWSER

Keeps the "Gas" In Gasolene

Doesn't matter what car you own, it can't do its best on weakened gasolene. When gasolene is kept above ground it loses its vitality through exposure to changeable weather conditions. Temperature fluctuations make it vaporize. That vapor is the "punch" that makes your car go. Water and dirt get in—that's annoyance when least wanted. See what happens when your gasolene is stored in a

BOWSER

Underground Gasolene Tank

It just can't leak. It is always at a constant temperature. Air can't play across it to rob it of its "vim". Every drop is delivered any distance to the garage—full of life and power. Not a drop lost on the way. Not an atom of power wasted. Safe from dirt—fire—thief—loss. You soon get your money back.

The particular Bowser System for your Public, Private or Commercial Garage is easily and economically installed. Learn about it. Use the coupon. Costs nothing to find out—no obligation. Send the coupon today—NOW.

Also in Stores and Factories

If you own a store or power plant learn how Bowser Systems are saving kerosene, lubricants and paint oils and money here also—how efficiency is compelled—space saved—oil profit assured. Use the same coupon. There are 500 different Bowser Systems—a million users. Bowser has been solving oil storage problems for twenty-nine years. Let Bowser confer with you in solving yours. Saving begins from the time you act. ACT NOW.

To Dealers We can now make dealers an attractive proposition to handle our Private Garage Line. No stock required—direct shipments. Write today for details.

The Literary Digest

CURRENT EVENTS

Mexico

- July 2.—John R. Silliman is appointed by the President to represent the United States at Saltillo, the temporary capital of the Constitutionalists.
July 3.—The British Vice-Consul, Albert St. Clair Douglas, is arrested by the rebels on a charge of aiding the Federals and is held for court martial.
July 5.—The Mexican elections are held in Federal territory and Huerta is elected President by a majority of the few votes cast.
July 6.—Generals Carranza and Villa are reported once more in agreement as the result of the conference of their representatives at Torreon, wherein Carranza is definitely announced as First Chief of the revolution.

Foreign

- July 2.—In a statement implicating the secretary of the Pan-Serbian Union and others, Gabrilovic makes a full confession of the murder of Francis Ferdinand, Archduke of Austria.
July 3.—Joseph Chamberlain, one of Britain's oldest and most prominent statesmen, dies of paralysis in London.
Suffragette incendiaries destroy a \$100,000 mansion near Belfast.
Satisfied that Manchuria and eleven of the eighteen Chinese provinces are clear of opium, England bans therefrom all Indian opium and prohibits poppy-growing in those districts.
July 4.—The Harvard eight wins the Grand Challenge Cup in the regatta at Henley, England.
A statue of Lincoln, a gift from North Dakota to Norway, is unveiled at Christiania, with appropriate ceremonies attended by King Haakon, Governor Hanna, and 250 Americans.
July 6.—U. S. Volunteers land 200,000 rounds of ammunition, successfully escaping detection from several British war-ships.

Domestic

WASHINGTON

- July 2.—The President receives J. Pierpont Morgan, Jr., at the White House, to discuss national business conditions.
July 3.—The State Department officially disclaims any responsibility for the statements published or subsequent actions of former Minister to Greece, George Fred Williams.
July 6.—The House Committee rejects the proposal to appropriate \$200,000 for the relief of Salem fire sufferers, holding that the State of Massachusetts is fully capable of extending all necessary succor.
July 7.—Taking exception to the attitude of the Senate Banking and Currency Committee toward his nomination as member of the Federal Reserve Board, Paul M. Warburg requests the President to withdraw his name.
The Interstate Commerce Commission orders a reduction in the pig-iron freight-rate between Alabama and Tennessee.
July 8.—The Senate receives a direct communication from President Melendez of San Salvador, protesting against the Nicaraguan treaty and complaining that the particulars of San Salvador's wrongs in this matter have not been brought to the attention of the Senate Committee by this Government.

General

- July 3.—Colonel Roosevelt resigns from the editorial staff of *The Outlook*.
The Mayor of Butte, Montana, is stabbed and seriously hurt by one of the rebelling Finnish miners.
July 4.—President Wilson speaks at the Independence Day celebration at Philadelphia.
Through the accidental explosion of a bomb that wrecks a New York tenement, three men are killed and anarchist headquarters are revealed to the police, with valuable data concerning anarchistic plans for future violence.
July 8.—John D. Rockefeller celebrates his seventy-fifth birthday.

Putting Him Next.—CALLOW YOUTH—
"Barbuh, how long will I have to wait for a shave?"
BARBER (glancing at him)—"Oh, about two years."—*Boston Transcript*.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"T. F.," Stafford Springs, Conn.—"Please let me know the precise meaning of the terms used in stock exchanges of buying on margin and buying long and selling short."

Buying on margin: A transaction in stocks whereby the purchaser makes partial payment to his broker, who advances the remainder of the purchase-money at a rate of interest, retaining the stock certificate as a security until the purchaser orders sale or the margin is used up by depreciation of the market. **Buying long:** Purchasing securities or commodities and holding them for an advance in price. **Selling short:** A sale for future delivery of goods or stocks not in possession at the time of the sale.

"C. T. B.," New Haven, Conn.—"Do the following subjective clauses take singular or plural verbs? *Group of men, majority of people, etc.* For example, which form of verb is correct in the following: 'He found that no system was complete, and that while the majority was (or were) effective in showing the derivations, few explained the applications.'"

Collective nouns take a verb in the singular or plural according to the interpretation put upon them by the writer. Both "the majority was" and "the majority were" are right, but the first considers "the majority" as a collective unit, whereas the second considers "majority" as a distributive consisting of separate units. See NEW STANDARD DICTIONARY, page 1908, col. 1, par. 5.

"C. J. D.," Chicago, Ill.—"Is the following expression correct? 'He had an army of not less than twelve thousand men.' Is there any well-recognized distinction between *less* and *fewer*?"

Concerning the use of *few* and *little*, the first of these words is sometimes improperly used for the second. Measurement by count is expressed by *few*, measurement by quantity by *little*; as, "The loss of a few soldiers will make but little difference to the result." "The fewer his acquaintances, the fewer (not the less) his enemies." *Few, fewer, fewest* are correctly used in describing articles the aggregate of which is expressed in numbers; *little, less, and least* are used of objects that are spoken of in bulk.

"H. A. G.," Clinton, N. C.—"Kindly give me the correct pronunciation of *virile*. Does the first 'i' retain the sound of its Latin root, or does it change to long 'i'?"

The NEW STANDARD DICTIONARY prefers the pronunciation *vir'il* (i as in *pin*), but the pronunciation *vir'il* has sanction of usage and is its second choice.

"E. E. O.," Oxford, O.—"Is the phrase *I don't think*, as used in the following sentence, correct? 'I don't think present-day methods in the school-rooms are efficient.'"

Notwithstanding the fact that we say *I don't think* when we mean "I think it will not," and thus, from the point of view of grammar, commit a breach of its rules, we are permitted to do so because *I don't think* is so old that it has become an English idiom. Just as, for instance, the word *pass* is used by us to-day at table: When we want bread, butter, or the like, we say "Please pass the bread," etc., but we mean "Please hand me the bread." The language is full of such anomalies.

"A. R. C.," Nashville, Tenn.—"Please tell me whether it is correct to use the word *tell* in the following sentence: 'It is impossible to tell one house from another.'"

As one of the meanings of the word *tell* is "to discern with certainty," the use of that word in the sentence given is quite correct.

"C. H. M.," Detroit, Mich.—"Will you kindly state whether the use of the word *surprise* in the sense of 'observe with surprise' is sanctioned by good literary usage?"

As the verb *observe* means "to take notice of with some degree of attention, or with careful scrutiny," it would be catachrestic to speak of *observing with surprise*.

Hupmobile

The car of The American Family

\$1050

Completely Equipped

With electric starter and lights, demountable rims, oversize tires, \$12.00. Prices f. o. b. Detroit.

Get the Facts

Easiest thing in the world to confirm all the good you hear of the Hupmobile.

Any Hup owner will gladly tell you the Hup costs less to run.

That it is easier on tires.

That repair costs are nothing, or next to it, because parts breakage is almost totally unknown.

That oil and gas mileage are highly satisfactory.

That he can travel wherever the wheels can find traction.

That he's never been stuck for lack of power.

Ask Any Hupmobilst

If you don't know an owner, make an opportunity to talk to one who is a stranger to you.

You'll find him glad to talk, and enthusiastic about every feature of the car and its low cost.

This enthusiasm of Hup owners is our greatest asset.

It sells second and third Hups to the same men.

It sells Hups to men who have owned other cars—higher priced and lower priced.

Wherever you read this, you'll find Hup ownership satisfaction—it's the same everywhere.

Talk to a Hup owner or the Hup dealer.

MOTOR-CARS

AND THEIR STORY

By Frederick A. Talbot

This is not a manual. The author's object has been to describe in a popular manner, and free from technicalities, the amazing romance of the motor-car since its inception, and particularly the great feats—novel and ingenious applications, etc.—of the automobile. A big, beautiful book, almost three inches thick; profusely illustrated. Large octavo, cloth; 368 pages.

\$6.00 net; average carriage charge, 24c.

FUNK & WAGNALLS COMPANY
334-336 Fourth Avenue New York, N. Y.

Digitized by Google

showing for June is the best ever reported for that period. The returns for six months furnish a total of \$36,426,507,618, a drop of one-tenth of 1 per cent. from the first half of last year, but the sum given is 3 per cent. larger than that reported for the six months ended June 30, 1912."

THE GROWING ACTIVITIES OF THE I. C. C.

Attention is called by *The Railway World* to the heavy increase that has taken place in the work done by the Interstate Commerce Commission. "Nothing," it says, "so strikingly indicates the growth in the activities of the Commission as a comparison between the early requirements of that body as to working force and appropriations and the requirements of the Commission at the present time." Twenty-five years ago—that is, in 1888—the appropriation made by Congress for the salaries and expenses of the Commission was \$125,000, of which amount only \$113,000.07 was expended. At that time there were only five Commissioners, one secretary, and twenty-six clerks. These with the other employees made a total force of thirty-eight.

In contrast it appears that last year the appropriations made for the Commission amounted to \$1,853,629, of which \$1,560,404 were expenditures. The Commissioners were seven in number, the clerks numbered 501, and these with the other employees swelled the total force to 859, as against only thirty-eight twenty-five years ago. The appropriation last year was divided into the following items:

For salaries of Commissioners and Secretary.....	\$75,000.00
For general expenses in the execution of the laws to regulate commerce.....	1,000,000.00
To enforce compliance with Sec. 20 of the act to regulate commerce as amended by the act approved June 29, 1906, including the employment of necessary special agents or examiners.....	300,000.00
For the payment of all authorized expenditures "to promote the safety of employees and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their locomotives with safe and suitable boilers and appurtenances thereto".....	225,000.00
To enable the Interstate Commerce Commission to keep informed regarding compliance with acts to promote the safety of employees and travelers upon railroads, including the employment of inspectors.....	150,000.00
To enable the Interstate Commerce Commission to investigate in regard to the use and necessity for block-signal systems.....	2,029.00
Deficiency appropriation to provide for the valuation of property of the carriers.....	100,000.00

STEEL COACHES INCREASING

The substitution on railways of steel passenger-cars for wooden ones has been going on at a rate more rapid than most persons have known. Moreover, it has been going on rapidly, in spite of business depression and the difficulties railroads have had in raising capital to meet charges and pay dividends. On January 1, it is known that of cars used on passenger-trains 3,144 were under construction, of which 87 per cent. were all-steel cars, and 12 per cent. cars having steel underframes. There are now more steel cars in use on American railroads than there are wooden cars,—the figures being, of steel cars 48,486, of wooden ones 45,546. This movement has been notably accelerated by legislation. In Congress there are now pending seven bills that require the replacement of wooden cars by steel ones. These bills do not require an immediate transformation, but call for a gradual replacement, periods during which the work may be done varying from one to ten years after the passage

ARE YOU WILLING to let one of these books tell you the TRUTH about advertising?

YOU'RE not afraid to hear the truth about your product.

You're not afraid to know how your salesmen spend their time—or what your dealers think of you.

Then it's time for some one to tell you what advertising really is and what it can do for your business.

To tell you why more money is being squandered on unwise advertising than in almost any other business enterprise.

To tell you how straight and plain and smooth is the right road for any man who is willing to follow it.

These books tell you the truth, and strip the mystery from advertising.

Check "A" on coupon if you're a non-advertiser, "B" if you are spending \$25,000 or less on advertising, "C" if you are spending more. One book, whichever fits your need, will be sent free. If you want more than one, send 25c for each additional copy.

"The Pride of Our Home"

We never tire of praising our beautiful "White-Frost" Refrigerator. We know it to be the ideal refrigerator. It protects our health because it keeps our food in perfect condition. It saves time and work because it is so convenient. It has a perfect circulation of air from the ice to the provisions and return; thus giving a pure, dry atmosphere in provision chamber at all times. We can remove and clean the interior parts of our "White-Frost" Refrigerator in one minute. Try the wonderful "White-Frost" Refrigerator in your home 30 days free. Note its beautiful finish—white enamel inside and out. Convenient revolving shelves—metal construction. Try it for ice economy and if you are not satisfied after the 30 days' free trial, return it at our expense.

Easy Payments

Never mind the money. Our rock bottom wholesale price and easy payment terms are so very liberal that you never think of the money. You buy direct from the factory. This offer places you in the very same position as if you were a dealer. You get 30 days' free trial before you decide to keep the refrigerator. We pay all freight charges to your nearest railroad station. Write for particulars of our direct free trial offer and easy payment plan.

Your Name and Address

will bring our free book, describing fully all the benefits and advantages of the "White-Frost" Refrigerator. It shows all the different designs. It gives you our rock bottom factory price, easy payment plan, our unparalleled free trial offer and 25-year guarantee which goes with every sale. Get full particulars of this amazing offer. Write today—now.

PROGRESS IN BRITISH RAILWAYS

It was shown by *The Statist*, of London, in a recent article, that the railways of Great Britain have been making real progress without making heavy increases in capital. There have been improvements in their physical condition and in their equipment, but these have been coincident with "much greater economy in capital expenditure than ever before." As summarized in the *New York Evening Post*, the *Statist* writer says:

"In the last five years of the period from 1900 to 1913 inclusive, the average amount of capital expended on British railways per annum has been only £6,000,000, whereas in the previous eight years the average expenditure was £15,600,000 per annum. The economy of capital in recent years in consequence of the new methods of operating the traffic of British railways, and in consequence of the much larger amounts of profits devoted to betterments and improvements, will be evident from the following statement, which shows the amounts of new securities issued and the yearly averages of stated periods:

Period	New Capital	Average per Annum
1909-1913	£30,000,000	£6,000,000
1901-1908	125,000,000	15,600,000
1891-1900	149,100,000	14,900,000
1881-1890	131,000,000	13,100,000
1871-1880	179,000,000	17,900,000
1861-1870	181,800,000	18,180,000
1851-1860	108,000,000	10,800,000

"Already the economy of capital relatively to the past has been between £40,000,000 and £50,000,000. That is to say, had the railways continued to deal with their traffic in the way they did up to ten or twelve years ago, they would have needed to spend during the last five years something like £9,000,000 per annum of additional capital.

"A relatively high return obtained on British railway capital in the past year was earned after paying substantially higher rates of wages to railway employees, and after spending money more liberally upon the maintenance and improvement of the permanent way and equipment than ever before. The satisfactory character of the results of the past year will be evident from the following statement, which presents the annual return on British railway capital since 1890, figures representing thousands of pounds. Figures for 1913 are partly estimated:

Year to Dec. 31	Gross Earnings	Oper. Exp.	Ratio	Net Receipts	% of Net Receipts to Capital
1913	£137,500	£87,000	63	£50,500	4.41
1912	128,553	81,224	63	47,329	4.16
1911	127,200	78,615	62	48,585	4.31
1910	123,926	76,570	62	47,356	4.22
1909	120,174	75,039	62	45,135	4.04
1908	119,894	76,408	64	43,486	3.90
1907	121,349	76,609	63	44,740	4.09
1906	117,228	72,782	62	44,446	4.07
1905	113,531	70,065	62	43,466	4.03
1904	111,813	69,173	62	42,640	4.01
1903	110,880	68,562	62	42,317	4.05
1902	109,170	67,541	62	41,629	4.06
1901	106,559	67,440	63	39,099	3.88
1900	104,802	64,744	62	40,058	4.05
1899	85,923	47,877	56	38,046	4.17
1890	79,949	43,189	54	36,760	4.37

RAILROADS THAT GREW UP FROM THE LUMBER INDUSTRY

It is pointed out in an interesting way by the *New York Times Annalist* that the history of the lumber industry in this country "is closely linked with the growth of railways." Because of the wealth that is in plain sight, "an unbroken forest is a magnet that always attracts a railroad." The first step is to lay down rails for the transportation of logs. They are crudely laid, it is true, with an unballasted road-bed, but in such roads are found the beginning of great systems coming afterward. After the cutting of the timber these primitive lines often cease to be profitable, but they are "seldom abandoned." For one

thing, the right of way they have secured is valuable. It is after the timber has been cut off that the period of their greatest usefulness often sets in. Some 40 per cent. of the railroads in Georgia, Florida, the Carolinas, and some other States, were originally logging roads; the lumber-jack "blazed the way for the settler." The same is true of many regions in the Northwest. Interesting details are given by the writer:

"Florida was once considered one of the wildest portions of the United States. Wild beasts and alligators were the monarchs of the cypress forest which the first rails traversed. What was considered, a generation or so ago, a region of uninhabitable swamps has become one of the most productive agricultural sections of the United States. What were once logging

roads are now well-hallasted lines over which roll heavily laden freight-cars and palatial passenger-trains. In Wisconsin and Minnesota, after the soil was bared, new wealth, in copper and iron, was discovered beneath its surface. In Pennsylvania it was coal.

"These changes are still going on. At Marshfield, Ore., and at Eureka, Cal., there are active logging roads nearly 200 miles in extent. They are gradually pushing eastward to meet the steadily advancing lines of the Southern Pacific that are being extended westward. On the peninsula that stretches north from Olympia, between Puget Sound and the Pacific, there are nearly a hundred logging roads.

"When Ben Holliday had made a fortune out of his stage lines he began the construction, from Portland south, of a railroad through what was then the most

The Home Life of the Ancient GREEKS

Translated from the German of Prof. H. BLUMNER
By ALICE ZIMMERN (Girton College, Cambridge)
With Over Two Hundred Illustrations

The purpose of this volume is to present, in a clearly written and attractive style, a description of all sides of life in ancient Greece. While to the student, by illuminating the many allusions to customs and manners, it will make clear the preparation for, and study of, the Greek texts, its interest will be equally felt by the general reader. *The Nation*, New York, says: "It is a book which may be used either for consecutive reading, or, owing to its full index, for reference."

Large 12mo, cloth. Profusely illustrated and thoroughly indexed.
Price \$2.00 Net, average carriage charges, 12c.

FUNK & WAGNALLS COMPANY, Publishers, 354 Fourth Avenue, New York City

dense forest in the United States. It was necessary to cut a path a thousand feet wide through the timber. For years his line was little more than a logging road. The chief feature of each construction camp in the Willamette Valley was a saw-mill, where the logs were turned into rough lumber and sent down-hill to Portland for transshipment beyond the seas.

"Finally this rough road met the rails of the Southern Pacific in the mountains where years before the gold hunters had surged in quest for fortune. Portland was linked with the East by way of San Francisco. Settlers spread over the denuded lands, blasted out the huge stumps, plowed the ground, and the rich agricultural region of to-day had its beginning.

"Meanwhile a number of small branch logging roads had been built as feeders to the bigger line. There was not much lumber left to haul and they ceased operations. There was an outcry from the colonists, and the railway company took over the branches in an effort to develop the country. To-day one of the most magnificent farming sections in the world, from Portland to the Rouge River, spreads along this former logging road and its tributaries, where a quarter of a century ago it was not thought possible to raise a profitable crop.

"The main line of the Great Northern from Seattle to Vancouver was originally a logging road. In southeastern Texas and southwestern Louisiana there was a network of small logging roads that threaded their way through the forests of pine. Later these were connected, and from them have sprung several vigorous railway organizations."

Putting It Up to Paul.—One day when old Archbishop Howley drove up in grand style to the door of the House of Lords a Quaker thus address him:

"Friend Howley, what would the Apostle Paul have said if he had seen these four horses, and the purple liveries, and all the rest?"

The good-natured Primate, in no way flustered, replied as follows:

"Doubtless the Apostle would have remarked that things were very much changed for the better since his time."—*Tid-Bits*.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. The LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

TOPICS OF THE DAY

THE LEGACY OF HUERTA

THAT THE REAL CRISIS in Mexican affairs is yet to come, now that Huerta has gone, is a dread suggestion in some quarters, because of possible counter-

revolutions and factional fights and the doubt whether Mexico has any man strong enough to rule. But no such dark view clouds the horizon at Washington, for dispatches from the capital to newspapers trustful of the Administration tell us that "it can not be too strongly emphasized that the general opinion in Washington official circles is that the war between the Constitutionalists and the Huerta Government is over, and that peace will soon be restored throughout the country, except in the regions where the Zapatistas, the forces of General de la O, and guerrilla bands are operating." But whatever the future, every one seems a unit in the belief that Huerta has done his native land a great service by leaving it, and President Wilson's policy is praised even by some opposition papers for the success of eighteen months of "watchful waiting." As to the actual situation, we read that Huerta is bound for Europe, with six millions of dollars for his "rainy" day, and to succeed him Francisco Carbajal, a jurist, is installed as Provisional President, claiming no ambition other than "to terminate the internal conflict" of his country. To this end he is preparing to transfer control of the national government to General Carranza, requiring only that Carranza grant a general amnesty and insure the protection of life and property in Mexico. Carranza's attitude is plainly shown in his telegraphed statements to various newspapers, and may be summed up in the following message to the *New York World*:

"Replying to your courteous message of yesterday, I would say: Huerta's surrender of the power which he had usurped may bring as a consequence the unconditional surrender of the army which sustained him. With such a surrender the existing warfare in our country should terminate. Otherwise

the strife will continue to a definite and complete triumph of the Constitutionalist cause."

The procedure of the United States, we learn from Washington dispatches, is that President Wilson has "tacitly agreed" to Carranza's plan to establish "an absolute dictatorship," but has also warned the Constitutionalists that "if violence accompanies the occupation of Mexico City, intervention still may be necessary, and that the American forces will be retained at Vera Cruz until peace is fully restored." How this is to be managed is described by one of the *New York Herald's* Washington correspondents in these words:

"To restore peace, Carranza will rule with absolute power over life and property. And yet in wielding this enormous power comes the likelihood of his offending Villa or Zapata.

"Even the reforms which Carranza has been fighting for will be put into effect, the State Department is informed, through military decree.

"Constitutionalism will have to await the restoration of peace and the installation of another Government. Until this occurs, Mexico and the United States will have to place their faith in the benevolence of Carranza's despotism."

The Constitutionalists "have conquered Huerta," the *Chicago News* remarks, but it asks whether they will "curb their own passions and personal ambitions in the interests of the people of Mexico?" So also the *Chicago Herald*, noting that "the revolution will soon be the government in Mexico," wonders what "animating ideas" it brings with it to power. The answer to

this query, *The Herald* adds, "should give an idea of the difficulties that still confront this country in Mexico." But while the *New York Evening Post* is not unconcerned, it is not dismayed at the outlook, as may be read in these lines:

"It is a continuous obligation in Mexico which the President has assumed—an obligation partly international in its character

THE "TRANSFER AGENT" IN MEXICO.

Francisco Carbajal, who became "Provisional President" of Mexico upon the resignation of Huerta. It is expected that he will only retain power long enough to transfer it to Carranza or some one agreeable to him, or perhaps until a general election.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE** or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as Second-class Matter.

—and the ways and means of seeking to execute it, delicately but with effect, will need to be carefully thought out. The country, however, will little heed these things at present. It will be inclined to believe that the smaller matters go with the greater; and that a President who, without a war, has succeeded

JONAE.

—Sykes in the Philadelphia Public Ledger.

In enforcing his original demand on Huerta can be trusted to deal successfully with the various sequels as they arise."

The *New York Times*, too, is hopeful that Mexico will profit by the present opportunity "to obtain a wise, just, and free Government," while the *Baltimore Evening Sun* says confidently that "the Mexican people have started on the road to the new freedom and nothing can turn them back—neither Pharaohs at home nor abroad." Of course, the *New York Journal of Commerce* is willing to admit, doubtfully, "it may be 'the beginning of a new era in Mexico,' but it takes time for new eras to work out their promised results." And critics of the Administration like the *New York Tribune*, *Evening Mail*, and *Evening Sun* are even less certain that following the departure of Huerta, peace and an orderly administration will soon be brought back to Mexico.

The following chronology of the now historical Huerta régime we take from the columns of the *New York Evening Post*:

February 18, 1913—Huerta became Provisional President.

February 23—Madero and Suarez, the deposed President and Vice-President, assassinated. Villa started revolution against Huerta.

April 9, 1914—Bluejackets from *Dolphin* arrested; insult to American flag.

April 14—Huerta refused apology, and President ordered fleet to Mexican waters.

April 17—Huerta offered conditional salute.

April 18—Wilson demanded unconditional salute.

April 20—Congress granted President power to coerce Huerta.

April 21—Vera Cruz custom-house seized by American force.

April 22—Huerta gave Nelson O'Shaughnessy, American *Chargé d'Affaires*, his passports.

April 25—United States accepted offer of envoys of Brazil, Argentina, and Chile for mediation.

May 20—Mediation conference assembled at Niagara Falls.

July 1—Mediators adjourned.

July 15—Huerta resigned as Provisional President.

"PERSONAL GUILT" ON THE NEW HAVEN

NEW ENGLAND is not contradicting the Interstate Commerce Commission's characterization of the Morgan-Mellen management of the New Haven Road, as "one of the most glaring instances of maladministration revealed in all the history of American railroading"; it is "simply wondering," says the *Springfield Republican*, "if it can get any of its money back." For by "waste and mismanagement," says this long-awaited report, the New Haven stockholders have been mulcted of an amount "between \$60,000,000 and \$80,000,000," and directors, it further hints, "should be made individually liable to civil and criminal laws for the manner in which they discharge their trust." And certain stockholders have already filed a civil suit for recovery in Massachusetts, the Attorney-General has sent evidence of "criminal negligence" to his district attorneys in New England. Mr. McReynolds is himself being urged by some editors to start a criminal suit under the Sherman Law, the Government's civil suit for dissolution is still threatened, and with New Haven stock dropping to 50, there is talk of a receivership. It should be noted, and the fact is emphasized by several newspapers, that the Commission says nothing unpleasant about the road's present management or future prospects, and even thinks that "honesty and efficiency of management of this property as a railroad only will undoubtedly, in time, restore its former standing." But the Commission confirms the general opinion expressed after Mr. Mellen gave his interesting testimony in Washington, that at the time when the New Haven was so lavishly spending its millions the other members of the board of directors were absolutely subordinate to the wills of Mr.

Copyrighted by the New York "Herald" Company.

THE LAST TURN OF THE WHEEL.

—Rogers in the *New York Herald*.

Mellen and Mr. Morgan. "It is inconceivable," we are told, "that these wrongs could have gone on without interference if the members of the board of directors had been true to the faith they owed the stockholders." Most of these directors, the report says further, "accepted their responsibilities lightly—

"They failed to realize that their names gave confidence to the public and that their connection with the corporation led the public to invest. When these directors were negligent and serious losses resulted therefrom, they were guilty of a grave dereliction of duty and a breach of trust that was morally wrong and criminal in its fruits."

These strong words are commended, quoted, and enlarged upon by a host of papers all over the country, and even conservative New York journals in close touch with Wall Street admit the evil thus described. Says *The Commercial*, for instance:

"The great evil of dummy directorships has had, perhaps, no more convincing exposé in the world's history, and the case should serve as a lesson not only for the future, but should act as a beacon-light to those corporations that may at present have some directors who are not in fact fulfilling the duties a real director should. That any such financing could have been done under our present laws is sufficient cause for such immediate remedial legislation as will make its repetition impossible."

In an effort to point out some of the men responsible for New Haven wrong-doing, several newspapers print a list of the directors of the road as last constituted under the presidency of Mr. Mellen. Altho the membership of the board had changed from time to time, and these gentlemen were not necessarily members when any of the criticized steps were taken, it is interesting to note in these lists the names of John L. Billard, William Rockefeller, Theodore N. Vail, Morton F. Plant, George F. Baker, Samuel Rea, Laurence Minot, and A. Heaton Robertson. Some of these men, suggests the *Newark Evening Star*, could make good the amount said to be misspent "without begging themselves." But most editors do not look for any voluntary restitution. That the courts should either force restitution or punish the offending directors is the desire of papers like the *Boston Post and Traveler*, *Springfield Republican*, *Syracuse Post-Standard*, *New York Evening Post*, *Philadelphia Public Ledger and Inquirer*, *Baltimore Sun*, *Chicago News*, and *Milwaukee Sentinel*. But they have little hope that either end will be gained, and they mention many legal difficulties which would have to be surmounted, tho the *Springfield daily* notes the Commission's belief that some \$8,000,000 might be recovered by proper legal action. This would include money spent on the "villainous Billard transactions" and the Rhode Island trolley deals. With Morgan dead and Mellen immune, "to send any one else to jail would be justice, but still a mockery of justice," declares *The Republican*, and it further notes a point likewise emphasized by the *Worcester Gazette* and the *New York Times*:

"Directors should direct, but so should stockholders control their own property by taking more than a passing interest in its management. The one weak point in the Commission's report is that it does not hold up to scorn the average stockholder who is smugly placid over Mellenism and Billardism, so long as dividends are paid. The leading stockholders of the New Haven were largely aware of the fact that the board of directors had its dominating spirits and they were not disturbed because the majority of the directors were dummies. Such was their faith in Mr. Morgan that doubtless they preferred dummies to kickers."

Some of the "significant incidents in the loose, extravagant, and improvident administration of the finances of the New Haven" are thus cited by the Interstate Commerce Commission:

"The Boston & Maine despoilment; the inequity of the Westchester acquisition; the double price paid for the Rhode Island trolleys; the recklessness in the purchase of Connecticut and Massachusetts trolleys at prices exorbitantly in excess of their market value; the unwarranted expenditure of large amounts in 'educating public opinion'; the disposition, without knowledge of the directors, of hundreds of thousands of dollars for influencing public sentiment; the habitual payment of unitemized vouchers without any clear specification of details."

"The confusing interrelation of the principal company and its subsidiaries and consequent complication of accounts; the

practice of financial legerdemain in issuing large blocks of New Haven stocks for notes of the New England Navigation Company, and manipulating these securities back and forth."

"Fictitious sales of New Haven stock to friendly parties with the design of boosting the stock and unloading on the public at the higher 'market price'; the unlawful diversion of corporate funds to political organizations; the scattering of retainers to attorneys of five States, who rendered no itemized bills for services and who conducted no litigation to which the railroad was a party; extensive use of a paid lobby in the matters as to which the directors claim to have no information; the attempt to control utterances of the press by subsidizing reporters; payment of money and the profligate issue of free passes to legislators and their friends; the investment of \$400,000 in securities

A HOUSE OF CARDS.

—Rebus in the New York World.

of a New England newspaper; the regular employment of political bosses in Rhode Island and other States, not for the purpose of having them perform any service but to prevent them, as Mr. Mellen expressed it, from 'becoming active on the other side.'"

The Commission notes several of the New Haven's worst bargains, which Mr. Mellen discuss at length on the stand, and estimates the total loss to the road "by reason of waste and mismanagement" at between \$60,000,000 and \$90,000,000. It was found that the company had 336 subsidiary corporations, many of which "were used to cover up transactions that would not bear scrutiny."

Mr. Mellen calls this the "report of a political tribunal issued for political purposes." *The Wall Street Journal* and the *Albany Journal* can not help seeing in it some relation to politics, and the latter daily thinks it evidence of Washington's continuing hostility to business. The *Hartford Courant* is aware of "a vindictive spirit," the *New York Journal of Commerce* regrets that the facts are "stated in an extreme and one-sided way," and the *Philadelphia Press* still believes that "most of the acts complained against would have turned out profitably if general business conditions had remained good." On the other hand, the *New York World* takes the report as a condemnation of Wall Street and a justification of the Administration. It says, in the course of a long and indignant editorial:

"The New Haven was looted under the personal auspices of men who were supposed to represent the loftiest financial integrity of Wall Street. . . . Yet under the direction of Morgan and Rockefeller the New Haven shared practically the fate of the Erie under Fisk and Gould. . . . There can be no Constitution of Peace with men who practise grand larceny and call it finance."

ADVANCE NOTICES OF PROSPERITY

ONE CAN HARDLY pick up a newspaper these days without seeing a brief item telling of some concern reemploying laid-off workmen, or of a railroad ordering supplies, or of improving conditions in some industrial center. The chief impulse to this renewed activity, we gather from

Copyrighted by the Chicago "Tribune" Company

SHOWING HIM PROSPERITY.

—Smith in the Chicago Tribune.

the editorial comment, is twofold, coming from the wheat-fields and the White House. The latest Government reports put the wheat yield at 930,000,000 bushels and the total value of all this year's crops is estimated at \$10,000,000,000. "There can be no calamity when the earth yields such a harvest," declares the *New York World* (Dem.); "calamity is drowned in an irresistible tide of Plenty and Prosperity." Then, the smiles on the faces of President Wilson's "big-business" visitors seem to have more meaning when we learn of a letter written by a Chicago manufacturer to the President a few days after their White House conversation, in which he said: "I have returned much more hopeful of an early return to better business conditions, and my first duty has been to give instructions to immediately increase operation at one of our plants from 75 to fully 100 per cent. capacity, and to prepare the other works for maximum operation just as quickly as improved conditions permit." Democratic editors, of course, make the most of these cheerful reports in each day's news, to show that the policies they advocated have not hurt business in the least and to point out that the President's "psychological" diagnosis was quite correct. Republicans who admit the rejuvenating influence of the great crops prefer to say with the *Portland Oregonian*: "We shall have good times in spite of the adverse influence of Democratic policies." Or they point out, as does the *San Francisco Chronicle*, that "all the conditions are favorable for a great and rapid extension of business except one. And that is the attitude of the President and Congress toward those who have shown their faith in this country by investing their money in it." A rather gloomily interesting point of view is afforded by an unenthusiastic writer who has been examining conditions throughout the country for the *Washington Post* (Ind.). He says:

"Notwithstanding the fact that crop prospects are the greatest for many years, record-breaking in some instances, there is a feeling of apprehension apparent everywhere in the West.

There is no buoyancy or optimism, except that voiced by certain politicians. The general course seems to be that of moving cautiously, and to hedge against possibilities. While no one will say it for publication, many persons who are in position to know expect hard times after the brief boom caused by marketing the harvests is over."

But on the editorial page of the same paper, this year's harvests are acclaimed as "the soundest and most reliable basis for general prosperity in business affairs of the United States." For, we are told:

"The news from the West, including Southwest, Northwest, the Middle West, Central West, and Far West, is that the railways will be called upon for full capacity of cars and motive power to transport the products of the soil.

"That means that Pennsylvania, Ohio, and Alabama iron and steel plants, furnaces, and coke-ovens will be called upon for greater outputs.

"That means that West Virginia, Virginia, and Kentucky coal-mines will have a demand that will call for employment of greater numbers of miners.

"That means that the industrial districts of the United States will resume activities and be able to dispose of larger outputs than during the past two years.

"The prosperity of the farmers and the greater activity in the manufacturing sections will insure larger demands upon the merchants in every city and town of the United States, and by the middle of August this will be fully demonstrated, and it will make a great change for better business in every part of the Republic."

Nor does the good news come only from the West. The *Boston Transcript* and *Springfield Republican* tell of good crops in New England. Corn and cotton prospects are good, and the South, declares the *New Orleans Times-Picayune*, "shows up well." So the influence of these \$10,000,000,000 crops, agree *New York World* (Dem.), *Indianapolis Star* (Prog.), and *Wall Street Journal* (Fin.), will help all kinds of trade all over the country. Nothing, adds the *New York Commercial*, "can discount this flood of new wealth, compared with which the products of any other industry, even steel and iron, shrink into insignificance."

But even in steel and iron there are reports of better times.

A HELPING HAND.

—Hodge in the Spokane Spokesman-Review.

Take, for instance, this announcement from a Republican paper published in the city where those industries center, the *Pittsburg Chronicle Telegraph*:

"Pittsburg is the first of American cities to recover from the

depression in business which has affected the entire country. In this manufacturing district the ebb-tide in the commercial and industrial field caused by the change in the nation's tariff policy, the changes wrought in the banking and currency system, and the uncertainty in the railroad-rate situation has been reached. Pittsburg is returning to its old-time prosperity. This is the opinion voiced by leading manufacturers, bankers, and business men of the community.

"All branches of trade are feeling the stimulus of the return

TAKE?
—Bowers in the Newark Evening Star.

of normal conditions. . . . Reports in the iron and steel industry for July in the Pittsburg district show an increase over June of 10 per cent. For August the outlook is still better."

The Iron Age reports that "the corner seems to have been turned at last" in the steel trade, and tells of manufacturers shortening their usual mid-year shut-downs for inventories and repairs because of demands from customers. Several newspapers are encouraged by the Pennsylvania Railroad's recent order for 81 new locomotives, 1,000 all-steel freight-cars, and 100,000 tons of new steel rails. Men laid off at this road's Altoona shops have returned and additional workmen have been required. The New York *Commercial* and other authorities report a "more liberal buying on the part of railroads." *The Wall Street Journal* tells of a most encouraging outlook for a large demand for coal in the fall. Several business authorities, including *The American Wool and Cotton Reporter* and Marshall Field & Company's weekly trade review speak of growing activity in textiles. Delegates to a New York convention of the National Leather and Shoe Finders' Association gave out most optimistic statements to the press, making, as the *Jersey City Journal* (Ind.) puts it, "an assault upon the calamity-howlers that will long be remembered." Senator Hollis, of New Hampshire, says: "Not a single cotton-, woolen-, or textile-mill has closed down in my State, and not a pulp- or paper-mill." Likewise not one of the three hundred cotton-mills in North Carolina have shut down, according to Senator Simmons, of that State, who further quotes a large mill-owner as speaking of this as "the best year the industry in the South had ever known." In Grand Rapids, they are selling more furniture than ever before, says the *Detroit News* (Ind.), while "in Detroit we have numerous indications of rising prosperity in the steady increase of employment in the larger manufacturing plants."

The New York *Times* has been making a nation-wide inquiry into business conditions and prospects at the beginning of this

month, as compared with the same time last year. Summing up the correspondence and reports received, it notes running through the entire mass "a feeling of confidence in the immediate future." The railroads have suffered most, but "expect a big increase over last year's business when the crops begin to move." It will take 525,000 cars to move the winter wheat crop alone, after making allowance for farm and local consumption, says E. C. Simmons, the St. Louis hardware magnate. Automobile manufacturers, says *The Times* in its summary, "report business booming." Quoting further:

"Cotton-mills have been somewhat busier this year than last, and the sugar industry shows considerable improvement. The hardware business got more or less into the doldrums a full year ago and is just beginning to work out of them, so that prospects are favorable. The boot and shoe trade shows a loss of about 15 per cent. The stove business fell off slightly, but the makers say there has been no depression, and a healthy growth is to be expected. With the hardware men, they are interested in the fact that building permits throughout the country showed a gain in June for the first time this year. In the anthracite-coal trade there was a slight recession during the six months, but June showed the other way."

Several papers mention the country's bank clearings as a good sign. For the first half of 1914, says the *Springfield Republican* (Ind.), they "were but 1.4 per cent. below the same period last year," and in the early weeks of July they exceeded the 1913 record. These figures, says *The Republican*, "can not be explained in any way consistent with 'hard times'; in all previous periods of very severe depression in business bank clearings have fallen off from 10 to 20 per cent." Idle railroad cars are now "decreasing fast as the crop movement goes on," and, according to *The Republican*, "it is now admitted that the figures of idle cars have for months been swollen at least 10 per cent. by the inclusion of freight-cars that under ordinary cir-

THE "TIRED BUSINESS MAN."

—Harding in the Brooklyn Eagle.

cumstances would be scrapped. These cars can never be put back into service, but their inclusion in the idle-car showing made a fine hard-times exhibit and helped to intensify the 'psychological' side of business depression." And this paper

makes another observation anent the "psychology" of this depression:

"A little thing like a 930,000,000-bushel wheat crop, as estimated by the Department of Agriculture, has no effect on the traders in the stock-market. . . . You can't fool the devotee of the stock-ticker. He knows this country is headed for industrial damnation and economic ruin."

THE CONVICT PLEA FOR PROHIBITION

THE DRAMATIC APPEAL for State-wide prohibition, address to the Pennsylvania legislature by 1,008 out of a total of 1,478 prisoners in the Eastern Penitentiary, at Philadelphia, because they ascribe their downfall to drink, is said by the Philadelphia *North American* to be "the strongest sociological argument ever made" against the liquor

WHERE THE PRISONERS PLEAD FOR PROHIBITION.

The Eastern Penitentiary of Pennsylvania, 1,008 of whose 1,478 inmates recently signed a petition for State-wide prohibition.

evil. More than that, press reports tell us that the example is being copied by other penal institutions, among them the Federal prison at Fort Leavenworth, Kan., the inmates of which are to petition Congress for a national prohibition law. The Pennsylvania petition attracts wide editorial attention, especially as it occurs when the perennial question of prohibition is much to the fore. Discussion of national prohibition, as called for by the Hobson resolution in the House of Representatives, is active, and our editors are also interested in the fact that on July 1 West Virginia became the ninth prohibition State, with all indications that Idaho will be the tenth. Incidentally, as an exceptional specimen of editorial interest, it may be noted that the Eastern Penitentiary movement is the work of the convict editor of *The Umpire*, the prison paper. He himself is a victim of drink, which he names "a wife's woe and a child's sorrow," adding "that if a decent manhood asserts itself at the next legislature, the curse will be ended." The text of the petition follows:

"To the Senate and House of Representatives of the Commonwealth of Pennsylvania, in General Assembly met:

"Your petitioners, representing the major portion of the inmates of the Eastern State Penitentiary of Pennsylvania respectfully aver:

"That they believe fully 70 per cent. of crime within the State is directly attributable to the excessive use of intoxicating liquors; and

"That many of them have a personal knowledge of its debasing influence as exemplified in their own lives; and

"That, believing if the sale of intoxicating liquors was prohibited by the enactment of laws by your honorable body, the effect would be to reduce crime at least 50 per cent., if not more, they therefore

"Respectfully pray that you will favorably consider the introduction of any measure having for its object the curtailment of the sale of intoxicating liquors, and use the great power with which you are clothed to secure the passage of an act to prohibit the sale of such intoxicating liquor anywhere within the bounds of the Commonwealth of Pennsylvania.

"We further pray that you will give due consideration to this petition, coming to you as a voluntary deed of a body of earnest men and women, acting entirely on its own initiative, without suggestion from others."

It is a notable coincidence, says the Philadelphia *North American*, that this petition was signed on Independence Day and the Sunday following, and it adds:

"A number of those who thus evidenced their stand on this vital question did so in the face of threats and intimidation which would have kept them from exercising their free will under ordinary circumstances. For while the circulators of the petition observed their instructions to use no persuasion and avoid all controversy, certain inmates of one of the prison blocks organized a militant opposition movement.

"These liquor advocates provoked the clerks and did all they could to keep the men in the block from signing. They resorted to threats and warnings; but in spite of these tactics—the force of which can hardly be appreciated by persons not familiar with certain phases of prison life—only 20 per cent. of those they sought to hold in line for rum were won over.

"This feature adds weight to the result, which greatly exceeded the expectations of the prison officials and those outsiders who had heard of the project. One prison officer had predicted it would be impossible to get 500 names to such a petition."

"Human documents" in the procedure appeared in the form of letters to *The Umpire*, some of which are reprinted by *The North American*. One writer says:

"I have been reading *The Umpire*, and particularly the articles aimed at the liquor traffic. For fifteen years I worked as a tradesman and maintained a family. I met bad company and began to drink. One night while intoxicated I went home. My good wife remonstrated with me, and in a moment of anger I killed her. I am here for life. My children will to their dying day bear the stigma of my wrong-doing. In the name of God, do what you can toward checking the evil! Good luck to you, comrade. I may never live to leave these prison walls, and, in fact, do not deserve it; but, believe me, while I am alive I will do my share toward putting an end to the curse."

The North American calls the movement "a great 'safety-first' measure," and Dr. Samuel Zane Batten says in the *New York National Advocate* (Prohib.) that "it is an appeal in behalf of many others who will come to the same sad end if the liquor traffic continues." The action of these men, thinks the *New York American Issue* (Prohib.), "will put the next Pennsylvania legislature in a position where it will either have to act against the liquor traffic or place its public approval upon crime." Then, replying to those who look askance at petitions from convicts, it argues:

"A prisoner in a penitentiary is still a human being and a member of society, and as such has a right to have his thoughts and convictions considered, however much his liberty of action may be restrained."

This contention is hotly denied by a correspondent of the *New York Sun*, who says that a convict "is recognized as an enemy to society, and society doesn't generally listen to, or ask advice from, its enemies." Then, too, he points out that in many cases inmates of jails—

"tearfully ascribe their downfall to the curse of drink, not to abnormal traits nor to the weakness or defects of their moral nature, because the alleged victim of drink or drugs excites pity and sympathy not usually accorded to the deliberate criminal; yet it is a well-known fact that many burglars, gamblers, and 'gunmen' are total abstainers, denying themselves the use of tobacco in order, to their way of thinking, that the nerves required in the exercise of their calling may be keyed up to the highest efficiency."

The writer summons to his support in this assertion the

"YOU'RE TOO BIG TO HAVE A CONSCIENCE."

—Fitz in the St. Louis Post-Dispatch.

Copyrighted by the "North American" Company, Philadelphia.

GUILTY!

—Richards in the Philadelphia North American.

THE COLONEL AND THE CANAL—FROM TWO VIEWPOINTS.

"confessions" of Al. J. Jennings, the former bandit, who is now seeking to be a candidate for the Governorship of Oklahoma, and quotes from the story of Jennings, published in *The Saturday Evening Post*, as follows:

"Part of my duty was to interrogate incoming prisoners concerning their private lives and enter the answers on the proper blanks. Then and there I had light on prison statistics. One of the questions ran: 'To what do you attribute your downfall?' In nine cases out of ten the experienced prisoner answered 'Drink.' Men who never tasted liquor, because they did not like it, returned that answer just the same. To begin with, it was a good, easy, conventional reason, which stopt further questioning, and then it gave the burglar, the murderer, and the counterfeiter an excuse to work up sympathy."

Daily papers like the *New York Tribune*, *Providence Journal*, and *Springfield Republican*, admit that the convicts' petition is a touching one, but argue that it does not affect the workability of prohibition legislation, which "doesn't prohibit."

LOUISIANA'S "SECESSION"

THE long-standing grudge against the Wilson Administration entertained by Louisiana because the Underwood tariff eliminates sugar "protection" is said to be breaking out in the stampede of Democrats of that State to the Progressive party. Such action on the part of Louisianians, who are Democrats by heredity, as we are reminded by the press, is nevertheless noted with little surprize by editors of whatever political persuasion. Rather it would seem to be the general idea that in going over to the Progressives Louisiana is only carrying out its belief in a protective tariff, for, to quote the *Syracuse Post-Standard* (Rep.), the State "has been for years Democratic by prejudice and Republican by principle." For all that, some Washington dispatches tell us that Democratic leaders from the South are "stunned" to learn that the Democratic Congressional Committee from the Third Louisiana District have gone over to the "Bull Moose" party in a body and that the "split" is "expected to extend throughout the State and may result in the election of three Progressive members." The cause of the "revolt," we read, is the "ruin" of the sugar industry by that section in the new tariff which has forced a 25 per cent. reduction in the duty and provides that in

1916 the duty be entirely removed. The lumber and rice industries are also victims of the tariff, for which, remarks the *Syracuse Post-Standard*, Louisiana has only herself to blame. Under Republican rule her interests were protected and by her efforts in aiding Democratic victory she lost that protection. Therefore, this journal adds:

"The sugar State feeling the pinch, which it has invited, rises in rebellion. It finds no solace in the disparaging comment made by Democratic leaders that its grievance is sordid and that it should suffer in patience for the good of the party. Until men reach a higher level of altruism the fiat that strikes their means of livelihood will seem to them an unfriendly instrument. Louisiana belongs in the Republican party, because upon the fundamental issue which divides the two parties it is Republican in principle."

In the view of the *Seattle Post-Intelligencer* (Rep.), a "really new party" has been started in Louisiana and the name "Progressive" is adopted "solely for the purpose of easing the way for those whose sympathies are entirely with the Republican party in national affairs to withdraw from the Democratic party of Louisiana without offending the old prejudices which survive there from Reconstruction days." The movement, we read further, has "nothing, save its name, in common with the Progressive party in the Northern States," and its beginning is "brilliant."

Among Progressive editors we find the *New York Evening Mail* maintaining that while the tariff is in part the cause of Louisiana's change of heart, it is "by no means the whole reason for the revolt," nor even the "chief reason," and we read:

"The South is tired of separation from the rest of the country. There never was any finer political capacity among any people in the world—not even in Rome in Rome's best days—than there is among the men of the South; and they are tired of maintaining their influence in the affairs of the nation not by their ability, but by local brute force, spasmodically supplemented by the worst political elements of the North. The men of the South want sympathetic association with the people of the whole country. They desire the end of the race issue—of the Solid South as an irreconcilable nucleus to which they must conspire to add somehow the Tammanyites and Roger Sullivanites of the North. They want to be national and progressive."

Another Progressive newspaper, the *Washington Times*, sees an additional source of Louisiana's resentment in the fact that New Orleans was "denied" a regional bank, which was "an

affront to the city and State alike." Still, as Louisiana's Congressional representatives have always been "assistant Republicans on tariff," *The Times* calculates no very serious loss to the Democracy, but it does believe that—

"A real fight for control of Louisiana would be interesting in the extreme. It would give demonstration whether, in a State containing a very high percentage of colored citizens, it is possible to get away from the everlasting domination of the race issue. That issue has so many times served to keep Southern States Democratic, as against all other considerations, that it is difficult to believe Louisiana is even now ready for an effective revolt."

Turning to the Democratic papers, then, we discover the New York *World* confessing that "it can hardly believe that any such good fortune is in store for the real Democrats of Louisiana" as that the "sugar Democrats" should secede, and it adds: "If this sugar crowd can be persuaded to join the Progressives and take the beet-sugar cormorants along with it, there will be another chapter to write in the history of the New Freedom." Of like mind are such journals as the New York *Times* (Ind. Dem.), the Baltimore *Sun* (Ind. Dem.), the Jacksonville *Florida Times Union* (Dem.), the Cleveland *Plain Dealer* (Ind. Dem.), while the Brooklyn *Eagle* (Ind. Dem.), and the St. Louis *Republic* (Dem.) see no great cause for worrying about the Democracy because of "signs of unrest for wholly local reasons."

Among the newspapers that class themselves as "independent," however, there is an occasional tendency to consider the Louisiana "revolt" as a home-thrust to the Democratic party, and it serves admirably the purposes of Colonel Roosevelt, who, caustically observes the New York *Sun*, "deserves well of the whole country," because "to break up the Solid South may be thought amends for breaking up, temporarily, the Republican party." Going further still, the New York *American* says that Louisiana's move presages "Democratic disaster

throughout the United States," while the New York *Globe* cautions the Administration leaders against underestimating the influence it may have. The situation, says the Detroit *Free Press*, is "parlous for the President," and it adds that "he has been threatened with no more serious blow to his prestige"; but the Louisville *Post* thinks that while "the Progressives may get a respectable vote in Louisiana this year," it is very improbable that "the electoral vote of any Southern State will be cast for the Presidential nominee of that party in 1916." And we read in the Syracuse *Herald* that "sugar or no sugar," Colonel Roosevelt's attempt to capture Louisiana is "not a hopeful undertaking," because—

"while sugar production is a leading industry of Louisiana, only an inconsiderable proportion of her people is directly interested in it. Besides, the sugar question, obtrusive tho it be just now, can not overshadow the race issue in that State, where the negro population is more than 700,000, equal to nearly 80 per cent. of the white population. A political overturn in a State heretofore so one-sided, on account of a tariff schedule that affects only a relatively small part of the people, is unthinkable."

Interesting as an expression of Louisiana sentiment is the remark of the Shreveport *Journal* (Dem.) that:

"Quite a few Louisiana newspapers have come out squarely with an indorsement of the idea of two active political parties in the State, but every one, ourselves included, took particular pains to make it plain that 'the other fellow' should be the one to go off after the strange political idols. We never shall get an opposition party in Louisiana so long as all those who favor the plan remain firm in their intention to stick to the old organization. And that's just where the Bull Moose hopes are going to smash. Even down in the Third Congressional District, where discontent over free sugar is especially in evidence, it will be found that it is going to take something more than a grouch to drive lifelong Democrats over to the party of Roosevelt, Pinchot, and Perkins."

FOREIGN COMMENT

SHALL IRELAND BE CUT IN TWO?

THE DIFFERENCE between the forces of the Orange and the Green appears to have simmered down to the question whether the Protestant counties of Ulster shall enjoy independence of the coming Dublin Parliament for six years or forever. The Unionist view of it is that there is no way of getting out of the Home Rule difficulty excepting by permanently excluding Ulster from the provisions of the Home Rule Bill. So argues Mr. D. C. Lathbury, in *The Nineteenth Century* (London). Suggestions and amendments have been made in both Houses of Parliament at Westminster, but the legislators, like Milton's fallen angels, "found no end, in wand'ring mazes lost." Some have suggested Home Rule within Home Rule, but this would subject the parliament at Belfast to the parliament at Dublin, making the opposition cry, Ulster's freedom a mockery and a sham. Mr. Asquith's plan of a time limit of Ulster's independence is also execrated by the Orange descendants of the Boyne warriors.

Mr. Lathbury has evidently studied the question with care. As joint editor of the *London Economist* and editor of *The Guardian*, he has made a brilliant record. He dismisses as impracticable the expedients enumerated above, but he thinks that the exclusion of the northern province will be of advantage to the Irish Catholics, as "the price paid for the exclusion of Protestant Ulster must be the recognition of Home Rule for Catholic Ireland." But Ulster desires that the whole of Ireland remain under the Westminster Parliament, "terms which the authors of the Home Rule Bill cannot grant." Nor can Ulster "admit a compromise" on any other terms:

"Six months ago I believe that Ulster could readily agree to this compromise; to-day it is not possible to feel the same assurance. The Government is really anxious to find a middle term on which both parties can agree. . . . The danger is that the recriminations which seem inevitable, whenever the subject comes up for discussion, may lead Ulster to stand out for terms which the authors of the Home Rule Bill can not grant without undoing the whole of the work."

Then the danger of civil war is dwelt upon, in the island where Ulstermen and Irish Volunteers stand ready to risk their lives for their cause. Both parties must make some surrender, and the details of the compromise he prescribes are thus outlined:

"The Home Rule Bill is now virtually law. Ardent partizans may talk of a date near at hand at which it will be torn up by a repentant people, and the reunion of Irish hearts be symbolized by the restoration of a single Parliament for the three Kingdoms. I doubt whether there are many, even among the most sanguine Unionists, who really expect such a counter-revolution. But

even if it were a hundred times more likely than it is, a quiet interval will be needed for its development. Restorations do sometimes happen after a civil war, but hardly in the middle of it, and it is civil war that now confronts us. It will come, indeed, in a shape which till lately no one dreamed of. What we used to fear was that some chance incident would tempt Ulster to fire the first shot, and that then the British Army, or so much of it as could safely be employed, would be obliged to take the field. Take the field,

indeed, it still must, if the Home Rule Bill remains what it is—a law for the whole of Ireland. But its use will be not to suppress an insurrection, but to bring to an end a war in actual progress between two volunteer forces which are not unlikely to offer a common resistance to the Regular troops which are trying to separate them. This is what the British Government has to render impossible, and this can only be done in one way. Ulster, in whole or in part, must be put outside the Home Rule Bill. The smaller the area chosen, and the fewer details with which the process is encumbered, the easier the application of it will be. It is not the best friends of a compromise that are anxious to overload it. The idea suggested by 'An Ulsterman' is about a tenth part of Ireland, and only a very impracticable politician will insist on fighting for all that he wants when he may have nine-tenths of it without striking a blow."

But the Nationalists will not agree to the permanent exclusion of Ulster, and Mr. Kelly, editor of the strong and influential *Tuam Herald*, speaks earnestly and patriotically as follows:

"If this permanent partition is the only basis of compromise, all we can say, speaking deliberately and advisedly on behalf of the Western Nationalists, is that we can never agree to it. We have reluctantly submitted to separation for the definite period of six years as the price of peace and as now formulated and suggested in the Amending Bill. We

agree to that expedient when settled by a bare majority of every county so voting. That limit as to form and time was the maximum of our concession and we were only driven to it by the wish to avoid civil disturbance. But to agree to permanent partition is inconceivable and impossible. It would be a violation of the national charter of nationhood, a breach of faith with the country, a betrayal of trust, which no party calling

AN ULSTER "HOME GUARD."

Enlisted to protect their homes while fathers and brothers are at the front.

—Punch (London).

itself national could venture to agree to. The Parliamentary party, ably led as it is by Mr. Redmond, have, with the most self-sacrificing spirit of submission and the most statesmanlike moderation, gone already as far on the road to concession and agreement as they consistently, having regarded for their obligations to the Irish people, dare to go. They have, with great reluctance, assented to the repugnant idea of temporary exclusion when such is voted by any of the eleven Ulster counties separately voting, but this is the end and will be the limit of their concession. To expect them to go further and agree to the clear cut, from out of this sacred island of ours, of either three or six counties, originally as Celtic and as Catholic as any other parts, because an intolerant and irreconcilable minority so demand it, is to ask what they will not and can not accede to."

He concludes with this eloquent plea for the conservation of Ireland's integrity:

"Ireland is one and indivisible, and it must remain so. It can not be dismembered and mutilated at the behest and bidding of any section, even if it were the majority of the population, and not a minority. The idea is repugnant to all common sense, and if the struggle is in the end to center round permanent exclusion or not the National sentiment must sternly take sides on the issue and it can not be violated. The country did not endure all that it has suffered only in the end to find itself put off with a dismembered three-quarter territory. France barely had Alsace and Lorraine as part of its territory for a hundred years, and yet the forcible taking of those sundered provinces has been for Germany and Europe a perpetual source of anxiety and unrest and will never by the French people be submitted to.

"Ireland is not going to allow itself to be cut and carved up by any influences or any party, and a big wall of demarcation and division set up between North and South. We are not particularly enamored of even the six-year exclusion. It is a costly, fanciful expenditure at best, but it is the fullest and the furthest we will or can go in the direction of division. We hope the best wisdom of the two English parties between them will bring about a settlement, speedy and satisfactory, but they must not expect to do that at our expense and by straining any further the loyalty to one of them of the Irish party. Strong as that party is and rightly so in the affection and confidence of the Irish people, it is not strong enough and never would be strong enough to suggest or submit to the permanent partition of one single town or county in the God-given heritage which we possess to-day in the soil and territory of this island of ours, given to us, entire and undivided, by our fathers and their fathers, and as a solemn trust to be so handed down by us to our sons and their sons."

JAPAN'S FEAR OF A CHINO-AMERICAN ENTENTE

CLOSER FRIENDSHIP between China and the United States has created in the Far East many rumors—some of them more amusing than informing. Japan in particular seems to be watching our activities in China with a mingled feeling of fear and suspicion. Early in June the Peking correspondent of the Tokyo *Nichi-nichi* wired his paper that China and the United States were said to have entered into a secret understanding of a political nature. To lend color to this sensational news, the Standard Oil Company secured an extensive concession for the exploitation of oil-fields in Shensi and Chili, while the Bethlehem Steel Company was said to have agreed to advance \$30,000,000 to the Chinese Government for the construction of the Foochow dockyard, in the province of Fukien. Nor was Japan the only nation which manifested apprehension with regard to American activities in China, for the British Minister at Peking, according to the *Nichi-nichi* correspondent at the Chinese capital, lodged a protest with the Yuan Administration on the ground that China's agreement with the Standard Oil Company, to the effect that she would not allow any other party to exploit oil-fields in China for the following year, was in violation of the principle of equal opportunity guaranteed by treaty.

Chinese views of the so-called proposed Chino-American al-

liance are highly interesting. According to the Peking correspondent of the Tokyo *Asahi*, a "high official" in the Chinese Government expressed himself on the question in these words:

"When Prince Tsai-shun, the then Naval Minister of the Manchu dynasty, visited the United States seven years ago, he approached the Washington Government with a view to concluding a treaty of alliance with the United States. Before this negotiation bore fruit the Manchu Government was overthrown by the revolutionists. Upon the establishment of the present republican government, Washington asked Peking whether the latter still entertained a desire to form an alliance with America. To this President Yuan answered in the negative, stating that it would be unwise for China to bind herself by such a treaty with any one Power.

"About this time Great Britain also proposed that she be the sole party to supply war-ships to China, and to train Chinese naval and army officers. This proposal was also declined by President Yuan Shi Kai."

If the above statement really emanated from official quarters at Peking, we can only add that we have seen nothing like it from any other source.

The Peking *Ji-pao*, a Chinese daily echoing the views and sentiments of the Yuan Administration, publishes a lengthy editorial explaining why China does not desire to become an ally of the United States. The Chinese editor apparently attaches great importance to Japan's military prowess, which he regards as superior to that of the United States, and says:

"Let us compare the Japanese Army with the Army of America. Fairness demands that we credit the Japanese with possessing an Army far more efficient than the American Army. We may concede that America has a powerful Navy, but the Monroe Doctrine forbids her to expand her Navy as rapidly as she might, while the Navy of Japan proved itself the peer of any by annihilating the Russian armada under Rozhdestvensky.

"Japan has also made signal strides in the art of manufacturing armaments. The armament factories at Tokyo and Osaka can turn out weapons of war as efficient as those made in America and Germany. Not the least important consideration on this question concerns the geographical positions of the three countries—China, Japan, and the United States. China and Japan are neighbors in the true sense of the word, while the United States is separated from China by the whole width of the Pacific. Suppose China enters into an alliance with America and provokes the ill-feeling of the Japanese. In the event of hostility with Japan, Japan's invading forces will have advanced far into the interior of China before the reinforcements from America have succeeded in landing at a Chinese port."

The editor of the Peking *Ji-pao* asserts that relations between China and America are purely commercial. And yet the Tokyo *Jiji*, perhaps the most reliable financial organ in Japan, publishes a letter from its Peking correspondent, giving a detailed statement from a "military attaché to a certain European legation" at Peking. According to the *Jiji* correspondent, the army officer has this to say:

"We must not dismiss the rumor of a Chino-American alliance so lightly. The United States is suspicious of Japan, and is anxious to secure a naval base in south China. Not long ago an American naval officer declared that the United States would be willing to pay \$100,000,000 for the Chu-shan group, if China could be induced to permit America to establish there a naval base, which would in time be to the United States in the Far East what Hongkong is to Great Britain in the same region.

"More recently the Bethlehem Steel Company, presumably with the indorsement of the Washington Government, offered to China, without demanding any security, an enormous sum for the construction of a dockyard at Mawei, near Foochow. This scheme, however, can not easily be effected, because Mawei is situated in a province where China, in virtue of a treaty with Japan, has no liberty to grant a concession of this nature to any foreign Power. . . . There is no doubt that America is anxious to make China her ally in the Far East. But it is doubtful if China is ready to accept such a bold plan. And yet the power of the American dollar is a factor which neither China nor Japan can ignore, and it will not be surprising if China will eventually enter into a defensive and offensive alliance with the United States."—Translations made for THE LITERARY DIGEST.

CEMENTING THE ANGLO-RUSSIAN TIE

A POWERFUL English squadron has been visiting Russia, and after anchoring at Reval and subsequently at the great sea fortress of Cronstadt, has been entertained and honored by fêtes of all kinds at the capital and flattered by complimentary speeches. These incidents, says the *Paris Figaro*, are highly significant. It is not meaningless, we

A GERMAN VIEW OF IT

IVAN—"If you continue to be so nice to me, my dear John, I will give you the other bracelet." —© Ull (Berlin).

are told, when we see the officers of the British Navy entertained by the Czar personally at Tsarskoe Selo. England and Russia are already rather loosely joined with France in the Triple Entente, but the reports of the press lead us to think that Russia is anxious to fortify her dual alliance with France by a like tie with Great Britain, with a view to expansion in Western Europe. Russia has not succeeded in the Far East, and is still staggering under the blow she received from Japan. Writing in the *Hamburger Nachrichten*, Leo Littmann discusses this scheme of expansion and reminds his readers that Austria-Hungary would stand in the way as a formidable obstacle to Russia's march on Germany. The powerful German fleet guards the North Sea, while the Mediterranean is dominated by France and England. The value of alliance with the two latter Powers is therefore evident. Mr. Littmann goes on to show how Asia is being divided up by the three Powers of the Entente, and the *Berlin Tageblatt* quotes the British Ambassador to Russia as referring particularly to the friendly arrangements between Russia and England in Persia. "This Anglo-Russian friendship," exclaimed the Ambassador, "has now taken such root that it will be able to weather all storms!" France is naturally gratified at all this. "We Frenchmen," says the *Figaro*, "have every reason in the world to rejoice over this arrangement." The Ambassador's speech was delivered at a banquet he gave to Admiral Beatty and his officers at St. Petersburg. Among the guests who applauded his sentiments were Mr. Sazonoff, Russian Minister for Foreign Affairs, Admiral Gvigorovitch, Minister of Marine, and Mr. Rodzianko, President of the Duma. The passage in the Ambassador's speech which especially roused the enthusiasm of his auditors ran as follows, closing with the exclamation quoted above:

"Mutual friendship, mutual sympathy, and common interests constitute the firmest bond of union between nations, and enable them to regard with equanimity and to reconcile without tension any passing differences that may arise between them. I, during the past few days, have witnessed with feelings of grateful emotion the warm—I might almost say affectionate—manner in which our squadron has been received at Reval, at Cronstadt, and in St. Petersburg, and I draw from this a happy augury for the future, as well as the conviction that all the conditions of an enduring understanding now exist.

"The two nations are getting to know and understand each other better. They are learning to appreciate and to value each other's friendship, and I am confident that this friendship has now taken such root that it will be able to weather all storms that may beat round it in the future."

The political coalition of Russia, England, and France is hailed by the Russian press as a combination devoutly to be desired. It will be remembered that the Russian Government protested when France thought of shortening the three years' service, as this would have made Paris a feeble ally. In view of combining her naval power with that of England to a mutual advantage, Russian dockyards have been very busy, and we read in the *Temps* (Paris):

"For ten years Russia has been making a great effort in naval construction. She has come to the conclusion that if she wishes to have a voice in international questions the possession of a strong navy is absolutely necessary. To the four dreadnoughts launched in 1914, four other vessels, of a still more powerful type, four cruisers, and eight ocean-going torpedo-boats, with twelve submarines, are to be added."

The *Russkoie Slovo* (Moscow), a Liberal organ, becomes almost Anglomaniac in its tone, and says:

"In order that our juncture with the English may be close and complete, Russia itself must become a sort of England. Russia must foster in herself the English energy, English self-confidence, English persistency in gaining a proposed object."

An unnamed English ambassador to some European court writes to the *Lokal Anzeiger* (Berlin) that German chauvinism is driving the Powers to unite in self-defense. This paper, itself very chauvinistic, replies:

"We can not doubt the pacific disposition of the German Government, but we dread the turn of events which may render it obligatory to abandon this pacific disposition. Numberless journals are now disseminating the fatal doctrines of Germany's lost prestige. I am convinced that there is to be found in the German people a latent chauvinism which is more than the chauvinism of England, Russia, and France, countries at present so completely in accord on other points. German chauvinism finds its partisans in the most elevated classes of the nation.

RUSSIA PUTS ON HER SUMMER SUIT.

—Kikeriki (Vienna).

The nobility, the clergy, the Army, the Navy, professors of learning and students, even boys at school, all are boasting and shaking their fists at those with whom Germany has no alliance."

The *Berlin Post*, a very warlike journal, exclaims:

"If we find ourselves thwarted in our struggle to emerge and survive as a world Power, we shall be infallibly driven to draw the sword, and then, wo to the conquered!"

The British press show less excitement over the matter, the *London Times* remarking coldly:

"We do not propose to make any changes in the Anglo-Russian Convention, which has kept the peace of the Middle East in very difficult times."—Translations made for THE LITERARY DIGEST.

OUR INADEQUATE ARMY

THE HIGH REGARD the British entertain for us as a people evidently does not extend to our Army, to judge from an article in *The Nineteenth Century and After* (London) by Mr. Sydney Brooks. Despite the efforts of Gen. Leonard Wood, "by all odds the greatest soldier-administrator that America has produced since the Civil War," our forces are declared to be in bad condition. Mr. Brooks has lived for some time in this country as a correspondent for English newspapers and magazines, and is a sympathetic admirer of our institutions, but he thinks that in military matters we are behind the world. Our Army is never marshalled in one spot, and the great maneuvers, with their "mimic warfare," are never made, as in Germany, England, and France, a feature of our military training. Scattered over some fifty posts in widely separated points of the Union, the American soldiers spend most of their time in keeping up the great parks which surround their barracks. Then the United States forces are numerically inadequate, altho the personnel of the various regiments is excellent. Such an army is incompetent to deal with the exigencies of the hour or of the near future, such as Mr. Brooks says:

"The Mexican situation confronts, or must soon confront, the United States with a military problem of a more formidable character than any it has been called upon to face since the Civil War. One can not foresee precisely how or when intervention on a big scale will take place. One can only be sure that in spite of all attempts at mediation, of President Wilson's sincere but awkward efforts to save the Mexicans from themselves, and of a general distaste among the American people for the undertaking that lies ahead of them, intervention in the long run will prove the sole alternative to an indefinite state of anarchy. And tho the actual amount of fighting to be done may not be very serious, still to invade, occupy, and hold down a country of fifteen million people and some seven hundred and fifty thousand square miles is not a small enterprise for any army. Even if things take the happiest possible turn—and they have a knack of being kindly when Americans go to war—even if diplomacy does not run ahead of military preparations; even if the invasion of Mexico can be successfully represented as a war of liberation rather than of aggression, and the Mexican can be kept divided among themselves and large numbers of them induced to remain neutral or actively side with the invaders from the north, not less than a quarter of a million of men will probably be needed to seize the four or five widely separated strategical points, to overcome whatever armed resistance may be offered, to put down brigandage, to guard the lines, and to enforce conditions of order and security."

Mr. Brooks proceeds to describe the numerical strength of the Army and its efficiency as a tactical unit as follows:

"The United States Army is distributed among some fifty posts in twenty-four States and Territories. Thirty-one of these posts have a capacity for less than a regiment each; only six have a capacity for more than a regiment; and only one has a capacity for a brigade. The average strength of each post is nine companies—the American company at full war strength contains 150 men, and in peace only 65 men—and the average number of men at each post is therefore a little over 600. The largest detachment at any one place is less than 2,500 men. It scarcely needs the emphatic and reiterated condemnation of this piecemeal division and subdivision of the Army by successive Chiefs of the Staff to convince one of its incompatibility with even the elements of sound military training.

"The American Army" [said the late Secretary of War] 'has no tactical organization at all. Its men have no opportunity to learn the war game as a matter of team play between the different arms. Its infantry, cavalry, and artillery have no opportunity to work in the harmonious unison which modern war requires. Its higher officers receive no training in the handling of large forces of troops. The time and energy of both men and officers are largely wasted on non-military matters of administrative detail involved in the up-keep of so many expensive posts. Soldiers spend their time in watching property, officers in keeping accounts, instead of learning the art of war. And as a result we have produced a scattered police force, instead of a highly trained body of regulars which should be the

striking arm of the Republic in case of need.' Even company drill, owing to the diversion of nearly half of the men to non-military duties, is difficult; while the opportunities for the instruction of battalions are meager, of regiments exceedingly indifferent, of brigades all but, and of divisions absolutely, non-existent."

In contrast to this the United States, we are assured, will need at least 120,000 men for the first movements in a war, and Mr. Brooks proceeds:

"I need hardly say that the regular Army is not prepared, and was never intended to be prepared, for warfare on this scale. Its actual strength at this moment is just under 80,000 men, of whom only about 54,000 are serving in the United States, the rest being engaged in the outlying American possessions, where few of them could be spared. Of these 54,000, about 14,000 belong to the coast and garrison artillery, and are not instantly available for foreign service. It seems doubtful, therefore, whether the United States could place as many as 45,000 regulars in the field within six weeks of the outbreak of war. The remainder of the army of invasion would have to be raised from the State militia, who number on paper about 120,000, but whose organization and equipment are defective and whose military efficiency is a somewhat doubtful quantity—they are probably rather below than above the standard of our own Territorials—and from volunteers who would of course be abundantly forthcoming, but who would need time to learn their business."

The American public take little interest in the Army, declares this writer, and the sight of such uniformed citizens as appear on the streets in every large town in Europe is not familiar to the eyes of many Americans. On this point we read:

"It gives me almost a shock to reflect that during some years of residence in the United States I have hardly ever set eyes on an American regular. Many millions of Americans, after a lifetime in the country, could probably say the same. On that vast continent the national Army, only 25,000 strong before the war with Spain, and even now some 20 per cent. below its legal maximum of 100,000, is swallowed up, lost sight of, and forgotten. Nor is it merely its smallness that makes it inconspicuous. It is distributed on a system that removes it far from the main avenues of trade and travel. The average citizen, the average visitor, has hardly a chance of coming in contact with it, scattered as it is in some fifty posts over twenty-four different States and Territories. How so extraordinary a grouping came into existence is easily explained. After the Civil War the American people saw no need for a standing army. Secure in their own invulnerability and innocent of all aggressive designs, they retained a few regiments at various points in the great territory west of the Mississippi to watch over the Indians, insure the safe conduct of mails and passengers, and maintain order in the frontier districts. The frontier since then has been pushed to the Pacific, the Indian troubles have disappeared, and all strategical justification for the retention of these petty isolated outposts has vanished. Nevertheless they have been kept in being and in use by the power of local pressure and vested interests."

But of the personnel of the Army we are given the following fair account:

"The personnel of the American Army is excellent. West Point continues to turn out soldier-graduates who are technically qualified for all branches of the service, who are keen and thoroughly equipped officers, with alert, working minds, seasoned physique, and the foundations of a strong and manly character. A cadet who has survived its four years' course of microscopic and unrelaxing discipline, during which the maximum of mental and physical pressure and of moral influence has been applied to the task of grounding him in his profession, emerges from the ordeal a more finished, all-round, and scientific product than, I should judge, any military academy in the world can display. That in many cases the removal of the pressure and the unnatural conditions of life at the army posts induce a deterioration is only what one would expect; but, taken as a whole, the officers of the American Army are a corps of whom any country would be proud and who only need the chance that a common-sense organization would give them to show their worth. I cordially subscribe to the dictum of the Washington correspondent of *The Times* that 'much that is cleanest and best in American life is to be found scattered through the army posts of the country.'"

SCIENCE AND INVENTION

CAN SHE CROSS THE ATLANTIC?—THE "AMERICA" GLIDING OVER LAKE KEUKA.

AIR EXPERTS ON THE CHANCES OF FLYING THE ATLANTIC

A THRILL of the endless fame that may be the reward of Lieut. John Cyril Porte, R.N., and his pilot, George Hallett, if they succeed in crossing the Atlantic in Rodman Wanamaker's hydroaeroplane, *America*, may be felt in the words of certain confident experts interviewed by the *New York Sun*. But at the same time the perils involved in the daring flight are ominously brought to mind by the statements of others, who have their doubts or flatly predict failure. But many, if not all, these authorities believe firmly that the transatlantic trip by air is a possibility of no distant date. Their questioning of the success of the *America*, which is the product of the building skill of Glenn H. Curtiss, is based largely on what resistance the air-boat can offer to the uncertainties of weather conditions at sea and on the ability of Lieutenant Porte as a navigator as well as an aviator.

The voyage, press reports say, is to be made from Newfoundland eastward, with the Azores as the first landfall, and thence continuing to England. In the view of Glenn H. Curtiss, as reported in *The Sun*, "once started, the flight should be successful unless some unforeseen emergency arises." All that can prevent a proper start, we are told, "will be the inability of the *America* to lift the full load," but Mr. Curtiss is positive in declaring that "she will lift her load." Among other authorities who give *The Sun* their opinion of the outcome of Lieutenant Porte's venture is Admiral Robert E. Peary, discoverer of the North Pole, who believes that if the *America* is a "fit" machine, the attempt will go through prosperously, altho he sees in "adverse weather" a serious menace. Admiral Peary believes, however, that

"the crossing of the Atlantic aerially with speed, safety, and certainty is only a matter of a short time," and his remark is seconded by Alan R. Hawley, President of the Aero Club, who says:

"The *America* will make the transatlantic flight. If it is not made with the present experimental machine, then with the No. 2, which will be built with the improvements suggested by the construction of the present machine, and so on to the third, by which time the developments will be such as to put all those who have doubted the possibilities of the flight in the 'I told you so' class. They will then be the most ardent supporters and will have forgotten that they tried to discourage those who worked to make this flight possible."

"Barring such an accident as might happen to any bit of machinery any time, anywhere," declares F. Cragh-Osborne, Superintendent of Compasses of the British Admiralty, Lieutenant Porte "will succeed if any one can," because "he is a navigator and an aviator," and "a sterling character." A verdict equally favorable is pronounced by Capt. W. C. Irving Chamber, U. S. N., who sets down his reasons at length:

"First, I think the Atlantic flight is likely to be successful because I have confidence in the ability of Lieutenant Porte. Success depends upon the following conditions: The builder's skill in producing a machine capable of performing the specific work, i.e., of rising from comparatively smooth water with the necessary load, of flying at the designed

speed, and of maintaining that speed for the required length of time. I have confidence in the skill of Mr. Curtiss to satisfy the conditions, and, from observation of the *America* at Hammondsport, it is my belief that they will all be met satisfactorily.

"Secondly, the weather conditions, including the force and direction of wind. In this the chances are in favor of Lieutenant

ONE OF THE ENGINES OF THE "AMERICA."

Porte, as any navy man of experience with the weather charts and the daily weather reports before him ought to be able to seize the proper time for a start.

"Thirdly, ability to navigate and to shape the proper course. In this Lieutenant Porte has the advantage over the average aviator, and I assume of course that he will not start unprovided

no matter how curiously the facts may be misstated, as they have been by some persons who evidently know nothing about navigational problems and little more about aviation.

"It is very pleasing to note that the opinions of those who know most about navigation are that the flight has excellent chances of success. I am not in the slightest degree discouraged by those who think I have no chances of finding the Azores or crossing the Atlantic at all. They are welcome to their opinions. Accomplishment or failure will tell the story better than it can be told now. As I have said before, when these construction problems are out of the way I shall tell something of the navigational side of the flight, which some of our skeptical friends think is insurmountable, mainly because they have not informed themselves as to what has been accomplished in the last few months of preparation to meet that very issue."

A KEYBOARD FOR THE VIOLIN

ONE OF THE ADVANTAGES of the violin is that the player is responsible for the pitch of his notes, as well as for their intensity and duration. On a keyboard instrument, the pitch is ready-made; it depends, not on anything done by the player, but upon what the tuner did at his last visit, together with the accidents of temperature and moisture in the intervening days or months. It is no credit to the pianist to say that he plays in tune, because he can not help doing so if the tuner did his work properly. But to say that a violinist plays out of tune is to say that he is unskilful to the last degree, because the pitch of his notes depends on his own fingering. Beginners on the violin find it difficult to acquire the necessary facility, and a Swiss violin-teacher has just devised a method of giving the learner the sureness of tone that a young pianist has at the outset, without making him permanently dependent, for the pitch of his tones, on a piece of mechanism. Says Dr. A. Gradenwitz in *Cosmos* (Paris, June 4):

"A distinguished violinist-composer, Frank Choisy, founder of the popular schools of music at Geneva, has made an attempt to give learners on the violin and violoncello a simple mechanical device to guide their early exercises and give them that precision of tone that is almost always absent in beginners.

"The 'joujuste' [French *jouer*, play, and *juste*, correct] is a simple sheet of paper with marks indicating the exact points on the strings corresponding to the different notes. The scholar,

LEARNING TO PLAY BY THE "JOUJUSTE."

"All uncertainty soon disappears, and the fingers assume a habit of correctness that greatly facilitates learning."

as may be seen, has only to place his fingers on these marks to produce the desired note correctly, which would be impossible for him, in the beginning, without the device. All uncertainty soon disappears, and the fingers assume a habit of correctness that greatly facilitates learning.

"The pupil may also learn by practise the exact place of the

THE VIOLIN KEYBOARD.

The beginner "has only to place his fingers on these marks to produce the desired note correctly."

with the instruments necessary to do this, both in daytime and at night."

On the other hand, President MacMechen, of the Aeronautical Society, is outspoken with a contrary opinion, saying that "the problems of navigation will be the thing most likely to defeat the project." Similarly thinks Lincoln Beachey, who offers an aviator's reasoning in these words:

"While I do not undervalue Lieutenant Porte's ability as an aviator, I am convinced that no one man can perform this feat. It is one thing to drive a machine for ten hours, fifteen hours, over a stated course over the land. It is an entirely different thing to drive this machine over water, over the boundless ocean, for that length of time.

"In the first instance, the aviator is always in sight of good old mother earth. In the other, when a man is faced with the endless expanse of water, out of sight of land, the loneliness, the sense of helplessness, will be awful. The very enormity of nature will be overwhelming. And most important of all the necessity of the pilot possessing an intimate knowledge of navigation.

"I believe that the mental tension will be more wearing than the physical tax of handling the wheel. I do not believe that any man in the world can, without training, stand the terrible strain. To be sure Lieutenant Porte will have with him a capable mechanic, but he should have another seasoned aviator, one who has stood the gaff and who should alternate with him in four- or five-hour tricks at the wheel.

"Regarding the machine, I believe that speed has been sacrificed too much to sustaining power. The machine that successfully flies across the Atlantic will, I believe, be one that will travel like a blue streak, that will not falter.

"One does not have to confine himself to matters of the air to form a conclusion regarding durability. Take automobiles instead. For two years our leading automobile builders have failed to produce a car for the Indianapolis 500-mile race capable of going the entire distance in close competition with foreigners. The home product gives evidence of speed and durability for a while, but a stop at the pits, for even a light repair, is always sooner or later necessary. And a stop at the pits in a motor-race is vastly different from a drop into the ocean a thousand miles from land. There are no 'pits' in mid-Atlantic."

Various other forecasts of failure are drawn either from the belief that the transatlantic crossing by air-ship is not yet feasible or that Lieutenant Porte has not an efficient machine, while several experts say he will "get across," if luck favors him. Replying to these criticisms, in the course of an article in the *New York World*, Lieutenant Porte says:

"I have been reading with interest the various expressions of opinion as to the chances of success of the transatlantic flight, published by several of the American papers. I have not the slightest intention of getting into a controversy with any one,

notes without instruction from any one. This right-hand practise should preferably be carried out, in the early days, without using the bow. The pupil places his violin against his shoulder, in the usual position, or under his right arm, following with his eye the movement of his fingers over the 'joujuste.' He names the notes, holding his fingers, as far as possible, in the form of a hammer."—*Translation made for THE LITERARY DIGEST.*

POWDERED COAL FOR FUEL

THAT A SAVING of 50 to 60 per cent. over other fuels may be effected by using powdered coal in industrial furnaces is asserted in *The American Machinist* (New York, June 18) by E. A. Suverkrop. He bases this statement on statistics furnished by the American Locomotive Company, at whose Schenectady works a coal-milling and distributing plant capable of handling five tons an hour is in successful operation. The use of powdered coal as fuel, Mr. Suverkrop notes at the outset, has been known for sixty years, but in the early days little success was met in handling it, and large sums of money were spent in research work. The principal cause of failure was the use of high pressures, which produced a sand-blasting effect, cutting the furnace linings so badly that their life was only three weeks. But early difficulties have been overcome:

"The first really successful system of burning powdered coal in metallurgical furnaces was perfected in the plant of the American Iron and Steel Company. They mastered the basic principles and evolved a device to control the fuel. This was more than ten years ago, and they now have about eighty furnaces in one of their plants. . . .

"The cost of fuels is dependent upon a number of factors, such as location and quantities used. The work to be done must also be taken into consideration, and no one fuel will be found the best under all circumstances. However, where the consumption is great enough to warrant the installation of an equipment for handling, milling, distributing, and burning, pulverized coal will effect great savings.

"To give the best results, powdered coal must be dry, that is to say, it must not contain over $\frac{1}{2}$ per cent. of moisture. Dry coal also requires less power to pulverize it.

"It must be finely divided: from 93 to 95 per cent. should pass a 100-mesh sieve, or 80 to 85 per cent. a 200-mesh sieve.

"When in this state in a proper burning apparatus, each particle is surrounded by the necessary amount of air for combustion, and the entire energy of the fuel is liberated at once. The volatile gases ignite and the fixt carbon is consumed instantly when the fuel enters the combustion chamber.

"The flame from powdered coal resembles that obtained with either oil or gas, and it can be regulated by increasing or decreasing the air or fuel supplies by opening or closing the valves

governing them. The fire is under absolute control . . . and the entire inflammable portion of the coal is converted into heat."

The present plant at Schenectady replaced one for the use of fuel-oil about two years ago.

"The fires are usually started with oily waste or wood in front of the burner, much in the same way that oil or gas fires are kindled. . . . The cost of installation is less than that for producer-gas. High temperature can be obtained without regeneration, and the loss in gasifying is eliminated."

The writer gives the number of British thermal units yielded by an expenditure of one cent with powdered coal as 114,036 as compared with 27,282 for fuel-oil and 91,228 for producer-gas. At the Schenectady plant the cost of operation is said to be only 48 per cent. of that with oil—a saving of more than one-half.

HOW LEAVES GROW OLD.—How the age of a tree may be told by examining its leaves is explained by Felix J. Koch in *The Technical World Magazine* (Chicago, July). The newest leaf of an old tree, says Mr. Koch, is not really new at all. It is as old in its way as the tree itself. He goes on:

"Prof. H. M. Benedict, of the University of Cincinnati, has, following the belief of nurserymen, finally proved it beyond dispute, and he can tell the grower of fruit-trees whether a branch is a cutting or a seedling, whether it is really young or old. No more will the fruit-grower purchase cuttings when he desires seedlings if he is the possessor of a magnifying-glass. The secret of the difference is disclosed by the venation of the leaf, which becomes closer as the plant grows older. The discoveries of Dr. Benedict are being applied at the New York State Agricultural Station at Geneva. 'Practical fruit-growers have for some time insisted that cuttings do show relation to the age of the parent tree. They observed this in the bearing qualities of the tree. But botany has always said this was impossible. Now we are able to prove that the practical nurserymen are in the right! The principle involved is that of senility, or the gradual loss of power, even when all external things are favorable. Senility applies to youth as well as age, in this connection,' said Benedict; 'in fact, it is most marked in the earliest stages of some animal forms, especially human beings. In plant life the embryonic tissue, whereby the plant grows, partakes of the age of the plant itself. This is the point which contradicts formerly accepted botanical principles. In other words, the new twig, which presents itself on the older branch in the springtime, is not a new growth, as has been thought; it is as old as the tree from which it springs.' As the plant grows older the multiple cells which carry the nourishment in the leaf become smaller in size and greater in number. It was by noting marked differences here and establishing a more or less uniform scale that the botanist was able to establish this new principle."

ORDINARY PHOTOGRAPH OF DR. BRASHMAN.

RECORD PHOTOGRAPH FOR THE SCULPTOR.
SCULPTURE BY PHOTOGRAPH.

BUST MADE BY THE NEW PROCESS

PHOTO-SCULPTURE

MANY A SCULPTOR has used photographs to help him in his work, but an improved method of employing this aid, devised by Prof. J. H. Smith, of Pittsburg University, has just been described by Carolyn Wilson Summers in *The Technical World Magazine* (Chicago, July). The sculptor of the future, says Miss Summers, may be thousands of miles away from his sitter when he starts to work on the production of a bust from life. The camera will save the sitter from the tiresome task of maintaining a position that the artist may work from, and the sculptor may work at any time, whether the subject has made his appointment or not. We read:

"The subject is quickly photographed from different angles by the 'sterometicon,' as the inventor, Prof. J. Hammond Smith, of the University of Pittsburg, has named his apparatus. The exact form of any object can be recorded for all time without touching the object itself, and these record pictures may be sent to the artist, making possible a better result than ever could be done with the present method.

"The sitter is seated in an armchair on a rotating central stand and a screen image projected upon him from one of the cameras by means of a strong light. 'Record photographs' of the object, with the screen images upon it, are taken by another camera.

"The name 'record photograph' is given because these photographs embody an accurate record of the form of the object photographed. These records can be used at once, or laid away for future use, as they last indefinitely and can be used again and again. The size of the production may be varied in any ratio by simply varying the distance of the camera projectors from the central stand in a radial direction; the nearer the stand, the smaller the reproduction, and vice versa.

"After the records are made, the carving of the statue is a very simple process, and it is remarkably accurate. Every pose and expression, every line of the profile, even every hair, is produced exactly as in life.

"An unusual effect can be produced by this method, which consists of the combination of the statue likeness with the photographic likeness by an illuminated effect that is, at first, very startling, as it seems to the beholder that the actual living person has suddenly appeared. This amazing apparition is produced by projecting colored photographs, taken by the record-photographic machine, on the bust of the model. When focused correctly, so that the features exactly correspond in both projected photograph and stone statue, the effect is startling, and to all appearances the flesh and blood model appears before you. It is just as if the statue had suddenly come to life. The idea is most ingenious and the practical usefulness of this in-

vention is varied and far-reaching; besides the productions from living models, with the marvelous illuminating effects, copies of works of art can be made so that they can be reproduced in case of loss or destruction, copies of architectural carvings or ornaments, which can, of course, be photographed anywhere. It can be used also in the mechanic arts, modifying and altering, when desired; and in the application of the illuminated effects there are wonderful possibilities in the way of scenic effects, stage illumination and decoration, show-window advertising; besides yet-unthought-of applications."

SUBSTITUTES FOR GASOLINE

CHEMISTS AND TECHNOLOGISTS have been trying for some time to find a liquid fuel that is both cheaper than gasoline and as available for use in motors. At the present time we are informed by A. F. Sinclair, writing in the *Glasgow Herald*, as quoted in *Railway and Locomotive Engineering* (New York, June), various schools of investigation and experiment advise the use of one or other substitute, each one advocating its own pet hydrocarbon. Benzol, alcohol, and paraffin are the liquids mainly advocated, but only by alcohol is it held that gasoline must ultimately be beaten. The others must be regarded as palliatives, not as a main supply. We read:

"Investigation is in progress in Britain with respect to alcohol, and the French Government has offered valuable prizes for the discovery of a successful paraffin carbureter. Such a bit of mechanism can scarcely be characterized as a carbureter in the accepted sense of the word. As generally understood, a carbureter is a device which regulates the proportions of gasoline spray and air drawn into the engine cylinder by the suction stroke of the piston. In the case of the Bellem and Bregeras machine the paraffin or other heavy mineral distillate is pumped into the combustion chamber and the suction stroke draws in a predetermined quantity of pure air.

"One of the strongest reasons why there is distrust regarding the use of alcohol as fuel is the fact that in both France and Germany—where agrarian interests are very powerful—attempts to employ alcohol as fuel have been unsuccessful. Potatoes in Germany and beet in France are largely employed for alcohol production, and in Berlin coercion of a kind was used to compel the employment of alcohol as fuel in taxicab engines, yet it failed, and mineral spirit reigns supreme there as elsewhere. Dr. Ormandy, the high priest of the alcohol cult, endeavors to explain away the unfortunate argument involved in that failure, but it can not be said that his arguments are as powerful as usual. Alcohol is not used as fuel, simply because it is dearer and more troublesome than gasoline even at its present price."

COTTONSEED AS A FOOD

IT HAS generally been held that cottonseed is injurious as a food for human beings, and this belief has put a stop to more than one attempt to utilize meal or flour, made from these seeds, in man's dietary. Elaborate experiments made at the Texas Agricultural Station, and described in its *Bulletin* No. 163, indicate that the seeds are "poisonous" only in the same sense as beans or potatoes; that is, that they may be injurious if eaten in enormous quantities. The author of the bulletin, Mr. J. B. Rather, assistant chemist at the station, advises the use of the cottonseed-meal mixed with corn-meal or wheat flour, and believes that when eaten thus it is a valuable food. He writes:

"The use of pure cottonseed-meal for bread-making does not appear to be desirable. It would be difficult, or impossible, to secure a palatable food without dilution of some sort, and there would be danger of overeating. In our work we found that a bread made from two parts corn-meal and one part cottonseed-meal was much less palatable than one from four parts corn-meal and one part cottonseed-meal. . .

"Cottonseed-meal and flour contain twice as much digestible protein as beef flank, three times as much as eggs, and twice as much as mutton. Since cottonseed-meal should be eaten mixed with wheat-flour or corn-meal, the above comparison might be misleading. The comparison can be made on the foods as eaten. The water content of the cottonseed bakery products varies from 6 per cent. (gingersnaps) to 50 per cent. (cottonseed-meal corn bread). The digestible protein of the cottonseed-meal wheat bread has a minimum of 8.80 per cent. and a maximum of 16.52 per cent. Then the digestible protein of cottonseed-meal wheat bread varies from one-third less to one-third more than that of eggs, and from half as much to as much as beef loin, according to the amount of water in the bread. So far as digestible protein is concerned, cottonseed-meal bread averages equally as valuable as eggs, pound for pound. . . . Cottonseed-meal and flour are as rich in fat and fat-forming nutrients as beef loin and mutton, much richer than eggs, and nearly as rich as beef flank. Cottonseed-meal breads vary from an equal amount of these substances to twice as much as those in beef loin, depending on the water content of the bread. Cottonseed-meal contains no starch. . . .

"Fats have approximately twice as much fuel value as protein. Cottonseed-meal flour has twice the fuel value of eggs, one-half more than that of beef loin and mutton. Cottonseed breads vary from a little more than the same fuel value to more than twice the fuel value of eggs. It will be noted that the fuel value of wheat bread and that of mutton is nearly the same, but the fact should be emphasized that foods are richest in two different nutrients, and that the carbohydrates and fats are not substitutes for protein in the body. It should always be borne in mind that cottonseed-meal is a meat substitute and not a flour substitute."

The writer warns the intending user of cottonseed that it is unpalatable and heavy alone, so that the proportion of other flour should be large. He recommends not more than one part to four of corn or wheat. The advantage of the meal will be found both in its cheapness and in its ability to serve as a meat sub-

stitute. A pound of digestible protein in this form costs only five cents, while in the form of steak it costs 73 cents, and of eggs \$1.06. We read again:

"It is not impossible that a large number of people will be driven by economic reasons to search for meat substitutes. In such an emergency, cottonseed-meal would deserve serious consideration. The available supply is enormous and is increasing yearly. It is cheaper than all but a very few of the staple foodstuffs, and is enormously cheaper than meats. In proportion to its food value, it is the cheapest foodstuff known to the writer. We are not advising the use of cottonseed-meal as a complete substitute for meat; our knowledge of the toxic effect of cottonseed-meal on pigs should make us cautious in using large amounts in the diet. About five ounces of cottonseed-meal would have to be fed daily to take the place of meat completely. Whether this amount can be safely used, experience alone can tell. We have already shown, however, that the needs for protein of the subjects used in our experiments were met with a little less than two ounces of cottonseed-meal daily, when about one-half gallon of milk was fed, together with an amount of corn-meal necessary to make palatable bread."

The following suggestions are made to those who desire to use cottonseed-meal as a food:

"The flour should be a bright yellow in color, free from any trace of rancidity, and of a sweet odor. Cottonseed-meal is equally as valuable as cottonseed-flour, if it is finely ground and sifted free from hulls and lint. Old meal, damaged meal, or dark meal should not be used.

"A proportion of four parts corn-meal or wheat flour to one part cottonseed-meal has been found to give satisfactory results. A larger proportion of cottonseed-meal should be avoided. The meal should be eaten as a substitute for meat and

not in addition to it, unless it is known that the regular diet is deficient in protein. A diet too rich in any nutrient may easily cause trouble. We do not recommend the continued use of cottonseed-meal in large amounts."

As regards the reported toxic effect of the meal in large quantities, the writer reports that he used the meal at his own house for ten days to the complete exclusion of meat, without observing any injurious effects, and he believes that under the conditions prescribed above its use is without danger. As regards the agreement of cottonseed-meal with individuals, he quotes as follows from Dr. Atwater's remarks concerning food in general:

"Different persons are differently constituted with respect to the chemical changes which their food undergoes in digestion and the effect produced, so that it may literally be true that one man's meat is another man's poison. Milk is for most people a very wholesome, digestible, and nutritious food, but there are persons who are made ill by drinking it, and they should avoid milk. The writer knows a boy who is made seriously ill by eating eggs. A small piece of sweet cake in which eggs have been used will cause him serious trouble.

"The sickness is nature's evidence that eggs are for him an unfit article of food. Some persons have to avoid strawberries. Indeed, cases in which the most wholesome kinds of foods are hurtful to individual persons are, unfortunately, numerous. Every man must learn from his own experience what food agrees with him and what does not."

MAKING A BUST BY PHOTOGRAPHY.

A screen is projected on the sitter's head when the picture is taken, the photograph serving as an adequate model for the sculptor who has never seen his subject.

LETTERS AND ART

PAGEANTRY IN ST. LOUIS AND ELSEWHERE

THE FEVER FOR PAGEANTRY which swept over England a few years ago seems to have reached us with some of its foreign virulence. Oxford, Warwick, York, St. Albans, Winchester had their shows on a scale that we have scarcely matched until the recent St. Louis Pageant and Masque was enacted in May and June. With 7,500 performers on the

Joseph Lindon Smith, who was stage director of the Masque; and Mr. Frederick S. Converse, who wrote the music for the Masque. With so many committees and so many directors and authors involved, one had a right to expect some confusion, but the opening performance went with a smoothness which testified to extraordinary cooperation on the part of all concerned.

"On the opening night, the crowd began to gather early for the performance announced for 6:30. This was necessary, for half of the forty-five thousand seats were free to those who came first. Quite properly, only on this condition would the city permit the sale of seats in this public pleasure-ground. Clear across the front of several hundred feet stretched two rows of boxes. These were about thirty-five feet back from the lagoon. Behind these, far, far up the hill to the Museum, ran the rows of seats, none higher in price than \$1.50, and many of them to be had for 25 cents. The policing had been so admirably arranged that the foot-passengers scarcely once crossed the path of the automobiles, and night after night these vast crowds dispersed with far less crowding and discomfort than one constantly experiences in our theaters. The ushering was in the hands of the Boy Scouts, who managed the overconfident, the misinformed, and any excited late-comers with a firm-

PAGEANT BY STUDENTS OF THE UNIVERSITY OF NORTH DAKOTA.
La Salle presenting his plan for the confederation of the warring Indian tribes.

stage and 150,000 spectators at one time, there was spectacle enough to satisfy the most grandiose imaginations. Many parts of the country, south, west, and east, have celebrated their local events in scenic display. To mention only a few of the most recent, there was the "Pageant of the Prairies," written and enacted mainly by the students of the University of North Dakota; there was also a minor "Pageant of the Melting Pot," where Irish, Bohemians, Croatians, Poles, Ruthenians, Jews, and Italians of New York exhibited their native songs, dances, and costumes. It would be a pleasure to describe and picture them all, but lack of space forbids. The greatest one, and the one that has been treated at most length by the magazines, is the St. Louis pageant, which was an effort "to arouse a city of 800,000 people to a sense of its solidarity, to a sense of the possibility of infinite achievement by a community under the spell of a unifying idealism." Speaking thus of its purpose, *The Survey* (New York) pays tribute to the success of the enterprise. "They proved that though a democracy may never have been tried, it is not an academic abstraction but a workable hypothesis, and they proved it through the age-long appeal to art." All this vast artistic effort "came from the enthusiasm of one person, Mrs. Charlotte Rumbold," says Prof. George P. Baker, of Harvard, who in *The World's Work* (August) gives this account:

"Believing strongly that St. Louis should have a pageant, undaunted by lack of understanding or indifference at the outset, she gradually won to her cause a group of representative citizens who became devoted and competent workers on the various committees which any pageant necessitates. To write and direct the Pageant and Masque, these organizers summoned Mr. Thomas Wood Stevens, who wrote and staged the Pageant; Mr. Percy MacKaye, who wrote the Masque; Mr.

ness, sureness, and tact that must have converted any doubting Thomas as to the Boy Scout movement. Taking one's seat, one faced a stage some three hundred feet long by about a hundred deep, built out a little over the lagoon on the farther side. On three sides, walls of wood, perhaps sixty feet high, shut in the stage. These were masked with canvas, painted to represent the crumbling walls of Aztec temples. At center stage, and elsewhere at right and back of stage, were huge mounds with steps leading to their tops. Across the center ran similar maskings to shut off the space where orchestra and chorus were concealed, the former of about three hundred voices, the latter of a hundred instruments. From the center and around the ends of this masking were entrances, as well as at upper stage left and at lower stage right. Each wall ended in a tower at the front of the stage. From these the spot-lights were directed upon the stage, and from them the directors of the performances, with their aids, guided the action. Scattered about the stage stood curiously shaped flat scenes painted to suggest shrubbery and trees. In the Pageant, from time to time, these were opened out into the huts of the early settlers, stockades, defenses, etc. Huge spot-lights on the Museum's roof played upon the stage."

The interest grew from the first night. Fifty thousand came then and nearly three times that number later:

"Promptly at half-past six on the first night an Indian high priest with two acolytes came up over the great mound near the center of the stage, and the Pageant began—in full daylight. In brief episodes, now of verse, now of prose, now of pantomime, the older Indian civilization gave way to the newer; De Soto and his followers came and passed on their way exploring; Marquette and Joliet paddled in canoes round the curve of the lagoon at the left. After they had passed, La Salle and his mixed party of French and Indians returned, this time in canoes. Quickly the voyagers rebelled against going into the unknown, and as quickly La Salle quelled their rebellion. As La Salle cried, 'Forward!' the voyagers, taking up their packs again,

Mississippi stands at the prow guiding the bark of the child, Little St. Louis—River spirits assist its progress.

returned to their canoes and paddled slowly out of sight at the right of the stage. Then an Indian prophet chronicled the passing of the Indian before the coming of the white man, an interlude before the Second Movement. The latter busied itself with brief scenes, closely following history apparently, concerning the founding of St. Louis, its control successively by French and Spanish, and the ultimate taking over of the post by the Americans. The third movement concerned itself, after some cuts, with the visit of General Lafayette, the return of the volunteers from the Mexican War of 1845, the prominence of the Germans in the early life of St. Louis, and finally a series of scenes connected with the election of Lincoln, the tidings from Fort Sumter, and the news of peace."

The Pageant was "realism in episodes." "With the Masque came symbolism, unified and clarified by the figure of St. Louis passing through it." Professor Baker goes on:

"I can not too highly praise Mr. Smith's staging throughout the Masque. At will, his lighting had brilliance, mystery, suggestion. He is a master in handling masses of soft coloring and in subordinating detail to larger effects. His balance in handling his stage is perfect. Never did he crowd one part of it to leave great spaces empty. Never did he distract the attention by groups of equal interest in different parts of the stage. However scattered his figures might seem to be, there was focus of effect. From that first scene of the Masque as Mr. Smith treated it, I got something of the delight which only parts of 'Sumurun' had previously given me. Slowly and with exquisite rhythm, figures, walking, swaying, dancing, filled the great stage, coming one hardly knew from where. And as it filled from the right in Indian file, with right arm extended before them, and right knee raised high like figures in Assyrian bas-reliefs, came the Boy Scouts, clad only in breech-clouts, their bodies stained a yellow-brown. On they came, slowly, rhythmically, endlessly. The delight to any pageant master in seeing numbers represented, not by tens or scores, but by hundreds!"

Another view is seen in Mr. William Marion Reedy's *Mirror* (St. Louis):

"There was a sense of beauty in power and power in beauty through it all. All the city was there. It was a great demonstration of democracy's idealism, of its passion for art that it could understand, of its love for its home town, its past, its future. Here was civic art in colossal splendor. Poetry, music, sculpture, acting, combined their effects and fused into an incalculably effective expression of fraternalism and solidarity of aspiration and purpose. . . .

"And there passed from the stage to the assemblage on the hill a vibration as of the awe in joy that comes when we apprehend the beautiful sublime in any form.

"The city pulsates yet with the passion the performance evoked. The Pageant and Masque influenced the great assemblage on four evenings—100,000 people at a time . . . and the enthusiasm still burns in the casual conversation of groups of people everywhere."

DECLINING "U. S. S. PINAFORE"

PEOPLE who saw the spectacular production of "Pinafore" at the New York Hippodrome during the past season may perhaps have reflected that at last the great English classic in comic opera had been "Americanized." It is hardly likely that it would have occurred to a British impresario to "do" this work on the spectacular scale that the Hippodrome stage afforded, yet the production won golden opinions from English reviewers of the theater. The recently published history of the Savoy Theater, London, where all of the Gilbert and Sullivan operas were performed, gives an account of a previous effort at Americanization that was thwarted by one of the authors, and the desire doubtless quenched by his amiable ridicule. The story is transmitted to us by Mr. Brian Phillips in the *Boston Transcript*. Mr. Bridgeman, one of the co-authors of the new work, admits that he can not vouch for the authenticity of the story, but our readers may be able to decide whether its verisimilitude bears evidence to its veracity:

"A certain American impresario, whose patriotism excelled his judgment, suggested to Gilbert that, while 'H. M. S. Pinafore' had decidedly caught on in New York, he guessed that they could heap up a bigger pile of dollars if an American version of the piece were prepared.

"Say, now, Mr. Gilbert," said our American friend, 'all you've got to do is, first change H. M. S. to U. S. S., pull down the British ensign and hoist the Stars and Stripes, and anchor your ship off Jersey beach. Then in place of your First Lord of Admiralty, introduce our navy boss. All the rewriting required would be some new words to Bill Bobstay's song—just let him remain an American instead of an Englishman. Now, ain't that a cute notion, sir?'

"Gilbert, pulling at his mustache, replied: 'Well,—yes—perhaps your suggestion is a good one; but I see some difficulties in carrying it out. In the first place, I am afraid I am not sufficiently versed in your vernacular to translate my original English words. The best I could do would be something like this improvisation:

He is Ameri-can.
Tho he himself has said it,
'Tis not much to his credit
That he is Ameri-can—
For he might have been a Dutchman,
An Irish, Scotch, or such man,
Or perhaps an Englishman.
But, in spite of hanky-panky,
He remains a true-born Yankee.
A cute Ameri-can.

"The New York impresario was delighted—vowed it would save the situation and set New York ablaze.

"Mr. Gilbert replied that, after two minutes' careful consideration, he didn't think it would do at all. He was afraid that

such words might disturb the friendly relations existing between the United States of America and the United Kingdom of Great Britain and Ireland.

"'Besides, my friend,' Gilbert added, 'you must remember I remain an Englishman. No, sir; as long as "H. M. S. Pinafore" holds afloat she must keep the Union Jack flying.'

"'Quite appreciate your patriotic sentiments, Mr. Gilbert,' replied the American, 'but say,—ain't it c'rect that "Pinafore" was translated into German?'

"'Quite correct—and played in Germany, but, under its Teutonic name, "Amor am Bord," it was not easy for any one to imagine that the ship had been taken from the English.'"

Another American story is told, this time involving the genial composer of the music and his encounter with the band that played in the theater when Sir Arthur Sullivan himself came to conduct the work:

"These gentlemen were all under the strict control of a musical trade-union. A scale of charges was laid down for every kind of instrumentalist, according to the nature and degree of his professional engagement. For example, a member of a grand-opera orchestra must demand higher pay than one who was engaged for ordinary lyric work, such as musical com-

two, here and there, from another musician. He himself was ever the first to plead guilty to such soft impeachment. But it may be asked, is it a more unpardonable offense to paraphrase a musical theme than to parody a proverb? Surely the composer of 'Princess Ida,' when he played an occasional joke at the expense of Handel, was guilty of no greater fraud than the author who 'respectfully' perverted Tennyson. On one occasion, when accused of having plagiarized Molloy's 'Love's Sweet Song' in his 'When a Maiden Marries,' in 'The Gondoliers,' Sullivan replied: 'My good friend, as a matter of fact, I don't happen ever to have heard the song you mention, but if I had you must please remember that Molloy and I had only seven notes to work on between us.'"

NEW BOOKS FOR OLD

THE LURE that the vender of the Arabian tale found to thrill householders at the prospect of new lamps can just as easily be found to apply to books. The principal qualification required of the literature of the day is newness, the *London Times* rather cynically declares. And old ones are shoved in disgrace upon dusty shelves or ignored altogether.

A book in order to be read "may be stupid, it may be bad, it is almost sure to be unliterary, but it must be new." And what seems to be worse, in this writer's views, it need only be new in the same way that an egg is. "It need not have new ideas, not even new lights on old subjects. It must merely have issued recently from the publishers." For,

"The object to be achieved by the general public is to be reading a new book at the same time that every one else is doing so. Its intrinsic merits have nothing to do with the matter. If you venture to recommend such and such a book to any one—'Is it new?' is the question you are almost sure to be asked by nine out of every ten people. You mention an age far from venerable, but if the years have got out of the singular, nay, if the months have reached double figures, your in-

terlocutor will reply, 'Oh, every one was talking about that six months ago. It hardly seems worth while to read it now.' . . .

"After all, it is only a surface novelty that is required. The popular author is expected to produce a new book annually in which the same sort of people under different names are doing the same sort of things as they were in his previous works. Wo betide him should he break really new ground! The crime is as unpardonable in the eyes of his readers as would be that of an old stage favorite who departed from his stereotyped style. 'He always lights his cigaret just like that,' you hear theater habitués say as they eagerly watch every gesture of their idol; and do it 'just like that' he must, be he guard or Guardsman; and the author is fettered with the same chain."

And fiction is not the only field where the prevailing craze for novelty betrays itself:

"This is as busy a time for the bookmakers as it is for the authors, meaning by the former those who manufacture books as distinct from those who write them. The stock in trade of the literary bookmaker consists of old histories, biographies, and letters. In them he digs and delves and serves up his treasure-trove between shiny new covers interspersed with charming photogravures and a little gossip letterpress to introduce the correspondence and anecdotes of the dead-and-gone celebrities or nonentities. They have all been done before, and done much better, these memoirs and lives; but who will trouble to hunt for them in dusty shelves or read them in stuffy old calf

ST LOUIS CELEBRATED IN MASQUE AND PAGEANTRY

By 7,500 performers, who repeated the show daily before numbers as high as 150,000.

edy, and so on, down to the humblest class of musical entertainment. Accordingly, when the announcement went forth that the opening performance of 'The Pirates of Penzance' would be conducted by Mr. Sullivan, and the manager of the theater had taken pains to impress upon his orchestra the greatness of the honor that would be theirs of playing under the baton of England's most famous composer, the handsomen showed their appreciation of such distinction by demanding from the management increased salaries on the grand-opera scale. There seemed likely to be 'ructions.' Whereupon, Arthur Sullivan, with characteristic tact and sang-froid, address the men in modest terms. Disclaiming any title to the exalted honors they would thrust upon him, he protested that, on the contrary, he should esteem it a high privilege to conduct such a fine body of instrumentalists. At the same time, rather than become the cause of any dispute or trouble among them, he was prepared to cable home to England for his own orchestra, which he had specially selected for the forthcoming Leeds Festival. He hoped, however, that such a course might be avoided. The Americans promptly took the gentle hint and agreed not to charge extra for the honor of being conducted by Mr. Arthur Sullivan."

Sir Arthur, we are told, "even when he became famous, knew the value of a soft answer for silencing criticism as well as turning away wrath":

"Sullivan was not above suspicion of having stolen a bar or

bindings? No, let us have fresh hashes and ragouts about people of old time in new bindings with a library ticket on the cover, and then we shall be satisfied.

"Hazlitt, half sarcastically, has given a very ingenious excuse for the craze for reading new books; it is one which, at any rate, is flattering to the reader:

"A new work is something in our power; we mount the bench and sit in judgment on it; we can damn or recommend it to others at pleasure, can deery or extol it to the skies, and can give an answer to those who have not yet read it and expect an account of it, and thus show our shrewdness and the independence of our taste before the world has had time to form an opinion."

"So we see that our forefathers were as much addicted to the reading of new books as we are ourselves."

FLOUTING THE "OLD MASTERS"

FOR THE TIMID ONES who have weighed the famous "Monna Lisa" of Leonardo da Vinci in the balance and found her wanting, but have gone away silent for fear of not being thought "artistic," one has spoken up with emphasis. Mr. Twells Brex, after looking at her "from all angles and all aspects," finds her—as he believes "nearly every one else finds her"—only "a singularly unattractive, uninspired, weary, and sly-looking woman." This opinion he bolsters up by the judgment of a friend who is "not indeed a critic or an expert, but a great lover of art and a man of many and catholic perceptions." The one so described could "see nothing in it" also, and added:

"It may be technically perfect, but for all that it is ugly. To my mind, the whole object of painting—like that of any other art—should be to charm the senses or elevate the mind. This picture fails in both."

Fortified in this way, he feels strong enough to tackle the critic and the connoisseur, whom he describes as "the arbiters of the markets," and to reply to their declaration that "we do not appreciate old masters because we do not understand them." Of course the critic will only find his reply simple-minded, couched as it is in the question, "Why should they need understanding?" In the *London Daily Mail* he asserts the taste of the plain people against the *cognoscenti*:

"Great art can sing to us without interpretation, strike primal chords in heart and mind, and be understood by the multitude. If it is perfect in technique it is only perfect because it conceals technique, and not because technique is its all in all. The painter does not paint for painters only, any more than the writer writes only for *literati*. The master who was the greatest master of his art that the world has ever known is so simple that there is scarcely a line of Shakespeare that a youth may not understand. Who needs technical knowledge of drama or poetry to read the great sonnets, to be enthralled at the profound human psychology of *Hamlet*, to thrill with the immortal lovers of Verona, or to follow Harry of England in his breathless epics in France?"

"The supreme cant of all critical cant is this claim of the *cognoscenti* for idols whose perfection is invisible to us ordinary people, this contention that some obscure mastery of technique is the summit of achievement. The cult of 'eubists' and 'futurists' is but a diseased exaggeration of this creed; the craze for archaic and uncomfortable styles of furniture is another manifestation of this esoteric whim. The hobby of the 'collector' is too often a mere shibboleth, devoid of every prompting of the love of beauty or utility. For the craze for the antique is not confined to old masters. In every little town there is at least one shop whose stock in trade is a jumble of things hideous, whose sole value is that they are old or that they are fraudulent imitations of the old. And so the flotsam and jetsam of one generation becomes the sought-for and treasured of the next; if we could only live long enough, we would find that our commonest little gods from Tottenham Court Road will sell in 1985 for a knight's ransom.

"You will even see in the 'antique' shops of to-day a serious display of terrible things that ten years ago the most old-fashioned and inartistic of us were throwing in the dust-bins because the charwoman would not take them as a gift. The antimacassar period is now old enough to be precious, mid-Victorian mahogany, glass lustres, samplers, china dogs—bywords of reproach

for their grim ugliness even of a period when domestic art was notoriously at its darkest in all history.

"How much of the value of many 'old masters' is not likewise fictitious, how much of it is really intrinsic? I challenge any critic to suggest what the 'Gioconda' would sell for if it were

GOLD DEPOSED BY LOVE.

Mr. MacKaye's Masque represented "symbolism unified and clarified by the figure of St. Louis passing through it."

painted to-day by a living artist, and how many of the experts would arise to call it immortal?"

This all leads up to the plight of the modern artist, "for whatever he does is wrong":

"If he ventures to tell a moving story that brings the public round his canvas he commits the unpardonable vulgarity. The picture that depicts an incident of life is utterly out of fashion. If he paints a landscape we read that he is 'trivial,' if his trees or his cattle imitate nature we are told that he is 'slavish.' If he paints a portrait he is, at least, in better case, for he may usually hope to sell it to the sitter. And thus he languishes, while the market for 'old masters' ever soars. I was lately in the studio of a water-color artist who told me that he can now only earn a third of his former income. The collectors will have none of living men. His paintings were of a country that I know well; they were so true, so beautiful, and so tender that, in a Westminster flat, I was by the waters of Lodore, and forgot that the painter stood beside me. I had to shake myself together to remember his shortcomings, his foolish fidelity, his forgetfulness of that paraphrase that the art world has made of Keats, 'truth is not beauty, and beauty is all that ye need know.'

"But his greatest fault is that he lives—therein is deplorable technique."

A day or two later another *Daily Mail* correspondent sends his "profoundest thanks to Mr. Twells Brex for his courageous article":

"I am sure it must have evoked a wave of gratitude among your readers—unexpressed but none the less sincere—for it undoubtedly represents the views of the great mass of even educated people who are sick and tired of the humbug of the critics who represent nobody and nothing but themselves."

RELIGION AND SOCIAL SERVICE

HOW INVASION HELPS VERA CRUZ

THAT THE MEXICANS of Vera Cruz may be trained to "a higher ethical and moral standard" by our occupation of the city is the hopeful belief of a writer in *The Christian Herald*, who points out that while the military achievements of the American forces are familiar enough, their

fight, and the bull-ring; but if American occupation continues, we may look for the passing of these old marks of barbarity and savage lust, and find substituted for them the cleaner and more wholesome sports, such as set forth American ideals. Vera Cruz, like other cities, has its 'open sores' of dissipation and social vice. When these shall be done away with, or cured,

is hard to predict. As long as the income from any business or trade is regarded as of more consequence than the lives of the men and women involved in keeping it going, we can not expect to cure the running sores of any city from the bottom. We can, however, depend on the American forces to do all in their power toward establishing the best and safest method of handling this situation."

On the subject of the poor and destitute, the writer notes that the Mexicans have no organization of their own to care for them, and states that "much has been done by the Army in serving out rations to the hungry, while the Red Cross Society has not been slow to see its opportunities for relief." Then, turning to the question of education, he informs us that altho "the educational interests of the city were

Copyrighted by Underwood & Underwood, New York

"PROCLAIM LIBERTY TO THE CAPTIVES."

Some of the Mexican prisoners set at liberty by the American forces at Vera Cruz.

humanitarian service is far from being so well known. To begin with, he claims that there is "a reasonable doubt if Vera Cruz has ever experienced such an ideal civic state as now exists, by the use of courts and police agencies under the supervision of the American forces." Due credit is given also to the influence of the orderly example of the men of the Army and Navy. While the writer thinks that at first the natives may have submitted to our authority through fear, now, he tells us, even the most ignorant understand "the idea of justice and equality before the law" as "the guiding principle" of our government. The freeing of political prisoners, the relief of the needy, and the safeguarding of the operation of the schools are among the humanitarian performances to be credited to American effort, the writer explains, and refers to social service of a kind even more unusual:

"A commendable work along ethical and moral lines has been the abolition of the bull-fights, the lottery, and the gaming-wheels. The city is to be congratulated that these demoralizing influences of the grosser sort have been done away with. Little by little the people may be educated to a higher ethical and moral standard. It will take a long time to lead them from the card-table, the roulette-wheel, the lottery system, the game-

for a short time disturbed," nevertheless soon after the Army assumed control the schools were reopened and "are now operated as nearly as possible as they were before our occupation." One thing above all strikes this observer, and that is the cleaning up of the city, on which point he says:

FEEDING THE CONQUERED.

Hungry Mexican residents of Vera Cruz seeking food at the headquarters of the United States forces.

"The cleansing of the city and the establishment of sanitary laws is one of the great achievements in the interests of the people. This was accomplished in a remarkably short time. In some places dirt accumulations of years were removed; in others, holes had to be filled to abolish pools of filthy, stagnant

water, which were common and furnished breeding-places for mosquitoes. Some of the streets were repaired with fine stone and gravel, and in a few places more permanent material was used. But it was necessary to go further than the ground surface with this kind of work. Rules and regulations affecting public markets, hotels, shops, restaurants, and dwellings had to be promulgated. All public places are cleaned regularly, and garbage receptacles are required in restaurants, hotels, and private homes. These are emptied by the garbage man, who hauls it away and burns it, or disposes of it in some satisfactory way. The buzzards and vultures that formerly performed this act of sanitation are looking on with apparent disgust at the American and his ways, as do many of the inhabitants."

An incidental benefit of the situation at Vera Cruz, we are told, is that "the presence of some twenty-five thousand men of the Army and Navy" in and around the city increases the demand for labor in stores, hotels, and restaurants; and as a final specimen of the methods of American invasion may be cited "the release of political prisoners and the humane treatment of the criminals in the Federal prison and city jails."

RÔLE OF THE CATHOLIC CHURCH IN FRANCE

A STRIKING CONTRAST to the days when the Church swayed the destinies of France is seen in an article by a well-informed writer picturing its almost powerless condition in the Republic to-day. And its spiritual hold on the people is at a similar low ebb. "Practising Catholics" are declared to be in the minority. Yet he finds encouragement in the thought that his Church has fewer enemies at the present moment and more friends outside her own pale than she has had since the lull after 1848. She has brought either into her fold or into sympathetic relations with her such men of letters as Paul Bourget, the poets Paul Claudel, Charles Péguy, and Francis Jammes, besides others, "imitators of less note, but of intelligence and culture," says the Abbé Ernest Dimnet, an experienced observer and frequent contributor to *The Saturday Review* (London), yet "her progress compared with the situation of Catholicism in happier times or countries can not be called considerable." He does not imply that her active representatives are below par:

"Her clergy have never been more regular; in a great many places they live in circumstances which would revolt even their poorest peasants, and they never say a word; they work and persevere with a simple cheerfulness which often strikes as perfectly heroic if one remembers that the hope of better days does not even begin to dawn; the seminaries are wonderfully managed, considering the difficulties their Rectors have had to encounter, losing their professors in a great many dioceses after the expulsion of the religious orders, and having to vacate their houses everywhere after the Separation; the teaching is on an average better than it was, and the spirit of the young men is exactly what the bishops want it to be: discipline seems much more natural to them than to the preceding generation."

In spite of these things, as we see in his careful article in the

July Nineteenth Century (London), the Church's power with the people at large is not considerable:

"Practising Catholics are still little more than a fraction of the French population, about a third; most French people are christened and buried by a priest, but between those two terms they stay away, and their ignorance and indifference are appalling: politically speaking, their numbers are so small that one had better not mention them. So, compared with the position of their coreligionists in Germany, Belgium, or even in the United States, the French Catholics not only have no power, which goes without saying, but they have hardly any weight: there is not one constituency in twenty in which they can control an election. They begin indeed to have their own press. The *Croix* is one of the big dailies, and several provincial papers are so thriving as to appear comparatively influential, and yet influential they seldom are outside the few countrysides I have just referred to; or if they are, it is by showing their conservative rather than their religious tendencies. As a body of men with whom the leaders of the great political factions have to reckon, therefore, they hardly count. Being scattered, that is to say, unable to show anything like an imposing front in an emergency, they are practically invisible, and this accounts for the ignorance of them in which even well-informed and traveled foreigners remain."

The writer reveals the fact that there is nothing like a definite political action of the French clergy:

"Pius X. differs from his predecessor inasmuch as he does not recommend adhesion to the Republican constitution, but he does not recommend any constitution whatever. He insists on Catholics preserving their political liberty and being at will Republicans, Monarchists, or Imperialists, so long as they promote the Catholic liberties. This evidently can not serve as

CLEANING UP VERA CRUZ.

General Funston's force burning the disease-breeding refuse of the occupied city.

a basis for any popular politics that might be called Catholic. But nobody is sorry. Practising Catholics who are numerous enough to maintain the moral influence of their Church in France are not numerous enough nor politically united enough to appear at any advantage at an election. The attempt made by two very good men, Colonel Keller and M. de Bellomayre, to found a Catholic party that would be a real party was a woful failure. So the French Catholics have no political program. There may be a few bishops who are personally Monarchists, and the general disaffection with the Republic throughout the country has certainly cooled the loyalist enthusiasm which greeted Leo XIII.'s adhesion to the régime; also the slow but

steady antagonism against the ideas, dreams, and vague modes of speech of the French Revolution which has been the fashion since Taine amounts to a perpetual criticism of the democracy, and Catholics bear it as everybody else; but all this is not enough to make unity where there is variety, and only Radicals can seriously denounce clericalism where they see reaction."

Contrasted with this, however, is the Church's influence on the life of the literary and social world. There is undoubtedly, the writer thinks, a "reaction toward a higher morality, a more solid social order, and a better mental equilibrium" in France. Many distinguished individuals whose conversion from indulgence to morals has been noted "have undergone a similar transformation with regard to religion."

"They may not be believers, most of them are not and will probably never be; they have been too deeply tainted with the skepticism in which they were bred, or they are both lazy and critical, and they are afraid to launch—somewhat late in the day—into researches which almost invariably demand an undivided and passionate attention, but they speak of religion, of the Church, of priests, monks, and nuns with seriousness and respect. Not only men like Jules Lemaitre or Barrès—not to speak of Bourget—who may have semipolitical reasons for leaning to that side, but typical Parisians like Capus or Lavedan, men who once represented that vanished entity the boulevard, and even at present aim hardly higher than at being the sages of the greenroom and the divines of the *Figaro* or *L'Illustration*, men whose attitude is the more easily copied because in most cases it is only a reflection from movements in society itself, show an unfeigned respect for the tenets, ethical teaching, and constitution of the Church. Twenty years ago writers of this stamp could not refrain from shrugs and smiles, which meant, as plainly as elaborate treatises might have, that these were things in which a modern man could not possibly believe."

This state of affairs may be found to be the same in all the literary circles of Paris, in the lecture-rooms, in the provincial universities, in the local literary academies. The press show a decided change also, the *Figaro*, the *Eclair*, and the *Echo de Paris* being "completely different from their former selves"; and only *La Lanterne*, *L'Homme Libre*, and a few such showing an anti-Catholic bias. In the most refined circles it is fashionable to "affect the greatest reverence for everything ecclesiastical." "Tho a mild indecency is rather the rule among them, it is fashionable not to blame the bishops when they blame the tango." Fashion gets around the difficulty by changing the name of their favorite diversion. We read:

"The violent hostility against the Church which prevailed among the aristocracy in the days of Saint-Evremond and Fontenelle, among the upper bourgeoisie at the time of the Encyclopedists, among the teaching body under Louis Philippe and Napoleon III., and which finally gained the lower strata under the influence of Gambetta, Ferry, and Paul Bert, has almost ceased to be visible in France. Of course it still exists in the Chamber among the Radicals, and in the narrow provincial circles which keep Radicalism alive against the whole country as four or five Jacobins would keep up the Terror in a town against the whole population. But you have to look for it, and its rampant attitude of the days when Combes was master is only an irritating memory. Those people have long lost the contagiousness of faith, and all their energy comes from the desperateness of their greed. This can not last long: let any fortuitous circumstance dispel the equivocations which are to-day their only protection, and even the pitifully doglike submissiveness of the country elector to his master, good or bad, will lose its last support."

"What the future will be it would be futile to prophesy. Who can tell whether the present mood of France is a beginning or only a phase? Materialism as a philosophical doctrine is outlived undoubtedly, and patriotism takes in numberless instances the Christian form of self-denial. But who would be sanguine enough to read in these changes a return to the Gospel and its detachment from the earth? The bishops complain that vocations to the priesthood are becoming rarer everywhere, and some people account for the decrease by the military laws, and by the timidity which the persecution of ten years ago left in the minds of Catholic parents."

GENESIS REINTERPRETED

THE DISCOVERY of early Babylonian tablets in the archeological collections of the University of Pennsylvania has recently aroused interest. They have been read by Dr. Langdon, an Oxford scholar, and, according to dispatches to the American press, a pre-Semitic account of the deluge contained therein is "clearly the original of that preserved in the book of Genesis." Another interesting feature is the story of the temptation and fall of man, which, in the Babylonian narrative, places Noah, and not Adam, as the chief figure. The discovery, as *The Churchman* (Prot. Epis., New York) points out, is only one of those showing the new direction given to critical work on the Old Testament. "It is no longer enough to examine with microscopic skill the text of the ancient religious books of the Hebrew race and to determine their character and validity on the basis of editorial revision. The history of other peoples and races must now be drawn in to explain the religious growth of the Jew." In the New York *Times* dispatch we find this account of the tablet lately read:

"The tablet came from an early library at Nippur, and is now, with a number of others, in the museum of the University of Pennsylvania at Philadelphia. Last October Dr. Langdon visited the museum and copied the inscriptions on about fifty tablets of the Nippur collection.

"One of these tablets is engraved with a hymn to Nintud, who in the Babylonian legend is the creatress of man. The hymn contains the Babylonian version of the flood, and, in contrast with the famous 'Chaldean Account of the Deluge' discovered by George Smith in 1872, agrees with the Biblical account in naming a patriarch who saved the world from a catastrophe by reason of his piety.

"It further agrees with the Biblical narrative in making him a gardener or agriculturist and in the duration of nine months assigned to the flood. The name of the patriarch is given as Tagtog—the Semitic 'Nuhu.'

"It is related that after the flood Noah became 'like the gods,' which is interpreted to mean that he received the gift of extraordinary longevity.

"This version says the Canaan (Babylonian for the God Enki, the water-god) taught Noah the secrets of things revealed to him, and the wisdom possessed by the gods. With this revelation the tablet breaks off.

"It is notable that this 'revelation of wisdom' is related by Berossus, a Babylonian historian, who wrote in the time of Nebuchadnezzar.

"After a break in the inscription there occurs a remarkable story of the fall of man, his punishment being the loss of effectual life, or of longevity, because he ate of the tree of life. The story includes the contention between the creatress of man, Ninharseg, or Nintud, and her husband, Enlil. The beginning of the story of the fall is broken off."

Dr. Langdon's position as a scholar gives his discovery weight, tho as yet a conservative attitude is maintained here. *The Churchman* quotes Professor Batten, of the General Theological Seminary, who is inclined to suspend his judgment until the full text of the translation can be inspected. In Dr. Batten's opinion these Nippur tablets represent only another variation of the same story that the Jews wrote in their Bible. Further, he says:

"That story was common property all over Assyria, Asia Minor, and adjacent countries, and was adapted and corrupted by each people that used it. The fact that the Jewish version of it is accepted was that they were the ones to preserve it in their Biblical writings and so hand it down to us. Professor Langdon's discovery amounts only to a corroboration of what the Jews wrote and makes their Bible more authentic, if another version of what seems to have been common property among a great number of different and constantly warring peoples can amount to a corroboration."

This Episcopal paper observes that "whatever analogies may be found between the Biblical narrative and these early Babylonian accounts there can be no question of diminishing the spiritual worth of the Old Testament."

CURRENT POETRY

PATRICK MacGILL was once a navy. Now he is a poet and a novelist, and what he likes best to write about is his experience working on the railroads of England and Scotland.

And altho he says that a working man's life is a terrible thing, altho "Songs of the Dead End" (Mitchell Kennerley) is a book filled with expressions of anger against the long-suffering "master class," yet he does not make his reader pity the navy. In spite of his ostentatious radicalism, which is a little too stereotyped to seem sincere, he betrays a sentimental affection for the old days of hard work and hard play. To exchange the pick for the pen does not always bring happiness.

And here, in vigorous Kiplingesque lines, the pen celebrates the pick.

The Pick

By PATRICK MacGILL

In the depths of the pluvial season it gallantly
stayed to your hand,
In the dead end of wo and creation, afar in the
farthermost land,
When the saturnine heavens hung o'er you as
dark as the ultimate tomb,
When the trough of the valley you gutted was
filled with ineffable gloom,
When down in the depths of the planet uprooting
the brontosaur's bed,
With the fire-damp withering around you, and a
candle affixt to your head,
When the gold-secking fever enthralled you, when
you fitfully watered the pan,
Ever it strove to your bidding, ever it aided your
plan,
Ready, restless, reticent, friend of the con-
quering man!

See that its edge is like silver, tempered to try and
be tried,
Look on your pick as a lover would gaze on the girl
at his side,
If it responds to your promptings, when the
navvy men hurry and sweat,
If it be proof to the tempest, when the clouds
and the dirt-bed have met,
If its handle be graceful and limber, slipping and
soft in the hand,
Brothers, 'tis meet for its mission, tend it, for
ye understand:
Try it with fire and with water, try it in sand and
in rock,
See that the slag can't resist it, see that it beareth
the shock,
Hurling the rock from its fastness, goring the
destitute earth,
Tearing the guts of the tunnel, seeking the coal
for the hearth,
Down in the stygian darkness, ye who can reckon
its worth!

Work it for days one and twenty, then if it's true
to the test,
Look on your pick as a maiden, but often the
pick is the best,
For the temper of women when broken, e'en
heaven can't better the same,
But the pick will regain what it loses with the
touch of the hammer and flame,
And for aye will it answer your yearning, be true
to the trust that ye place,
But oftentimes the fairest of females is fair in the
glance of the face,
And fickle, and sure as she's fickle, your sweet-
heart in labor is true
As long as there's grub on the hot-plate, as long
as there's hashing to do,
While the half-harried winter is scowling, while
the slides of the winter are blue.

Enough! for the pick has been trusted, enough!
for the pick has been tried
In the uncharted lands of the world, past where
the pathways divide.

"I raise these specially for Campbell's Tomato Soup."

"Notice how heavy they are, and red-ripe all over. Solid meaty fruit clear through. Full of juice. Full of natural sugar. There's nothing too good for Campbell's Tomato Soup!"

And this is true in the widest sense of the words. Not only are the choicest materials used, but the ablest skill and most advanced methods are employed in preparing and blending them.

No expenditure of money and time and labor is spared to render every can of this favorite Campbell kind worthy of its matchless reputation.

Better order it by the dozen.
That's the practical way.

Your money back if not satisfied.

21 kinds 10c a can

Campbell's SOUPS

LOOK FOR THE RED-AND-WHITE LABEL

Where the many lead into the city of mimicry,
aping and show,
Where one leads away to the vastness, the in-
finite vastness you know,
And there with the grim pioneer it wrought in the
shine and the shade,
While he feared in the gloom and the silence,
afraid as a child is afraid,
Pleased with his rough hand's caresses, slave to
his wish and his whim—
Away on the fringe of the world, comrade and
brother to him.

Enough, for the pick has been trusted, in hazard-
ous, desperate years,
When the wine-press was trodden alone for the
vintage of sorrow and tears,
Under the blight of the upas, the bane of the
vampire's wing,
Shaping the founts of a temple, raising the keeps
of a king,
To labor that stood as its sponsor for the fiery
baptism given,
It has proved its worth, on a toll-cursed earth, and
under the eyes of heaven:
Stanch in the pitiless combat, vigorous, virile,
and bold,
To-day I give it the honor our fathers denied it
of old,
To-day I have sung its praises, and told of the
honor due
To the pick that ever was trusted, tried on the
dead-line and true.

From the *London Spectator* we take a
song which belongs to the same genre as
"The Pick." But what a difference be-
tween Mr. MacGill's rhetoric and Mr.
Smith's simple, undecorated statement!
With the exception of Mr. Henry New-
bolt, whose "Drake's Drum" is a classic,
Mr. Smith is the strongest and truest of all
living singers of the sea. His verses smell
of tar and salt water, and the roll of a
great ship is in their measure.

The Ould Has-Been

By C. Fox SMITH

All down by the harbor a-walking one day,
I saw an old hulk by the wharf-side that lay,
Her topmasts lopped off and her paint weathered
bare,
Red rust flaking off her and no one to care.

Then met I a man standing, lounging beside,
Who scornful did speak as he spat in the tide:
"There lies an ould has-been that once had the
name
Of a sea-going clipper, a clipper of fame."

"Time was when her races with grain or with wool
Were the talk of the crews 'tween Bombay and the
Pool,
When the tales of her sailing like wildfire did fly
From Leith to Port Phillip, from Cork to Shanghai.

"But now who's a glance for her, limping her round
With coal for the ferries that ply on the Sound?
And who that now sees her would know her the
same
Which once was a clipper, a clipper of fame?"

O long I stood gazing then, sad to be told
How all men neglected her, now she grow old,
And my heart just to see her with pity was sore
For her, once so lovely, now lovely no more.

I marked the thick grime on her main deck forlorn;
I marked the poor masts of her, woful and shorn;
And all of my thought was that sure it was shame
To see such an end of that clipper of fame.

I thought of her sailing, so hopeful and proud,
The dawn of her sails like a mountain of cloud,
I thought of her battles, none stouter than she,
With the strength and the rage of her rival the sea.

O better the sea that so long she did use
Should take her and break her as good ships would
choose!

Some chance of the storm or some mercy of flame
Should make a brave end of that clipper of fame.

I thought of her captains, how once they would
stand

So proud on the poop of their splendid command;
And all the good sailormen, each in his day,
That loved her and left her and passed on his way.

O scattered the world through-to-day they must be,
And some sleeping sound in the deeps of the sea;
And some will be old men grown grizzled and lame
That were lads like myself in that clipper of fame.

But no one can steal from those stubborn old sides
The secrets she shares with the winds and the
tides.

The tales that she tells of the sea and the sky
To the wood and the gulls and the ships going by.

And I took off my cap by the dingy wharf-side
To the grace and the glory, the strength, and the
pride.

Which all were her portion who once had the name,
In a day that's gone by, of a clipper of fame.

Does life pass "old maids" by? It is
dangerous to generalize, and it would
be easy to compile a long list of women who
never married whose days were full of
actions that the world must always hold
in grateful remembrance. But there are
old maids and old maids, and also there
is life and life. It is a vivid portrait,
but not a "type-portrait." It appears
in *The Smart Set*.

An Old Maid

By LOUIS UNTERSMEYER

Day after day she knits and sews,
Waiting for nothing—yet she waits;
Hemmed in by silence, pansy rows,
A set of Lytton, five old plates,
There is a bird that seldom sings,
Four *genre* pictures on the wall—
Day after day she sees these things,
And that is all.

Great joys or sorrows never came
To set her placid soul astir;
Youth's glowing torch, Love's leaping flame
Were never even lit for her.
The harsh years only made her wear
Misfortune like a frail perfume—
It hung behind her on the stair
And filled the room.

Tending her lilac grief with tears,
Her soul grew prim and destitute;
An empty guest-room, locked for years,
Musty with dreams and orris root. . . .
The strengthening cares, the kindling strife
Of living never swept her high—
For even in the midst of life,
Life passed her by.

From *The Smart Set*, too, we take this
epigrammatic little song. Its grace re-
calls the exquisite art of the Spanish
court poets.

Rondeñas

By THOMAS WALSH

I asked the marble for a little urn
To hold my tears and say my blessing there;
It seemed as tho it answered in return:
"I am unworthy of her breast so fair."

The granite then I asked if it would be
Eternal sentry where she sleeps apart;
There sighed a message from its depths to me:
"Unworthy I to hold so hard a heart."

The Right Kind Of a Boy

—the son of a mother or daddy
who insists on the right kind of
food to back up the natural en-
ergy of youth.

Ordinary food often lacks the
elements that promote the sturdy
growth and upkeep of the human
body.

Food that will furnish the
organic elements needed—iron
for the blood, phosphate of pot-
ash for brain and nerves, lime for
the bones, and the other natural
salts of the field grains that build
stout bodies and keen brains—is
a necessity.

All these body-building ele-
ments are found in

Grape-Nuts

FOOD

Made from choice whole wheat
and malted barley, it is scientifi-
cally prepared for easy digestion
and quick absorption by the life
forces.

The crisp, golden granules have
a delicate sweet taste, are ready
to eat direct from package with
cream or milk—a perfectly bal-
anced food for both children and
grown-ups.

No wonder Grape-Nuts has be-
come famous the world over—

*The Eagle is a wise old bird,
And what he says is so.
His is the brand
You should demand
To make your Baby grow.*

BORDEN'S EAGLE BRAND CONDENSED MILK

A mother's love is a mixture of tenderness and wisdom. When she is unable to nurse her baby, her wisdom is put to the test to secure for it that food upon which it will thrive.

To prepare and recommend a food for babies is a great responsibility. We have accepted that responsibility for nearly sixty years. It is nothing that Gail Borden invented condensed milk if, during all those sixty years, eternal vigilance was not exercised in keeping Borden's Milk up to the most rigid demand of purity and quality.

Both the doctor and the mother are factors in selecting a food for the baby. The fact that so many mothers and doctors have met with success in feeding Borden's Eagle Brand Condensed Milk must have weight with you. The evidence will appeal to your wisdom. The story of Borden's Milk will convince you.

Two books mothers ought to read are sent free. "The Baby Book" with feeding chart was prepared under the supervision of a competent doctor. "Where Cleanliness Reigns Supreme" tells why Borden's Milk is the safest for baby, and, therefore for everybody.

This Free Book About KELLASTONE, the Wonderful New Stucco that is Permanent as Stone and far more Beautiful.

You have often admired the graceful lines of a plaster house only to be disappointed, when you looked closer, to see the fine network of cracks that disfigured the walls.

Stucco cracks when it is brittle and right there is the manifest superiority of

KELLASTONE

Imperishable Stucco

for KELLASTONE is tough instead of brittle.

KELLASTONE is not ordinary stucco because it contains no lime or cement. It is made by an entirely different process. It has great tensile strength which means that it offers unusual resistance to settling strains. It is simple to prepare and apply. It can be used at any time of the year.

The KELLASTONE BOOK tells how KELLASTONE has been put to the test and proven under strenuous conditions. It contains photographs of KELLASTONE houses complete and in process of construction. It shows various KELLASTONE finishes. Finally, it will convince you that KELLASTONE is the long-sought-for material that makes stucco success certain.

KELLASTONE

Composition Flooring

for bath rooms, sun parlors, kitchens, offices, and public buildings, is sanitary, proof against water and fire and will not wear away.

We will gladly send you the KELLASTONE BOOK No. 3 and Composition Flooring Book No. 5, upon request.

PERSONAL GLIMPSES

VILLA'S ORDER OF THE BATH

THE order sent out of Mexico by General Villa not long ago for a \$1,000 bathtub was too good a joke not to be appreciated by paragraphers and editorial writers. Moreover, it was too good a joke to have been perpetrated unintentionally by the Constitutionalist commander. Villa's sense of humor is remarkably strong, as his various previous actions have shown; it is native and yet sophisticated, and it may be assumed that nothing would tickle it more than the conception of startling his rather dainty American neighbors by a sudden demand for a de luxe consignment of the most truly symbolical agent of their culture. Among other comment the Birmingham (Ala.) *Age Herald* remarks upon the jest as follows:

No more convincing proof of the "Americanization of Mexico" could be given than this act of the rebel leader who aspires to take his morning "bawth" in a receptacle that is rivaled by the tubs of few millionaires. It is reported that when Villa reaches Mexico City he will cast General Huerta's bathtub on the junk-pile and install his new tub in the Mexican palace.

Time was—and not long since—when the redoubtable Villa rocked not of such luxuries as ornate porcelain bathtubs. There are very good reasons to believe that he didn't indulge in the matutinal dip any more than he did in the evening shower. A wild, rough life was led by Pancho. He had little time to take a bath, even had he been so disposed, and practically no facilities.

But the star of the former bandit's destiny has risen high and shines now with increasing luster. As he soars, naturally his thoughts turn to the possibilities of enjoying his new honors and dignities. Splashing around in a \$1,000 bathtub will be merely one phase of the apotheosis of Villa. Later on he will affect manicures, face specialists and other "artists" who cater to an effete civilization. The time may soon come when we may see a transformed Villa strutting it with the foremost military dandies.

This pleasing prospect is not shared by the *Baltimore News*, which discovers a more ponderous reason for Villa's remarkable action. Not Villa's sense of humor is to be credited for his ablutionary zeal, but rather his cleverness as a publicity man and diplomatist. We read:

To the list of sensational advertisers must be added one from the war zone. Villa, never a man of many words, as usual has let his creative imagination speak through deeds. He ordered a thousand-dollar bath installed in the palace which will soon cease to be Huerta's and become his—if, that is, he beats Carranza to the capital. The question as to what dis-

20 Days' Trial on Your Motor

A Remarkable Device!

The McCormick Power Plug

Replaces the spark plug

Transforms the ordinary energy from battery or magneto into a flood of high frequency sparks. By instantaneous and complete combustion it maintains full power strokes in the engine. Solid surface electrodes do away with burning, displacement or adjustment of wire points. Thousands of enthusiastic users. A trial will convince you.

We will send you a set by insured parcels post for 20 days' trial on your machine. As a bookkeeping facility you can send us a check or money order at \$2.00 for each Power Plug and we will send it back if you are not in every way satisfied. State thread; make and model of car.

MCCORMICK MFG. CO.

206 McCormick Bldg., Dayton, Ohio

posal shall be made of the bath in case he fails has not yet come up. There is only one program on the boards for General Villa; and that is, get some ammunition and get that bath installed.

Everything else of Huerta's may seem to a soldier reeking with slaughter decent enough to use at a pinch. Whether he will have a new dinner-service or wardrobe accommodations or audience-hall depends in part upon what Huerta's packing-boxes and bombs leave undisturbed. But about the bath there must be no doubt. Villa is to be conspicuously, luxuriously, extravagantly clean.

Is it possible that the canny Mexican has put his finger upon the bath as peculiarly attractive to the United States, which he would like to placate after the Benton affair? Will we hear soon of his exploiting other American institutions—baseball, for instance, and chewing-gum? Shall a delicate attention to New Jersey mandate prompt him to declare that his bath must be tubless and all shower?

TWO GREAT AMERICANS

"FOUR lines," says the *Baltimore News* indignantly, "sufficed to tell in the newspapers of this country of the passing of a man who so imprest his individuality on men and nations that his work is part of the progress of civilization." And yet this man, Henry Willard Denison, gave the whole of his life to playing the part of the power behind a throne, and hence was predestined to live and die obscurely. The bare facts that were published as news are that he died stricken with paralysis while in the employ of the Japanese Government, and that he was an American. This tells little, but fortunately *The News* has more to tell:

Henry Willard Denison's almost seventy years of life were passed in the midst of the greatest activities, under the most terrific physical and mental strain. He wore out his body and mind in the service of civilization, peace, and progress, so that his passing from the world must take one of the great figures of the present generation, albeit one of the quiet men who seldom figure in the newspapers, but on whose powerful hands whole nations have depended for guidance and support.

For many years Mr. Denison had been known as the foreign adviser of the Foreign Office of Japan. He held that office nearly thirty-five years—the thirty-five years that marked the making of Japan into a world Power.

A native of Vermont, a graduate of Columbia College, New York, Mr. Denison went to Japan in 1880 and became an important factor in Japanese affairs immediately. In all its relations with foreign governments the policy of the Japanese was the policy that Denison dictated. His, however, was a power for peace. He directed the growing statesmen of Japan into the pathways of peace. He was the trusted friend of the late Emperor, the confidant and advisor of the present Emperor. He stood behind Ito, and all the other big men whom Japan has produced.

Hold a Sheet to the Light

To discover that elusive *something* about "Crane's Linen Lawn" which makes it different and better, hold a sheet before a window.

It will at once become apparent that this paper is distinguished for its rich, pure texture and its inviting surface.

The added charm of smart creations in cuts, sizes and tasteful colorings give just cause for the universal adoption of Crane's Linen Lawn, the correct writing paper.

Be first among your friends to write a letter on our new style paper, the "Elizabethan." A full size sample letter sheet of this rich, panelled paper with the newly created Darcy envelope to match, will be sent, together with other usable samples and a booklet showing tints, for 10c. in stamps or coin. These samples will prove a source of delight.

SMILE AT MILES

It was his policy and his participation in all negotiations conducted by the Japanese that made these men famous. He was the counselor of the peace envoys at the time of the war with China, and matched his wits against the wily Li Hung Chang—and beat him. He was counselor of the peace envoys at Portsmouth and is generally accredited with writing the treaty with Russia. He was a permanent member of the Court of Arbitration at The Hague. He was delegate from Japan to the second international peace conference. He had been decorated and consulted by practically every nation of the world. And yet he was a simple, quiet, pleasant-spoken, gray-haired American. He was intensely American, tho his lifework made him a citizen of the world.

And so, while all the world is upsetting itself with fifth-rate, spiggoty politicians and ex-bandits, while it shudders at the misfortune of a gentleman and his wife whom accident of birth has placed where personal achievement would never even approximate, while the populace greedily tries to solve the matrimonial puzzles, four lines suffice to tell of the striking down of one of the world's greatest figures—one of the men who have made history.

Another great American has died recently who also gave his life to an enduring constructive work for the benefit of mankind. This is Sir Francis Campbell, who died in London at the age of eighty-two. The *Philadelphia Inquirer* calls him a most wonderful man, and explains the term as follows:

We refer to him as "wonderful" because there is no other word that so fitly describes him. Not because he was merely a self-made man, for in that respect alone he would not be unique, but because, springing from a farm in Tennessee, he made his fight against the terrible blight of blindness which came upon him at the age of five and he ended his long career as the most successful blind-leader of the blind that the world has ever known.

He was born poor, and might almost be said to have been born blind. But he struggled for an education and got it; actually worked his way through Harvard; was long connected with the Perkins Institution for the Blind in Boston; perfected his musical education in Berlin and Leipzig and founded, with the aid of the late Dr. Armitage, the Royal Normal College and Academy of Music for the Blind, at Upper Norwood, in the outskirts of the metropolitan district of London. With his American wife, who came from the Faulkner family of South Acton, Massachusetts, he has been at the head of that great establishment, which has taken the blind boys and girls of England and taught them to be self-supporting. He has graduated many a finished organist. What American drawn to the concerts at the Albert Memorial Hall in London has not heard the music that has responded to the touch of the keys by his pupils?

There are other institutions of the blind—many of them—but most of them have profited by the experience of this establishment in Upper Norwood. For here was a blind man working among blind people—sympathizing with them, understanding

Not Quantity of Milk Alone —Quality, Richness

It's a familiar story about the lady who one morning went out to the milkman with two pitchers and said she would like to have her milk and water separate—she would mix them to suit herself.

That was a joke on the milkman, but all cows do not give equally rich milk.

The Jersey Cow

is not distinguished for quantity of milk alone. She combines richness with quantity. "Good goods put up in small packages" is true in case of the Jersey cow—only half true in case of her milk. With richness and quantity of milk goes persistency in milk. And your Jersey cow is gentle, beautiful and easily kept.

We have no Jerseys to sell. We are interested in the breed. May we send you some Jersey facts?

His Latest—His LAST Book

JUST PUBLISHED Just before his recent death, Dr. Alfred Russel Wallace, the eminent scientist, author of "Darwinism," "Man's Place in the Universe," "Social Environment and Moral Progress," etc., sent to his publishers the manuscript for this new book "THE REVOLT OF DEMOCRACY" which must now take its place in history as the last published utterance of his towering intellect.

The Revolt of Democracy

By Alfred Russel Wallace

The keynote of this new book, the successor to "Social Environment" and the last written by Dr. Wallace, is found in the words: "It is certain that we have now reached a point in our political history which will necessitate much more direct and radical measures than have yet been taken to secure the immediate abolition of that disgrace to our civilization—starvation and suicide from dread of starvation." The work is white hot with the zeal of the social reformer who, not content with uprooting long standing evils, suggests ways and means to erect a new temple of loveliness, of prosperity and of health.

FUNK & WAGNALLS COMPANY, 364 Fourth Ave., New York, N. Y.

them and their capacities and showing them the way with his own hands. To a considerable extent Dr. Campbell—for he won several university degrees—has revolutionized methods for handling and instructing the blind. Herein lies his first claim to distinction.

He was a lover of nature. He has bicycled through Norway and Sweden and Germany. He has climbed to the top of Mont Blanc. He has been everywhere and "seen" everything. He always insisted that the surroundings of the blind should be made attractive, and his pupils dwelt amid beautiful gardens where flowers bloomed and birds sang. He has accomplished what most men blest with sight could not do. Who shall say, then, that the career of the poor blind boy, struggling against great odds and achieving such magnificent success, did not partake of the wonderful—that his epitaph could not properly be: "Here lies buried a wonderful man."

ADVERTISING BOYS

HAVE you never seen a long, plodding line of orphan boys or girls out for an airing from some near-by asylum and wondered why it is that there aren't enough fathers and mothers and big brothers and sisters to go 'round? Watch them as they pass, shuffling along rather silently, all clad alike in costumes far more to be praised for their qualities of endurance than for any hint of prettiness, trimness, or comfort—how dull they seem! Overdrilled soldiers in the Army of the Unwanted, fed, washed, clothed, amused, taught, and (possibly) petted, in batches, squads, and herds—and all because there aren't enough parents to go 'round! This is the situation that one man down in Texas has found. He wanted to know why a boy couldn't be a boy, instead of merely a forcibly washed and drest member of a herd; and they told him of the paucity of parents. But he didn't believe them. He dared to doubt a self-evident fact, and went back to a principle that a good many people discovered a few years ago, the principle of advertising—the principle that says you can't expect people to do what they really want to do without a little persuasion. He believed that there really were stray parents and brothers and sisters around somewhere in the world, people who didn't have any children, or else didn't have children enough. So he advertised for them. The Montgomery (Ala.) Advertiser remarks briefly on this one-man Parents' Employment Bureau and the popularity he has won among the children who have come to know him:

Judd Mortimer Lewis, of the staff of the Houston Post, has a great love for children—homeless and otherwise. He conducts a children's bureau in the columns of *The Post*, in which he makes announcement of the discovery of stray children and advertises for homes for the

INVESTMENTS AND FINANCE

STOCKS AND DIVIDENDS OF AMERICAN RAILWAYS

FROM an abstract of a report made by the Interstate Commerce Commission for the year ending June 30, it appears that the total capitalization of the railroads of this country now amounts to \$19,796,125,712, of which huge sum the stock amounts to \$8,610,611,328. Readers will note here the excessive amount of the bond issues. Conservative students of finance hold that the stock and bonds of a given railway should each comprise about one-half the total capitalization. The above figures show that the funded obligations are about two and one-half times as great as the amount of stock.

In the same report it is set forth that of this total amount of stock 32.9 per cent. paid no dividends last year, and that of the bonds 10.44 per cent. paid no interest. On stock on which dividends were paid, the total amount paid was \$368,616,327, or an equivalent of 6.38 per cent. on each share. If an average were struck for the entire amount of outstanding stock, the dividends paid would average 4.28 per cent. Other interesting statistics in this report are printed below:

"The operated mileage of the railroads was 244,418, an increase over 1912 of 8,628 miles; equipment (locomotives), 63,378, an increase of 2,102; cars of all classes, 2,445,508, an increase of 76,566; employees, 1,815,239, an increase of 115,208. Of the total amount of capital outstanding there existed as stock \$8,610,611,327, of which \$7,231,515,045 was common and \$1,379,096,282 was preferred. The remaining part, \$11,185,514,385, representing funded debt, consisted of mortgage bonds \$8,186,366,426, collateral trust bonds \$1,189,636,796, plain bonds, debentures and notes \$1,107,076,783, income bonds \$250,290,655; miscellaneous funded obligations \$82,858,275, and equipment trust obligations \$369,285,450.

"The net increase in investment in roads and equipment during 1913 is stated at \$477,059,640; number of passengers carried, 1,033,679,680, an increase over 1912 of 39,307,397; number of tons of freight carried, 2,058,035,487, an increase of 239,239,857; the average receipts per passenger mile, as computed for the year ended June 30, 1913, for the roads covered by this statement, were 2.008 cents; the average receipts per ton mile, 0.729 cent; the passenger service train revenue per train mile was \$1.356; the freight revenue per train mile was \$3.243.

"The following figures present a statement of the operating revenues for 1913, in detail:

Freight revenue.....	\$2,194,930,565
Passenger revenue.....	603,987,417
Expressive baggage revenue.....	7,607,902
Parlor and chair car revenue.....	715,596
Mail revenue.....	50,740,212
Express revenue.....	70,717,266
Milk revenue (on passenger trains).....	9,057,591
Other passenger revenue.....	6,110,252
Switching revenue.....	33,248,734
Special service train revenue.....	1,380,362
Miscellaneous transportation revenue.....	6,461,901
Total rev. from oper. other than transpor.....	31,624,843
Joint facilities—debit.....	1,051,001
Joint facilities—credit.....	3,553,800
Total operating revenue.....	\$1,125,135,798

Operating expenses, as assigned to the five general classes, were:

Maintenance of way and structures.....	\$421,232,395
Maintenance of equipment.....	511,561,363
Traffic expenses.....	82,850,113
Transportation expenses.....	1,006,252,745
General expenses.....	78,072,308
Total operating expenses.....	\$2,100,969,924

"The aggregate of dividends declared during the year 1913 was \$368,552,632, apparently including those paid by railroads to railroads and thus duplicating. The corresponding figure given in the preliminary abstract for 1912 was \$400,308,609."

WHAT BIG STEAMSHIP LINES EARN

The four big transatlantic steamship lines, Mercantile Marine, North German Lloyd, Hamburg-American, and Cunard, employing a gross tonnage of 3,230,170, earned last year the sum of \$46,237,361, which is an increase of 12½ per cent. over their net earnings for the preceding year. These four lines control the bulk of the transatlantic traffic. The increase in earnings "was shared by the four lines practically to the same degree," says *The Wall Street Journal*. All were able to strengthen their reserves, and the two German lines, besides doing that, "found it possible to make larger distributions to stockholders." Other interesting data as to the business of each line are printed in *The Wall Street Journal*:

"Together the four lines represent a total stock capitalization of \$181,162,706. On this amount they earned in net last year the equivalent of 4.97 per cent. On a capitalization of \$179,287,706, in 1912, a little under 4.30 per cent. was earned. Individually, however, the three foreign lines earned a much larger surplus for dividends on their respective capitalizations than the aggregated earning power indicates, owing to the comparatively heavy capitalization of Mercantile Marine.

"Net earnings per ton on the basis of tonnage was \$14.31, or \$1.21 per ton more than in 1912. Against this net earning power the per-ton capitalization for 1913 was \$190.92 and in 1912, \$207.61.

"Taking the operating results of each of the four lines for the past two years, and reducing these to a per-ton basis, the following ready index of the performance of each company is had. It should be added, perhaps, that in making the computations from the reports of the companies, the equivalent of one pound sterling and of 20 marks, was taken at \$5:

	M. M.	N. G. L.	Hapag.	Cunard
Act. ton., '13.....	1,115,461	778,709	1,051,503	294,097

* Includes other income account interest, \$1.11 per ton.
† Includes other income account interest, \$0.58 per ton.

"The Cunard Line, referred to in shipping circles as 'the Pennsylvania of the Seas,' with a little more than 25 per cent. of the tonnage employed by Mercantile Marine, earned about 37 per cent. of the latter's gross, while its net earnings were equal to 59 per cent. of Mercantile Marine's. The explanation for this apparently better showing by Cunard is partly in the fact that this company's tonnage is less divided and partly by the reason that its service lines extend to a much smaller number of ports of call.

"Mercantile Marine's ocean service tonnage, for instance, is carried in 120 vessels, which gives its fleet an average gross capacity of 9,274 tons per vessel. Cunard's tonnage is contained in 25 vessels, making for an average gross vessel capacity of 11,329 tons. Taking Cunard's average vessel tonnage as a unit, Mercantile Marine has to employ nearly 1 1/2 times that unit to perform the same amount of tonnage service. The fact that Mercantile Marine's service is much more diversified, subjects its service tonnage to the constant fluctuations in ocean freights, to a considerably greater degree than Cunard's.

"The comparatively large surplus per ton, shown by North German Lloyd as against the other three companies, is due to smaller appropriations to its reserve accounts, altho the company contributed proportionately more than the others, to the single item of depreciation, including all properties. Mercantile Marine, it will be noted, made a very substantial increase in its annual appropriation to the depreciation account. Carrying the above tabulation to its logical conclusion, the following table, showing the stock, bond and total capitalization per ton, is added:

	M.M.	N. G. L.	Hapag.	Cunard
Mid. stck., '13....	46.39	43.84
" "12....	45.30	21.91
Com., '13....	44.67	40.16	37.46	11.24
" "12....	48.62	40.74	37.64	12.36
Tot. stck., '13....	91.06	40.16	37.46	31.34
" "12....	94.92	40.74	37.68	34.27
Bd. dhs., '13....	63.54	31.73	16.33	55.94
" "12....	72.19	22.69	17.97	65.44
Tot. cap., '13....	154.60	61.90	54.99	87.28
" "12....	167.11	63.43	55.65	99.71

"The feature of the above comparison is the comparatively heavy bonded indebtedness per ton of the Mercantile Marine. Cunard also has a substantially heavy similar total for the tonnage employed, altho its actual total of debentures outstanding is \$15,900,000 against Mercantile Marine's total of bonds of \$76,428,055. Hamburg-American has a lighter per ton bonded debt and per ton total capitalization than the other three lines. Disregarding tonnage, however, the bonded debt of the North German Lloyd is smaller than that of its Hamburg rival. Actually, North German Lloyd has a funded debt, as of December 31, 1913, of \$16,912,500, as against Hamburg-American's \$17,370,875, while the total capitalization of the two big German lines is, respectively, \$48,162,500 and \$56,745,875."

EXTRAVAGANCE AND A CRISIS IN ARGENTINA

It is only a few months since interesting data came to hand as to the extent of the financial depression of Brazil, due in large part to low prices for products and especially for rubber. It is declared now by *The Journal of Commerce* that a depression exists in Argentina, "hardly less acute than that in Brazil." In Argentina, however, there has been no disastrous fall in the prices of staple products, nothing in fact, to correspond to the low prices in Brazil for rubber; nor is the Government in serious straits, altho it has been "prett for credit." Prices for Argentine cereals

Have You \$100 or \$1000 to Invest at 6%?

Many persons have the mistaken idea that bonds are only for the wealthy or for large institutions. Nothing could be farther from the truth. Safe bonds are investments for everybody. A sum as small as \$1,000 or even \$100 will buy a safe bond, which will pay you 3% interest every six months—6% a year.

Thousands of thrifty Americans each year are learning the great lesson of investment in sound bonds, and are finding that, after all, there is no investment so satisfactory as a well-secured bond bought of a responsible and reputable investment banking house.

Good bonds are safer than the best stock and more convenient than the best mortgages and ensure absolute privacy to the investor.

We have prepared a booklet, sent without cost on application, which will help you solve your investment problem and explain to you the merits of the first mortgage bonds we sell. The fact that no investor has ever suffered loss of either principal or interest on any security purchased of us since this House was founded, 32 years ago, is a record which is worthy of your consideration, and which should be an ample basis for confidence.

If you are interested in safe investments and have \$100 or any larger sum available, write for Circular No. 546H

Largest Organization of its Character in the United States

are "well maintained," figures for wool "have been perfectly satisfactory," and prices for beef-cattle "have been climbing higher and higher." Following are figures of production in wheat, linseed, maize, and oats for the past five years, from which it is evident that the Argentine crisis "cannot justly be attributed to failure of production":

Season	Wheat	Linseed	Maize	Oats
1909-10	3,565,556	714,813	4,350,000	629,551
1910-11	3,073,000	595,000	703,000	643,000
1911-12	4,042,000	628,000	7,515,000	882,000
1912-13	5,400,000	1,150,000	4,905,000	1,082,000
1913-14	3,100,000	700,000	17,000,000	740,000

* Latest Government estimates (April). † The figures given equal the official forecast of April, 1914, less 15 per cent. (estimated loss by floods in April and May)

"In 1912-1913 the production of wheat, linseed, and oats reached the highest figures known, and the maize crop, tho the yield per hectare sown was disappointing, came second only to the record of the previous year. Altogether, exports from the Argentine in 1913 topped those of 1912 by \$3,113,291 gold and those of 1909 (the highest recorded before 1912) by \$80,154,019 gold."

The writer in the *Journal of Commerce* declares that "by the time this bumper year was half over, the shadow of a crisis had begun to lie heavy upon Argentina." As to the causes of depression in Argentina, a Buenos Aires correspondent of the *London Times* is quoted as saying "various explanations are given, each more or less consonant." In official circles the statement commonly made is that "a general restriction of credit due to European wars has cut off the cash nutriment of Argentina's well-being." While there is something in this explanation, a deeper cause is to be found elsewhere. This is extravagance, overspending and overspeculation. In detail the writer says:

"Extravagance of expenditure would never have brought matters to the present pitch if it had not been based upon the most amazing extravagance of thought. To increase commitments year by year in the full confidence that next year will bring to the rescue a miraculous harvest, or a still more optimistic speculator—this is the superextravagance that has prevailed in the Argentine."

"Altho the production of 1913 attained a record figure, it was altogether insufficient to fulfil the high hopes of the previous year. So much had been built upon those hopes. Land had mounted higher and higher in price. A sold to B at a large profit, and B to C, and C to D; and D dreamed of the price he would get from E. And A, B, and C put their profits into more and more land, good, bad, and indifferent—"alfalfa camp," cereal lands, "undeveloped" land all over the country, from Patagonia to Paraguay. The final price was always high, but it was manfully paid—with borrowed money."

"Obviously a crash had to come, and in the latter half of 1913 a number of lofty edifices toppled and fell. Commercial failures had been increasing during the years 1910-12. From 1910 to 1912 the liabilities involved in the failures of the year had doubled. From 1912 to 1913 they doubled again, and totalled over £15,000,000 in the latter year."

"A large amount of liquidation is still necessary to clear the way for a return to healthy conditions, tho the outlook shows some signs of brightening at last. When the split effervescence of land speculation has been wiped up, the essential soundness of the Argentine, as a country that produces and exports the chief necessities of life, will be thrown into sharper relief."

kiddies. The following is a typical announcement:

I want a home, a Catholic home, for a freckle-faced, stubbed-toed, bright, happy boy; just the sort of a boy you used to be; just the sort of boy artists love to put on the cover of *The Saturday Evening Post*; just the sort of a boy that used to hike off down to the Ol' Swimmin' Hole with you an' me an' Jim Riley. If you can not give a boy love, and an education in return for his love and gratitude, please don't apply. This bureau is not furnishing servants and drudges. He's twelve years old, dern his skin! And, believe me, some boy!

Lewis is the idol of Texas children, and well may he be, so well does he treat them, and so well does he entertain them.

"MATTY" UNDER A CLOUD

A BASEBALL variant of a familiar saying seems to be, "A famous pitcher is not without honor save when he takes it upon himself to umpire a game." This is deduced from a news account of Christy Mathewson's experiences behind the plate, as given by the *New York Tribune*. "Matty" is beyond doubt one of the greatest of the small boys' heroes, but when he appeared at the New York Juvenile Asylum, at Dobbs Ferry, N. Y., and donned the mask and breastplate and attempted to hand out decisions, not even the eminence which he occupies on other occasions could restrain the customary objurgations from the incipient big leaguers. He is a great man, and a good fellow, and all that—but he's a "fierce ump," all the same! The events leading to that decision are given as follows:

The boys were in the middle of one of their regular league games when he arrived. They stopt long enough to cluster around the big fellow and welcome him with lusty cheers. Then they pulled him out behind the pitcher's box and made him umpire the game. He came in for the usual complimentary remarks to the umpire, when he was called on to make several close decisions. One of the kids slid into first base about the same time the ball reached the bag, and when "Matty" called him out he was emphatically told that he was "rotten."

After the game the boys express their willingness to be initiated into the mysteries of the "fade-away." "Matty," however, made them a speech instead:

"I have tried to teach several big-league pitchers how to throw the 'fade-away,'" he said, "and not one of them has succeeded. The difficulty is that too much attention is required. The 'fade-away' is a difficult ball to control. I'd rather not try to pitch to-day. I was in a hard game yesterday, and my arm needs rest. You boys don't realize how much my arm is worth to me."

"A Man Would Die in the First Alcove"

"There are 850,000 volumes in the Imperial Library at Paris," said Emerson. "If a man were to read industriously from dawn to dark for sixty years, he would die in the first alcove."

And he would not die a well-read man.

But if a man could know what few great books are enduringly worth while and could read those few—histories, biographies, dramas, works of travel, fiction, poetry, philosophy, and religion—he would become well read, even though he could devote to them but a few pleasure moments a day.

EXPERT ADVICE ON YOUR READING—FREE

For years Dr. Charles W. Eliot, President Emeritus of Harvard, has maintained that the books really essential to the Twentieth Century idea of a cultivated man could be contained in a Five-Foot Shelf, and from his sixty years of reading, study, and teaching—forty of which were spent at the head of one of the world's greatest universities—he has put aside those few books that he considers most worth while—the few that best picture the progress of the human race from the earliest times down to the present day, through the writings of those who have made our civilization what it is.

\$70,000 was spent in compiling and indexing the set, arranging foot notes and Reading Guide, and the result was finally presented at a cost of \$1,000,000.

MOTOR-CARS AND THEIR STORY

By Frederick A. Talbot

This is not a manual. The author's object has been to describe in a popular manner, and free from technicalities, the amazing romance of the motor-car since its inception, and particularly the great feats—novel and ingenious applications, etc.—of the automobile. A big, beautiful book, almost three inches thick; profusely illustrated. Large octavo, cloth; 368 pages.

\$6.00 net; average carriage charges, 24c.

JUST PUBLISHED

An Important New Book

FRANCE From Behind the Veil

By COUNT PAUL VASSILI

IN THIS VOLUME, written in frank and pungent style, is embodied the author's unrivaled experiences of the inner social and political life of France during the last fifty years. He opens his reminiscences with the meteoric reign of Napoleon the Third and his lovely Andalusian wife, the Empress Eugénie, and closes them "the day before yesterday" as it were.

"There is here much first-hand and entertaining gossip about the celebrities and notabilities of French society during the author's time."—*The Sun, New York.*

"Contains much that is momentous in history, simply and frankly told."—*The Evening Post, Chicago, Ill.*

"No man of the era which closed with the downfall of Napoleon III. had better opportunity for close investigation than did this diplomat, whose missions, mostly of a semi-official nature, were many, taking him to all the courts of Europe."—*The Globe-Democrat, St. Louis, Mo.*

Large Octavo, Cloth, \$3.75 net; by mail \$3.91

The Home Life of the Ancient GREEKS

Translated from the German of Prof. H. BLUMNER
By ALICE ZIMMERN (Girton College, Cambridge)

With Over Two Hundred Illustrations

The purpose of this volume is to present, in a clearly written and attractive style, a description of all sides of life in ancient Greece. While to the student, by illuminating the many allusions to customs and manners, it will make clear the preparation for, and study of, the Greek texts, its interest will be equally felt by the general reader. *The Nation, New York, says:* "It is a book which may be used either for consecutive reading, or, owing to its full index, for reference."

Large 12mo, cloth. Profusely illustrated and thoroughly indexed.
Price \$2.00 Net; average carriage charges, 12c.

FUNK & WAGNALLS COMPANY, Publishers, 354 Fourth Avenue, New York City

It isn't as young as it was when I was your age, by about sixteen years.

"Now, let me give you a little advice about pitching. Don't be too anxious to throw a curved ball. Some of the best curve pitchers I've ever known were never able to make the big league. The reason was that they could never attain control. I might lecture to you boys about control being the big thing in life, but just now we are talking about pitching, and in that control is everything. Most young pitchers attempt a round-arm delivery, because it permits them to put 'more on the ball.' I would advise you to keep to a straight, overhand delivery. Watch the plate, and be sure the ball goes over. Never mind if the opposing batters do make hits off you. It won't be long before you will have such control that you can place the ball where you want to and begin to outguess batters."

When "Matty" left, the full band of thirty-six pieces turned out to give him a send-off. From his automobile he thanked the boys for their welcome and invited them to visit the Polo Grounds as his guests on the first afternoon Superintendent Guy Morgan, of the village, would grant them a holiday.

A RULER WHO RULES

EMPEROR FRANCIS JOSEPH apparently is not at all the kind of king we see in the cartoons—an idle incompetent beguiling his ennui with high living, and merely amused by the distress of the subjects who pay the taxes. On the contrary, for sixty-six years ruler of a turbulent and unruly people, fated to suffer misfortunes of the most harrowing sort, bereft of those whom he has loved, abandoned by his friends whose years were numbered, Francis Joseph has lived on, steadily and unflinchingly performing the duties of his high post. As a writer in the *London Daily Chronicle* says, he has won, through the faithfulness of his efforts, the confidence of Czech, German, Magyar, and Slav, so that they have trusted him implicitly in crisis after crisis of racial and party strife. They knew that their side of the case would be examined and judged with the thoroughness and fairness of a court of appeal. And further:

There have, indeed, been times when Francis Joseph might almost seem to have reached Walter Bagehot's ideal of what a king should be—a man of immense moderation and industry, whose experience as a sort of Permanent Secretary of State is the sheet-anchor of Minister after Minister and Cabinet after Cabinet. Ministers come and go, Parliaments meet and are prorogued, Cabinets are formed and are dissolved; but he is always there and always working. All State affairs he knows by heart; for sixty years and more he has been in the thick of them, laboring at nothing else; and it might be said of him, as was said of Sir Robert Peel, that he is qualified to take any post in the Government.

One of his own Premiers, Hasner, described him as "the most industrious man in the realm," and Bismarck indorsed the statement. Both were good judges of work. Francis Joseph has a full measure of that retentiveness of mind and memory that

Six More miles per gallon—

A Speedler on your car will give you an average of 6 more miles from every gallon of gasoline. Try this test: Put on a Speedler for 30 days free trial. Set the gasoline throttle at the 10-mile notch. Then touch the Speedler Control, and watch the speedometer jump to 15 miles. You got 6 miles extra without an extra drop of gas. The Speedler air spray does it.

Speedler "Less Gas—More Mileage"

Gives you extra power from the gasoline by mixing extra air in the manifold. Instant control at your finger-tip. Over 12,000 individual users equipped their cars with Speedlers last year.

Free Trial

Your garage man or dealer can get you a Speedler for 30 days free trial from his nearest wholesale supply house. If he can't supply you, write direct to us. When you buy a new car ask to have a Speedler on it. Learn how easy it is to cut your gasoline bill almost in half. Price only \$5; refunded if you are not alone a Pays for itself in a month. Get one today.

NORTH GERMAN LLOYD

\$620⁶⁵ UP

seems to be one of Nature's gifts to sovereigns; an instinct and a capacity for affairs developed and perfected by hard and accurate practice; and a conscientiousness that has never faltered under any trial. His is at bottom a very simple character, sympathetic, frank, unobtrusive, dependable, and the paternal system of government has taken on, in his hands, its kindest aspect.

Moreover, he has made an unceasing effort to live with the times. Whole centuries seem to separate the Austria of today from the Austria of Metternich. A constitution, universal suffrage, trial by jury, the right of public meeting, freedom of the press—he has consented to all these. The Concordat is abolished, the serf is no longer subject to the lord, the shackles of the old trade guilds have been largely removed, and commerce allowed more or less to seek its natural channels.

To Francis Joseph, who has always governed as well as reigned, much of the credit of this advance must go; and in addition there has hardly been a single year or a single portion of his realm in which his services have not been needed as umpire or moderator, to compose racial feuds, to save the Reichsrath from being turned into an unworkable cockpit, to avert or allay severe constitutional crises, and to restrain centrifugal forces that threatened in their passionate vehemence to disrupt the Empire.

THE SPICE OF LIFE

The Artist.—FIRST TROOPER IMPERIAL YEOMANRY (discussing a new officer)—
"Swears a bit, don't 'e, sometimes?"

SECOND TROOPER—"E's a masterpiece, 'e is; just opens 'is mouth and lets it say wot it likes."—*Punch.*

Left Out.—HONEST AGRICULTURIST—"We don't need you women to help us run things. Didn't we men pass the compensation law, protecting everybody except farm-hands and domestic servants?"

His WIFE—"Yes; and I'm both."—*Puck.*

"One Braver Thing."—"Who led the army in that recent expedition?"

"I did," replied General Tamale.

"I thought the attack was led by General Concarne."

"It was I who prevented great loss of life. He led them going forward, but I led them coming back."—*Washington Star.*

DEPT. 4.

Precautionary.—"What do you consider the most important qualification for a beginner in literature?"

"A small appetite."—*Boston Transcript.*

Meow.—"I've been catfishing all morning."

"Where?"

"On the hotel piazza. I've heard all the scandal of the place."—*Judge.*

Her View.—SUNDAY-SCHOOL TEACHER—"What do you understand by suffering for righteousness' sake?"

LITTLE GIRL—"Please, miss, it means having to come to Sunday-school."—*Tribune.*

Just as Good.—TOURIST—"You have an unusually large acreage of corn under cultivation. Don't the crows annoy you a great deal?"

FARMER—"Oh, not to any extent."

TOURIST—"That's peculiar, considering you have no scarecrows."

FARMER—"Oh, well, you see, I'm here a good part of the time myself."—*Sacred Heart Review.*

Have You Tried This?—"Miss Ethel," he began, "or Ethel, I mean—I've known you long enough to drop the 'Miss,' haven't I?"

She fixt her lovely eyes upon him with a meaning gaze. "Yes, I think you have," she said. "What prefix do you wish to substitute?"—*New York Globe.*

Jailless Crimes.—Killing time.

Hanging pictures.

Stealing bases.

Shooting the chutes.

Choking off a speaker.

Running over a new song.

Smothering a laugh.

Setting fire to a heart.

Knitting a performance.

Murdering the English language.—*Judge.*

Cheering the Patient.—The eminent physicians had been called in consultation. They had retired to another room to discuss the patient's condition. In the closet of that room a small boy had been concealed by the patient's directions to listen to what the consultation decided and to tell the patient, who desired genuine information.

"Well, Jimmy," said the patient, when

the boy came to report, "what did they say?"

"I couldn't tell you that," said the boy. "I listened as hard as I could, but they used such big words I couldn't remember much of it. All I could catch was when one doctor said:

"Well, we'll find that out at the autopsy."—*Boston Record.*

Possibly Tainted.—These are evil days for the rich men, said George Ade at a luncheon at the Chicago Athletic Club. "I'd rather be a pickpocket than an interlocking director—there's more honor in it."

"They say that a cannibal king recently sent post haste for his doctor."

"Good gracious, man," the doctor said, "you're in a dreadful state; what have you been eating?"

"Nothing," groaned the sick man, "except a slice of that multi-millionaire whose yacht was wrecked on Coconut Reef."

"Merciful powers!" the doctor cried. "And I told you under no circumstances to eat anything rich. George, get the saws and axes. We must operate at once."—*Boston Advertiser.*

FUNK & WAGNALLS COMPANY, NEW YORK

CURRENT EVENTS

Mexico

- July 9.—Guadalajara is captured by the Constitutional forces, 5,000 Federal prisoners being taken, with a great quantity of ammunition and artillery.
- July 10.—The Mexican ex-Minister of Commerce, Moheno, in Vera Cruz, makes a charge of a conspiracy on the part of the Progressive party in the United States to disrupt Mexico. Francisco Carbajal is sworn in as Foreign Minister, with three other new members of Huerta's cabinet.
- July 12.—Carranza refuses to entertain the suggestion that Carbajal be recognized as Provisional President in case of Huerta's flight.
- July 15.—General Huerta resigns from the Provisional Presidency of Mexico and appoints Francisco Carbajal in his place. General Villa announces that the war will go on in spite of Huerta's resignation.

Foreign

- July 9.—A German aviator, Otto Linnekogel, attains a height of 21,450 feet, establishing a new world's record for altitude.
- July 10.—The Ulster "provisional government" holding its first meeting, constitutes Sir Edward Carson virtual dictator of the North of Ireland, with full power to issue a call to arms of the Ulster Volunteers.
- In Perth, Scotland, a militant suffragette leaps upon King George's automobile, attempting to reach the King's person. She is saved from lynching at the hands of a Scotch mob by twenty mounted police.
- July 11.—Walter L. Brock, an American, wins the aeroplane race from London to Paris and return.
- As the result of the official inquiry held in Quebec, the *Storstad* is held responsible for the sinking of the *Empress of Ireland* in the St. Lawrence River on May 29.
- July 13.—Orangemen at Belfast and Drum-beg make Sir Edward Carson the hero of a demonstration commemorating the battle of the Boyne.
- A chance discovery foils a revolutionist plot to assassinate the Russian Czar at Odessa.
- July 14.—The anniversary of the fall of the Bastille is celebrated in Paris.

Domestic

WASHINGTON

- July 10.—A decrease of \$250,000,000 is shown in the country's exports for the past fiscal year. Secretary Daniels announces that the four next dreadnoughts are to be named *Arizona*, *California*, *Idaho*, and *Mississippi*.
- July 11.—Representative Good attacks Secretary of the Treasury McAdoo for using revenue-cutters for the private enjoyment of himself and his political friends.
- The House passes the Hay bill providing for aviation service in the Army Signal Corps.
- July 12.—Alexander Vouras, the Greek Chargé d'Affaires, attacks bitterly the Carnegie Peace Foundation's report on the Balkan War.
- July 13.—The Pennsylvania Railroad and three other companies are indicted for violation of the Commerce Act in their coal shipments.

GENERAL

- July 9.—David Starr Jordan is elected president of the National Education Association, in convention in St. Paul, Minnesota.
- July 11.—The battleship *Nesada* is launched at Quincy, Massachusetts.
- July 12.—Associate Justice Horace H. Lurton, of the United States Supreme Court, dies at Atlantic City.
- July 13.—The balloon *Goodyear* wins the elimination race from St. Louis, covering 300 miles.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall's New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"W. F. E." Lexington, N. C.—"Should personal pronouns which refer to the Deity—that is, any one of the three persons of the Godhead—begin with a capital letter?"

In all but religious literature, yes. In the Bible, the pronouns are always printed with a lower-case initial letter, but that is a Sacred book.

"M. C. D." Prosser, Wash.—"Is the form of the abbreviation 'et al.' ever changed to that of 'et als.'? If so, please explain when and why."

The Latin abbreviation *et al.* stands for *et alibi*, meaning "and elsewhere," or *et alii*, meaning "and others." The form *et als.* is sometimes used under the mistaken idea that the first *et al.* stands for a singular and means "and other" and that its plural when "others" is meant should be formed by adding "s."

"H. F." Chicago, Ill.—"Is not the following sentence erroneously constructed: 'An elephant, lions and tigers, and other animals'?"

There is nothing to object to in the sentence you submit. "I saw an elephant, lions and tigers, and other animals," is good English; why then should not the sentence you submit be so? Possibly you take exception to the repetition of the conjunction *and*, but that is permissible.

"G. A. L." Winchester, Wash.—"What are the pronunciations of the following words: 'Enrico Ferri,' 'Col. Goethals,' 'Dr. Montessori,' 'The Hygienist'?"

"Enrico Ferri," *far"ri'*—*a* as in *fare*; *i* as in *police*; "Col. Goethals," *gō'thālz*—*o* as in *no*; *ā* as in *art*; "Dr. Montessori," *mon"tes"so"ri'*—*o* as in *not*; *e* as in *they*; *ā* as in *no*; *i* as in *police*; "The Hygienist," *hai"gi-en-ist*—*ai* as in *aisle*; *en* as in *pen*; *i* as in *pin*.

"E. P." Brooklyn, N. Y.—"Kindly inform me which of the following sentences is correct. I claim both are right, the word 'to' having another meaning than that of 'in the direction of.' 'I fed the dog to the candy,' and 'I fed the candy to the dog.'"

"I fed the dog on candy" and "I fed candy to the dog" are correct, but "I fed the dog to the candy" is erroneous. See the definitions of the verb *feed* on page 365, column 2, of the NEW STANDARD DICTIONARY, and you will see that one can *feed* food or fodder to animals, *feed* grain to a machine, *feed* paper to a printing-press, but can not invert any of these. The word *to* in the sentence "I fed candy to the dog" is a preposition, noting a limiting object after a verb—"fed . . . to the dog."

"J. W. G. H." Spokane, Wash.—"Please answer the following questions: 1. Is 'frightened of' ever correct? 'You're frightened of anything.' 'Frightened of you.' 'Frightened of love.' Isn't 'afraid of' the correct form? 2. On the revolving doors of our Federal Building is the legend 'Danger! Go Slow.' It has offended my eyes for some time, and recently I wrote an open letter to our morning paper, criticizing the use of 'slow' for 'slowly' and hoping that the error would be corrected. In its defense the custodian of the building quoted from a book written by two Harvard professors, Greenough and Kittredge, to the effect that 'slow' like 'fast' is a 'flat' adverb and does not need the adverbial ending 'ly.' Will you kindly straighten this out?"

1. The form "frightened of," to which you refer, was condemned as long ago as 1858, by a writer in *The Saturday Review*, who said: "It is not usual for educated people to perpetrate such sentences as 'I was frightened of her.'" This expression is used as a modern colloquialism for "afraid of," but has very few literary sponsors. Mrs. Molesworth, who wrote in a somewhat colloquial vein, in "Her Baby" says "Baby was at first terribly frightened of him." 2. With reference to the legend, "Danger! Go Slow," Professors Greenough and Kittredge are quite correct. *Slow* in the sense of *slowly* dates as far back as the year 1500. Shakespeare used it in "Midsummer Night's Dream," act 1, scene 1, line 3, "But, oh, me thinks, how *slow* this old Moon wanes." Milton also used it in 1632 in "Penseroso": "I hear the far-off curfew sound, swinging *slow* with sullen roar."

"J. O. R." Pasadena, Cal.—"In **THE LITERARY DIGEST** for January 17, 1914, I find the following: 'The Cabinet are still adverse to the proposal.' I have seen this construction frequently of late, especially in English publications. Is it correct?"

Cabinet is a collective noun that may be used collectively or distributively—everything depending upon the meaning which the person writing or speaking intends to convey—and it takes a verb that agrees with the user's intention.

"H. M. R." Wilson, N. C.—"What was the exact date of the big fire in Baltimore, Md.?"

The fire began February 7, 1904, and burned until the 9th, entailing a loss of about \$70,000,000.

"G. W. C." Marlinton, W. Va.—"Is the plural of *harness* the same as the singular?"

The plural of *harness* is *harness* or *harnesses*. Both forms have the sanction of usage.

"J. C. M." Sagerstown, Pa.—"The word *kakki* is pronounced—*ka'ki*—"a" as in "arm" and "i" as in "habit.""

"G. S." Red Creek, N. Y.—"In a bank statement, under the heading 'Resources,' the term 'Loans and discounts' is used. What is the exact meaning of *discounts* as here used?"

Discounts, as used here, designates commercial paper that has been discounted, as bills and notes.

"L. J. W." Independence, Kan.—"The term *horse latitude* designates a belt of the Atlantic Ocean where calms often prevail. It was so called in Colonial times when vessels carrying horses from New England to the West Indies were sometimes obliged, when becalmed there, to throw overboard a part of their cargo for want of water."

"E. L. S." Annville, Pa.—"Variations of pronunciation are due to the people, not to the dictionaries. While in general the pronunciations of dictionaries agree, there are instances in which they differ. Consult the department of Disputed Pronunciations of the NEW STANDARD DICTIONARY for all that you need. Take, for example, the word *gape*. Some people pronounce it *gap*; others, *gop* ("e" as in *they*). *Tomato* is pronounced to rhyme with *potato* in some parts of the country, and in others to rhyme with *staccato*. But the usage of the people, not the dictionaries, decreed this. The province of the dictionary is to record usage, not to dictate it. Editors state what they find in use and place it on record, and not what they think should be used. The Lexicographer is not a dictator."

If you have ever lived in a region peopled with descendants of Scotsmen, you may have found the Scottish pronunciation of English prevalent in that region; if, on the other hand, you have dwelt in a region peopled with descendants of Irishmen, no matter whether they be Nationalists or Ulsterites, you may have found English as it is spoken in Ireland in use there.

The same thing applies even to descendants of persons from different parts of England. There the Northerner speaks with the soft "a" as in *chat*, *glad*, *mat*, and gives to "o" almost the sound of that letter doubled, saying *coom* for "come." To him "enough" is *enoof*. The Southerner uses the broad "a" as in *farther*, and speaks of a *glars* and a *barth* (the "r" is inserted here merely to approximate the sound which is nearer to "ah" than "ar"). Where the Dutch have settled in numbers and established themselves, the foreign immigrant has naturally taken on the pronunciation of the settlers as did the English during the reigns of William and Mary and Anne of England. To this day the idiosyncrasies of some persons of more or less culture are permitted to influence the speech of the indiscriminating few, as is shown in some parts of the United States and of Great Britain, by the pronunciation of *yes* which is given as "yep," "yeh," "yuh," and even "yah" in imitation of the German *ja*; by that of *maid* and *maiden*, which is rendered "myd" and "myden"; by the clipping of the letter *g* off such words as *morning* (which becomes "marnin"), *going* (which becomes "gowin"), *sowing* (which becomes "soujn"—"ou" as in "out"), etc. No variations of pronunciation are not due to the dictionaries; they are due to the people whose utterances the dictionary-makers follow.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

NEW YORK, AUGUST 1, 1914

WHOLE NUMBER 1267

TOPICS OF THE DAY

MR. BRYAN OUT FOR WOMAN SUFFRAGE

BEFORE THE VOICE of the Secretary of State was raised in support of the equal-suffrage amendment in Nebraska, suffragists had received little comfort from the Administration. Now, say all except those who can not see Mr. Bryan as anything but a burden for any cause he favors, they should take heart. For the Secretary's announcement, believes the *New York World* (Dem.), "will be worth many thousand votes" in Nebraska; the *Washington Star* (Ind.) believes it will have a notable effect in the adjoining State of Missouri, where an amendment is also to be voted on in November; and in the *Nashville Tennessean's* (Dem.) opinion it means that "we will have votes for women in all the States sooner than would have been the case without his help." True, nobody looks upon it as so great a suffrage triumph as the conversion of the President would be. Nor, observes the *Springfield Republican* (Ind.), can "Mr. Bryan personally commit the Administration," but it adds, "aside from the President, he is far and away the greatest political figure in it."

Mr. Bryan's announcement, so the *New Orleans Times-Picayune* (Dem.) explains, "will help the woman-suffrage movement in two ways. The Nebraskan wields a powerful personal influence. Whether his personal following has been increased or diminished by his

recent courses as Secretary of State, there can be no doubt that he still numbers his admirers by thousands, and that what he says about woman suffrage will help to shape their views. In addition, other thousands who oppose Mr. Bryan, but esteem him a skilful and clever politician, will be apt to accept his espousal of suffrage as an indication of the popular drift, and for that reason may follow him to what this statement leads them to consider the popular side."

Since no man in this country, with the possible exception of Colonel Roosevelt, "has a better sense of the general drift of public opinion than Mr. Bryan," and since "nobody is more willing to concede to popular opinion the right to rule," it necessarily follows, according to the *Chicago Herald* (Ind.), "that when Mr. Bryan comes out in favor of woman's suffrage, woman's suffrage may be regarded as already beyond the experimental stage." This reform, concludes *The Herald*, "is coming ultimately to every State in the Union."

"In the signs of the times there is none clearer than this. Mr. Roosevelt read the signs two years ago. Mr. Bryan reads them now and hastens to give his allegiance to the future."

By several papers Mr. Bryan's espousal of the suffrage cause is looked upon as an attempt by the Administration to counteract the bad effect of the "rebuffs" extended the suffragists at the White House, and to show them that "the Democrats are not

opposed to equal suffrage, but consider it a State, not a National issue." But neither the *Scranton Tribune-Republican* (Rep.) nor the *Detroit Free Press* (Ind.), which enlarge upon this theory, believes that the Secretary will succeed in placating those who have taken offense at the President's attitude, some of whom

now, when some or many of the suffragists are cold to Mr. Wilson.

"Woman suffrage gets no real strength from the adherence of this veteran champion of humbug. . . . To the friends of woman suffrage the only value of Mr. Bryan's buttery commendation is that it shows how he thinks the cat will jump. The antis too will be encouraged. Brother Bryan is usually wrong."

It should be noted, however, that the *New York World* defends Mr. Bryan against the charge of championing woman suffrage "merely because it is popular," pointing out that "no American politician of this generation has ever advocated a greater number of unpopular measures than Mr. Bryan, or been more obstinately willing to remain in a minority."

After all this talk of his motives Mr. Bryan may be allowed to speak for himself. In his statement, as it appears in the *July Commoner*, he says he will support the suffrage amendment in Nebraska because "I shall ask no political rights for myself that I am not willing to grant to my wife." From this document, variously described as "poor stuff," in which Mr. Bryan "mumbles the platitudes" and "rehearses feebly the old arguments," or as an admirably written statement which is bound to "appeal strongly to the popular mind," we quote a few characteristic sentences:

"As man and woman are cotenants of the earth and must work out their destiny together, the presumption is on the side of equality of treatment in all that pertains to their joint life and its opportunities. The burden of proof is on those who claim for one an advantage over the other in determining the conditions under which both shall live. This claim has not been established in the matter of suffrage. On the contrary, the objections raised to woman suffrage appear to me to be invalid, while the arguments advanced in support of the proposition are, in my judgment, convincing."

This new adherent of the suffrage cause proceeds to dispose of some of the stock objections to equal suffrage, that woman can not bear arms, that the vote would overburden her, lessen the respect in which she is held or take her from the home. He wonders if such fears may not "be found to be as groundless as

AND NOW HIS TROUBLES BEGIN.

—Hanny in the *St. Joseph News-Press*.

have already said that they would hereafter act with his political opponents. Two Washington dailies, *The Times* (Prog.) and *The Star*, profess to see no real divergence between the Wilson and the Bryan positions. Mr. Wilson, remarks *The Times*, "is opposed to the national constitutional amendment, insisting that suffrage is a question to be settled by the States, one at a time. He left the door wide open for himself to support suffrage in his own State, if the question be raised there; and Mr. Bryan is merely supporting suffrage in Nebraska." But the *Pittsburg Leader* (Prog.), representing a party which opposes the Wilson Administration and has officially indorsed the suffrage movement, sees the two Democratic leaders seriously at odds:

"The Secretary of State is as sure that women ought to have the ballot as President Wilson is that they shouldn't. It is possible that the future will help to make up its estimate of the two men as much on this subject as on their public acts. For in this problem of woman suffrage is interwoven the vital part of the principle of democracy so much that the very integrity of their intellectuality will be weighed in the answer. . . .

"In his broadness and desire to be fair it looks as if the Secretary of State presents himself in a much better light than the President.

"President Wilson, in fact, never looked quite so cramped as when he tried to dodge the issue with a committee of women and side-track them with a lot of political generalities. . . .

"President Wilson may sincerely believe that he is offering himself as a picture of intellectual and political martyrdom in refusing to agree to a popular propaganda for woman suffrage, but Secretary Bryan in openly speaking for it is a picture the American people will like much better."

But another Progressive observer, the *New York Press*, takes a quite different viewpoint. It thinks that Mr. Bryan "has been converted to woman suffrage at this late day" just because "he has his eye on 1916." And the hostile *New York Evening Sun* (Ind.) hears from Washington that "various motives" are imputed to the Secretary, "mostly selfish considerations." "I am not in doubt as to my duty," *The Sun* quotes Mr. Bryan as saying. No, it proceeds,

"Not now, when there are nine States on his side and the is particularly full of organization and enthusiasm. Not

DUET!

—Spencer in the *Omaha World-Herald*.

those that once forced the widow in Eastern India to ascend the funeral pyre or as those that now exclude Mohammedan women from the social benefits and responsibilities which the women of the Christian world now share?" A doubter, he thinks, "would be justified in giving weight to the fact that organization and

enthusiasm are on the side of those who favor woman suffrage." "As for myself," he says, "I am not in doubt as to my duty"—

"Without minimizing other arguments advanced in support of the extending of suffrage to woman, I place the emphasis upon the mother's right to a voice in molding the environment

"OH, WILLIAM, THIS IS SO RUDDEN!"

—Patrick in the New Orleans Times-Picayune.

which shall surround her children—an environment which operates powerfully in determining whether her offspring will crown her latter years with joy or 'bring down her gray hairs in sorrow to the grave.'

"For a time I was impressed by the suggestion that the question should be left to the women to decide—a majority to determine whether the franchise should be extended to woman; but I find myself less and less disposed to indorse this test. . . . Why should any mother be denied the use of the franchise to safeguard the welfare of her child merely because another mother may not view her duty in the same light?"

Not the least interesting result of the Bryan pronunciamento is the fact that it has stirred up so many opponents of suffrage to reply. And there will be lively opposition in Mr. Bryan's own State, notes the Springfield Republican, which hears of a manifesto issued by Nebraska antisuffragists telling how excitable and emotional women are and declaring that "the greatest danger to the Republic to-day is in an excitable and emotional suffragist." A woman, who is editor of an antisuffrage publication, writes to the New York Times (Ind.) to inform its readers how women voters played into the hands of the interests in the recent Chicago elections. A man who is on the same side reproaches Secretary Bryan for calmly ignoring the most serious objection to the "silly" suffrage "fad," namely: "that women do not want to vote." The Hartford Courant (Rep.) writes in scorn of "Mr. Bryan's tearful plea." To his declaration of willingness to share his political rights with his wife, it opposes his argument:

"She already is a complete participant with him in every social or humane or uplifting condition that the exercise of political rights in this country has produced, and she could get nothing more if she had forty votes. What is the good for her, then, of having a new right which would leave her exactly where she now is and as she now is?"

"The truth about this country is that good women do not want the vote and that bad women should not be permitted to have the vote."

Likewise the Louisville Post (Ind.) can find nothing new or convincing in Mr. Bryan's argument. And while Champ Clark and Colonel Roosevelt and Colonel Bryan may go over to suffrage,

there is another Colonel in Louisville who never will. No man, writes Colonel Watterson in *The Courier-Journal* (Dem.), "no man who loves and reveres woman—especially no man who loves and reveres his own women—can, without foreboding, look upon this crusade, and all that it implies, of degradation to womanhood, of destruction to all domestic and moral organism, of desecration to everything we hold dear in the wife, the mother, and the home."

THE TRUST BILLS IN THE SENATE

TWO MONTHS AGO the three trust bills that form the Administration's trust program were sent from the House to the Senate to run the gantlet of criticism and take their chances of mutilation or death. Last week saw them all before the open Senate, still recognizable after the committee ordeal. It may be three weeks or three months, we read, before the bills are ready to receive the President's signature, but several editors think it likely that the Senate modifications will be retained in the measures on their final passage. The amendments, it should be noted, are pretty generally looked upon as improvements by both friends and foes of the Administration and its antitrust policy, including such representative newspapers as the New York Journal of Commerce (Fin.), Tribune (Rep.), American (Ind.), and World (Dem.), Philadelphia Public Ledger (Ind. Rep.) and Record (Dem.), Pittsburg Gazette-Times (Rep.), and Washington Times (Prog.). The bills, as our readers will recall, are the Covington Trade Commission Bill, the Rayburn Stocks and Bonds Bill, and the Clayton "Omnibus" Antitrust Bill.

The Clayton Bill suffered most at the hands of the committee. The House measure, as the New York Sun puts it, was "ripped to pieces." Among the modifications which seem most worthy of note to Washington correspondents and editors are the provision for court reviews of Trade Commission orders, the permission of price discrimination for the purpose of meeting competition, and the simplification of the "interlocking direc-

"WILLIE!"

—Harding in the Brooklyn Eagle.

torates" provision. The Pittsburg Gazette-Times is one of several dailies to remark upon the wisdom of the "abandonment of the plan to compel the sale of products of mines, oil- and gas-wells, and of hydroelectric plants to all applicants," and "the striking of fraternal and consumers' organizations from :

DIRECTORS' MEETING.

—Winner in the Harrisburg Patriot.

RUNNING A NEW LINE.

—Tutbill in the St. Louis Star.

STRANGE RAILROAD ACTIVITIES IN NEW ENGLAND.

trust-exemption list." But the paragraph exempting labor and farmers' associations remains practically unchanged, while the language of the section of the House bill relating to injunctions in labor troubles is modified somewhat. The much-criticized and much-defended labor exemption clause now reads:

"Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations, instituted for the purpose of mutual help and not having capital stock or conducted for profit or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations or members thereof be held or be construed to be illegal combinations or conspiracies in restraint of trade."

Republican critics, like the *New York Tribune* and *Albany Journal*, do not see much improvement here, and consider this amendment as either meaningless or offering special class privilege to two special classes. But the *New York World*, no more friendly than they to the original proposition, thinks that in exempting the unions only so long as they "lawfully carry out the legitimate objects of their organizations," the Senate Committee applies the "rule of reason." As it says:

"The changes now proposed remedy a just grievance on the part of labor organizations in that several courts have held them to be illegal combinations *per se*, and by injunction and other processes have in effect convicted them without a hearing. . . .

"The Senate Bill safeguards every right of organized labor; it legalizes all its lawful operations; it prohibits the arbitrary judicial methods against which there has been reasonable complaint; but it does not tolerate in labor, any more than in capital, violations of law which are the very essence of conspiracy."

In changing the penal provisions of the Clayton Bill, the Senate Committee has "softened" it, in the opinion of some. But while several teeth are taken out, one or two are added. The amended bill, as the *Philadelphia Record* notes, "revokes the proposed fines and prison penalties for price-fixing, and substitutes the remedy by injunction. The personal liability of directors, officers, and managers for crimes committed by corporations in violation of the antitrust law is restated and emphasized; and the conversion or misappropriation by directors and officers of the property or assets of a common carrier is made a felony." The *Washington Times* makes the rather practical observation that if this "personal liability" section had "been law when the Billard Company was making a couple of millions of profit for insiders out of a juggle in New Haven securities," it "would have warned those thrifty persons"; and—

"if they neglected the warning, would have reasonably insured their punishment. It will hardly be presumed that anybody is going to object to 'harrying business' by safeguarding investors against such practises."

Considering the Clayton Bill in particular and all three bills in general, the *Philadelphia Public Ledger* concludes that all these modifications are in the right direction,

"For they simplify the measures and deliver business from the necessity of appealing to the courts to find out what the new laws mean. Now, if the committee will go still further and cut out all those regulations of business practises already covered by the existing law, or by the court interpretations of the law, the bills will gain in simplicity and usefulness more than they will lose in bulk."

To the *New York Journal of Commerce*, which has been following closely the course of antitrust legislation, it seems that while a good deal of the crudeness "has been thumped out" of the Clayton Bill, "its composition is so refractory that it is not possible to make a reasonable measure of it," because—

"It is based upon a radically wrong theory, that of prescribing specifically what shall and shall not be done in business, and expecting official authority to force compliance with all its requirements, instead of that of laying down broad principles of justice and equity in the conduct of business and providing penalties for their violation as a means of inducing compliance with them. It would impose upon public authorities and the courts an impossible task and establish an unworkable system of 'regulating' commerce. It is like attempting to follow up private business processes to see that men conduct their transactions in a prescribed manner in order to make them honest and faithful to their obligations, instead of providing penalties for fraud and failure to meet such obligations."

And a daily representing the most progressive thought of the Middle West, the *Chicago Tribune* (Prog.), denounces the Clayton Bill as "dangerous," "uncertain," and "impractical," and declares that "it should be given up and its proper objects should be covered by clear and carefully considered provisions in a trade commission bill."

But the Trade Commission Bill now before the Senate has its critics, tho it has aroused less discussion than the Clayton Bill. The backbone of the measure, says the *New York Evening Post's* Washington correspondent, is the Stevens amendment forbidding "unfair competition." It seems "significant" to the *Kansas City Star* (Prog.) that the Senate contest should center around this provision.

"Some of the objections to this are that it is 'too vague'; others, that it is too specific when taken in connection with

other clauses of the bill; others, that it 'places too great a power in a few hands.' And that last seems to disclose the darky in the wood-pile.

"That last objection ignores the fact that the power complained of is already in a few hands—often in the power of one hand, the hand of one judge, it may be, or the hand of one financier like the late Mr. J. P. Morgan."

The Rayburn Railroad Bill, giving the Interstate Commerce Commission full control over the issuance of railroad securities, is the last of the "antitrust trinity" to be reported in "perfected" form from committee. Its more general requirements satisfy the *New York Journal of Commerce*. But, we are told,

"It gives altogether too much power to the Interstate Commerce Commission to 'hold up' efforts to raise capital when it is needed for proper purposes and to hamper the financial operations of the companies and those interested in their investments. Laying down the requirements and restrictions and providing for full publicity, with adequate penalties for any violation of the law, would accomplish the object without giving to the Commission power to dictate, prescribe, and forbid to a degree which would have a paralyzing effect."

Railroad officials, according to the *New York Herald*, "contend that such a settlement to existing legislation would practically take the management of transportation lines out of the hands of stockholders and directors and place government officials in control of their finances as well as their regulation and operation." Objection is also heard from the critics of the roads that such financial control would almost amount to a government guaranty of railroad paper, and would be so used by "high finance" to thimblereg the public.

QUIETING HAITI AND SANTO DOMINGO

THE "DESPERATE CRISIS" in our relations with the republics of Haiti and Santo Domingo forces the Wilson Administration to face "new diplomatic problems of momentous importance," thinks the *Albany Knickerbocker Press*. The chief problem involves "the supremacy of the United States in the vicinity of the Panama Canal." Both

"GOSH! I'M GETTIN' TIRED DOPIN' THESE 'INTERNAL DISTURBANCES.'"
—Chapin in the *St. Louis Republic*.

republics are going to pieces, we are told, as the result of endless "barbaric internal warfare," and not only our own interests, but those of foreign nations, are gravely imperiled. It is the concern of the German Government and others on behalf of their nationals, express in very definite terms, press dispatches

inform us, which has brought matters to a head. The present situation, according to a Washington correspondent of the *New York Sun*, has come after months of patient but futile effort to settle matters by diplomatic methods, and it becomes necessary to put an expeditionary force within easy striking

CLASS IN PSYCHOLOGY!

—Carter in the *New York Sun*.

distance, where it can enforce order and safeguard life. Particularly responsible for this show of force, says this writer, is "the eternal attitude of Europe, which is ready to accuse the United States of a 'dog in the manger' policy in the Caribbean," and he adds:

"The Monroe Doctrine, Europe has always said, limits our freedom to act in our own and the interests of civilization in the Caribbean; therefore it rests with the United States to abate such international nuisances as Haiti and Santo Domingo are admitted to be in their present state. To this the United States Government has never had any satisfactory answer, and hence, to avert the raising of embarrassing questions by European Powers, the present Administration, like others before it, finds itself compelled to move against its will and to prepare for armed intervention in the Caribbean."

The writer then recalls the establishment of our financial guardianship over Santo Domingo, when, in 1905-7, we put the Republic through international bankruptcy and began to collect Dominican revenues and apply "the proceeds to the payment of its debts to the world." In Haiti, he continues—

"no such definite obligations have yet been formally undertaken by the United States, but the condition is almost identical with that which nine years ago brought about in Santo Domingo the present American trusteeship of the Republic. The United States then faced the alternative of seeing European Powers assume charge of Dominican revenues, thus establishing a foothold for themselves in the Republic, or accepting responsibility for seeing the European creditors paid. Precisely this situation obtains in Haiti, and the United States is more than ever committed against permitting the European Governments to acquire a financial or political control of the Republic."

Against this reported stand of the Administration may be

set the statement of a Washington correspondent of the New York Times, in which we read that:

"The German Government, for example, has notified the United States that sole American control of the collection and disbursement of Haitian customs revenues will not be acceptable to Germany. This intimation was given informally, but it is realized that unless there is an improvement very soon in the Haitian situation the suggestion will be placed before the State Department in a way that will call for a definite answer.

"The French Government occupies the same position as Germany. It is realized by the Administration that, if an effort should be made to arrange with the Haitian Government for transferring the control of its customs revenues to the United States, Germany and France, and probably Great Britain and Belgium, would insist upon being made parties to the arrangement. It is for this reason, it is understood, that the Washington Government hesitates to apply to Haiti the customs-control scheme which has been in force in Santo Domingo for eight years."

With Europe ready and anxious to take a hand, our protectorate over Santo Domingo "must be made to succeed," thinks the Newark (N.J.) *Evening News* (Ind.). We must not let others share it:

"The European Powers wished to make it a joint protectorate when the convention was signed. They now ask for a joint protectorate over Haiti. To grant this request would amount to our permitting the Powers to join with us in enforcing the Monroe Doctrine. They have never formally recognized the Doctrine, which is a declaration of our purpose only. Their foreign policies do not coincide with ours; cooperation of this sort would mean a sort of an alliance, which, heretofore, our people have earnestly desired to avoid. It would be a confession that we have not and can not administer the Dominican protectorate to the satisfaction of Europe.

"A great deal hangs upon the success or failure of our policy on the island lying between Cuba and Porto Rico, which guards two main channels into the Caribbean Sea. Our highway to the Panama Canal must be kept clear and free from any menace from a foreign Power. Beyond this lies the whole question of our future relations with Mexico, Nicaragua, and other Central American republics, as well as Cuba."

The New York *Evening Post* (Ind.) thoughtfully infers from our custodian experience with Santo Domingo a significance "in relation to other disturbed regions in which we may be tempted to adopt a similar course upon the inducement offered by its supposed ease and simplicity," but the Houston *Chronicle* (Ind.) says that "if we are obliged to assume so much authority and so much responsibility, why not go the limit, establish a genuine protectorate, and compel the aggravating little pest of a nation to behave itself?" Of similar mind is the New Haven *Journal-Courier* (Ind.), which favors a protectorate for Haiti as well, while the New York Times (Ind. Dem.) sums up the problem as follows:

"It is high time that not only Santo Domingo and Haiti, but all the Central American republics, should be relieved of the reproach of being hotbeds of revolution, the revolutions having no other purpose generally than loot, and too often being fomented deliberately by American adventurers. Much can be done in Washington toward identifying and restricting the malevolent activity of such adventurers and their employers, when they have responsible employers. But there is still more to be done, and the establishment of such a modified protectorate as the proposed treaty with Nicaragua implies is worth the serious attention of the Senate. In regard to that plan there is much to be said on both sides."

OUR NEW CHEROKEE CITIZENS

FAR from being "a vanishing race, the Indians of Oklahoma are multiplying in numbers," remarks the Cleveland *Plain Dealer*, in commenting on the dissolution of the tribal entity of the Cherokee nation by treaty with the United States. The tribe passes out of existence, this journal explains, because the Indians, "as citizens of the Commonwealth of Oklahoma and possessing the full rights of American citizenship," have no further need of tribal government, and their progress, we are told, is "a convincing proof of the excellence

of the American Indian when he is uncorrupted by the white man's evils." In the division of the tribal funds, press dispatches say, each member will receive a share of about \$15, and among the distinguished men who will partake United States Senator Owen is conspicuously named. However, in speaking of the Cherokees as "the most advanced native American race that the continent has seen since the Spaniards wiped out the empires of the Incas and the Aztecs," a writer in the New York Times queries whether the Cherokees of to-day have any more right "to be called a native American race than the Mexicans or some of the South-American nations." He reminds us that the tribe is "full of the descendants of white men, mostly missionaries and British traders, who married into it in the eighteenth century," as well as of "squaw-men" who have been taken in since the Cherokees settled in Indian Territory, now known as Oklahoma. At present, the writer informs us, the tribe numbers 41,798 members, including about "2,000 full-blooded white men, who have been adopted into it, and about 3,000 negroes, who are descended from the slaves freed in 1865."

As a sign of Cherokee enlightenment the New York *Evening Post* calls attention to the fact that the tribe has "long maintained

a constitutional government and native newspapers," while it has "produced more teachers than all the other tribes combined." The Cherokees' chief claim to notice, *The Post* thinks, may be "the alphabet invented by Sequoyah ninety years ago and its effect on their development," while, on the other hand, this journal continues, the prime importance of the present event is as—

"the first large achievement of the Government in its policy of bringing about the cessation of all tribes as individual entities—the first policy worthy of the name it has had. The Cherokees were the last of the five nations to enter into a treaty to that end; and the record of the contentious lawsuits involved in completing the transaction is, with the tragic history of their early deportation, an epitome of much of the injustice of the United States toward its wards. The other nations, Creek and Chickasaw, Seminole and Choctaw, which suffered equally from an 'independence' in Indian Territory that attracted every outlaw in the Southwest, can rejoice that they also will shortly pass."

"The clearing up of their affairs and the conversion of all tribal property into cash to be distributed thus see a measure of final justice done a people that once claimed a vast empire. It is a first goal reached on the road marked out when, in 1887, Congress, abandoning the wretched reservation idea, enacted the Land Allotment Law, authorizing the division of Indian lands into individual allotments, each to be held in Government trust until an allottee was felt competent to receive full letters patent. Such patents, carrying citizenship, have been issued to each member of the tribe."

REMEDIES FOR THE BEEF FAMINE

AS THE SOARING PRICE of beef is now pretty generally attributed by the press to the dwindling supply of cattle and the growing number of mouths to feed, so the remedies suggested naturally take the shape of hints to the small farmer to go in for stock-raising, and intimations to the hungry to curb their longing for the flesh-pots. While editors are deeply impressed by the news that beef cattle sell at about ten cents a pound on the hoof in Chicago, which means that a steer costs about \$150 and that the rate per hundred pounds to retailers is "increased from 30 to 70 cents," still many of them busy themselves to find a remedy for this recurrent rise rather than with a mere discussion of causes. Thus one authority, holding with others that we must raise more beef and be more economical in using what beef we have, says that "there is no mystery about such rise as has taken place recently in the price of meat, especially beef, in spite of the removal of duties from that imported," because "figures show that it is entirely due to a falling-off in the number of cattle received for slaughter at the great markets of the country." At the same time, we learn from the press, statistics prove that the number of people in the country who eat beef is greatly on the increase. Thus it is seen, we read in journals of "protective" tendency, that it is not the tariff, but the law of demand and supply that "rules the meat market," while some of those who believe in the new schedules of duties incline to suspect the big beef interests of making imports difficult, if not impossible.

Such a charge as this is put in concrete form, we read in the *New York Evening Post*, by A. H. Benjamin, agent for the independent packers of Argentina, "who declares that he is in a position to supply beef 'at from three to five cents a pound under the domestic price' provided he can get the transportation facilities." Mr. Benjamin's trouble, *The Post* says, is that "the railroads have refused to give him the facilities, on the plea that the refrigerator-cars under their control were owned or leased by other packers." This is a question, *The Post* remarks, that should have a thorough clearing up, tho it adds:

"It is interesting to note, however, that Mr. Benjamin winds up with the statement that, even as matters stand, 'had it not been for the imported beef, the domestic beef would have been at least four cents per pound higher wholesale.' And so we come back to the point, which every sober debater of the subject must constantly bear in mind, that the tribute which the giant combinations can extort is limited by the conditions governing supply. We must do all we can to keep monopoly down; but for a check on the high-price tendency, we must look primarily to increase of supply at home and facilitation of imports from abroad."

The *New York Globe* reminds us that the Department of Agriculture may be able to enlighten us on the meat situation when it presents its report of the investigation it has been carrying on for the past half year, yet it fears that not much "that is new will be disclosed," because—

"It has been obvious for some years that we were approaching a 'meat famine.' Grazing lands have been steadily giving place to cereal fields. The stock farmer has had no encouragement. He is more or less at the mercy of the big packers, who control his products as completely as they control the business of supplying the public's needs. Corn and wheat with which to feed his animals have been so expensive as in large measure to prohibit their conversion into beef. Meanwhile nothing has been done to discourage the slaughter of calves. For veal, mature

or immature, there is a constant demand, and the farmer finds more profit in catering to it than in trying to raise full-grown animals."

Signed dispatches from several Chicago packers appear in this same journal, attributing the high cost of beef to supply shortage, while some of these authorities aver that "stopping slaughter of calves means necessarily more beef." But the *Pittsburg Chronicle Telegraph* says that "the veal argument is as over-worked and weary as its choice-cut predecessor," and it continues:

"It is becoming more and more true that the beef we buy comes and must continue to come from the farm (if not from Argentina and Australia), nurtured and prepared for market from high-priced lands, instead of from broad expanses where the cattle of the plenteous period picked up a living for themselves and cost their owner little more than the expense of a round-up and drive to the nearest shipping-point. The passing of the big cattle ranches and ranges tells the story of why shin-bone costs as much as one could buy filet for in the yesteryear. The price of beef now is dependent upon the farm and the farmer."

The meat situation may be "a discouragement" for to-day, admits the *New York Press*, arguing along a similar line, but it does "not despair for the future," because—

"There is an immense latent meat-producing capacity in American farms which at present are not developing their possibilities in this regard. They will be more and more disposed to raise meat, in view of the low price of wheat, the high prices of meats, and the improving conditions that will develop as progress is made toward the control of swine disease."

The *New York Journal of Commerce*, too, points out that:

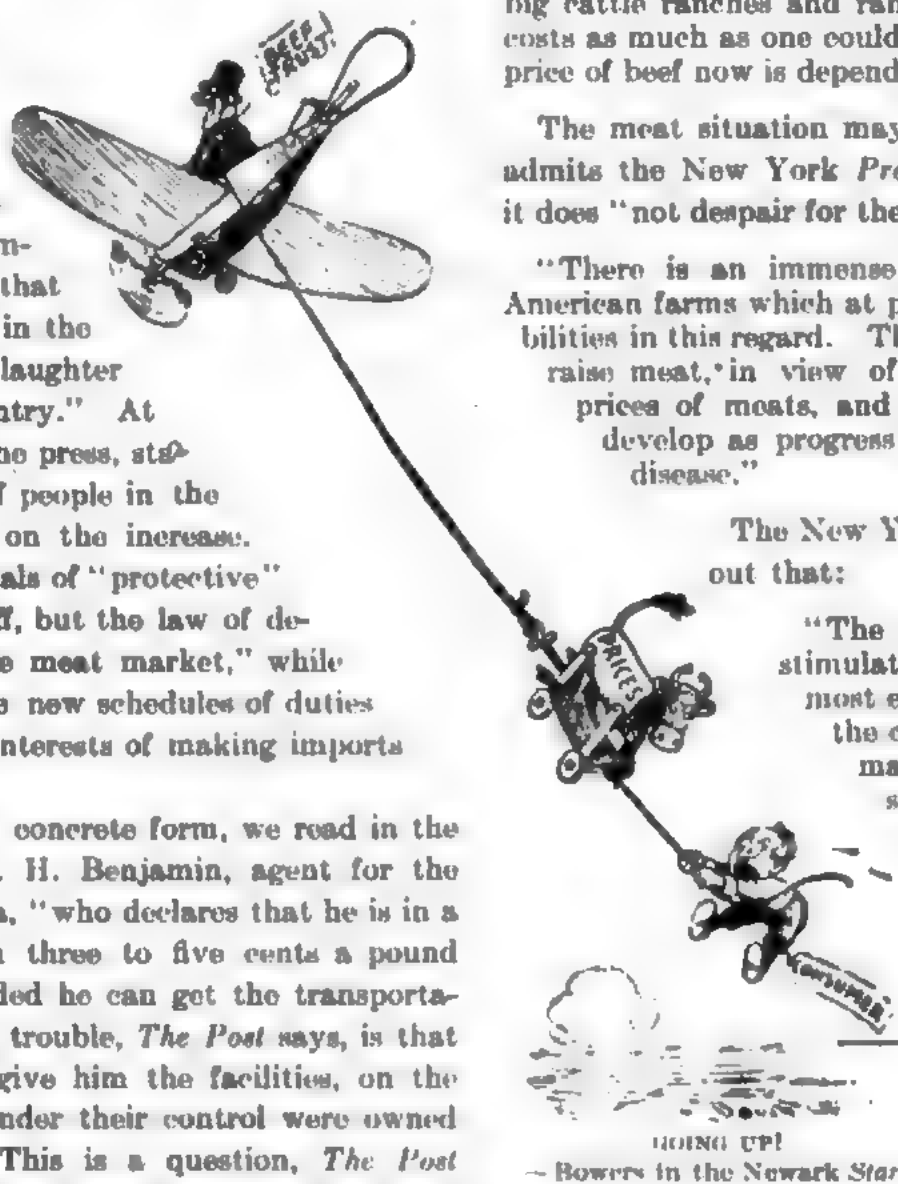

"The tendency of higher prices will be to stimulate the raising of food animals, but the most effective defense is greater economy in the consumption of high-priced meat. It may not be true that meat is not reasonably to be regarded as a 'necessary of life,' at least for those employed in labor requiring muscular strength and vitality; but it is true that there is a great deal of waste in the use of flesh food in this country. There is much more consumed than is either necessary or salutary, but worse than that is the lack of economy in preparing it for the table and making refuse of much that might be utilized to advantage. Kitchen and table economy, for which the French have such a high reputation, is little known in this country."

Nor does the *Detroit Times* seem to be unduly alarmed, but rather takes a humanitarian tone when it urges that—

"One of the reasons that meat is high now is that pastures and feeding conditions are good. This is not a profitable time to market stock. Meat does not keep well in warm weather. It does keep when it is cool. Summer is the time to grow it. Winter is the time to eat it. During the summer months there is provided an abundant variety of fruits and vegetables to take its place. Surely such a happy arrangement of circumstances was not ordained by an all-wise Providence without the expectation that man should profit by them. Therefore, if the price of meat wants to climb, let it."

We are also counseled by the *Springfield Republican* that "one of the sensible ways of escape" from beef-price domination is to find substitutes for meat, "as thousands did several years ago" when prices soared, and it cites with approval the following remark of the *Boston Globe*:

"At that time it was demonstrated that human beings could retain their health and strength by a diet which did not include a large supply of meat. In fact, many individuals, without becoming thorough vegetarians, . . . began to consume food that was palatable and better for their system than the meat products they had formerly considered indispensable."

WHO WILL PAY HUERTA'S DEBTS?

THE MENACE of "foreign complications" is seen by some observers of the Mexican situation, who say they are sure to arise if, in the words of the *Brooklyn Eagle*, "there is any tampering with the part of the national debt incurred by Huerta while a *de facto* President, not recognized, indeed, by the United States, but recognized by European Powers." That there is a great temptation to repudiate this indebtedness *The Eagle* admits, because "the proceeds were used or were intended to be used, to kill Constitutionalists," but it has every confidence that Washington will make any provisional government that succeeds the "Carbajal makeshift" meet this obligation in full. As to Huerta's other engagements, in particular his concessions to nationals of foreign governments, we learn from Washington dispatches that the United States does not intend to "recognize as valid any concessions granted by Huerta, even those to Americans." The debt, however, is a different matter, about which the *Brooklyn paper* says that "Mexico, poor as she is, can not afford national bankruptcy," and it adds:

"The best historic parallel for the kaleidoscopic changes of form of government in Mexico is offered by France. The revolution that overthrew Louis XVI. and had to fight all Europe could not be nice about paying all the annuities that kings had lavished on favorites. It scaled down such charges. It refunded debts. It made some debts payable in assignats of debased value or mandats which were little better. But the policy was not one of repudiation. And when the monarchy came back after the fall of Napoleon it accepted all the obligations incurred by the republic and the empire. Since that time there has been no attempt at repudiation in France, and French credit is superb.

"Mexican rebels will do well to study the financial history of France. It offers the very best guide for them when they come into power. If its guidance is accepted, the United States will not have to interfere to protect European bondholders."

At the same time we read in a Washington dispatch of the *New York Tribune* that the French Government of to-day is

becoming concerned about the interests of its nationals in Mexico, and such "agitation" is considered as "a forerunner of general uneasiness" among the European Powers. This is made "doubly certain," the *Tribune* correspondent tells us, because of Secretary Bryan's revelation that the United States "intends to divide Huerta's regime into two parts, so far as the legitimacy of his actions is concerned," and the writer adds:

"Secretary Bryan's brief statement . . . indicated that the Administration would not approve nor support claims growing out of any action by Huerta since October 10, 1913. It was on that day that Huerta dissolved Congress and assumed the powers of a dictator, suspending all other parts of his government. It is understood that at that time the United States informed Europe of its intention no longer to consider legitimate or binding any action of Huerta."

In this connection *The Wall Street Journal* calls attention to the announcement of General Carranza that he "proposes to ignore" the debts of Huerta, and observes that it "raises one of those disturbing problems which are likely to prove more difficult in the ultimate solution of the Mexican situation than the clash of arms." Consequently this journal points out that:

"The Government of the United States may well proceed deliberately in the policy of extending further favors to the Constitutionalists until something is learned of the limitations of this policy of throwing overboard the obligations of the Huerta Government. It will probably be admitted by General Carranza that obligations incurred by General Huerta for the purpose of paying interest on the old Diaz loans should be excluded from the policy of repudiation. Other items may be more difficult to adjust to the mutual satisfaction of the parties in interest.

"In so far as local partizans of Huerta voluntarily advanced money to maintain his sway, there may be a colorable defense for the policy of repudiation. The difficulty is, however, even in these cases, that it can probably be claimed, and pretty nearly established, that advances were made under terrorism, which would constitute a legitimate claim for damages against any administration which claims to be responsible for the orderly government of the Republic. Along these lines inextricable labyrinths open of legal contention and diplomatic correspondence."

TOPICS IN BRIEF

FOREIGN COMMENT

WHY FRANCIS FERDINAND DIED

THE CONSPIRATORS who perpetrated the crime at Serajevo were not blind anarchists who slew the Prince merely because he was a prominent figure in a settled government. The assassins were men of deep if diabolical purpose, who thought their country was suffering a grievance. They acted in the spirit of Charlotte Corday, and removed the person they considered a ringleader in plans for their national obliteration. So, at least, the Italian and German papers account for the murder of hereditary Grand Duke Francis Ferdinand of Austria and his consort, the Duchess of Hohenberg. In an article by Alessandro Dudan in the government organ, *Tribuna* (Rome), the blame is laid on the reactionary policy of the Prince himself. It appears that he tried to propagate an Austrian policy of his own by secret means, in opposition to the plans of the reigning Emperor, and relied on the support of the clerical and aristocratic party in enrolling all the Slavs of the neighboring territories under the standard of the Black Eagle. His policy was particularly hateful to the Serbs, who had already seen Bosnia-Herzegovina swallowed up by Austria. Of the Archduke's intrigues Mr. Dudan says:

"For some time Belvedere, the palace of the Archduke at Vienna, has been universally regarded as the headquarters from which stretched out all the manifold controlling influences which Italian historians have styled the *Nebenregierung*, a side or secret government, a replica of the Spanish *camarilla*, which represented at the court and throughout the provinces the closely allied and potent forces of the old feudal and reactionary aristocracy and of the old clergy and military, as against the constitutional authorities, the Parliament, the ministers not in league with the *camarilla*, and even against the Emperor himself, whenever that ruler preferred to follow the advice of his ministers rather than of the military authorities. . . . In this coterie were eventually included the Archduke's connec-

tions in Bohemia, while the feudal, aristocratic, and clerical circles in that country joined the group to which the Archduke found himself attracted after his marriage with a daughter of a Bohemian aristocrat, a marriage which by its very morganatic character detached him still more from that circle surrounding the Emperor which he had abandoned. Then there were formed in Austria two parties in the political Olympus of the monarchy. On one side was the old German bureaucracy, strongly supported by the Hungarian Government: on the other side were the clerical and military circle of reactionaries and those members of the bureaucracy who saw in the Archduke the future, and in the reigning Emperor the past, of the country."

The Archduke desired to include in the Austrian Empire the group of nationalities known as Jugo-Slavs, or Southern Slavs, including Bulgarians, Servians, Croats, and the

Slovenes who inhabit Carinthia, Carniola, Styria, and Austria. But all these sections of the Peninsula were nationalists and labored for their own emancipation from the yoke of the Hapsburgs. In describing how Ferdinand matured his plans we read:

"The influence of the hereditary Archduke was especially extended after his nomination to the post of Commander-in-Chief of the Austro-Hungarian troops and of Inspector-General of all the armed forces of the monarchy, on sea and land. To this work he devoted every energy. In the Army and Navy, according to the Hapsburgian tradition, he saw the most powerful weapon, offensive and defensive, against the enemies of the dynasty. I use the word defense, because the Archduke has always been charged with imperialistic designs by which Austria should head a great confederation of Catholic nations in accord with Bavaria and the

Catholic party in Germany, and should amalgamate also the Jugo-Slavs, as well as Servia."

Mr. Dudan thinks the consequences of the tragedy will be that in Austria severer police discipline will be exercised over the Servians, and the Slovene and Croat Liberals, whose program is

GOING TO THEIR DOOM.

The Archduke and Duchess photographed a few minutes before their death, leaving the town hall in Serajevo.

ARREST OF THE ASSASSIN.

the nationalist union of all the Jugo-Slavs, generally to be described as the Slavs who are not Russian. But the most important result is thus stated:

"The gravest consequences of the catastrophe will appear in domestic politics, where the party of reaction will lose in the so-called camarilla that support on which they most count. The rank and file of the party will exist for some time in complete disorder. The Parliament at Vienna will to a large extent regain its power. For some time at least Austria will revive a constitutional government. At any rate, the old rallying-place of the military and clerical circles will take on a different phase of life under the new hereditary Archduke Charles Francis Joseph, who will have no reason to fear that insurrections will be made in favor of the murdered Archduke'smorganatic sons."

It was the idea of being incorporated with Austria that incensed the Servians, who looked upon Francis Ferdinand as their enemy. In the *Hamburger Nachrichten*, under the heading of "Serbia's Guilt," this point is especially dwelt upon. Serbia, we are told, has always been the foe of Austria, and "has admitted into the ranks of its Army deserters from Austrian regiments," while "Major Milan Pribicevitch, subchief of the Servian General Staff, received the assassins at Belgrade." It is even hinted that the bomb may have been provided from the imperial arsenal, under the direction of this officer. This writer adds:

"All neighboring states must join hands with Austria in calling the Servian Government to account. And then a suspicious glance is directed toward Russia. Will this greatest of Slavie empires, which has so far extended a protecting hand over Serbia, show itself to be the protector and elder brother of murderous bandits and dastardly assassins? Russia has sufficient nihilists and bomb-throwers of her own. Austria, with her prestige, her political outlook, and her security at home, is bound at once to make a movement against Serbia. In that case we should soon see whether some European Power or group of Powers would set out to hinder her course or whether Servian political incendiaries found favor and protection in Europe."

The Hungarian *Pester Lloyd* is very bitter against the Servian Government, and speaks of "the trails which, according to the Serajevo investigation, lead to Belgrade." The article concludes in the following rather strong language:

"The Servian Government will be shown up as a nest of pestilential rats which come from their territory over our border to spread death and destruction. If the Servian Government shows readiness to exterminate this nest of rats, it will bring proof of its upright sentiments and again make good its title to that neighborly correctness which of late has become questionable."

Speaking in the Landtag at Laibach, Carniola, Deputy Dr. Sustersics declared that Belgrade was undoubtedly responsible for the assassination. After "giving expression to the grief of the Slovene people," adds the Budapest daily, he continued:

"Grand Duke Francis Ferdinand was bound to come to this end, especially as he was the friend of the Southern Slavs. Imperialistic Serbia saw with alarm the rise of this potent personality, this knight 'without fear and without reproach,' who showed both the will and the power to promote peaceful relations between the Southern Slavs and the Hapsburg dynasty."

But the London *Times* thus meets the accusation:

"There is, indeed, strong reason to suspect that the murder is the outcome of a Serb plot. But the existence of that plot has yet to be established by clear and authentic proofs, and when it has been established, it will still have to be shown by like proofs that any of King Peter's subjects had a share in it."

PRESIDENT WILSON'S POPULARITY

THE FALL ELECTIONS will soon show what the country thinks of the Democratic Administration. Some are saying that the Wilsonian defeat of Huerta and the rising tide of prosperity will bring a Democratic victory; others argue that the President's feverish haste in pushing his program through Congress betrays a fear that he will soon have a hostile law-making body to deal with. Meanwhile, we have the judgment of a disinterested British observer who tries to tell his readers at home how the President stands after a year and a half of power. He has shown strength and wisdom, writes James Davenport Whelpley in *The Fortnightly Review* (London), but he has now "reached and passed the greatest height of his political power." Mr. Whelpley, a British Washington correspondent, thinks that this failure in influence was manifested by

the manner in which the repeal of the Panama tolls discrimination was passed. President Wilson's betrayal of his inexperience in forming a program for Democratic legislation roused up enemies in his own political household, we are told. Of the result of the new Panama Tolls Bill on the President's prestige this writer says:

"There are striking indications that this victory in Congress marks the beginning of the decline of the political strength and popularity of President Wilson himself. He became President at a time when his party had long been out of power. He at

once formed a legislative program which would have staggered a more experienced leader. With considerable sagacity and a realization of the shortness of the day in political life, he forced his program upon a party somewhat light-headed over victory and anxious to conserve the party strength by presenting a solid front to the Opposition. The period of light-headedness has gone, however, and the glamour of the new and unaccustomed has passed from over the vision of the Democratic floor leaders. President Wilson now finds critics within his own party, and partially successful rebellions against the autocratic control he has exercised for the past year are now not infrequent. He has, in short, reached and passed the greatest height of his political power. . . .

"To the political weather experts in Washington and elsewhere the barometer shows signs of falling, and if history repeats itself, the fall, once begun, will accumulate momentum on its way. No longer has the President but to express his will and witness its immediate accomplishment. That he may have realized this would come to pass is not impossible, for no intelligent man who has studied political psychology as closely as President Wilson could fail to realize the inevitable escape in time of the party majority in Congress from his strict and forceful guiding hand. To use a homely expression, he has 'made hay while the sun shone,' and, to give him the credit that should be his, he probably knew that to carry out even a large part of his political program he must, as the old frontiersmen used to say, 'go while the going is good.' He has accomplished much of what he started out to do, and has only been a year at it. It is a record of big achievement, for even if he has to fight harder in the future for what he gets, and yield to a greater degree of compromise, he can but congratulate himself upon the distance already covered and accept the waning of his power with more or less philosophy."

The fight against the trusts is next dealt with by this well-informed journalist, who remarks:

"The Old World has long ago discovered that the greatest forces for the expansion of foreign trade are big industrial combinations commanding unlimited capital. The New World, now needing foreign trade nearly as much as the older communities, is doing its best to discourage those agencies and penalizing

CARTOON SKETCHES OF ALBANIA AND ITS RULER.

those who have built them up to their present effective fighting power.

"That there will come a reaction against overregulation is inevitable, and signs of this are not wanting. Industrial conditions in the United States are not particularly good at the moment, and the public is quick to lay the blame upon those in political power, for politics and business have become so interwoven through the mania for regulation from Washington that any and all of the evils of industrial depression may quite plausibly be brought to the door of those who are placing increasingly severe legal restrictions upon business. For the first time in many years imports are now increasing more rapidly than exports, and as the United States is a debtor nation, paying out each year about \$600,000,000 to foreigners, this is not a favorable sign. The most cheerful feature of the present situation is the fact that the harvests of 1914 promise greater returns than ever before in the history of the country. It is a 'bumper' year."

In discussing the Mexican question, Mr. Whelpley predicts

what has since been accomplished, the elimination of Victoriano Huerta. Perhaps the President "overestimates the self-governing power of the people of Mexico"; yet, as this writer concludes:

"It is easy for political opponents to criticize, but it is a question as to whether any one else could have done any better, or even as well, so far as the interests of the American nation in Mexican affairs is concerned."

The future fate of the Democratic party, which Mr. Whelpley thinks the dictatorship of President Wilson threatens to disrupt and send to defeat, is thus described:

"Should the Republicans sink their differences and unite upon Theodore Roosevelt as candidate for 1916, as now seems possible, an attack will be made upon the Democratic party which will be almost unparalleled in its fierceness and for the compactness of the fighting organization. The Democratic party before President Wilson was elected was the critic, and the

Republican party was upon the defensive. It had been so long since the Democrats were in power that their sins of commission and omission had faded in public consciousness and the sins of the Republicans were shining marks. It will be very different two years from now, for the Democrats have been in power, and from the day of their accession they have been inordinately busy under the aggressive leadership of President Wilson. He has given his followers no time to meditate as to the wisdom of his policies, and where hesitation made itself apparent the party whip has been used with great effect. The disposal of patronage by an incoming Administration is a tempting bait to induce members of Congress to remain inside the Administration circle, and this argument has been used with great effectiveness during the past year to secure Congressional assent to the measures proposed by President Wilson.

"The cream of this patronage is now skimmed, however, and personal ambitions within the party are making themselves felt. The passage of any important law generates enmities and party dissensions hard to reconcile. This is all the more true when the party, as in the present case, consists largely of one man who has dictated its policies and conducted its business single-handed. President Wilson's Cabinet is nothing more than a background for his own personality. The functions of State, War, and Navy are directed from a single desk rather than from the Cabinet table, and it is American history that the strong man as President, who ruled individually rather than through a group of strong men about him, has generally split his party into factions, and finally gone to defeat through inability to carry all the load himself. The American political system does not admit for long of a dictator, however thoroughly he may be disguised as a 'tribune of the people.'"

DUMA MEMBERS ON RUSSIAN REFORM

THE DILEMMA of the Duma appears to be that it is powerless to enact laws that will satisfy the people, yet unwilling to follow the path of reaction desired by the Government. So no one is satisfied with it. We gather from the Russian press that the people are becoming convinced that parliamentary methods of struggle with their rulers are not expedient in a country where a deputy of the Duma is put on trial for expressing his belief that a republican form of government is preferable to autocracy. It is the opinion of leading members of the Russian Parliament that a conflict is inevitable, and they hint at the possibility that the insurrectionary events of 1905 may be repeated. The *Ryetch* (St. Petersburg) publishes their views on the political situation.

Mr. Opochinin, a radical Octobrist, hints at tragic times ahead if the Government takes no reform measures. He asks:

"What next? The key to this question is in the hands of the Government. The composition of the Fourth Imperial Duma is such that should the Government adopt a policy of reform, there would immediately form an enormous majority in the Duma. . . . The thirst for positive activity is so great at the present moment that even the parties further 'left' to us would not demand of the Government anything impossible. . . . But will the Government adopt such a policy? I am not convinced of it, to my great regret. I do not see in the Government any authoritative person who could change our policy to one of reform.

"What will be the result? That the Fifth Duma will be very Radical whether the Fourth lives to the end or not. And as the large masses usually do not stop to consider who is right and who is wrong, there may come a time when the very principles upon which the political order is based will suffer. Besides, it may happen that at the first international complication there will be repeated, only in a much greater degree, those sad events which followed after the Crimean War and the Russo-Japanese War."

Mr. Shidlovsky, an Octobrist leader, thinks the people may despair of legal methods:

"One must be blind not to see that with this condition of the governmental mechanism . . . legislative work is absolutely impossible. . . . If the Government continues to disregard the opinion loyally expressed by the moderate elements of the Imperial Duma, that the course it follows is a dangerous one, the country

will come to the conclusion that the legal, parliamentary methods of struggle are futile. But while admitting the abnormality of the situation, I regard skeptically the possibility of a change of the political course. I do not say that I have completely lost all hope for it, for that would mean that I lost hope for the peaceful, normal development of the whole political life. But all that we are witnessing gives food only for skepticism."

Mr. Shingareff, a Constitutional Democrat, speaks of a coming struggle and the necessity of courage for it:

"I do not believe the authorities understand their mistakes. They will not understand them simply because they do not want to understand them. There will be a further parting of ways between the Duma and the Government, and the aggravation of the struggle is inevitable. The struggle must go on both within and without the Duma. Once we are in the Duma we have not the least ground for rejecting those methods of struggle which the parliamentary conditions afford us. I consider, for instance, that the passing by an overwhelming majority of the Imperial Duma of the legislative project regarding the freedom of a deputy's speech . . . has an enormous political significance. In the struggle for the liberation of Russia we do not feel justified in thoughtlessly ignoring such weapons as the work in the Imperial Duma. If this work yields little, what of it? Let it be little.

"When will results come? It is difficult to be a prophet. The history of other countries affords examples of quick and slow victories over reaction. We must be prepared for either. . . . I believe in the people, I believe in Russia. This is sufficient—not to lose courage in the coming struggle."

Mr. Kerensky, a Labor deputy, evidently believes that conditions are growing so bad that any change must be for the better:

"I am in quite an optimistic mood. All the stages which reaction must go through are passing here very rapidly. All the significance of the eighteen months' existence of the Fourth Duma, in my opinion, consists in that it has shown in the clearest possible manner the complete political bankruptcy which began since the enactment of the law of June 3. The politicians wanted to construct a dam against the democratic currents of the country, but the dam turned into a quagmire which gave way under the pressure of reaction. . . . All the ornamentations which distracted and deceived the public consciousness have disappeared. All the decent portions of the middle classes of society have in some degree or other come over to the side of democracy against reaction. The conflict between the country and the Duma during the time of the Third Duma has now turned into a conflict between the country and the Government."

Count Kapnist, a conservative "Octobrist," says:

"I regard the state of things pessimistically because, to my regret, I have little faith in the creation of such conditions as will show a wise and normal way out of the existing political situation. That way, in my opinion, consists in the formation of a Cabinet united by a sincere desire to carry out the necessary reforms in the spirit of the manifesto of October 17. If the authority were held by men filled with the spirit of reform and ready to prove it by deeds, the general political picture would change at once, and everything would proceed differently. Then there could be no talk about the absence of a definite majority in the Imperial Duma. Such a majority would form immediately. More than that: I am convinced that the Government which leans upon a real majority in the Imperial Duma and enjoys the confidence of the wide circles of society and the organs of local self-government would have such great moral weight that it could without difficulty break down the opposition of the Council of the Empire to all progressive undertakings. . . .

"Unfortunately we have no data which would permit us to hope for the realization, in the near future, of the modest dream of the moderate elements of the country. Of course, partial changes are possible toward fall. There may be the substitution of some people by others. But we must not be deluded: such changes do not alter the situation. What is the use if instead of X there will be Z when the general political situation and the general political course will remain as heretofore? A positive political turnabout is necessary. If this will not occur, the fall session of the Duma will begin with what the spring session has terminated. And the guilt for this will lie entirely with the Government."—Translation made for THE LITERARY DIGEST.

SCIENCE AND INVENTION

"A NAKED DIVER WILL SLIP INTO THE AFFRAY, AND AS THE SHARK TURNS OVER TO ATTACK HIM, HE WILL PLUNGE A KNIFE INTO THE VITAL PART OF THE MONSTER."

SUBMARINE MOVIES

REMARKABLE moving pictures have been taken under water in the West Indies by the Williamson brothers, of Virginia, using special apparatus of their own invention. One of them, Mr. J. E. Williamson, has written for *The Scientific American* (New York, July 11) an account of his methods and experiences, part of which we quote below. The first really successful photographs ever made under the sea, Mr. Williamson claims, were produced about a year ago at Hampton Roads, Va., by the father of the writer, Mr. Charles Williamson, who devised what is the basic principle of the apparatus here described. This "notable photographic accomplishment," as Mr. Williamson calls the elder Williamson's submarine snap shots, "opened up to the eye of the camera a virgin field of startling significance—a field having a superficial area of 140,000,000 square miles." He goes on to say:

"The submarine apparatus which made possible the easy access to this underwater world is most worthy of note, beginning, as it does, a new era of enterprise, reducing to a minimum the risk, and eliminating all physical strain. This device allows any one to step from the deck of a vessel and climb down through an open air-shaft to any desired depth, and there look and reach out and carry on, within limits, any work he may wish to accomplish. . . . Through its use the first practical submarine pictures were made, and in the past few months a marvelous motion-picture film has been produced with this apparatus—the Williamson submarine tube. Its flexible metallic construction makes a habitable hole in the water down and through which the camera man passes to his sub-aqueous studio to work for hours under normal atmospheric conditions.

"I had been down in this tube, and from the work-chamber

at its base looked through the port lights and had seen the fish in their native element. With experience gained as a newspaper photographer, my faculty for getting a news-picture was keenly developed, but it was not until the enormous possibilities of a motion-picture film of this new and fascinating realm were realized that the project of submarine photography was started. A few sleepless nights, and, with the cooperation of my brother, our plan of action was formulated. We knew the clear water of the tropics, abounding with plant and animal life, would be the place to obtain the best results. To fit out an expedition

to go to these waters equipped with the necessary vessel, a powerful submarine lighting outfit, a Williamson tube, and operating chamber for photographic work at its base, was a big undertaking. So it was necessary to carry on experiments near our home at Norfolk to prove that we were right in our assumptions and gain the interest and support of capital.

"The organization of a corporation in Norfolk, Va., with T. S. Southgate as president, was the result of successful experiments that followed, and after seven months' work of preparation our expedition was in readiness for launching. We wanted the best motion-picture camera man for the important work to be done, and finally secured the services of Carl L. Gregory. With the West Indies as our destination, we started. Headquarters were made in the

beautiful harbor of Nassau, in the Bahamas, and we made many trips from there to the near-by islands around whose treacherous coral reefs are found beneath the sea the beautiful, picturesque, and thrilling scenes we desired to capture and embalm forever on the retina of our deep-sea camera.

"Pictures were made at night with the aid of our submarine lamps. They were each equipped with a 2,400 candle-power Cooper Hewitt quartz burner, and the results obtained, as the films show, are remarkably successful. The exposure used for these night pictures was about the same as that used in day-time, the average time of exposure being 100th part of a second.

THE UNDERWATER PHOTOGRAPH GALLERY.

"Ten thousand feet of film was taken on the expedition; 5,000 feet of this will be selected to show the best results."

Wonderful results were obtained at various depths of from 15 to 60 feet. A striking example is . . . a diver snapt at work on an old wreck. Forty-five feet of water was between him and the camera, and the reef in the background, 75 feet away, is clearly in focus.

"Ten thousand feet of film was taken on the expedition; 5,000 feet of this will be selected to show the best results of the many

ready camera man will do his work, and millions will see exactly what he saw and depicted.

"What the grass shack of prehistoric man is to the Woolworth Building, or the first dugout of primitive man is to the gigantic ocean liners of to-day, the present apparatus that we are using—the first Williamson collapsible tube—and the results obtained, will be to the amazing evolution of this submarine device in the future. To photograph the bottom of the sea is, perhaps, the last of the big things to be done on this hoary planet, and undoubtedly it will be done."

Says the *New York Herald* of this enterprise:

"Altho the greatest depth achieved in the experiments is not greater than that frequently reached by divers, it has been demonstrated that the means for deeper trips into the unknown waters has been found, and the time is not far distant when the riddle of the deep will be solved. Experiments with the apparatus at the Norfolk Navy Yard by officers of the Navy resulted in a report that it would be perfectly safe in its present form of construction at a depth of 800 feet."

Commenting editorially on a report of William E. Doty, U. S. Consul at Nassau, the *New York Sun* says:

"No machine previously invented has been efficient at a submersion of more than two or three feet, but with this apparatus submarine pictures have been taken in Nassau Harbor showing with great clearness the marine gardens, fish of many varieties,

HOW THE SUBMARINE MOVIES WERE TAKEN.

interesting subjects portrayed. Combats between sharks and divers will furnish some of the thrills for the production. The big fellows will be shown fighting for pieces of flesh thrown overboard, tearing at each other in their efforts to get at the food. A naked diver will slip into the affray, and as the shark turns over to attack him, he will plunge a knife into the vital part of the monster. Myriads of striped and odd-shaped tropical fish will be seen darting in and out among beautiful coral reefs and the waving flora of the sea. Queer and unusual plant formations, bending and rippling in the swift currents of the marvelous sea gardens, will be flashed on the screen, and for the first time a clear and lifelike view of what the bottom of the sea is actually like will be shown. A surface scene will show the passenger-steamers leaving Nassau, and the native black boys sculling and diving from their small boats. Then the scene will shift beneath the surface, and the natives will be seen diving for coins thrown overboard, grasping them, in many instances, before they reach the bottom. The practical diver will also make his first underwater appearance before the world as recorded by the camera man who turned the crank in the operating chamber at the bottom of the tube while the amphibious human went about his work. As he strolls around the wreck of an old blockade-runner, hundreds of fish swim about him, and the stream of bubbles issuing from his helmet grow in size as they approach the surface and the pressure is lessened. Many people of note will be shown boarding the *Jules Verne*, the odd-shaped operating craft of the expedition, which controls the surface end of the big flexible tube. When the visitors go below they witness with delight the marvelous panorama that unfolds itself before their wondering eyes, after which the submarine tube is unfolded, section by section, to demonstrate how easy access to the secrets of the deep is obtained.

"These pictures make a vitally interesting page in natural history, and, as submarine work is continued with the Williamson tube, more new and strange sights will be seen. The ever-

Illustrations from "The Scientific American"

AS A FISH WOULD SEE THEM—
NEGRO BOYS DIVING FOR COINS.

old wrecks with divers working among them, anchors at a depth of a hundred feet and the movements of sharks and other submarine dangers. . . .

"Consul Doty reports that an American physicist of high reputation has expressed the opinion that the tube may be lengthened perhaps to 1,000 feet, which would make it of importance in many lines of scientific work in oceanography. It may prove very useful in salvage operations and in the inspection and repairs of hulls at sea. In the pearl and sponge fishery the tube is expected to work a revolution, since many of the best specimens lie too deep for exploration in the diving helmet.

"These films have been shipped to New York, where they are to be placed on exhibition at once."

SCIENCE TO CATCH FRAUD IN ART

THE "COROT FACTORIES" and similar hives of industry where the forgers of "old masters" do their work must presently go out of business if the modern scientific methods of examining pictures and ascertaining their authorship are to become the rule. Especially effective would appear to be the use of microscopic photography, as perfected by Prof. A. P. Laurie, of Edinburgh, Scotland. We quoted Professor Laurie himself on this subject in our issue of February 21. Further details of his methods are given in *La Nature* (Paris, June 20), by Dr. Alfred Gradenwitz, in an article entitled "Science's Aid to the Art Expert." Dr. Gradenwitz would have us note, at the outset, that in all domains of human activity we are now attempting to supplement personal judgment by the impartial methods of science. He goes on:

"It goes without saying that we can never eliminate personal judgment from criticism, or even reduce its importance. The experience of these last years, none the less, has shown the facility with which the most skilled experts in art may be deceived in identifying the author of a picture or a statue. Any means of controlling the element of personal appreciation is thus welcome.

"Prof. A. P. Laurie, of Hewitt-Watt College, Edinburgh, has devised rigorously scientific methods that deserve somewhat detailed description. Professor Laurie, who has studied the history of colors somewhat extensively, has prepared a detailed list of the characteristic pigments of each epoch. When it can be established that a given color is not used in a certain epoch, and that another ceased to be employed at such and such a time, the examination of the pigments used in a painting will enable us, in many cases, to establish the approximate date of its origin, and to decide whether the generally received opinion is correct. On the other hand, the microscopic examination of the surface of a painting often makes it possible to tell whether it has been retouched.

Finally, since certain artists were in the habit of using only particular colors, the presence of these is very strong evidence in favor of the authenticity of a picture.

"Professor Laurie has also been struck with the surprising conclusions that may be drawn, with a sufficient enlargement, from the technique—from the 'brush-work' of an artist. Experts in art, it is true, often make use of a simple lens to examine the details of a picture, but to develop a rudimentary process into a really scientific one, we must, as Mr. Laurie has done, have recourse to microphotography, together with a lantern that will project on a ground-glass screen the image of a small part of the painting, sufficiently enlarged. The enlargement is regulated at will, within reasonable limits (1-6 diameters). The use of orthochromatic plates makes it possible to render correctly all the shades of the picture and to reproduce the lightest details of the painting's structure. A typical microphotograph can thus be preserved as long as desired, to serve at any moment for a comparison of brush-work. Even if the picture is of dimensions sufficient to make an enlargement unnecessary; even if the brush-work is coarse enough to be examined with the naked eye, the photographic method presents evident advantages, concentrating the attention of the critic on a given spot and eliminating the influence that the colors and forms of the rest of the picture might have over him."

The photographic reproductions in our article of February 21 afforded an idea of the applications of Laurie's method. Dr. Gradenwitz closes his article thus:

"When two microphotographs present perfect similarity in the brush-work, we may in all security assert the identity of

origin of the corresponding pictures. In case of disagreement, on the contrary, we may not necessarily contest the authenticity of a doubtful picture. It would be necessary first to study the pictures of the same painter belonging to different epochs, and to follow the modifications that his technique may have undergone in the course of his career. It would be a good thing to establish in this way, for each of the great masters, a complete system of specimens of his technique, which in all doubtful cases would furnish the necessary bases of comparison."

AN ICELESS ICE-BOX—The standby of the small household in summer has always been the iceman, but a new invention mentioned by *The Technical World Magazine* (Chicago)

threatens to supersede him entirely and make the peddling of ice an anachronistic performance. In this refrigerator no ice is used, but a small, inexpensive, and reliable refrigerating plant takes its place. The cost of operation is apparently no more than the cost of ice would be, and the resultant chill is from thirty to forty degrees lower than in the average ice-box. This invention, we are told, is the result of an imperative need:

"Because no ice-refrigerator is cold enough, according to the experts, to prevent decay of perishable foods, the iceless domestic refrigerators are doing away with the iceman. This new machine, which has been placed on the market, operates with an electric motor and the well-known ammonia system of refrigeration. The average cost a month for electric current is about two dollars, and the various spaces in the refrigerator are kept at a temperature of from twenty degrees up.

"The average ice-box in hot weather keeps its compartments at a temperature of from fifty-six to sixty-three degrees, but it has been shown that fruits should be kept at a temperature at least thirty degrees lower. Fish and oysters should have a temperature of from twenty to thirty degrees and meats from twenty-nine to thirty-eight. It has been shown that butter keeps best at about eighteen degrees."

BACTERIA KILLED BY LINOLEUM—That the ordinary floor-covering, linoleum, made of linseed-oil and cork, has the valuable property of destroying bacteria which fall on it will be news to most housewives. Says *Die Umschau* (Berlin):

"In testing for germs it is often found that such substances as stone, wood, porcelain, glass, etc., are sterile. A number of years ago Privy Councilor E. Fischer made the observation that on certain building materials disease germs quickly die. L. Bitter has shown that the very resistant staphylococcus perishes within one day on the surface of linoleum. As far back as 1901, Jacobowitz proved that the germ-killing effect of the much-acclaimed 'disinfecting wall-paints' was due to the chemical effect of the linseed-oil used as a binding medium. Since the essential constituents of linoleum are cork and a large quantity of linseed-oil, its disinfecting capacity is not to be wondered at. But in the case of the disinfecting wall-paints the sterilizing power wears off in a few months because the linseed-oil dries, while linoleum has a lasting effect. Hence linoleum operates to kill the majority of the microorganisms brought in on the shoes. Frequent moistening accelerates this disinfecting property. Hence all disease-germs which do not form spores quickly die on a linoleum covering which is wiped off daily with a damp cloth. According to F. Fritz this bactericidal power is due to certain chemical groups in the oil, especially linoxyn."

POISONS AND THE MAILS

POISONS must not be sent through the mails: so say the postal regulations. This rule seemed reasonable and offended no one, until the establishment of the parcel post. Then wholesale druggists found it convenient to use the post-office for the transportation of substances for medicinal use which, taken in large quantities, would be undoubtedly poisonous. Hence a very pretty little quarrel between Uncle Sam and the pharmacists, which has culminated recently in the arrest of a representative of a reputable drug house in New York for the violation of the postal laws in the way above described. In a paper read before the American Pharmaceutical Association and printed in its *Journal* (Columbus, Ohio), B. L. Murray and A. W. Frame point out the necessity of a workable definition of a poison, if the word is to be used in such regulations as this. Familiar foods, like potatoes and beans, contain poisonous principles, whereas strychnin and arsenic are tolerated in small doses by the human system. Again, salt is poisonous in large quantities, and some people can not eat buckwheat cakes or strawberries. Say the writers:

"There are hosts of articles generally regarded as harmless that should be classified as poisonous if one is to follow the definitions, the laws, the court decisions, etc. It is not impossible to classify the various drugs and chemicals as to poisonousness, but no two people would do it alike. They would make up classifications widely different. Again the need for some one master classification is shown. And a proper national poison law would be such a master classification.

"A proper national poison law would leave no doubt in the mind of the producer, dealer, or consumer as to just what articles are to be considered poisons and labeled and handled accordingly. With such a law it would not matter that one says chemistry and physiology know no substance as such which is deleterious to health, but every substance has a definite ratio to the weight unit of the human body below which it is without any effect, and above which it exerts its specific influence. It would not matter that some pronounce caffeine poisonous, while others proclaim it harmless. With a proper national poison law enacted, all would be on an equal footing."

In the discussion following this paper, much was said about the action of the Post-office Department, to which allusion is made above. One speaker referred to it as "attempted poison legislation" and characterized it as "little less than silly." Another called attention to the fact that poisons are already excluded from the mails by the Criminal Code, though the law gives the Postmaster-General power to make regulations for the admission of certain poisonous substances. The present regulation is admittedly defective, and presumably the agitation concerning it will result in its modification.

WHY SUCTION-DREDGES FAILED TO WORK.

Cape Cod was discovered to be more than sand. Boulders weighing twenty tons were found.

BUILDING THE CANAL.

OYSTERS AND COPPER

A"COPPERY" TASTE may be detected in certain varieties of oysters, particularly the small English ones beloved of our transatlantic cousins, in whose opinion this taste adds to the lusciousness of the bivalve. At any rate, the oysters come honestly by it; for the copper is really

there. A wealthy Virginian oysterman evidently does not agree with the British taste, for, having found copper in his oysters he sued the Virginia Smelting Company for putting it there. The company puts up a brave defense, but was made to pay \$250 damages—a result which is claimed by the Norfolk correspondent of *The Engineering and Mining Journal* (New York, July 11) to have been "a practical victory for the smelting company." We read:

"Plaintiff produced receipts from the State inspector of grounds leasing him oyster ground near the smelting plant and showed that the Smelting Company poured slag on some of his beds. The grounds for the suit were based on damage to oysters by the action of 'copper and other deleterious substances' on the oysters.

"Plaintiff produced an abundance of evidence from oystermen and others who swore that the smeltery had ruined the oysters for distances as much as fifty miles in all directions. A pamphlet from the State Bureau of Chemistry was put in evidence in support of the view that the smeltery did the damage. A chemist employed in Government service was placed upon the stand and testified to the finding of certain percentages of copper in oysters from near the works and gave his explanation of how the copper came to them from the plant altho he only found 'traces' of copper in the slag.

"The defense proved that copper in slag was not soluble; that its business is to recover copper and not to scatter it over the country; that enormous amounts of Paris green were spread on the lands in the surrounding districts yearly for a long time; that there were many other sources of copper, and finally that copper is as necessary to the life of the oyster as iron is necessary as a carrier of oxygen in mammals.

"It proved that oysters in Spain, Holland, England, New York, New Jersey, and many other places had copper in quantities greater than was claimed by plaintiff in the oysters near the smeltery. The defense showed that oysters all over the district as much as fifty miles away and up the river had more copper than near the smelting plant. The prosecuting attorney claimed that the defendant was proving that the plant was taking the copper out of the oysters as they got nearer the works. The defendant solemnly repudiated any such claim, but proved that all the damage was due to sewage and showed

by uncontrovertible evidence the oysters from these beds were not allowed to be sold for food and that copper had nothing to do with it, but that it was purely a question of sewage contamination.

"During the proceedings both sides got busy opening oysters to prove their respective contentions. The results were often very amusing."

THE CAPE COD CANAL—BUILT TO SAVE TIME, SHIPS, AND LIVES.

MAKING CAPE COD AN ISLAND

IT WILL NEVER CEASE to be Cape Cod—that name has stamped itself on history; but with the opening of the Cape Cod Canal, part of it, at least, becomes “entirely surrounded by water,” which makes it an island, unless the geographies are wrong. Ever since the days of the Puritan Fathers, writes Mrs. C. R. Miller, in *Leslie's Weekly* (New York, July 2), men have talked and planned for this canal. During the days of Washington a survey was made, but nothing further was done. In 1860 the legislature of Massachusetts published an exhaustive report setting forth the feasibility of a waterway across the Cape. But it was not until 1909 that a company was organized to construct a waterway. On June 22 of that year August Belmont, the president of the Cape Cod Construction Company, turned the first shovelful of earth of the excavation. We read further:

“Records show that during the last sixty years more than two thousand vessels have been wrecked in the waters of Cape Cod and something like seven hundred lives have been lost. The number of craft which round Cape Cod every year are said to be about 25,000. These vessels carry about 25,000,000 tons of freight. The canal will shorten the route of these vessels and save them many dangers. August Belmont, president of the company that is constructing the canal, recently said that the prospective tonnage is greater than that of the Panama Canal by at least 13,000,000 tons per year. This will make it, in point of traffic carried, the greatest canal in the world. . . .

“Apart from the financial attractiveness of the project, Mr. Belmont had a sentimental motive for becoming interested in the Cape Cod Canal. He is a grandson of Commodore M. C. Perry, who opened the ports of Japan to the world, and a lineal descendant of Edward Freeman, Governor of Sandwich and a pioneer settler on Cape Cod. The spot where Mr. Belmont started the work near the Bourne railway station was once a part of the domain of his ancestor.

“William Barclay Parsons, who built the New York Subway and who was at one time on the advisory board of the Panama Canal, was chosen as the chief engineer. The canal runs from Barnstable Bay to Buzzards Bay, is thirteen miles in length, and will cost \$12,000,000. It has its Chagres River in the shape of the Monument or Manomet River, which has been diverted from its course in order that the canal may follow the valley and avoid as far as possible a Culebra. The work is efficiently handled by private enterprise. The only other large canals built without government help are those of Suez and Manchester.

“The canal is a sea-level one and is being constructed without a tidal lock. As there is some difference of opinion as to the practical working of this type of canal there is a clause in the franchise obligating the company to build a device for controlling the current, if such should be found necessary after the canal has been in operation for one year. The fact that there is three hours' difference between the periods of slack water on the two sides of the Cape is expected to obviate the necessity of

tidal lock-gates even tho there is considerable difference in the heights of the tides of the two bays.”

The canal is 100 feet wide at the bottom and about 300 at the surface. Its depth is 25 feet at low tide. The sides are riprapped with stone, and a granite breakwater 3,000 feet long protects the Barnstable Bay entrance. The work was first undertaken with suction dredges, but great boulders, some weighing twenty tons, barred the path, and it was necessary to use huge dipper dredges bringing up with every scoop as much material as could be shoveled by one man working ten hours. The material was dumped upon scows and deposited in deep water. Two machine shops had to be set up, one at each end of the canal, as the work has necessitated constant repairs and the making of new implements. To proceed:

“Two dikes, something like the Gamboa dyke at Panama, were built and the central part of the canal was dug with steam-shovels. Electrically driven pumps kept the water down as the men were working below tide. When the work was completed the dikes were dynamited and the two bays brought together at a point not far from the spot where Capt. Miles Standish once had a trading post.

“The franchise gave the canal company the right to buy or condemn property if necessary, in order that it might have a canal zone 1,000 feet wide at each end and 600 feet through the central part. Naturally, this resulted in several lawsuits, in one of which Gray Gables, the home of the late Grover Cleveland, was involved, as a portion of this estate was needed for the Buzzards Bay part of the zone. The canal divides several villages, and in one instance the town is on one side of the canal while the railway station is on the other. A relocation of several miles of the New York, New Haven & Hartford Railway was necessary, and, much to the surprise of the canal company, the railway officials showed no antagonism to the project. The railways can not profitably carry coal and bulky raw material at as low rate as it can be shipped by water. Whatever cheapens water communication will benefit the mills, and the products of the mills will be shipped over the railroad. It is expected that factories will locate near the waterway, and later traverse canals may be cut, thus bringing rail and water communication direct to the manufacturers' door. The canal will not destroy the beauty of the Cape, as the picturesque bridges and excellent roads which the company is building will really add to its beauty. The bridges, of course, are draws, and the one used by the railroads is of the ‘jack-knife’ type. It is operated so easily that Mrs. August Belmont, who is most enthusiastic over the work, raised the bridge herself during one of her visits.

“The canal will be lighted from end to end. The buoys or beacons which mark the entrances will be of a permanent character and equipped for illumination at night. A complete telegraph and telephone system, and audible signals for use in time of fog, will be set up—in fact, there will be everything necessary to an up-to-date canal. The people who live along its shores are enthusiastic over the project and declare that ‘it will bring business to the Cape and make the towns.’”

LETTERS AND ART

ENGLISH TESTS OF FUTURISM

THE FUTURISTS are apparently taken very seriously in England—by everybody, at least, except Mr. G. K. Chesterton. Even he takes Mr. Marinetti seriously enough to be immensely amused by him. He believes Mr. Marinetti is only "playing the fool," and he "would wear a false nose at his carnival with pleasure." When Mr. Marinetti suggests that "the new drama should consist of calamities happening to the audience, and proposes (by way of a beginning) that the same seat should be sold several times over to persons selected for their punctiliousness or pugnacity," Mr. Chesterton agrees that "it would be devilishly funny." But this which only looks like a "student's rag" has been known to most of the generations of Christendom and seems to have little to do with esthetic canons. To the English paradoxist "Mr. Marinetti's only originality is in the dithyrambic and transcendental way in which he talks about it." In *T. P.'s Weekly* (London), now issuing from the hands of a new editor, Mr. Holbrook Jackson, Mr. Chesterton goes on to illustrate:

"Thus, you or I might say, in the casual course of our social custom: 'Let's make a butter-slide for the bishop.' But Mr. Marinetti would say: 'The Priest, laden with the age-long fatness and slowness of a blind and swinish Past, shall suddenly change his plodding tread for one mad moment of the Glory of Speed. His legs shall aviate with an insane smoothness; he shall claw the air with hooked fingers; he shall find the impossible postures.'

"Or, suppose you or I were giving hospitality to some princess or peeress, we might say, in our hospitable mood, 'Let's make her an apple-pie bed.' It might awaken her silvery laughter—or our silvery laughter, anyhow. But Mr. Marinetti would not be content with laughter; he would want seriousness as well. He would say (speaking of the apple-pie bed): 'Sleep is our foe! We have abolished Night! We affirm to Italy, London, and the Suburbs that every bed is a grave! The Futurist Bed, which, we announce, refuses admission to the abject suppliant who asks from it the old repose. What exploded drama can compare with the vigilance and vigor with which the Bed baffles and eludes the statuesque wrestlings of the Man.' This seriousness is all that Mr. Marinetti has added to the good old Christian practical joke. But, when all is said, there is a certain Latin lightness of touch in the way he does it, that makes it very hard for me to believe that he takes such seriousness seriously.

"But there is no light touch about the English Futurists, and one must deal with Mr. C. R. W. Nevinson as with a professor. Of the pictures mostly presented to us by the school, I should be quite content to say that, in my opinion, they are bad pictures—when they are pictures at all. But a serious theory has a right to be considered on its merits, apart from the crimes that it committed in its name.

The essence of Mr. Nevinson's doctrine seems to lie in these

sentences. 'No picture should be a mere representation; a photograph can get a likeness of a person much better and much quicker than an artist.' And then, 'By means of contrast, of abstract color, form, lines, planes, and dimensions that don't in the least imitate or represent natural forms, it is possible to create emotions infinitely more stimulating than those created by contemplating nature.' With God all things are possible; by man it has not been done.

"But if you think the theory out as far as it will go, and further (for you will find it does not go very far), you will see that there is an idea behind all this acoustic statuary or algebraic literature, all this project of painting with a fiddle or fiddling with a paint-brush. The tribute to the photographer is undeserved. Vandyke's 'Strafford' is probably much more like the man's head and body than a photograph would have been."

The paradox of Futurism, says Mr. Chesterton, finding of course his paradox, is that it has no future:

"The paradox of Futurism is that it has no future. It is sterile and suicidal. And this is because, so far as there is any principle in it at all, it is that principle of death which was in the heresies of which I speak: the wrong kind of asceticism. At intervals in the long story of Christendom, there has regularly arisen a philosopher who combined asceticism with anarchy, and who based both the asceticism and the anarchy on a kind of pessimism, but especially on a furious contempt for the body. As a pessimist, he

did not mind what he did to his body. As a neveler, he did not mind what he did with it. In both cases he, the soul, was supposed to be above and outside the body; an essence or spirit which needed no body to express it.

"Such were some of the Gnostics and Manichees who held that physical nature was made by the Devil, but was rescued by a pure Spirit; such the many heresies which held sexuality blameless if it brought forth no offspring; such the Family of Love, which is said to have held that mere actions can not corrupt the heart; as it says in the song (which, however, was not apparently written by a member of the sect):

It's no matter what yer do
If yer 'art be only true,
And his 'art was true to Poll:

and thither unconsciously drift the Futurists of to-day, who despise the separate senses and the strong arts that have been built on the separate senses.

"The old root idea is to recognize no obligation to Nature; and this is wrong, not only intellectually but morally, for it is thankless, and impudent, and a lie. A picture called 'The Soul of an Ox' may legitimately differ from the picture of an ox; but if the artist had never seen an ox, how would he get at his soul? But these artists would profess to find a kind of essence of ox; a sort of transcendental Bovril. And if the artist says 'The Ox Emotion is best expressed to me by zigzag lines of black and vermilion,' I shall say to the artist: 'You

HE ADVOCATES FUTURISM.

And more—"Vorticism, Cubism, Imagism, Blastism," and his name is only Wyndham Lewis.

are a story. The Ox Emotion was most vividly expressed to you by two horns, four feet, cloven hoofs, and all the code of signals already drawn up by God in order to convey that emotion. And it did convey it, for I saw you running for the stile."

Mr. Chesterton declares there is no light touch about "the English Futurists." Whether Mr. Wyndham Lewis is to be dismissed in that way may be tested by his view of Marinetti in *The New Weekly* (London):

"He is the intellectual Cromwell of our time. He has taken quite lately, even, to chanting while on the march—among his audience. He has his Ironsides. The picture is complete.

"Michelangelo is at the present moment living over in Italy. So is Dante. Their death was a 'canard,' merely; rather like Zuloaga's telegram to Buenos Aires (where he was holding an Exhibition, with little success) saying he was dead. All his paintings immediately were bought.

"We must learn, provisionally, to treat the Artist as a dead man, and give him the honors of the dead. For among the dead only the dead are honored.

"We must acquire a facility for overlooking the compromising fact of an Artist's existence.

"At the sight of anything fine in Art, people must learn to say: 'Only the dead paint or write like that. This Artist is evidently dead. He is not dead, you say? Nonsense. I refuse to admit the possibility of such a great Artist being alive! He is dead! His work is splendid! Amen!'

"With the great Artist, still alive, the living can not get over the fact that he is in their category; this degrading similarity to themselves makes them incapable of recognizing his importance.

"But the living become, happily, less humble every day. When they have at last got rid of this idea of there being something shameful and derogatory about existence, and become increasingly cocky and pleased with themselves for being alive,

HOW A CABINET MINISTER LOOKS TO THEM.

This is Mr. G. C. F. Masterman, a most amiable and mild-looking man to eyes not futuristic.

the artist will no longer have to think of posterity, or, as an alternative, pretend he is dead in his time.

"One of the functions of a man like Marinetti is to instil into people the importance of the Present, the immense importance of Life. The healthy fame and real existence of the Artist are

bound up with humanity's way of regarding Life. It is necessary, in the profoundest sense, that humanity should live, and place their living above everything else, for Art to arrive at its goal."

THE DRAMA IN 36 NUTSHELLS

A FRENCH WRITER who has surveyed the whole field of dramatic literature finds but thirty-six situations. Everything put upon the stage can be made to fit into

one of these, so Mr.

Georges Polti seems to think; but our clever Mr. James Huneker notes he has omitted one that is the most thrilling of all. It is that of "the author whose play has just failed, whose royalties are therefore nil." It tops all the other thirty-six in its frequent recurrence, he observes. Mr. Polti, it seems, has, however, only codified the situations of Gozzi and adduced concrete examples to illustrate them. He quotes Goethe in reference to "Faust": "I owe the intrigue to Cal-

deron, the vision to Marlowe, the bed scene to 'Cymbeline,' the serenade to 'Hamlet,' the prolog to the Book of Job." In *Puck* (New York), which has enlarged the scope of its matter and included this writer on the drama, Mr. Huneker gives a translation of the chapter headings, Mr. Polti's book still remaining untranslated. These are the situations, with their nuances:

"The first he gives under the rubric: To implore, which technically necessitates a persecutor, a suppliant, and a power which does not at first decide. Aeschylus is cited, the Heracles, and the second act of Shakespeare's 'King John'; there are minor divisions—fugitives imploring, one who implores assistance to accomplish a pious duty; imploring an asylum in which to die; a shipwrecked person demanding hospitality; asking charity by one who has been disinherited, and many other subdivisions. I mention a few merely to show the possibility of combination. It will hardly be necessary or expedient to do so with the other examples.

"Second situation: The Savior. Third situation: Vengeance pursuing a crime. Fourth situation: Vengeance by degrees. Fifth situation: Tracked, i.e., the fugitive, chastisement. Sixth situation: Disaster. Seventh situation: In the clutches of evil, a prey to the stronger. Eighth situation: Revolt. Ninth situation: An audacious attempt—this is the very backbone of the dramatic structure, involving struggle, or the opposition of two hostile elements. Tenth situation: Abduction (Enlèvement). Eleventh situation: Enigma (suspense—the casket scene in the 'Merchant of Venice'). Twelfth situation: Possession. Thirteenth situation: Hatred of relatives—the field is wide. Fourteenth situation: Rivalry between relatives and friends; love, naturally. Fifteenth situation: Adultery coupled with murder. Sixteenth situation: Madness—a large field for exploration. Seventeenth situation: Fatal imprudence. Eighteenth situation: Involuntary love crime. We are now half through the list. Courage!

"Nineteenth situation: To kill an unknown friend or blood relation. Twentieth situation: To sacrifice one's ideal. Twenty-first

THE CAUSE OF IT ALL.

The arch-futurist, Marinetti, who Chesterton believes is only "playing the fool."

situation: To sacrifice one's self for family reasons. Twenty-second situation: To sacrifice all for passion. Twenty-third situation: To sacrifice for duty a child or some blood relation (Iphigenia). Twenty-fourth situation: Unequal rivalry; here the changes to be rung on this theme are numerous. Twenty-fifth situation: Adultery—plain, stale, old social sin (no wonder the author gives us abundant examples). Twenty-sixth situation: Love crimes. Twenty-seventh situation: Knowledge of the dishonor of a loved one—friend, wife, mother, sister, father, brother. Twenty-eighth situation: Hindered love. Twenty-ninth situation: The enemy loved; little need to quote as a capital instance 'Romeo and Juliet.' Thirtieth situation: Ambition; a magnificent theme. Thirty-first situation: The struggle against God, or the gods—the most ancient of all dramatic motives,' says Polti. Thirty-second situation: Mistaken jealousy. Thirty-third situation: Judicial error—dear to melodramatists and the groundlings! Thirty-fourth situation: Remorse. Thirty-fifth situation: Recovered (something or some one lost); and Thirty-sixth situation: The loss of beloved ones by violence or otherwise."

AMERICAN PAINTERS AND ENGLISH CRITICS

THE NEGLECT by the English critics of the American art at the Shepherd's Bush Anglo-American Exposition, recently noticed here, has been amended in places. For almost a month after the opening of the show the English critics held their peace; only two notices appeared in the first fortnight, records "N. N.," the London correspondent of *The Nation* (New York). One of these we quoted in our issue of July 4. Mr. Humphry Ward, of *The Times*, then complained that our painters owe their inspiration to France, and the few critics who have since given more than a perfunctory notice to the show repeat the charge. A new world, they imagine, should give to its painters something entirely new under the sun. Outside of this vague impatience it has not been easy to gain a clear idea of what is expected. Mr. Archibald E. Jones, in *The Nation* (London), is the most helpful in this respect, however. "What possibilities are suggested by the proximity of the Redskins, the presence of the negro population, and the character of the country itself." The writer in *The Nation* (New York) points out that the critic who has never visited America could not be a good judge of its landscape artists, and the same fact must account for his idea of the "proximitous Redskins." It is perhaps only the insular British idea that outside of the purlieus of New York one runs the risk of a scalping from the aboriginal population. There is also the implication that British gray skies ought to be expected to prevail the world over. "N. N." states the case for the British critic:

"The Englishman who has never been in America and knows nothing of its high luminous skies, its pure brilliant sunshine, its clear distances, its delicate foliage, may see affectation or sheer invention in many of the American landscapes and studies of light. The illumination of Childs Hassam's canvases, for instance; the radiance that fills the sky in Redfield's snow scenes, the tender purity of Alden Weir's night, these effects are as American as are the details in Pennell's Panama, Philadelphia, and New York lithographs. It is for this reason that the landscapes strike one as still more distinctly American and more original, perhaps, than portraits painted in the even studio light, which is much the same in all countries."

Referring to the English critics' objection that American art is but a reflection of French art, this writer observes:

"American art, they say, owes its inspiration to France, is but a reflection of French art, has developed no national characteristics. But Americans, to oblige the British critics, could not at the start have forgotten the centuries of tradition they carried with them from Europe in order to take over the aboriginal traditions of the Red Indians; nor could they object in recent years to study in Paris, since it has been the chief artistic school for Europe and America both. It would be quite as true to say that British art as seen at Shepherd's Bush shows French influence, for many of the British artists who are rep-

resented have also imported methods from Paris. France alone can not be held responsible for the enormous difference in the work of the two countries; neither is it a difference that can be attributed altogether to subject. Americans paint much the same kind of subject as British artists, tho, unless painting for illustration, they are less addicted to anecdote, and tho, of course, detail has its American character.

"But it is in their attitude to their subject that they differ—in the greater life and vitality, the keener concern for technique, the fresher vision, the more independent point of view they bring to it, and to their treatment of it. This may not invariably mean greater accomplishment. The fact is, there are many things which, for the credit of American art, might better have remained at home. But there is no question that as a whole the collection gives an impression of life and energy not found in the work of British artists, whose philandering with French methods never quite frees them from their inherited restrictions and dull technical routine. The American artist may be dealing with a problem appropriated from other lands or other schools—a problem making no claim to originality—but he approaches it with a zest, an energy, a straightforwardness all his own that force you to look with interest at the result he gets from it, no matter if you do not always approve. He gives you the same comfortable assurance of a vitality equal to the problem that I have so often pointed out as the chief merit of Sargent's paintings when they hang in the midst of anemic academic commonplace at Burlington House."

Convinced, however, to his own satisfaction, of the unrepresentative character of American art, Mr. Jones in the *London Nation* finds a solution in the cool suggestion that "the American spirit is itself antipathetic to art, and thus necessarily incapable of expression by it." Further:

"We are tempted to believe that this is the case, for, when we come to analyze it, what is this spirit but that intoxication with the superficialities of life which it is the first business of the artist, the seeker after fundamentals, to sweep aside? Enthusiasm for an object for the mere sake of its novelty, prejudice against lineage and preoccupation with the sensational aspects of life, represent a point of view incompatible with the outlook of the artist—a consideration which explains the curious fact that it is only in the work of the least successful of her painters that we catch a glimmer of the American spirit. Thus the peculiar character of American art is incapable of definition save by negatives, nor could we define it more clearly in a single phrase than to say that it is distinguished by lack of sympathy. For the American seems incapable of absorbing, and consequently of transmitting, atmosphere. He holds himself aloof, unable or unwilling to surrender himself to his picture. So that even in a group of water-colors by so eminent an artist as Mr. Sargent we notice an absence of feeling, detect almost a metallic touch, as tho the artist had held his picture at arm's length, using his consummate technique like a machine for the due accomplishment of a definite task, and never pouring his soul into the canvas. Absence of sympathy, too, explains the failure of the many portraits which hang from the walls; they have a masklike quality, catching the exterior likeness only, and incapable of revealing essentials. And, when we come to think of it, do not we find this metallic touch in the poetry of Edgar Allan Poe and the essays of Emerson? Is it the thumb-mark of the American potter?"

One critic, "J. M. M.," in *The Westminster Gazette* (London), throws blame upon our "highbrow" public of picture-buyers who want a Paris hall-mark:

"The rooms which contain the Whistler drawings . . . the Sargent water-colors, and the Pennell lithographs suggest one [problem] yet more subtle. Why has the American, completely *déraciné*, attained such preponderating importance in modern art? Is not Mr. Sickert, unrepresented here, an American of Virginian provenance? Of Mr. McClure Hamilton's origin, and of Mr. Frank Mura's, we knew, but it appears that Mr. Mark Fisher and Mr. Epstein are also American by birth. Why are the Americans who work in New York content to be French, while those who work in London achieve a dominant individuality? These latter have had, and many even now exercise, a profound influence upon English art, upon the American little or none. The case is old and familiar—no prophet is without honor. I fear that the Americans have still the habit of insisting upon the authentic Parisian trade-mark, without which as yet no art is genuine. They should at least see to it that they refuse all imitations."

OUR PIONEERS IN ART EDUCATION

ONE OF THE FIRST and almost the last of his generation of art directors of the West and Southwest was W. M. R. French, of the Art Institute of Chicago. His death, in June, marks an epoch in our art, says Mr. Will H. Low, in the *New York Evening Post*, for he was one of those who established a chain of galleries and art museums in the almost virgin field of that territory. The seed of art interest was sown in the Centennial Exposition of 1876; the first blossoming followed seventeen years later in the Columbian Fair in Chicago. Chicago's Art Institute was founded in the first of these years, and Mr. French as its director "followed his own vision and his self-acquired knowledge of the world's larger activities in art." He had "literally grown up with the country which the Art Institute served, beginning when naught save a yearning for relief from the dreary conditions of a life isolated from all visual and intellectual converse with art existed." Of others in this class we read:

"Halsey C. Ives, of St. Louis, was the earliest of these, and achieved national reputation through his able direction of the section of art at the International Exhibitions of Chicago and St. Louis. His history was not unlike that of Mr. French, from beginnings quite as modest building up a flourishing art school and a museum that from the first has had a distinctive character of its own. Mr. Ives's chief distinction, however, and one which constitutes a noble monument of his memory, was the success of his almost single-handed effort to induce the city of St. Louis to include a generous appropriation for the support of the art museum in the general municipal tax. Thanks to his efforts, the City Art Museum of St. Louis is now a municipal institution, with an annual endowment of over \$100,000, a singular instance, I believe, of any American city giving countenance and financial support to an institution whose chief function is the exhibition of current art. C. M. Kurtz, who died soon after organizing the Albright Art Gallery at Buffalo, was a third instance of a self-trained man, who did yeoman work as an improvised museum director.

"The old order changes, and undoubtedly the work, so well begun by men like these, will be carried on by specialists trained by study hardly available to their predecessors; and, at the best, of little use for the time and the task which they had before them. To one jealous for the continued growth of our national art, it is in no chauvinistic spirit that, for their successors, the hope may be expressed that more comprehensive knowledge, and greater familiarity with the modern pseudo-science by which 'attributions' are run down with self-assertive accuracy, may go hand in hand with a tempered enthusiasm for our national production. With Ives and with French such enthusiasm was hardly tempered, but partook more of a passion, and the present well-being of our school of painting is in no small measure due to the official hospitality of galleries such as the East can not furnish, and even more to the population which they had trained,

not only in their schools as capable producing artists, but in the broader boundaries of their environment, as appreciative lovers of art."

Mr. French, it is noted, traveled far and wide, "as a missionary of art," through his Middle Western territory—

"bringing to many localities almost their first acquaintance with—certainly the most authoritative information concerning—masters and schools of art, supplemented by lantern-slides and elucidated by a delivery which was all the more convincing by its total lack of pretension; the manner of one fortunate to have learned a little more than his hearers, and eager to put them on the track of further knowledge.

"As the administrative work of the Institute grew in volume, Mr. French never wholly relinquished these missionary lectures, and even in these later years the writer has seen him, after a hard day's work in the office of the Institute, hasten to catch a train for a three hours' journey to some point within his circuit, punctually appearing at eight o'clock upon the lecture platform, returning by night to take up his round of duty the next morning in Chicago. Popular in their appeal as were these lectures, lacking, as their author modestly insisted, any authority other than accuracy of information and citation of recognized authorities, it is not difficult to calculate the effect of this continuous missionary effort, bringing to a population at least eager to know some inkling of the uplifting gospel of art.

"Thirty years of his life Mr. French gave to this effort, merely as a by-product of his legitimate work. But through and from this vast outlying field there returned to him, for the benefit of the Art Institute, as from the remoter mazes of a labyrinth of art, threads which centered in his

hands, and which were in turn controlled by him. It would be as difficult to describe his character as to enumerate the quality of the various questions submitted to his decision. . . .

"For successful conduct of the art school, to which have been called as instructors a number of competent artists, with the result that the school of the Institute has as high a standard as any other in the country, while in certain of its features it offers opportunities to students not available elsewhere, and the development of Chicago as an important exhibition center, both of which tasks have been from their inception under the control of Mr. French, are very considerable achievements for one man's life.

"Granting that his work was aided by the civic pride of which Chicago has so much (and our larger metropolis so little!), while both above and below him in the actual organization of the Institute necessary assistance was freely lent him, the work was constructed upon a basis of nothing, and has grown to such an extent that in no city of the country does there exist in proportion to its population so large a number of people of all classes to whom their museum, their exhibitions, their lectures on art, their special dramatic and musical festivals, count as an integral portion of their daily lives as do these various activities, controlled by the Art Institute to the people of Chicago. And this is chiefly due to the untiring service, the unfaltering enthusiasm of the modest, unassuming gentleman who was its director."

RELIGION AND SOCIAL SERVICE

METHODISM'S \$1,000,000 REPLY TO MR. CARNEGIE

FOR THOSE who wish to escape the lure of the Carnegie millions, Atlanta has pointed the way. It is in the process of creating the Atlanta University, to take the place, for Methodists of the South, formerly held by the Vanderbilt University, which has withdrawn from ecclesiastical oversight in order to accept Mr. Carnegie's aid. The endowment fund was started with a gift of a million, made by Mr. Asa G. Candler, brother of Bishop Warren A. Candler, and in a letter he declares his purpose to aid in "repairing the loss inflicted upon the Church by the decision in the case of the Vanderbilt University." In his letter he gives expression to his ideal, which seems to stand at the opposite pole to Mr. Carnegie's. Thus:

"In my opinion, the education which sharpens and strengthens the mental faculties without at the same time invigorating the moral powers and inspiring the religious life is a curse rather than a blessing to men; creating dangerous ambitions and arousing selfish passions faster than it supplies restraints upon these lawless tendencies in human nature; stimulating into activity more of the things by which men are tempted to wrong than it quickens the powers by which temptation is resisted with success.

"I am profoundly impressed that what our country needs is not more secularized education, but more of the education that is fundamentally and intentionally religious. I see no way by which such religious education can be supplied without institutions of learning owned and controlled by the Churches. Under our political system the limitations upon the civil government in matters religious put such education beyond the reach of that power. And I can not agree for a moment that the best type of religious education is that which some claim is propagated in an unwedded state, outside any and all Churches, by institutions which are subject to neither civil nor ecclesiastical authority and which acknowledge no responsibility to the people whom it proposes to educate.

"Boards of trustees that are independent of all government must inevitably change in person and policy with the changeable years. But the Church of God is an enduring institution; it will live when individuals and secular corporations have perished. It is not easily carried about by the shifting winds of doctrine which so affect men and institutions too responsive to the transient modes of thought and custom which come and go with the seasons. Hence I desire that whatever I am able to invest in the work of education shall be administered by the Church, with a definite and continuous religious purpose.

"In this I do not seek a sectarian end, for I gratefully acknowledge that I have received benefits and blessings from all the Churches of our land. I rejoice in the work of all the denominations who love our Lord Jesus Christ in sincerity and seek to do good to men. But to some one Church I must commit my contribution to Christian education, and I see no reason to hesitate to trust money to that Church to which I look for spiritual guidance. To that Church at whose altars I receive the Christian gospel and sacraments and upon which surely I depend, I may safely intrust the things I possess.

"Its history in the work of education justifies me in believing that it will use what I intrust to it in a liberal and catholic-

spirited manner, for in all of its institutions of learning it has on occasions engaged Christian men of other denominations when the needs of the work seemed to require the services of such instructors, and it has never used its schools for purposes of proselyting the sons and daughters of other Churches.

"I can not believe that the promotion of the evangelical and brotherly type of Christianity for which it stands will fail to benefit the people of my section and country without regard to denominational lines.

"This type of Christianity has prevailed generally in the South, and I desire to do what I may be able to perpetuate it, believing as I do that it makes for a wholesome conservatism politically and socially, and for a blest civilization crowned with piety and peace.

"I wish that the characteristic excellences of our people may be made better, and that the things which blemish our lives may be speedily obliterated."

The first school of the new university to be opened will be the theological school, says Bishop Candler in the *Atlanta Constitution*, "the need of such an institution being the most urgent necessity now upon the Church." Work will begin in October. We read further:

"The work of the school will be done in the commodious lecture-rooms of the Wesley Memorial Building, a structure equal to the best building occupied by any theological school in our section of the country, if we may not say in the United States. In this building there is the famous Wesley collection, which contains about 2,500 rare volumes bearing on the history of Methodism, and a considerable number of the standard works of the-

ology. In it, also, are many autograph letters and manuscripts of the Wesleys and their contemporaries, and an interesting collection of pictures and other objects of historic interest.

"Other schools will be added from time to time, and they will be projected on the same broad lines. A suitable site for the campus upon which to erect the other buildings of the university will be secured as promptly as the nature of the task will permit, and other buildings than those previously mentioned will be erected in due time.

"There is wide-spread interest upon the part of the people in the enterprise, and contributions, great and small, will enter into the making of the institution which is proposed. In this first meeting of the commission, subscriptions were offered ranging from \$500 to \$1,000,000. Two noble laymen of the Presbyterian Church have made subscriptions of \$5,000 each. Mr. T. T. Fishburne, of Roanoke, Va., makes a contribution of \$25,000. I do not mention the several subscriptions made in Atlanta by other Methodist laymen, among which are several very generous contributions, because they are to be counted in the \$500,000 which has been pledged for the city.

"No educational enterprise in the South was ever begun under conditions so cheering, and we believe the tokens of good will be multiplied with every passing day.

"The Methodist Church and all the Christian Churches in the Southern States are going to strengthen their educational institutions and bind them more closely than ever to the Churches

ASA G. CANDLER.

Who gives \$1,000,000 to the new Methodist University in Atlanta, "a benefaction unexampled in the South."

which have founded them. The work of higher education is not going to be surrendered to secularism."

AGENTS OF THE WAR ON WAR

A PIQUANT ANTITHESIS appears in the attitude of two Nobel peace-prize winners—Baroness von Suttner and Mr. Roosevelt. The Baroness, when in this country two years ago, is reported to have included the ex-President among her three "detestations." They were Nero, Napoleon, and Roosevelt, and the third held his place because the author of "Lay Down Your Arms" could not be brought to believe that the pacificator of the Russo-Japanese imbroglio was really interested in peace. In *The Christian Work and Evangelist* (New York), Rev. Frederick Lynch gives an interesting personal view of the distinguished writer, whose death occurred on June 21:

"I met her several times in New York at luncheons and dinners while she was the guest of this country. I remember on one occasion we got to speaking of detestations, and she said she had only three: Nero, Napoleon, and Roosevelt, all three of whom, she said, seemed to love slaughter. I questioned whether she ought to say this of Mr. Roosevelt, and she referred me to several passages in his books, which certainly do seem to bear out her contention. She said that she never read anything that he wrote because she never could sleep afterward. 'It makes my blood run cold,' she said. She gave vent to some expressions about Mr. Roosevelt in public, and was, of course, severely criticized. She could not bring herself to believe that he really had any interest in the promotion of international peace, but it must be remembered that her type of hero was so opposed to the type which Mr. Roosevelt represents that she could not judge him dispassionately. In one of these last conversations she said to me: 'After all, how much finer type of men John Bright and Richard Cobden were than either Bismarck or Von Moltke. The first two loved the people; the other two loved empire and cared nothing for the people.'"

The early life of this distinguished Austrian was one of romance. She began with aspirations for the life of a public singer, but fell in love and eloped because her husband's family opposed the match. The escapade was not forgiven for nine years, and during these early days she became a writer. When domestic peace was established, she was welcomed into her husband's family, Mr. Lynch records:

"Immediately after her return to the old home, at Harmannsdorf, she began her literary activities and soon published the two books, 'The Romance of an Author' and 'The Age of Machinery.' Meantime her acquaintance with Alfred Nobel had begun, and they carried on a correspondence which lasted till the time of his death. Also, at this time she began to grow interested in the movement for international peace. Her interest took its rise from several sources. First of all, her immediate experience of the effect of wars. She saw the flower of Austria's youth brought home either dead or mutilated; she saw the suffering of

wives, mothers, and little children; she saw that as a general thing these wars all arose out of petty disputes and that very rarely any great principle was at stake. Another thing that aroused her indignation against militarism was the fact that in all the conversation which she heard in court circles, war was treated simply as a great game. The officers spoke of it in the most heartless way, and considered the peasantry of Austria as nothing but pawns and machines, to be used for their winning of the game. She also saw how war continually destroyed all the civilization that years had gained, so that the world was simply going around in a circle. It built up a beautiful structure of mind, soul, and material things during the years of peace, and then proceeded to knock it all down again. There then began to come to her a vision of a new order for the nation. It was simply the already old order in which individuals lived. Individuals no longer went to war over their disputes; they settled them by judicial methods. There was no reason why nations should not do the same. In her mind she conceived the idea of a court for nations similar to that which existed for men."

At this time she learned that there existed in London a society devoted to this end: the International Peace and Arbitration Association. She began to wonder how she could give most help to the cause, and a novel took shape in her mind.

"It was the history of a young woman whose sad fate was closely involved with the wars being fought in her own day. The result was 'Die Waffennieder' or, as it is called in the English translation: 'Lay Down Your Arms!' It is hard to believe that in 1890 it was almost impossible to find a publisher in Austria who dared print a book having anything to do with the peace movement. Finally a publisher was found, and he never regretted his venture, for the novel soon leapt into a circulation of hundreds of thousands and has since been translated into all civilized languages. It did for the peace movement in Europe something like what 'Uncle Tom's Cabin' did for the anti-slavery movement in America—it popularized it. It also made the ground fallow for the different peace organizations that immediately began to spring into existence. It made the Baroness famous throughout Europe. It brought her letters from great men of every land. One of the most remarkable results of the novel was that it converted many statesmen who had been skeptical of the whole movement. The most interest-

ing letter of all, perhaps, was the one which she received from Alfred Nobel: 'Dear Baroness and Friend: I have just finished reading your admirable masterpiece. We are told that there are two thousand languages—1,999 too many—but certainly there is not one into which your delightful work should not be translated, read, and studied. How long did it take you to write this marvel? You shall tell me when next I have the honor and happiness of pressing your hand—that Amazonian hand which so valiantly makes war on war. Nevertheless you make a mistake to cry "Away with Weapons!" because you yourself make use of them, and because yours—the charm of your style and the grandeur of your ideas—carry and will carry much farther than the Lebel, the Nordenfelta, the De Banges, and all the other implements of hell.—A. NOBEL.'

"She was now among the leaders in the peace movement, and all the rest of her life was devoted to assisting the different countries of Europe to organize the peace societies, in helping to create the different branches of the Interparliamentary Union.

THE LATE BARONESS VON SUTTNER.

Who wrote the novel doing for the peace movement in Europe "something like what 'Uncle Tom's Cabin' did for the antislavery movement in America."

in furthering the Hague conferences, and in organizing international congresses yearly in the various States of Europe. All of this is fascinatingly told in her Memoirs. Especially interesting are the records of her conversations with the great minds of Europe. I think it is generally taken for granted that she was the means of converting Alfred Nobel to the peace cause."

The Christian Commonwealth (London) enumerates the various proposed symbols of peace to mark the completion of a hundred

HOUDON'S "WASHINGTON,"

A replica of which Virginia presents to Great Britain on February 22 of next year in celebration of the Hundred Years of Peace.

years of peace between Great Britain and America. One of these is a bridge to span the Niagara River below the falls:

"Peace monuments, in addition to the proposed bridge, now being arranged for, include a memorial arch over the highway leading from California, Oregon, and Washington, to Vancouver and Victoria, British Columbia, and a great peace memorial to be erected on a pinnacle of the Rocky Mountains by the Rocky Mountain States. Virginia presents a replica of Houdon's statue of Washington to Great Britain on February 22 of next year, while American women residing in England have subscribed for a statue of Chatham, the friend of the American colonies, which will be presented to the Government of the United States. It is also proposed to erect in London a replica of St. Gaudens's Lincoln.

"The English Committee has purchased Sulgrave Manor, the ancestral home of George Washington, in Northamptonshire. This is now being restored and refurnished. In connection with the manor it is proposed to establish the Sulgrave Manor Institution, which, when amply endowed, will endeavor to promote friendship and prevent misunderstandings among the peoples of the world."

RELIGION FOR SCHOOL-CHILDREN

THE "TERRIBLE FALLACY" of godless education suffers frequent attacks in the religious press, regardless of denominational persuasion. A striking instance is the article by Dr. William Douglas Mackenzie, President of the Hartford Theological Seminary, contributed to *The Sunday School Times* (undenom.), in which he says that "no prospect awakens greater dread in the minds of any audience than to suggest the possibility of a generation of children arising for whom religion has become a superstition and the knowledge of the Bible a puerile and needless irritation." Yet the churches must act quickly, he maintains, "if such a generation is not to be raised in our own time." The State speaks with authority, he tells us, and the Church must speak "no less definitely and with a coordinate authority," so that, working together, they "can bring the principles of the Christian faith to bear very definitely upon the molding of the young lives of America." And yet the great difficulty that confronts any attempt to infuse religion into education is clearly recognized by Dr. Mackenzie in his statement that "in some communities it is well known that if teachers begin to speak of God with any direct and earnest effectiveness, complaints would come in from certain parents to the principal of the school, to the public authorities; and what we euphemistically call 'trouble' would begin." This, he tells us, is the result of the effort "to avoid sectarian teaching," but points out that it is in fact a "victory" for the Secularists, "the poorest and narrowest of all the sects." Leaders in church and State, we read, are "deeply concerned with this situation," and among the plans to find a way out of it, the one indorsed by the present writer as being "considered by an increasing number of persons" involves "a frank and well-considered cooperation between the State and the churches of all denominations." While admitting that "no one form of cooperation" can be laid out for the whole country, because each community will need to work according to its own light and need, nevertheless the writer states the general principles of the cooperation plan in these words:

"(a) The educational authorities would agree that a certain number of school hours in each week should be set apart for religious instruction, it being understood that this instruction shall as a rule not be given in the school buildings, while it must always be of a grade intellectually comparable with that of the secular instruction which the children receive from the public-school teachers.

"(b) The churches in each given district shall undertake the training of their own children and of all those who are sent to them by their parents. It would not be impossible, of course, that churches which are closely akin to one another should unite to make this work effective. It would have to be done at their cost and by means of teachers whom they would select, but those intellectual and pedagogic qualifications would have to be approved by the educational authorities.

"(c) It is understood that the work thus done by the churches would be credited to the general course of the child's education in the public-school records. Hence it must be, as I have already said, of a quality equal to that given in their secular training."

But how are you going to do this? is the question most natural to ask, we are reminded, because it is apparent that "only in rare cases could the pastors be expected to add this to their program of weekly toil." It is true, we read, that in certain cases public-school teachers who are "earnest Christian persons" could be engaged by the churches "for a slight addition to their salaries," but in the main specialists would be required, which means—

"Nothing less than a vast army of trained teachers who have been prepared by special study of the Bible and of Christian truth, and the relations of the Christian spirit to modern civilization, to become the convinced and inspiring teachers of the children of America."

REVIEWS OF NEW BOOKS

RECENT FICTION

Austin, Mary. *Love and the Soul Maker*. Pp. 287. New York and London: D. Appleton & Company. \$1.50 net.

Mary Austin, "one of the deepest thinkers among modern women," has not feared to write frankly on the subject of the mating instinct and sex experience in relation to modern marriage. She throws a new light on sex in its relation to the feminist movement. The psychology student will appreciate the truths deduced by the author, altho her poetic imagery and elusive phraseology will be slightly "over the heads" of the ordinary reader. Careful reading, however, should prove instructive and helpful, both in understanding sex impulses and the way in which they can best serve the "Soul Maker." One great plea she makes is for the exercise of creative impulses which find outlets in artistic and religious activity, and in a realization of high ethical enthusiasm. She cautions against books, plays, and operas that blaze the trail for the "way the body points." It is probable, she says, that "we do not make enough of love in life, of its relation to all our activities and its power to affect them, but it is certain we make too much of loving."

Janvier, Thomas A. *At the Casa Napoleon*. Pp. 226. New York and London: Harper & Brothers. 1914. \$1.25 net.

This is not the first time that the lamented "Tom" Janvier has shown his love for the picturesque locality about Washington Square. His "In Old New York," published in 1894, contains a delightful account of the charm and individuality of the artistic and foreign elements which frequent the so-called "Latin Quarter," in lower Fifth Avenue. Mr. Janvier's humorous and gentle style is always charming, with its little touches showing a loving appreciation of human frailties. Keen comprehension of the spontaneity and exaggerated optimism of the Latin races, and a sense of humor which is always vivid, add other charms to the literary excellence of the tales. The Casa Napoleon, whose inmates move through these pages with intimate freedom, has an atmosphere of its own, and "Madame and her husband" take such a parental interest in their patrons that each story is a gem and fits in with all the others to make for literary unity. Fortune's coincidences, bombast, pathos, devotion, and rewards of true affection are all exemplified in these charming tales of the old hostelry. It is a book of real stories by a real author whose books touch all human sympathies.

London, Jack. *The Strength of the Strong*. Pp. 257. New York: The Macmillan Company. \$1.25 net.

Seven short stories make up this collection, to which the first gives its name. All are in the style peculiarly Jack London's own, original and unconventional. The author excels in stories of natural forces. In several of these sketches he projects himself into the future, indicating developments which a vivid imagination and a logical mind consider probable outcomes of present tendencies. "The Un-

paralleled Invasion," in which is shown the serious results of China's growing power, and "The Dream of Debs," illustrate this line of thought. The well-worn theme of dual personality gets a new showing in "South of the Slot," and "The Strength of the Strong" gives us an exposition of the problems worked out by aboriginal South Sea Islanders in their dawning appreciation of the strength attained by unity. The stories are all rugged, vivid, and interesting.

Herriek, Robert. *Clark's Field*. Pp. 478. Boston and New York: Houghton Mifflin Company. \$1.40 net.

We are all familiar with the story of some strong personality that dominates and controls every situation, but here is an entirely new theme, the power of an inanimate thing—a fifty-acre field—over a whole family, an influence which culminates in "Adelle Clark," who is portrayed as a heroine, only as she shows the inevitable influence of "Clark's Field." Could the field have been sold piecemeal, this story would not be possible, but a missing heir complicated the title, and so there it stood in the center of town, to be let to market-gardeners or to be used as a ball-field by the ubiquitous small boy. At last no one was left of the Clarks except Adelle, "a little meek, self-effacing, colorless" girl of twelve, whose usual weapon was silence. A lovable poet-judge succeeded in ridding her of grafting lawyers and assigned her to the care of a Trust Company that was able to legalize her title. From that time "Clark's Field" became a source of marvelous income for the little girl, and her character developed as she found herself powerful and favored simply in proportion to the amount of money she could spend. She spent it just for the power and popularity it gave her—in school to obtain recognition, in Paris at the behest of a designing woman, but at last eloped with Archie Davis, who had neither business ability nor moral stamina and so experience of life comes thick and fast. Adelle has to lose part of her money and a dearly loved little son before she finds herself and the problem is solved. The process of her awakening makes an engrossing and cleverly told story. It is, perhaps, the best thing Mr. Herriek has done.

Willcocks, M. P. *The Will to Live*. Pp. 473. New York: The Macmillan Company. 1913. \$1.35 net.

This novel's greatest fault is its length and consequent indirectness. We are interested in Sophie Revel from the time when she, a little baby, is handed to Dr. Jonathan Revel, the impracticable, nature-loving, medical theorist and former lover of Sophie's grandmother, to the end, when she brings her life up onto a triumphant plane, after scaling tragic heights and facing many dramatic problems. The characters are all unusual types, as the theme is novel and unbackneyed, but the author delights in long drawn-out explanations and is, consequently, diffuse and unconvincing. Still there is a force behind it all that holds our interest. We follow Sophie's development with keen attention after her apparent lack of confidence

drives the old doctor to suicide, because of her sentimental and wholly inexplicable infatuation for Moysey Botterill, and her final self-sacrifice and happiness with Dr. Rideaux.

Hamilton, Cosmo. *The Door That Has No Key*. Pp. 324. New York: G. H. Doran Company. \$1.25.

Just what thought actuated the writer of this romance is not quite clear, for the hero is abnormally good and the heroine abnormal, but neither good nor bad, just a fool, for whom few would have sympathy. Jack Scorrier had been graduated from Oxford, and decided to become a barrister and politician. He was clean and honest enough, but his parents feared these facts would be a force working against his ultimate success. The book relates his temptations and opportunities in his attempt to remain "honest." He at last finds the girl for whom he has kept himself clean, even in the face of the derision of friends, and marries her—the beautiful Violet, only to find that—well, that is the story, and the reader has some thrilling pages of exciting situations to peruse before he reaches the tragic, but inevitable, end. The theme may be suggestive of certain necessary reforms in social conditions, but it is certainly a door to which there is no apparent key.

Von Suttner, Baroness. *When Thoughts Will Soar*. Pp. 449. Boston and New York: Houghton Mifflin Company. \$1.60 net.

Should we designate this volume as a "novel," we should not be exactly truthful, nor would the title "a treatise on civilization" be any nearer the mark. It is, in fact, both, and follows out many of the author's theories advanced in her prize peace story, "Lay Down Your Arms," adding to them a clear exposition of some of the active principles and problems in the feminist movement. The background is unique. An American multi-millionaire spends his money and his time in promoting peace and in aiding progress by assembling in Lucerne, at his own expense, famous men and women at a "feast of roses," where ideas are exchanged, inventions explained, and conclusive results announced to the world through the press, phonograph, and every known means. In these social councils of beauty and brains, our hero and heroine are bright and shining stars: Helmer, the poet, and Franks Garlett, the beautiful heiress who has devoted her wealth and position to the furthering of woman's freedom and progress. Much is said about aviation, and the power of aeroplane tactics in checking war, but stress is laid particularly on the winged flight of the spirit and the mental aeroplane which is to carry the spirit into the ether of ideas and ideals, and above sordid ineffectuality. It is a convincing love story, and proves it is only when conditions are ideal and happiness most human and normal that "minds will soar." As the story is projected into the future, the author finds plenty of opportunities to voice her beliefs in the outcome of the psychological and scientific tendencies of to-day.

Last week I visited a boy scout patrol and

found fifteen bright-faced earnest lads listening to a talk by their scout master. "Take care of your teeth," he urged. "You can't grow up to be strong self-reliant men unless you have good health, and good teeth mean good health. Brush your teeth thoroughly twice-a-day and visit your dentist twice-a-year—it is insuring your health and happiness when you are grown men."

The Scout Manual puts care of the teeth first among the things a boy should know if he wants good health. And every boy should realize that Good Teeth—Good Health will take him far along the road to success in school, in sports, in business and in pleasure.

The twice-a-day use of Colgate's Ribbon Dental Cream—the dentifrice with the delicious flavor—keeps the teeth clean and the mouth healthy.

CURRENT POETRY

UNIVERSAL peace is a subject that attracts many poets of this generation. But it has not yet, it must be admitted, produced great poetry; the songs of battle that belong to the world's literary heritage surpass the songs against battle. *The Delineator* prints a poem that is not a direct argument against war, but, nevertheless, reflects strikingly the feelings of those to whom war is most cruel—the women of the slain. The simplicity of "A Woman's Voice" is one of the chief reasons for its forcefulness.

A Woman's Voice

BY THEODORA GARRISON

O heart! what is it you hear above the noise of a nation,

Above the sound of clamor and shouting
And men making ready for war?

Only a single voice, little more than a broken whisper,

Patient and unprotesting—only the voice of a woman.

Yet I hear it above the sound of guns
And the turmoil of men embarking.

I

There's no use praying any more; the prayers are done and said;

But daytime going through the house, or night-time in my bed,

They trouble me, the old prayers, still ringing in my head.

The young men from the papers, they brought the word to me.

I'm thinking of their mothers, how glad they ought to be,

Who never said "Good-by" to them and let them off to sea.

As strong as any man he was, and bold to do and dare,

And why should I be hearing, then, all night above the prayer,

A little lad that's calling me—and wanting me—somewhere?

II

He said what he thought was right:

"Let you be proud," he said,

"That you gave a son to the fight;

"Tis a glory over your head!"

'Tis never a good man's words I'd scorn,

And he said what he thought was best;

But I knew my pride when the lad was born,

And his head was warm on my breast.

"Let you be proud," he said,

'Twas the word that stabbed me through;

Proud—and my one son dead

In a land I never knew!

'Tis the women know when glory's worn

(Tho he meant the word for the best);

I knew my pride when the lad was born,

And his head was warm on my breast.

Only a woman's voice—patient and unprotesting,
But I hear it above the sound of guns
And the turmoil of men embarking.

The August issue of *The Delineator* is especially rich in good verse. From it we take, also, this charming little picture. "The Shoemaker" is, perhaps, too brief; we have not a quite complete portrait of the "quaint, old, tolerant" person. But it is skilfully done, and sympathetically.

The Shoemaker

BY LAURA BENET

He might unravel a tale of woe,

Of nights when the winds are all awake

And whirling wraiths of the winter snow

His crazy chimney rock and shake,

And he sits by a guttering taper's light

Mending old shoes till the dead of night.

"Here's
All
Three
Of
Us—
Kellogg's
Dad
An'
Me!"

To prevent disappointment, don't merely ask for toasted corn flakes—say "Kellogg's, please" and look for this signature on the package.

W. K. Kellogg

He might talk morally if he chose
 Of the petty jealousies of the town:
 "Old Manette's boots never match his hose;
 And the Abbé's best are all run down!"
 Yes, he might gossip of folly and sin—
 For the neighbors wrangle, when they drop in!
 But ever, as he sits patching there
 The leather with which they tread their way,
 He silently thinks, in his wooden chair,
 Of the many souls in the village gray,
 Battered and worn, but kindly, too,
 Shown forth in each shabby, outworn shoe;
 And he breathes a prayer, and his keen eyes blur
 The quaint, old, tolerant shoemaker!

Here is another picture in rhyme, by a poet whose method is more impressionistic than that of Miss Benét. It is effective, but we feel it more as a type-study than as an actual portrait. It appeared in the *London Nation*.

In a Restaurant

BY WILFRED WILSON GIBSON

He wears a red rose in his buttonhole,
 A city clerk on Sunday dining out;
 And as the music surges over the din,
 The heady quavering of the violin
 Rings through his blood, and puts old cares to rout,
 And tingles, quickening, through his shrunken soul.
 Till he forgets his ledgers, and the prim,
 Black, crabbed figures, and the qualmy smell
 Of ink and musty leather and leadglaze;
 As, in eternities of summer days,
 He dives through shivering waves, or rides the swell
 On rose-red waves of melody awing.

It is strange that so few American verse writers take part in the monthly prize-competitions of the *London Bookman*. This interesting periodical now announces an additional competition with prizes of five and two guineas for the best and second best original lyric, and prizes of the same value for sonnets on events in English history and for humorous poems. Manuscripts sent from this country must be received before December 1 at the offices of *The Bookman*, St. Paul's House, Warwick Square, London, E. C. Here are the two poems which shared first prize in the June monthly competition. When Miss Royds says "in sooth," some critics would say it exposes her to the charge of either affectation or laziness. But the last three stanzas of her poem are sincere and beautiful.

The Lost Mother

BY DIANA RUTEN

Renewed, you say, in every breath,
 She lives where happiest dreams come true;
 But were it not the sting of death
 If death indeed made all things new?
 Haply she weaves, with starry strands,
 Some web of heaven; but O, to look
 Again upon the wrinkled hands
 That laid the knitting by the Book!
 No need of glasses now, to see
 The farthest star which burns above;
 But could the old eyes beam on me,
 Dim eyes whose only light was love!
 And then she was I seek her now—
 No halo round the silver hair,
 No crown upon the patient brow;
 Only the cap she used to wear.
 Talk not of her immortal youth;
 Dearer her placid age than all.
 What shining wings could wear, in sooth,
 The beauty of her faded shawl?
 Nay! by her portrait kneeling down,
 One prayer, but one, will I record:
 No white wings, but the old gray gown,
 No angel, but a mother, Lord!

Who Ever Forgot His First Dish of Puffed Grains?

You have forgotten, no doubt, when you first tasted most things. But one always remembers the first dish of Puffed Wheat or Puffed Rice.

Look back—you who know them. Note how well you recollect the first sight of them. What other food dainty in all your lives ever left such an impression?

Your Time is Coming

Your time is coming—if it hasn't come—when you learn the delights of Puffed Grains. Some day you will order a package. Out will roll brown, bubble-like grains, eight times normal size.

You will see crisp, airy, fragile morsels which seem too good to eat. You will serve them with cream and sugar, mix them with fruit, or float like crackers in bowls of milk. And you will find that these thin-walled, flaky grains have a taste like toasted nuts.

You will never forget that morning.

Puffed Wheat, 10c
Puffed Rice, 15c

Except in Extreme West

**CORN
PUFFS**

Vest Pocket KODAK

with Kodak Anastigmat Lens

AN accurate, dependable instrument, refined in every detail—absolutely practical—and it will really go in the vest pocket—easily.

The Kodak Anastigmat lens is made of the finest Jena glass—giving perfect flatness of field—freedom from astigmatism, and such microscopic definition that enlargements can be made to any reasonable size, without loss of detail, and at slight cost.

The Kodak Ball Bearing shutter, working with a certainty of action that makes it a most reliable shutter, has time and "bulb" actions, and speeds of $1/25$ and $1/50$ of a second. Equipped with Autotime Scale to insure correct exposure—has brilliant reversible finder, and loads in daylight with Kodak film cartridges of eight exposures. Size of pictures, $1\frac{1}{2} \times 2\frac{1}{2}$ inches.

Price, with Kodak Anastigmat Lens, - \$12.00

If it isn't an Eastman, it isn't a Kodak.

EASTMAN KODAK COMPANY,
ROCHESTER, N. Y., *The Kodak City*

Kodak catalogue free at your dealer's, or by mail.

The other prize poem is widely different from this, in spirit and in style. "Arcady" is a word that the poets have used so constantly that its luster is a little dimmed. But Miss Duncan's song is so fresh and gay and musical that she nearly succeeds in re-creating that most certainly dead of all gods, Pan.

Holiday

BY BRENDA DUNCAN

Come out! for summer has filled the skies,
And the breath of the morning's sweet,
And I must follow the love in your eyes,
And the lift of my dancing feet.
The same blithe spirit is calling us
Who piped at the birth of man—
For we on the shimmering sands the track
Of the little goat-feet of Pan!
He beckons us over the far, blue hills
Adown to the shining sea—
Go up!—come follow him, follow him, follow him
—follow the trail with me!

The little fauns giggle behind the rocks—
Brown bodies flash in the sun—
For Arcady opens when great Pan knocks
Where beauty and truth are one.
As, piping a melody ever new,
He beckons us over the sand,
To follow the lure of his Pagan joy
Away to a Pagan land.
So, tho my home is upon the shore,
And yours on the rolling sea—
Come up!—come follow him, follow him, follow him
him—follow the trail with me!

Perhaps he will steal on us, unawares,
And carry us far away.
And when we come back on our homeward track,
We shall find we are old and gray.
Who knows?—but the lure of the sea and the sun
Is one that we can't withstand.
I would fain explore in the faerie lore—
So give me your guiding hand.
For Pan is piping a mad, June song
And calling to sky and sea:
"A man and a maid from earth have strayed
As of old into Arcady."
So up!—come follow him, follow him, follow him
—follow the trail with me!

American readers are not particularly moved by the news that the field of Waterloo may shortly be cut up into plots and sold to speculating builders; they cherish, of course, no sentimental affection for the scene of that great battle. But they can not fail to feel the power of Mr. Stephen Phillips's ringing lines, which we take from *The Poetry Review*. Mr. Phillips is one of the very few living poets who could do justice to so high a theme.

The Site of Waterloo

BY STEPHEN PHILLIPS

Forbear! This plain is still too deaf with cries,
This soil too sanguine for thy stucco lies.
Shall Earth where reeled The Guard thy villa pen,
Where nations groaned be heard the cackling hen?
A mansion mark where in the gathering murk,
Those terrible gray horsemen so did work?
Here wilt thou dare to live, where such men died
And on that memorable dust reside!
Here only ever let the solemn moon
Uninterrupted weave a spirit-noon;
Here only falter down a pensive dew
From skies too wistful to be purely blue,
But shouldst thou build on consecrated ground,
Then be those houses filled with spectral sound
Of clashing battle and the ghostly war.
Of charging hosts against the battered door!
Let solemn bellow of hollow cannon boom,
A dreadful cavalry invade the gloom!
Untill in awe of those who fell or fled
The living flee from the more living dead!
That silence now too conscious is for sound,
It broods upon itself and is self-bound.
Then let no builder of this field have lease,
'Tis lot to Time, the property of Peace!

PERSONAL GLIMPSES

A RAILROAD'S MASCOT

FOR fifteen years and up to a few weeks ago there has been on the Long Island Railroad, which runs out of New York City toward Oyster Bay and other suburban retreats, a commuter who has never paid a fare. For these years, constituting practically his whole lifetime, he has been the guest of the road, recognized, honored, and renowned alike by train crews and by his fellow passengers. Not long ago he made his last trip over the Long Island line. The New York American prints a brief memorial:

Roxey, for fifteen years mascot of the Long Island Railroad, the only dog permitted the freedom of the company's trains, is dead. Roxey was the only dog with a bank account, started by commuters, hundreds of whom made friends with the terrier while he rode from station to station. He died yesterday at Dr. W. L. Johnson's veterinary hospital in Jamaica, after suffering for several months with dropsy.

To-day Roxey will be buried on the railroad's property adjoining the station at Merrick. His body will be taken there in an automobile by A. G. Slack, general foreman of the railroad company's high tension department, and C. F. Young, foreman of the electrical department. A tombstone will be presented by Richard Homeyer, of Queens.

Roxey's record will bear enviable comparison with those even of the oldest employees of the company. In many an unofficial good-conduct book he is credited with exemplary gentlemanliness, with never having returned an insolent growl to a passenger, even at the end of a hard day; with a strict attention to business, and always to his own business; in short, with the patience, obedience, courtesy, and tact that are the prime requisites in a servant of the public. It was thus he won his firm friends and his many acquaintances, of whom we read:

One of the chief mourners will be Miss Elsie Hess, of Merrick, at whose home the animal frequently called.

With the exception of Dr. Johnson and Miss Hess, Roxey would visit the homes of none save uniformed employees of the railroad, altho he was known to almost every person on Long Island.

The dog's bank account was started by commuters when the dog began to show signs of age. The money provided him with the best of care at Dr. Johnson's hospital.

No matter where Roxey was when the day for renewing his license came around, he would be telephoned for by some official of the Long Island Railroad. This message would be delivered to Roxey: "Go and get your license, Roxey."

The dog would bound for a train and, on arriving in Manhattan, rush to the rooms of the Society for the Prevention of Cruelty to Animals.

The A. S. P. C. A. people knew him, and,

Roads around New National Museum, Washington, D. C. Constructed with "Tarvia X."

This road is three years old—

HERE is a Tarvia-built road that for three years has carried the heavy traffic of sightseers to the New National Museum in Washington.

Ordinary macadam would have lasted but a few months in this location.

The addition of "Tarvia X" as a binder, when the road was constructed, has been sufficient to keep the surface in splendid condition for three years, with the prospect of very little maintenance expense in the near future.

Tarvia is a dense, viscid coal tar product of great bonding power. It introduces an element of plasticity in the roadway and binds the stone in

a tough matrix. Internal friction under heavy loads is prevented. Water runs off the surface instantly, and the tarviated macadam will not ravel on slopes. The surface is automobile-proof, producing no dust.

Tarviated macadam in the end costs no more than ordinary macadam—its first cost is a little higher, but its maintenance cost is very much lower.

Tarvia is made in three grades. "Tarvia X" is suitable for building Tarvia-macadam roads; "Tarvia A" and "Tarvia B" are thinner grades suitable for roads already in use, to preserve them and make them dustless.

Booklets free on request.

having equipped him for the year, would say, "Now, get out of here." Then Roxey would run down the street, wagging his tail as he went. He would make for a train, going wheresoever his fancy took him.

WHERE LEPERS ARE MADE HAPPY

CULION, with the accent on the *on*, is the name of one of the lesser Philippines, about a day's sail from Manila. The island has another name as well—"the Place of Happiness for the Unclean." Here is the leper colony that was established by the Health Bureau of the United States Government, under the direction of Dr. Victor G. Heiser, when this country went into the Philippines. Leper colonies were known hitherto as grim living graves, haunted by desolation and despair; but when the colony of Culion was formed the ideal of the founders was to institute a retreat where lepers might be happy. It sounds impossible, but is far from being so. Contrary to popular belief, leprosy, except in its last stages, has little apparent effect upon the mentality or physique of the victim. As long as he does not endanger others by the risk of contagion, he might as well go free and live like other men. This, then, is the secret of Culion. Here the leper is encouraged to live a clean, brisk, pleasant, and profitable existence. He is taken away from the world of the clean, where he was an outcast, hated and avoided, and is placed in the community of the Unclean, where no one fears him, where all are glad to see him and be his friends, where he can live, work, amuse himself, and improve his condition in life, in close touch with others. What this means to the leper is shown vividly in the *New York Evening Post's* description of the arrival of the lepers:

The scene as one comes in toward the island gives the impression of serenity. The bay is deep and amazingly blue, and it swarms with varieties of the most brilliant fish. Reaching out from Culion, crescent-wise, is a peculiar and fantastic coral formation, called the Coral Islands, jagged and impassable; within them rises Culion itself, hilly and green and serenely beautiful. Except in typhoon season these waters are quiet, and as one nears the shore one has the sensation of being awaited by some spirit of friendliness and peace—an effect never lost upon the little throng of men and women—and often children—who stand forward in the vessel, looking with wondering eyes upon this spot where they are to spend the rest of their lives. They have been expecting a prison, and what they are beholding has the appearance of a home.

There is the colony. The little white houses or shacks, with their garden yards, cover the hillside, and the larger buildings showing here and there, the hospital, the quarantine buildings, the theater, the church on the headland, and others. But

it is on the wharf that the interest centers. There all the able-bodied of the colony have gathered—an eager throng, in the very vanguard of them a trim group of erect men in white uniforms, the Culion Leper Band, already playing welcoming strains which greet the newcomers.

These two crowds gaze toward each other eagerly—the little crowd on the boat, the big one on the landing—because in the colony all the tribes of the Philippine Islands are represented, and great is the excitement of those who espy members of their own tribe. On the boat the entire attitude has changed. The despondency which the lepers have felt since they were first taken aboard rapidly gives place to an astonished and childlike delight. Not only does the colony appear now to be a home, but for many of the strangers it is the first home they have ever known. They begin to realize that here they will not be outcasts, living in avoided huts and among rocks on hillsides, shunned by their fellow men, but they will be living with people.

It is a town that receives them, with a population of some thirty-two hundred, with shops, homes, a theater, a currency of its own, outdoor amusements, and even social life of a sort. Many of the inhabitants have gone in for market-gardening, while others have built themselves fishing boats and have taken up the fisherman's life as a means of subsistence. With all this they are content. The attempts to escape from Culion are extremely rare, and when the fugitives are caught their almost invariable request has been to be returned to the colony again. Of the lighter side of their existence there we read:

Perhaps their favorite amusement is baseball, with the exception, of course, of cock-fighting. Scarcely a shack in the Unclean part is without its game-cock. This sport is so instinctive with the Filipino that it has not been forbidden the lepers, in whose favor various laws have been a little stretched, as, for instance, the marriage law. Intermarriage is permitted, on the basis that it gives a moral tone to the colony. Few children are born of these marriages. Even if the children live, after birth, their lives are always brief; and in all the years in which the colony has been operated, very few of these children have lived to see the age of five years.

There is one phase of the colony-life we should not have pictured of ourselves, and yet which must inevitably be present as long as lepers are just human beings. That is to say, Culion, like any other community, is not sociologically ideal. It has class distinction, pronouncedly, and beneficially, too, in some cases. Many a leper, altho of good family, enjoyed none of the benefits of his station in his former manner of life, being outcast and often isolated, but here he can take his proper place among other lepers of his better-born class, and after the fashion of mankind, his vastly increased importance in his own eyes has its good effects upon his health and entire outlook. He is at last Somebody—and that means much to human nature.

Build the New Way

Self-Sentering reduces cost— saves time

TO ALL the advantages of concrete construction the important element of economy has been added by the use of Self-Sentering. It does away with expensive form work that was a necessity in the old method of concrete construction but no longer needed in the modern.

For Self-Sentering is *both* reinforcement and form. Every dollar spent on Self-Sentering construction is for *permanent* work. With Self-Sentering, the highest type of roof—concrete—is an economic possibility.

Two-inch concrete roofs pitched, flat, or curved, are strong, rigid and fireproof. Two-inch Self-Sentering partitions are rigid and great space savers. Compared with the usual 6-inch partition, they add one square foot of floor space to every three lineal feet of partition.

Figure the added total income from every floor thus made possible. Before you decide on plans discuss this modern construction with your architect or builder.

Send for Fireproofing Handbook

which shows the almost unlimited application of Self-Sentering to every type of building and explains fully about it. Send us the name of your architect or builder, so we can co-operate with him.

Remembered

A SON'S thoughtfulness gives the old homestead the protection as well as the conveniences afforded by modern science. The Pyrene fire extinguisher, recognized as the most efficient weapon against incipient fires—easy to operate and instantly effective—is as great a necessity as the telephone. It is always at hand, to use when the blaze starts—long before any outside aid could be summoned, even by the telephone. Will you risk the danger of a fire tragedy in the old home by denying it this protection?

Ready for use, and is easily refilled. Promptly extinguishes violent gasoline, oil and electrical fires. Does not injure most delicate fabrics. Write our nearest office for convincing evidence in booklet form, "The Vital Five Minutes," free.

SPO PEE, VICTIM OF ERROR

OUT in the Blackfoot district a legend had grown up during the last quarter century and more concerning Spo Pee, the Indian who was spirited away by the Great White Chief, and who would remain forever hidden, suspended half-way between life and death. And during that time, thirty-two years in all, there dwelt in the criminal ward of the Government Hospital for the Insane in Washington, D. C., a strange Indian patient who never spoke a word to any living soul. For the last ten years Delegate Hamilton, of the Blackfoot District, has been carrying on a search for the legendary chief, who once had been tried and adjudged guilty of killing a white man, but who he went through every penitentiary in the country, his search was fruitless. It remained for a party of Blackfoot Indians, sightseeing in Washington, to discover Spo Pee in the hospital known as St. Elizabeth's, and to set about the work of his liberation. The Washington Times comments thus upon his heavy punishment:

Awakened from a tortuous and horrible living nightmare of thirty-two years, Spo Pee, Blackfoot Indian brave, to-day takes up the skein of life where he dropt it a third of a century ago, when the white man, with an unconscious and bitter irony, performed the "humane" act of commuting his death sentence.

Spo Pee probably paid the heaviest penalty ever exacted of any human being in any enlightened land.

Snatched from his own people, after a touching farewell to his daughter, then three years old, Spo Pee was placed in a prison where none could speak his tongue. Then Spo Pee tried to make signs in Indian fashion. Fingers crossed, one hand on another, signified to him shooting the bow and arrow. Two fingers straddling his doubled-up fist meant a horseback ride. Spo Pee had no war paint, so he decorated himself with buttons and all the trinkets he could find. He had nothing with which to trade, so he made strange devices on scraps of paper and gave these to his guards.

For all these things Spo Pee was adjudged insane. Then he was brought to Washington and put in the ward for the criminal insane at the Government hospital known as St. Elizabeth's. That was thirty-two years ago. Since then the Indian brave has mingled with none of his own race, nor any white man save his guards, who were sane.

No one but an Indian could have stood it, his friends assert. But Spo Pee's stoicism stood him in good stead.

"Soon after I was sentenced," he said through his interpreter. "I made a petition to the White Fathers to pardon me. I was told the pardon would come. So I waited and waited. But now I guess it has come."

And Spo Pee broke into a smile that bore nothing of resentment or malignance, as he sat surrounded by white men plying him with questions.

Spo Pee was convicted of killing a white

miner in Montana, in spite of his earnest assertions that he had never seen the miner before, and was only fighting in self-defense. The plea that he made at that time has been preserved in the records of the Indian Office. It reads:

"You ask me if I have anything to say why I should not die. Ten years ago the Great Father's soldiers came to my people's homes and killed a great many young men and women, old men, and little children. I myself was shot. The soldier chief did not ask us if we wanted to die. But you are a great chief; you ask me to say why I should not die. I did kill the white man, for I thought if I did not kill him he would kill me; he told me he would do so. When I first saw him he would not take me by the hand."

Spo Pee went on with his account of the killing and concluded, "You are a great chief, and can hang me, but you have no right to do so. I have spoken straight, my heart is brave. It is done."

The severity of his punishment was probably due to the fact that the killing came but shortly after the Custer massacre, when the anti-Indian feeling was at fever heat. Because of this Spo Pee has forfeited half of his three score and ten, and has no redress. The New York *Globe* finds a general significance in this and remarks that this is "one of the gravest faults of our whole judicial system." Freedom is precious, and if the State takes it away unjustly, the State should pay for the mistake. Evidently he is willing to be convinced that he is a very lucky person, and harbors no grudge, beyond thinking that white people are very queer. He marvels a bit that whereas they condemned him and left him in solitude for thirty-odd years, now they crowd around him, hang on his words, and show him every courtesy. He is conscious of no change in himself, and so he wonders in vain. He has hastened westward to meet his daughter again, who is now Mrs. Take Gun; but first he was shown a little of the city in which he had been so long confined. The Washington *Times* says:

Spo Pee's first glimpse of the outside world from which he had been snatched so ruthlessly was had in an automobile ride. Mr. and Mrs. Russel MacLennan and Delegate Robert J. Hamilton, of the Blackfoot tribe, took him for a spin around Potomac Park. Then they went to the New Capitol Hotel for dinner, and in the evening he was received at the office of Indian Commissioner Cato Sells, where a group of newspaper men and officials of the Indian office gathered to shake hands with him.

There he sat, with stoical good nature, in wonderment of the attention he was attracting now. He was dressed in American clothes, his hair was closely cropped, and his iron-gray mustache added to his resemblance to many bronzed white men one sees daily.

"Back to Indian dress? Oh, no. White collar nice. Shoes nice. I like white

When the earth rises up and smites your car

something has to give. It won't be the Earth—it will be your springs.

HAVOLINE OIL

"It makes a difference"

and Lightens Your Motor Troubles

ARE your cylinders clogged with heavy carbon deposit? Does your motor generate its maximum efficiency or is it hindered by heavy frictional losses? Is its general serviceability and power of endurance being weakened by the use of non-adhesive molecule-cracked lubricants?

HAVOLINE OIL

prevents these life-destroying processes in every make of car, because: It forms a lubricating "cushion" of oil of equal thickness between the moving metals, minimizing frictional loss and enhancing the efficiency of the motor. By our "special process" of manufacture it is entirely freed from impurities and floating carbon, leaving the least deposit—yet its life and potency are retained. The base crude of Havoline is always uniform and of known quality.

Buy the Oil in the Blue Can.
2 Five Gallon Cans to the Case.

Tell us your make and we'll
tell you your grade.

Ask your garageman or write us direct for testimonials of Havoline users who own your make of car.

FRANCE From Behind the Veil

By COUNT PAUL VASSILI

IN THIS VOLUME, written in frank and pungent style, is embodied the author's unrivaled experiences of the inner social and political life of France during the last fifty years. He opens his reminiscences with the meteoric reign of Napoleon III, the Empress Eugénie, and closes them "the day before yesterday" as it were.

"There is here much first-hand and entertaining gossip about the celebrities and notoriety of French society during the author's time."—*The Sun, New York.*

"Contains much that is momentous in history, simply and frankly told."—*The Evening Post, Chicago, Ill.*

"No man of the era which closed with the downfall of Napoleon III. had better opportunity for close investigation than did this diplomat, whose missions, mostly of a semi-official nature, were many, taking him to all the courts of Europe."—*The Globe-Democrat, St. Louis, Mo.*

Large Octavo, Cloth, \$1.75 net; by mail \$1.91

166-U70 N. Michigan Boulevard Chicago, Ill.

man's clothes. Never go back to Indian clothes," he told his friends.

His air while on his automobile ride was that of a retired business man enjoying an evening's spin. He looked with placid and calm interest at the strange sights, to him, of the city, but only once did he show any surprise. He gave a start when he saw electric signs as they lit up and went out again.

"How funny," was his comment, and he chuckled in amusement at this curious new spectacle.

Once he was driven near a market-wagon on which the driver was asleep.

"Unless the horse know the way, that man never get home," he told his interpreter.

Spo Peo was equally composed when he faced the gathering awaiting him at Commissioner Sells's office. He was told that the Commissioner, with others, had been working to obtain his pardon.

"I thought there were those outside working for me, tho I did not know who they were," he replied through Interpreter Hamilton.

"Ask him how it feels to get out," one reporter requested.

"Good," was his guttural and succinct reply.

THE SPICE OF LIFE

The Solution.—Lady Macbeth was walking in her sleep.

"My day gowns are too tight," she explained.—*Puck.*

Heavenly.—Every motorist envies Lieutenant Porte for at least one advantage he will have. There won't be anybody along the road to misdirect him.—*New York Press.*

Suspicious.—HARPER—"Fuzzle has a great scheme and he invited me to get in on the ground floor."

HARPER—"Don't forget that that is where the trap-doors are."—*Town Topics.*

Of Course!—James started his third helping of pudding with delight.

"Once upon a time, James," admonished his mother, "there was a little boy who ate too much pudding, and he burst?"

James considered. "There ain't such a thing as too much pudding," he decided.

"There must be," continued his mother, "else why did the little boy burst?"

James passed his plate for the fourth time, saying: "Not enough boy."—*The Multitude.*

Too Much.—One day a Scottish boy and an English boy who were fighting were separated by their respective mothers with difficulty, the Scottish boy, tho the smaller, being far the most pugnacious.

"What garred ye fight a big laddie like that for?" said the mother, as she wiped the blood from his nose.

"And I'll fight him again," said the boy, "if he says Scotsmen wear kilts because their feet are too big to get into their trousers."—*Tit-Bits.*

Accounted For.—"Is he a credit to his family?"

"No; a debit."—*Concord Herald.*

Silver Lining.—Bryan's choice of diplomats does a lot for the business of the passenger steamers.—*New York Press.*

Too Easy.—"Have you been able to meet all the demands of your creditors?"
"Meet them? I haven't been able to avoid them."—*Buffalo Express.*

Once Too Often.—PARSON BLACK (sternly)—"Did you come by dat watch-melyun honestly, Bruddeh Bingy?"

THE MELON TOTER—"Deed I did, pahson; ebry day fo' nigh on two weeks!"
—*Puck.*

The Efficacy of Prayer.—Bobby had been taught to remember all his relatives when he said his prayers. One night, as he knelt at his mother's knee, he did not mention the name of a favorite aunt.

"Why, Bobby," said the mother, "you didn't say 'God bless Aunt Beatrice and make her happy.'"

"Well, mother," replied the little boy, "I don't have to say that any more. Aunt Beatrice's engaged."—*Ladies' Home Journal.*

CURRENT EVENTS

Mexico

July 17.—A triangular fight at Acapulco is reported between the Constitutionalists, Federalists, and Zapatistas.

July 18.—General Orozco, with his followers, defeats the Federal Army with the announced intention of starting a new revolution.

President Carbajal orders the evacuation of San Luis Potosí as a move toward peace.

July 20.—The United States Government announces that it will not recognize any conventions or loans made by Huerta later than October 10, 1913.

General Carranza agrees to meet the Carbajal envoys and to suspend hostilities pending negotiations.

July 22.—An armistice between the Mexican Government and the Constitutionalists is signed and all hostilities throughout the country are ordered suspended.

Foreign

July 17.—Millais's portrait of Carlyle, in the National Gallery, London, is slashed by a militant suffragette.

July 19.—The Hindus imprisoned upon the Japanese vessel in the harbor of Vancouver drive off immigration officers who attempt to board the ship.

July 21.—After all preparations are made for a pitched battle between the Canadian cruiser *Rainbow* and the Hindu ship *Komagata Maru*, the Hindus accept the Government's decision and agree to withdraw from Vancouver.

Domestic

WASHINGTON

July 17.—The bill to abolish the Naval "Plucking Board" is introduced in the House.

July 20.—President Wilson orders Attorney-General McReynolds to proceed at once with the New York, New Haven & Hartford dissolution suit.

July 22.—The Rivers and Harbors Bill, against which Senator Burton has for twelve days conducted a one-man filibuster, is side-tracked, and thus perhaps killed, to make room for the trust bills.

GENERAL

July 17.—The New Haven road is sued for \$306,000,000 by minority stockholders, who charge gross mismanagement.

July 22.—A criminal warrant is issued against the Standard Oil Company of New Jersey for selling gasoline under coat and thus violating one of the New Jersey "Seven Sisters" acts against monopolies.

Designed Especially for Cars of Highest Standards

READY made parts and accessories for an automobile are very often a source of waste.

Westinghouse Electric engineering calls for a design amply able to do the work required but *without waste.*

Westinghouse Electric Systems Starting—Lighting—Ignition

Westinghouse Electric generating units for ignition and lighting take the very smallest amount of power from your engine, so small you can hardly find it in your gasoline bill.

Westinghouse Electric starting motors run with the very smallest drain on your storage battery.

Westinghouse Electric ignition applies the spark to the very best advantage.

These features of the Westinghouse Systems have proven themselves in test after test by the best automobile engineers in the business—the engineers responsible for placing the Westinghouse Systems on these well known cars.

A Great New Book

Covering all phases and every condition of Eugenic Progress to date; by the leading writer and propagandist of the movement.

The Progress of EUGENICS

By Dr. C. W. SALEEBY

(Author of "Parenthood and Race Culture")

In this work Dr. Saleeby sums up the whole case for the advocates of eugenics. In his own attractive style he points out some of the inaccuracies of those who oppose the science, and protests with equal vigor against others who would identify it with certain brutal, immoral and impossible theories.

INVESTMENTS AND FINANCE

THE UNION PACIFIC DISTRIBUTION

ON July 20 the Union Pacific Railroad made the long-delayed distribution of its \$83,356,000 extra dividend, consisting in the main of Baltimore & Ohio stock, but in part of cash. About a week before, the Court of Appeals had rendered a final decision in a protesting suit, in which it was contended that U. P. preferred shareholders should participate in the distribution. This decision was against the preferred shareholders. Along with the distribution goes a reduction from 10 to 8 per cent. in the Union Pacific's dividend on its common stock. Income from the distribution, however, is expected to make up to stockholders the difference. For each share of Union Pacific on which \$10 in dividend was formerly paid, a holder will now get:

	Par Value	Tidings
Baltimore & Ohio pfd.....	\$12.00	at 4 p. c.—\$0.48
Baltimore & Ohio com.....	22.50	at 8 p. c.—1.35
Cash.....	3.00	at 6 p. c.—.18
Union Pacific.....	100.00	at 8 p. c.—8.00
Total yield.....		\$10.01

It is noted in the New York Times *Annalist* that the Union Pacific management, having now had confirmed by the courts its right to distribute to stockholders its investment stocks as surplus earnings, "may in time work out other plans for extra dividends to be paid concurrently with a reduction in the parent company's rate of dividend." For many years, it has been well understood that the Union Pacific, in paying 10 per cent. dividends, paid only 6 per cent. out of its own earnings, the remaining 4 per cent. having been derived by it from investments in other railroads. With the Baltimore & Ohio stock now distributed, the Union Pacific will still own stocks in other roads as follows: a remainder of \$1,805,000 in Baltimore & Ohio; Chicago & Alton preferred, \$10,342,100; Chicago & Northwestern common, \$4,018,700; Chicago, Milwaukee & St. Paul preferred, \$1,845,000; Illinois Central, \$22,500,000; New York Central & Hudson River, \$17,857,100, and railroad securities, \$3,484,920 common and \$1,936,900 preferred. The enforced sale by the Union Pacific of its \$126,650,000 of Southern Pacific stock, and its voluntary distribution of Baltimore & Ohio, have reduced the par value of the Union Pacific's investment stocks from the \$228,176,320, the value reported in the last annual statement, to \$67,385,320.

Before July 20 Union Pacific was selling in the market at about 157. It is interesting to recall that in recent years, on expectations of a distribution of Union Pacific holdings in other roads, this stock has risen to high figures; in 1909 there was a quotation for it of 219. It seems not at that time to have been understood that with the distribution of stocks in other roads, there would come to Union Pacific stockholders a reduction in Union Pacific dividends. In other words, a price so high as 219 indicated that shareholders, or expectant shareholders, believed there was coming a time when they might "eat their cake and have it, too."

REACTION IN TRADE ALL OVER THE WORLD

In *The Statist*, of London, was presented early in July a comprehensive view of prospects in the world's trade. Adverse movements were found to exist in nearly all civilized countries, and especially in Great Britain, France, and Germany. *The Statist* believes, however, that these movements are not likely to prove as severe as adverse movements proved in other periods. The review first deals with conditions in this country:

"Inasmuch as there has been no inflation in the United States for a number of years, and inasmuch as the country has been waiting for more abundant supplies of capital for railway building and for house construction, there are no grounds for anticipating any great depression of trade in that country, or serious contraction in the purchasing power of the American people. It is true that during the past few months trade in the States has shown decline, in consequence partly of the short maize crop of last year and partly of the check to railway construction caused by the great rise in railway expense and the failure of the companies to obtain from the Interstate Commerce Commission an advance in freight rates to compensate them for their heavier expenditures; but these adverse influences are likely to pass away when the present bumper harvest is safely gathered in, and the railways receive power to increase their rates to compensate them for the great rise in their expenditure. As far as we are able to gauge the temper of the American people, we believe that, even if the Interstate Commerce Commission were to come to a decision adverse to the claims of the railways, the American public would insist upon action being taken to enable the railways to raise the capital they need. In brief, we anticipate that the consuming power of the American people will be maintained, and that this will have a steadying effect upon trade and upon the prices of commodities."

The Statist believes that the consuming power of the people will also be maintained in Great Britain. In recent years the people of that country "have been abnormally economical," and have "invested greater sums than ever before in profitable rates of interest." It is argued that "with lower prices of commodities, even with a reduced demand for goods, the consuming power will be increased rather than diminished." The writer says, further:

"In Great Britain great amounts of capital are now needed for house construction, for town planning, for sewerage, drainage, and for other improvements, as well as for the introduction of electrical traction to deal with railway suburban traffic. The free expenditure of capital in this country for these purposes will tend to maintain the consuming power of the British people at a high level, notwithstanding the contraction that may occur in the demand for their products by nations who for a time are compelled to restrict their consumption more nearly to the level of their productions."

What applies to Great Britain, *The Statist* believes, "applies also in large de-

gree to France and in lesser degree to Germany." Both those countries in the last ten years "have largely added to their wealth by providing capital for younger countries, including Russia." Because of expansion in their incomes and the retention at home of a larger proportion of their savings, the French and the Germans "will be able to devote greater sums than heretofore to housebuilding, improvement of cities, and other purposes." Continuing, the writer says:

"It should be realized that the manufacturing and distributing industries of the United States, of Great Britain, of France, and of Germany have, in a measure, suffered from the great rise in prices which brought so much advantage to the districts which produced foodstuffs and raw textiles, and that with the return of a lower cost of living the manufacturing and distributing industries should derive marked advantage.

"In forming periods of trade reaction and of falling prices the countries which supported consumption were mainly England, France, Germany, Holland, and Belgium. The countries which will support consumption in the period of trade reaction upon which we now seem to have entered will include the United States. Hence the number of persons whose consumption is likely to be maintained, and possibly increased, will be very much greater, both actually and relatively, than in past periods of trade reaction.

"This means that the reaction in trade is not likely to be nearly as severe on the present occasion as in former periods, when a number of countries entered upon a period of production after a period of active construction. The situation has been and is being handled with great discretion. In Canada the Government has come to the assistance of railways under construction with loans of capital to enable them to be completed. With regard to Brazil, the bankers of Europe have come to her aid with the offer of a large loan in order that she may meet her obligations in respect to floating debt and interest until she is able to increase her income or reduce her outgoings. In Argentina precautions have been taken against the danger of a check to the influx of capital by the accumulation of a great gold reserve, and no one doubts the power of Argentina to protect exchange and to meet her obligations.

"On the whole, therefore, the reaction in world commerce which seems to have begun in consequence partly of the disturbance to confidence caused by the Moroccan incident and the Balkan wars, and partly of the need of certain countries to curtail their capital expenditures and to increase their productions, does not seem likely to be a serious one or of long duration."

OPTIMISM

Bradstreet's finds that "a variety of causes" have aided in bringing about "an undeniably more optimistic feeling in various lines of business. With chief place given to the exceptional promises of the crops which seem now likely to be better than in any previous year on record, except 1912—indeed, the final results as to actual value may surpass those for 1912"—importance is given to the growing realization that too much pessimism has had sway in trade. Thus far, however, the Claffin failure has exercised "comparatively slight influence on trade." In the West there is a considerable reduction in the number of idle cars, and better buying of railroad supplies, and enlarged orders for steel.

SAXON \$395

Judge the SAXON by What It Is Doing

The picture above represents the Saxon in a new dress, with a new color scheme—elegant, dark blue body, and black running gear, with running boards, headlights in front, gasoline filler cap extending through cowl, hinged bonnet and 38 other detail refinements.

ON July 4 the Saxon car finally demonstrated its independence of all road conditions. For on that famous day a Saxon car reached San Francisco, having traveled 3,389 miles overland from New York in 30 days across the Lincoln Highway—the first automobile to make a continuous trip from New York to San Francisco over the Highway and the first car of its size and price to make the journey from coast to coast.

Over the Alleghenies, over the Rockies, over the Sierras went the Saxon without faltering. Through mud, through sand, over the great plains, across the

Great American Desert, the Saxon held to its schedule, and averaged 30 miles to the gallon of gasoline all the way.

8,000 Miles in 60 Days

The same car, from April 8 to May 8, ran 135 miles a day for 30 consecutive days—4050 miles—averaging 30 miles to the gallon of gasoline and 190 miles per quart of oil, covering the entire distance on the original set of tires. In 60 days this transcontinental car has covered almost 8,000 miles—as far as the average owner drives in two years.

On May 16, 100 regular stock Saxon cars in as many towns all over the country made non-stop runs of 200 miles each, averaging 34.55 miles per gallon of gasoline—less than half a cent a mile for fuel, less than $\frac{1}{4}$ cent a mile per passenger.

Order Your Saxon Now

With this evidence before you there is no reason for hesitating to buy your Saxon now. Why not get the benefit of the motoring season, now at its height—in a Saxon? The demand for these cars is great, so we urge you to act quickly. Call on the nearest Saxon dealer and place your order immediately for the earliest possible delivery.

Catalog and dealer's name on request. Address Dept. D.

Bradstreet's has gathered from newspapers reports from many trade centers by competent authorities expressing optimistic views:

"From St. Louis—'I am more optimistic to-day than I have ever been before.'

"From Chicago—'The man who holds to a steady and hopefully conservative course will not go far astray in his calculations.'

"From Iowa—'We have had a demonstration of the idea that sufficient pessimistic talk will bring about depressed business conditions.'

"From New York—'If the American people will just stop wasting their time talking and realize the facts as they are, we will see the largest business that this country has ever had. I believe that by October we shall see a very heavy business in full swing.'

"From Pittsburg—'Puddlers are to receive an advance of 25 cents a ton.'

"From Yonkers—'Carpet mills shut down for two weeks reopened to-day, and 7,000 employees returned to work.'

"From New Orleans—'Lumber consuming industries throughout the East and

North are operating more hours than was the case a very few weeks ago. It will not be many weeks before lumber orders will be coming South in volume.'

"From *The Iron Age*—'The corner seems to have been turned at last, and manufacturers are confident the remainder of the year will show a much larger volume of business than the first half.'

"From Chicago—'Road sales for the past week show a gain over a year ago, and collections are better.'

"From the head of a large steel company—'I feel sure we have seen the worst in the steel business this year, and the recovery, tho gradual, might be expected to continue throughout the remainder of the year.'

The writer in *Bradstreet's* declares, however, that "it would be futile to say that the situation is an entirely clear one, or that trade has as a whole rallied." It is to be remembered that the foreign financial situation, "for two years a load on domestic stock-markets, has not much improved." Moreover, "some long distance will need to be traversed before the spring-planted crops are in as safe a position as is the winter-wheat yield."

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. The *LITERARY DIGEST* mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"S. D." Los Angeles, Cal.—"Who wrote the poem with lines which run something like this—
"Man's inhumanity to man"

Robert Burns wrote a poem entitled "Man was Made to Mourn," in which occur the lines—

"Man's inhumanity to man
Makes countless thousands mourn."

"M. R. C." Philadelphia, Pa.—"Can 'criticism' be 'favorable,' and is the sentence, 'The Board favorably criticized the report in its resolution on the subject,' correct?"

To criticize is to examine according to an established standard—not necessarily to condemn. Therefore, one may say: "The Board in its resolution on the subject criticized the report favorably."

"F. E." New York, N. Y.—"To settle a wager, will you kindly let me know whether there is any authority for the word 'Guarantying' used in this sense: 'We are guarantying a sale of 50 and 50 many copies?'"

Yes. It dates as far back as 1786, and was used by Edmund Burke in his impeachment of Warren Hastings, vol. vi, page 693. But the form preferred to-day for the verb, both in law and in common usage, is *guaranteeing*.

"E. W. K." Syracuse, N. Y.—"Is the following sentence grammatically correct? 'That neglect is paramount in the deterioration of batteries is proven from an examination of them as they are returned to the manufacturers.'"

The word *paramount* can not be used in the sentence you submit. The idea is correctly expressed by "the principal cause of—is proved by." Correctly rendered, your sentence should read: "That neglect is the principal cause of the deterioration of batteries is proved by an examination of them as they are returned to the manufacturers."

"W. H. A." Georgetown, S. C.—"Kindly tell me the meaning of 'afield.' Can you say 'the flying-machine is *afield*,' when it is in the air? And, also, do flying-machines belong to the navy or the army? Are they considered in the navy or in the army?"

An *aeroplane* and a *dirigible balloon* may be said to belong to the army; a *hydroaeroplane* may be said to belong to the navy, but both arms of the service have been experimenting with them. If an aeroplane were on the practice-ground, it should be characterized as being *afield*, but if it were in the air, it should be characterized as being *afloat*—that is, floating in the air.

"J. B." Watertown, Wis.—"What is the reason that we do not spell *fourty*, but *forty*, since all other words derived from *four* are spelled *four* and not *for*, as, *fourteen*, *fourteenth*, etc.? Is it not more correct to spell *fourty* instead of *forty*? Or is it a misspelling or mistake to spell it *fourty*? In Middle English it was spelled *fourty* and *fourtighly* instead of *fortighly*. Please explain?"

The spelling *forty* is one of the evolutions toward simplified spelling which the language has undergone. A combination of the Anglo-Saxon *feower*, "four," and *-tig*, a suffix allied to "ten," the word was spelled *feowertig* in Anglo-Saxon times. In the Gospel of St. Matthew, of Lindisfarne, which dates about 950, the spelling varies from *feuertig* to *sewertig*. Chaucer, in his "Canterbury Tales," spelled it *fourty* (abt. 1386); Caxton, in "Sonnes of Aymon," spelled it *fourthi* (1489); Robert Browne, the theologian, preferred *fourtle* (1585); while Shakespeare favored *fortie* (1607). The form *forty* was in use as early as 1567, when "forty pence" were "gaged vpon a matche of wraatling." In an edition of Shakespeare dated 1613, we find the spelling *forty* ("Henry VIII., act 2, scene 3). The genius of language is responsible for these mutations in the spellings of words which usage confirms. No other explanation can be given, for none of us know why, unless it be, in this particular case, that people began to pronounce the word "for'ty" instead of "four'ty," and with the spread of this pronunciation the change in spelling followed.

Travel on "A.B.A." Cheques

They will relieve you from the risk of carrying large amounts of cash. They will simplify your calculations in foreign currency. They will free you from the annoyance and expense of exchanging money at frontiers.

"A. B. A." Cheques make money matters as simple as though you carried \$10, \$20, \$50 and \$100 bills engraved with their values in the moneys of the various nations. They are safe to carry because your counter signature, which identifies you, is required to make them good and because they may be replaced if lost or stolen.

They are accepted exactly like currency by hotels, railway and steamship lines generally, and by the best shops in every country. They may be cashed by 50,000 banks.

"A. B. A." Cheques are the only travelers' cheques issued under authority of the American Bankers Association. They are the only travelers' cheques accepted, under the law, for U. S. Customs duties.

Be sure that you get

"A.B.A." American Bankers Association Cheques

Get them at your Bank

If your own bank is not yet supplied with "A. B. A." Cheques, write to the American Bankers Association, 100 Broadway, New York City, for a list of banks which issue them.

GRANTLAND RICE
Famous Sporting Writer and
Authority, says:

"Whenever I go hunting or fishing I slip a curved tin of Tuxedo tobacco in my hip pocket and I always keep a supply at home. Ample proof that I like Tuxedo."

Grantland Rice

E. YSAÏE
The World-famous Violinist,
says:

"Tuxedo is a fine, mild, fragrant smoke—the best ever. The more experience one has had, the more convincing is the superiority of Tuxedo. It is the only tobacco free from bite that I have ever found, and it leads all others in fragrance and flavor—a rare combination."

E. Ysaye

PENRRHYN STANLAWS
Celebrated Artist, creator of
the famous "Stanlaws Girls,"
says:

"Some artists draw better than others, but no artist draws better than a good pipe filled with Tuxedo."

Penrhyn Stanlaws

"Joy, Temperance and Repose Slam the door on the doctor's nose—"

and if Henry Wadsworth Longfellow were alive today he would include under the head of Joy and Repose the day-by-day use of Tuxedo in a pipe.

Tuxedo assures real repose: the calm, wrinkle-smoothing, mind-easing repose that comes with a wholesome, helpful pipe of satisfactory tobacco.

Tuxedo is the satisfactory tobacco—in a class by itself for mildness, fragrance and non-irritating qualities.

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Tuxedo tobacco has made thousands of men joyful, temperate and comfortable converts to the pipe, because it has made pipe-smoking not only possible but pleasant to them.

Under the famous "Tuxedo Process" the mild, tender leaves of the highest grade Burley tobacco are so skillfully treated that Tuxedo absolutely cannot bite, parch or irritate the tongue or mouth in any way. Tuxedo burns slowly and coolly, with a delicious aroma.

Many other brands have tried to imitate the original "Tuxedo Process"—but the process is still a secret known only to the makers of Tuxedo. Get the original Tuxedo—avoid imitations—and you will get the best tobacco on earth for your money.

TOPICS OF THE DAY

EUROPE'S CALL TO ARMS

OUR ISOLATED POSITION and freedom from entangling alliances inspire our press with the cheering assurance that we are in no peril of being drawn into the European quarrel. But the closing of our stock exchanges, the exportation of gold to Europe, the rise in wheat and corn, the failure of business firms, help to remind our editors that a war which involved all Europe could not but have its effects among us. And so, among the hundreds of editorials discussing the Austro-Servian quarrel, the alliances and ententes of Europe, the motives of rulers and the feelings of races, the comparative strength of land and naval forces, and the possible changes to come on the map of Europe, we find a number of attempts to show our own country's gain or loss from what is feared may be the greatest war of modern times. A common opinion is that while our trade will be stimulated, we will eventually share in the economic loss of such a disaster. Wheat, as the *Detroit Free Press* notes, "jumped six or seven cents a bushel with the official declaration of war, and that brings a prospect of much money for American farmers in this year when we are to have a great crop." America, says the *New York Evening Mail*, may lose some laborers who will return to fight for their respective fatherlands, but this would be compensated for—

"America would send grain and all other foodstuffs, horses for cavalry mounts, petroleum for the great number of motor vehicles now employed in war, gunpowder and other munitions; while the necessity for reconstructing railways and bridges would cause a great demand for our iron, steel, and lumber.

"Everything is used up in war—vehicles, animals, chemicals, coal, lumber, cotton cloths, leather, and many other articles which we export to Europe. At the same time, the paralysis of the productive industries of several great European countries would make us the leading source of supply for Asiatic, African, and South American countries with which we now have comparatively little trade. Our commerce would doubtless be permanently stimulated with many of these countries through the opportunity which a great European war would afford.

"Such a war could hardly be otherwise than materially profitable to us."

Yet, says the *New York Tribune*, prices will rise here and our own consumers will suffer. The *New York Journal of Commerce* points to the sharp reaction bound to follow any immediate stimulus due to the European war. In the long run, we too would suffer, the *New York Times* asserts, "as falling markets and the destruction of property bring permanent good to nobody." Yes, agrees the *New York World*, every country will

suffer. But, it adds, "America would suffer least of all. If Europe insists on committing suicide, Europe must furnish the corpse for the funeral." And the point that the *New York Sun* makes is that this country may share in the world's loss, and it may gain at the expense of some competitors, but it will certainly find itself in a better relative position in the future:

"In its ultimate relations anything resembling a general European war would seem likely to guarantee that the economic future will belong to the American continents, especially to North America. The paralysis of European finance and commerce during any such upheaval and their subsequent prostration will leave the way clear for all nations whose energies have not been debilitated and whose resources have not been exhausted by the waste of war. It was in the Civil War that American shipping supremacy was lost. As a result of a European war it may be regained with contributing influences to its recovery provided by the facilities for commercial expansion which the Panama Canal and the approaching modernization of the American banking system will supply.

"In more ways than one the folly of warfare which Europe has long been threatening to commit and at last seems determined to perpetrate must spell opportunity for the United States. Among other things it is likely to provide a splendid opportunity to extricate the country from a debtor condition represented by the large European holdings of American securities. The *Sun* believes that advantage will be readily taken by American investors to absorb on their own terms the further sales of stocks and bonds which Europe may seek to make here at the dictates of fear or necessity. If the absorption can be augmented by the purchase of European state funds or other foreign obligations which will place the Old World in debt to the United States, so much the better."

The withdrawal of millions in gold from New York within four days after the opening of hostilities along the Danube led to some apprehension on the part of the press, tho there is also a feeling of pride that we could maintain the world's only market for ready money. This very exhibition of "the fundamental soundness of the country's economic institutions" suggests to the *New York Sun* that we might easily protect ourselves "from the consequences of Europe's insanity":

"There is nothing reasonable in such a war as that for which Europe has been making ready, and it would be folly for the country to sacrifice itself to the frenzy of dynastic policies and the clash of ancient hatreds which is urging the Old World to destruction.

"Could anything be more rational than a refusal by the United States, the Government, and the banking and business community, acting together, to permit Europe to draw on this

country further for the expense of the mad courses on which it is about to embark? After declaring, through its governmental and business representatives, that it proposes to honor all legitimate drafts upon it after Europe has made its peace, should not the United States now announce to the world that if Europe is going to plunge into the abyss the United States does not intend to go down with it?"

A review of the series of events leading Europe to the brink of this abyss pictured by *The Sun* leads us back to the assassination of the Archduke Francis Ferdinand and the Duchess of Hohenberg on June 28 by a Serb of Bosnia. A reading of the foreign newspapers persuades the *New York Evening Post* that "a press and militarist campaign against Serbia was at once set on foot

THE NEAR-SIGHTED MAN.
"I'll teach you to sting me!"
—Orr in the Nashville Tennessean.

in Vienna." Its leaders "went violently into the whole matter of the Serb movement and the threat to Austria which it was alleged to mean."

"Those who had so confidently counted upon the Archduke Ferdinand as one who would take a high tone in foreign relations were determined not to be balked by his death. So manifest was their purpose that the Hamburg *Fremdenblatt*, as early as July 4, spoke of an attack by Austria upon Serbia as a settled thing."

The Evening Post goes on to quote Austrian papers which seemed to be "manufacturing, not alone an anti-Servian spirit, but a demand for war." The *Neue Freie Presse*, it says, "looked ahead to actual intervention, or to war, and argued that Russia ought to give Austria a free hand at Belgrade, since it was clear that the ambitions and the plottings of the Serbs constituted a danger to all Europe, as well as to Austria, and must be sternly repressed." And the general attitude of the Vienna press, we are told, "was not badly represented by the *Reichspost* when it asserted that Austria was not threatening Serbia, but that Serbia was menacing the Dual Monarchy."

As a sequel to this came the official declarations which preceded the military operations on the Servian boundary. On July 23, the Austrian Government presented to Serbia a note demanding that Servian officers who had a part in the killing of the Archduke be prosecuted, that the King of Serbia publish an official expression of regret for such participation, that Serbia apologize for or explain anti-Austrian utterances of her officials, that anti-Austrian propaganda of any form be suppressed in Serbia, and that Serbia organize an official investigation of the Serajevo murder, "in which Austrian representatives be allowed to participate." Serbia accepted all these conditions without

reservation except the last, asking for a further explanation of the part Austria would expect her officials to take in an inquiry, and suggesting a reference to the Powers as to The Hague Tribunal. This reply Austria denounced as "filled with the spirit of dishonesty, which clearly lets it be seen that the Servian Government is not seriously determined to put an end to the culpable tolerance it hitherto has extended to intrigues against the Austro-Hungarian monarchy." And on July 28 war was declared against Serbia. A manifesto issued by Emperor Francis Joseph referred to Servian ingratitude, long-continued hostility, faithlessness, and the "criminal propaganda which has extended over the frontier, aiming at the destruction of the foundations of order and loyalty in the southeastern part of the monarchy, and the leading astray of growing youth and inciting it to deeds of madness and high treason." It continued:

"A series of murderous attacks in an organized and well-carried out conspiracy, whose fruitful success wounded me and my loyal people to the heart, forms the visible and bloody track of those secret machinations which were operated direct in Serbia. . . ."

"Serbia rejected the just and moderate demands of my Government and refused to conform to the obligations forming the natural foundations of peace in the life of peoples and states. I must therefore proceed by force of arms to secure those indispensable pledges which alone can insure tranquillity in new states within and lasting peace without."

Austria's stand, according to her Ambassador to the United States, is "the defensive act of a man whose bed-room was being entered at midnight by an assassin." A prominent Austrian in this country writes to the *New York Tribune* to say that the Serbs in Austria are better off than those in Serbia, and that Austria's action is a necessary one. Mr. F. Cunliffe-Owen says in the *New York Sun* that Austria acted so quickly because she had just obtained evidence that high Servian officials "had been the instigators, the organizers, and financial backers of the plot which resulted in the assassination of Archduke Francis Ferdinand." The Springfield *Republican* admits that there are two sides to the case and that a close parallel to Austria's case would be "to suppose Texas filled with rebellious Mexicans anxious to secede to Mexico, and a President of the United States assassinated by a Texan affiliated with a band of conspirators at the Mexican capital." Further, Austria "may fairly argue that whatever hardships and disabilities are suffered by her southern Slav subjects are due to the agitation stirred up by nationalists outside her border and abetted by Russia, and that if Serbia were absorbed into the Empire it would be possible for the 10,000,000 Serbs to create a third kingdom with home rule, parallel to Austria and Hungary." But the question of the treatment of the Serbs in Austria, continues *The Republican*,

"is inextricably involved in the greater question whether the existing balance of power is to be maintained in Europe, or the Slavie influence is to predominate over the strains which have hitherto taken the lead in culture and political control. Whether West or East shall dominate in the Mediterranean is the secular issue involved in the question whether Austria is to keep control in the Adriatic or be driven back by a bigger Serbia controlled by Russia."

This race problem is also prominent in the presentation of the Servian side of the case by their most distinguished representative in this country, Prof. M. I. Pupin. Austria's new enthusiasm, he says, is an "outburst of *furor Germanicus* against the Slav, who is blocking Teutonic progress to the Mediterranean and the East, the Slav who interferes with the Teutonic policy described by the words '*Drang nach Osten*.'" And Professor Pupin goes on to point out, from his pro-Servian standpoint, the respective interests of the Triple Alliance (Austria, Germany, and Italy), and the Triple Entente (England, France, and Russia), in the present crisis. As the *New York Times* quotes him:

"Why, the Triple Entente was formed, not because Russia

France, and England love each other, but because they have vital interests in common which were threatened by the Austro-German League. Official Italy, but not the Italian people, has been hypnotized into joining the league, which is reaching out for the Aegean Sea and the supremacy of the Mediterranean. Serbia is the bridge which this league must cross before it can reach its goal. Can Russia permit itself to be bottled up forever? Can France permit itself to be cut off from its African possessions, and can England give up her control of Egypt and the Suez Canal, and bid good-by to all her Eastern possessions? If Serbia falls, Greece will fall, and the Teuton will settle down in Salonika and rule the Aegean Coast."

That these European alliances, instead of being safeguards of peace, are a fatal cause of war, is an argument developed by the New York *Evening Post* in a long editorial, of which these are the final words:

"But for the obligations which they have laid upon the contracting nations, no one would think it possible that the ignoble war upon Serbia could plunge all Europe into strife. . . . But Germany must stand by her ally, Austria. And Italy, pitifully, without one real interest at stake, with no heart in the war, with all her natural and inherited instincts anti-Austrian rather than pro-Austrian, must mobilize her army, too, all because Bismarck and Crispi once agreed that it should be done. What advantage will it be to France to place her army at the disposal of Russia? Ah, France, it is said, must do it under the terms of the Russian alliance. Talk about the Deal Hand! The two Alliances, with their subsidiary Ententes, are laying a hand of death upon all Europe to-day; compelling rulers to do what they shrink from; launching navies and setting armies on the march; leaving the masses dazed as to what it is all about; and opening a prospect of ruin and woe fit to stagger humanity. They have been called, these Alliances, the safety of Europe. Now we see them as they are, a peril and a curse."

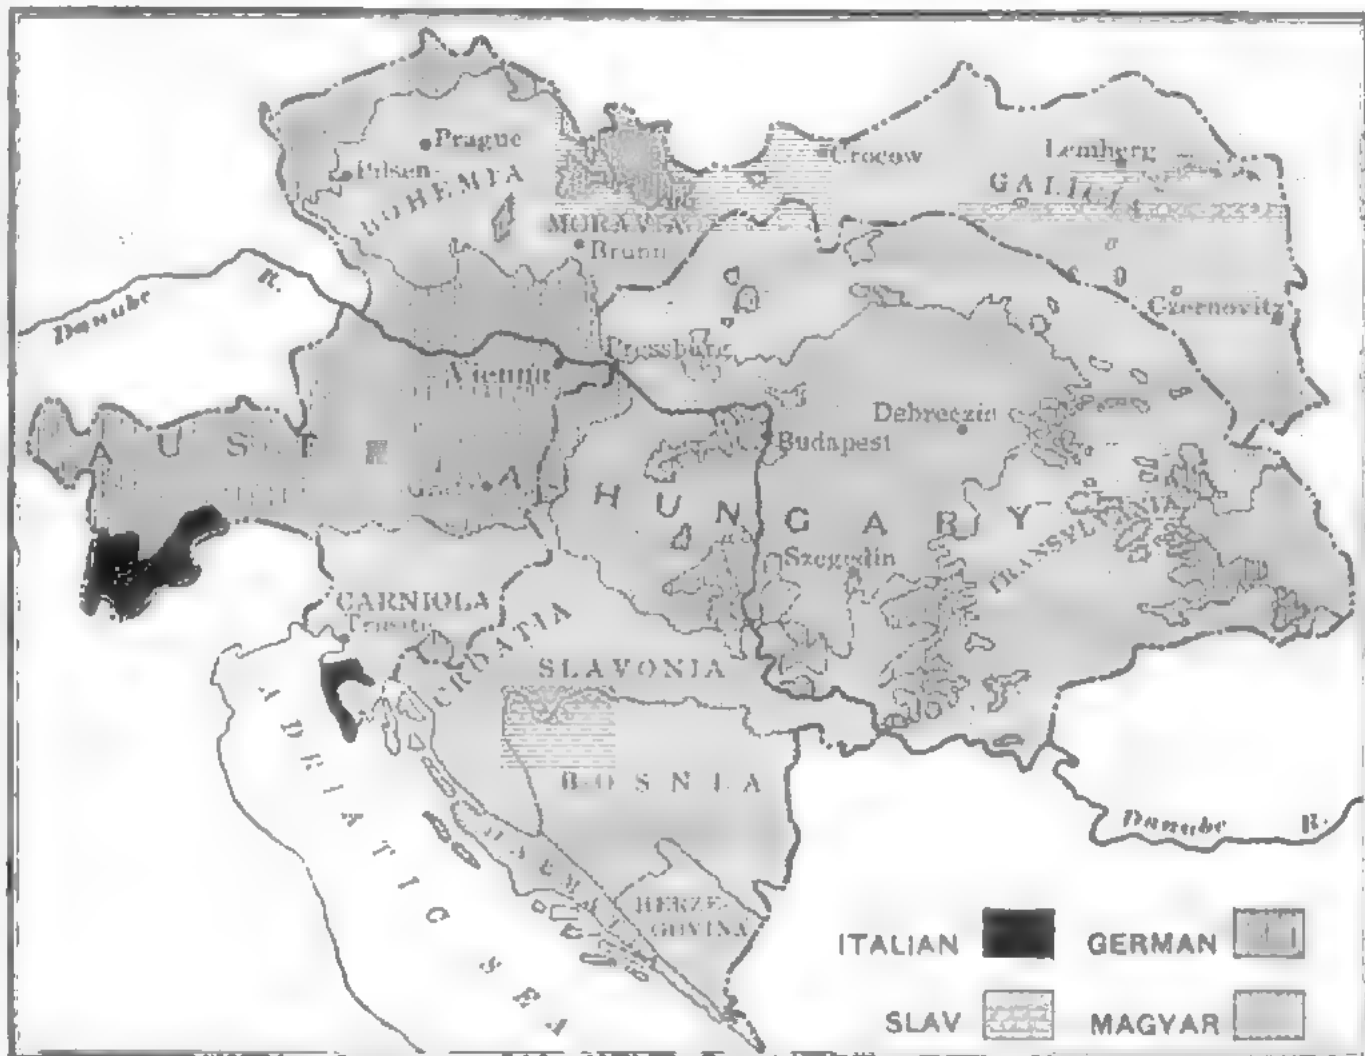

In a similar editorial the New York *Journal of Commerce* takes up the question of the great military and naval establishments of modern Europe. "This cost of always being prepared for war tends to impoverishment and hardship for those who labor in the pursuits of peace, and cripples industrial enterprise by depriving it of capital which might be put to beneficent uses." The plea is made, we are told, that it is necessary as "an insurance against war." But the New York editor is moved to ask: "At this critical moment does it appear that all this panoply is an assurance of peace rather than a provocative, an incentive, or a temptation to fighting?" When war comes, "it will be mainly due to this 'preparedness for war,' which was to be such a potent means of preserving peace." And Mr. Henry M. Pindell, who came so near to being our ambassador at St. Petersburg, says in his *Peoria Journal*:

"To argue that preparedness for war is the best insurance against war, in the face of present events in Europe, looks almost analogous to insisting that the surest way to prevent a small boy's getting burned or burning somebody is to equip him with a bunch of firecrackers and a box of matches."

Returning to the issue between Austria and Serbia, it should be noted that our editors generally favor the cause of the latter, believing that Austria has but a flimsy pretext for taking up arms, that the war against Serbia is, in the New York *Tribune's* words, "a war of conquest inspired by the lust of empire."

MR. JONES OUT

A STRONG LIGHT on the kind of men the Senate would have on the powerful Reserve Board that is to control our currency situation is seen by many in its cold attitude toward two of the President's appointees, Messrs. Jones and Warburg. And the feeling of the President toward the Senate may, perhaps, be revealed in the comment of the leading Administration organ in New York on Mr. Jones's withdrawal. "A disgrace to the Senate," is the verdict of the New York *World* (Dem.) on the conditions in that body which are responsible for the retirement of Thomas D. Jones at his own

After a diagram in the London "Graphic."

AUSTRIA'S PROBLEM OF DISCORDANT RACES.

request as nominee for the Board, and these conditions the same journal describes as "partizan politics, shameless demagoguery, and personal spite." Now that Mr. Jones has withdrawn, the New York *Times* (Ind. Dem.) remarks, "is there any rush for the honor to be expected from men of such knowledge and experience as to make their services eminently desirable?" And this doubt is expressed by many who deplore the influence of "mere politics" on so important a part of the Government as the Federal Reserve Board. Others, however, consider that the nomination of Mr. Jones, director of the "Harvester Trust" and old-time friend of the President, was "unfortunate" and "should never have been made." They point to the fact that Mr. Jones is even now a defendant in the District Court of Minnesota in a suit brought by the Government against the International Harvester Company, and judge, in the words of *The Florida Times Union* (Dem.), that "it is not proper that a man charged with repeated violations of the law should be clothed with a great trust and set to enforce the law upon others." Among various defenses for Mr. Jones's connection with the Harvester Company, the explanation that he did not become a director until after it was organized is bitterly assailed by Senator Reed, of Missouri, in these words:

"A man who volunteers to serve on board a pirate ship with an already established criminal history may be worse than one who enlists with the original crew. The latter might have been deceived into the service; the former knows the gory record of the craft."

The Senator from Missouri and Senator Hitchcock, of Ne-

Congressman-at-large." Similar activity is reported from many other States.

But it is not merely the low registration figures, but also the talk of fusion, which persuades Republicans that the Progressives are returning to their old allegiance. So, too, thinks the *Detroit Free Press* (Ind.)—"the indications have been numerous that the Progressive party was in a bad way this year, but the report that it is joining with other parties is the death-rattle." The *Rochester Post Express* (Rep.) sees "no national Progressive issue left, and it is as plain as an electric sign-board that the 1916 battle will be waged between those who are satisfied with President Wilson's policies and those who are not." And "those who are not," it is being loudly whispered, will be led

THE ROOSEVELT MOVIES.

—Carter in the *New York Evening Sun*.

by none other than Colonel Roosevelt. Mr. Ormsby McHarg thinks the combined vote of Progressives and Republicans will elect him, and Mr. William R. Hearst believes that a large number of progressive Democrats will fall in with the Roosevelt procession. But a no less eminent political authority, who is now Secretary of State, thinks that the progressive attitude taken by the Wilson Administration has ended Mr. Roosevelt's chances of being elected President by the combined radicals. And several papers, among them the *Philadelphia Public Ledger*, feel certain that the Colonel can never attract a large enough following among conservative Republicans to carry an election.

But what light do recent events in New York throw on these problems? To recapitulate briefly the reports that have filled pages in the press: In June, Mr. Roosevelt let it be known that he would favor a movement of all "decent citizens," without regard to party lines, to defeat the bosses controlling the two party machines in the State, and to elect an honest, independent Governor. District Attorney Charles S. Whitman, the prosecutor of Becker and the New York "gunmen," was suggested as such a man; he arranged to enter the Republican primaries, and some of his friends tried to get Progressive support. But Mr. Roosevelt concluded that Mr. Whitman lacked sufficient courage in defying the bosses, and flatly repudiated him on the score that he was the Republican "machine" candidate. Whereupon the Progressives renewed their attempts to persuade the Colonel to take the gubernatorial nomination himself. Finally, Harvey D. Hinman, a progressively inclined up-State Republican who had been Governor Hughes's chief supporter in the State Senate, declared his intention of entering the Republican primaries, vigorously denouncing by name both

Charles F. Murphy and William Barnes. Colonel Roosevelt then openly indorsed Mr. Hinman, most of the Progressive leaders followed, and Mr. Hinman agreed to accept a Progressive nomination if it should come to him. Mr. Hinman will be opposed by Mr. Whitman and Mr. Job Hedges in the Republican primaries, and perhaps by ex-Governor Sulzer and others in the Progressive primaries. He has won the opposition of the State "organization," and Mr. Barnes has added to the piquancy of the affair by suing Colonel Roosevelt for libel in declaring him a partner in a corrupt bipartisan alliance at Albany.

Opinions on the Hinman nomination vary. Mr. Barnes represents the feelings of many New York Republicans when he opposes Mr. Hinman's candidacy on the ground that "Mr. Roosevelt is endeavoring to reestablish himself as a Republican in order that he may enter the Republican primaries for the Presidential nomination of 1916." As there are Republicans who prefer Whitman, and Progressives who look askance at the nomination of a Republican, these facts persuade observers like the anti-Roosevelt *New York World* (Dem.) and *Indianapolis News* (Ind.) that the nomination of Hinman is poor politics, and that he is practically certain to be defeated by the Democratic candidate. On the other hand, the Hinman candidacy is well received by Progressives and Republicans who find it what the *Troy Times* (Rep.) calls "a rallying-point about which both parties can assemble without detraction from the principles of either and with the purpose to rescue New York State from the domination of Tammany Hall." The *New York Evening Post* (Ind.) is convinced that at the Progressive primaries "Hinman will have the party solidly behind him." The *Brooklyn Eagle* (Dem.) notes that "a notable number of Republican politicians heretofore allied with the Taft regulars and the Hughes wing of the party have come out for Mr. Hinman." The *New York Times* has investigated "up State," and finds a tendency on the part of Republican leaders to support Hinman.

Progressive leaders outside New York generally, says the *Indianapolis Star* (Prog.), "regard Colonel Roosevelt's indorsement of Hinman as a desirable nominee for Governor by New York Progressives as a sagacious move," and the Colonel's stand is heartily indorsed by such Progressive or progressively inclined dailies as the *Chicago Post, Herald, and News*, and *Kansas City Star*. The *Baltimore News* (Prog.) exults in Colonel Roosevelt's shrewdness, for he has presented this issue to the Republican party—"it can go to victory with Hinman or to defeat with Whitman." And the *Brooklyn Citizen* (Dem.) tells its readers that "there is not a Republican leader in the State who does not know that Colonel Roosevelt holds the fate of the party in the hollow of his hand."

But here, according to others, lies the very weakness of the Roosevelt move. His "flop" to Hinman, thinks the *Jersey City Journal* (Ind.), "has muddled things considerably in every State in which the Bull Moose has secured a foothold." All Progressives, says the *Newark News* (Ind.), "who believe that the differences between the Republican and the Progressive parties are fundamental must necessarily look upon Mr. Roosevelt's action as a long step in the direction, not of fusion with the Republicans, but of absorption into that party." That many Republicans so consider it is evidenced by editorials in papers with Republican leanings, including the *Boston Herald*, *Pittsburg Chronicle Telegraph*, *Kansas City Journal*, and *Pueblo (Colo.) Chieftain*. At any rate, concludes the *New York Evening Post*, "Roosevelt is going back into the Republican party—that is, if he can capture and dominate it."

But just as so many are predicting a return of Progressives to the Republican fold, they are going ahead with their plans to detach one of the Democratic States of the solid South. It is not unlikely, comments the *Boston Herald*, that in Louisiana "they will actually elect several third-party Congressmen in the coming November polling. If so, it will be the most significant triumph for the Roosevelt party since its organization."

NEW ALINEMENTS AT ARMAGEDDON

PRELIMINARY SKIRMISHES in the Progressive battles are now on in nearly every State, and the results are very likely to determine, according to press opinion, not only the future of the Progressive party, but the complexion of the next Congress, the Republican policy and leadership in 1916, and perhaps even the issue of that year's Presidential campaign. Interest naturally centers in New York, where Colonel Roosevelt has, in the opinion of most observers, made a strategic move in refusing to run for Governor of the State and in indorsing the candidacy of a Republican who will enter both Republican and Progressive primaries on an "anti-boos" platform. This, it is explained, is "fusion," not "amalgamation," but many observers appear to regard it as a step toward reunion and toward securing Mr. Roosevelt the Republican Presidential nomination two years hence. In other States, Progressives are going it alone, but most of the Progressive leaders do not share Republican and Democratic suspicions of the Colonel's motives and say that conditions in New York are different and the Rooseveltian move there is "good politics." In many States Republicans are heartened by a reaction which they say they discern against the Wilson Administration and a falling off in the Progressive enrolment, a combination which means to them a decided downward revision of the large Democratic majority in the House of Representatives. And, if the Progressives will support Republican candidates, or fail to give more than nominal support to their own nominees, the more sanguine Republicans would be willing to guarantee a Republican House.

In New York and in Louisiana—where the "Bull Moose" movement is reported as making inroads in the Democratic party—there are peculiar local problems to unravel. Elsewhere, Republican editors predict the speedy dissolution of the third party, tho in many cases Progressive writers give reasons for optimism and impartial observers admit that the presence of Colonel Roosevelt on the stump this fall will mean a great deal in both enthusiasm and votes. In Massachusetts Charles Sumner Bird, who has twice polled a large vote for Governor, and once run ahead of his Republican competitors, has declined the Progressive nomination. According to the leading Republican daily of the State, the *Boston Transcript*, this is the beginning of the end of the Progressive party in the State of all others east of the Mississippi where . . . the party reached its high-water mark of strength," and so say many editors, in New England and out of it. Yet the Progressive leaders do not seem to have lost heart, and we note a long letter in the *Boston Herald* (Ind.) showing the weakness of the Republican candidate, former Congressman McCall, and declaring that "the next Governor of Massachusetts will be either the present official, David Walsh (Dem.) or Joseph Walker," who is in the lead for the Progressive nomination.

Maine, says the *New York Times* (Ind.), in an editorial review of the situation, "is a State in which there is nothing whatever to the Progressive vote except pro-Roosevelt feeling; the indications are that without him the party vote in Maine will almost disappear," while his presence in the campaign "might hold it to near its former strength." Similarly in Pennsylvania, where Gifford Pinchot is the Progressive candidate for Boise Penrose's seat in the United States Senate, much is expected from the one or more speeches the Colonel is expected to make. Such talk of fusion as has been heard in Pennsylvania

Progressive circles concerns itself with the Democrats rather than with the Republicans. Turning westward, we read in the *Times* editorial:

"The labor troubles in Colorado have deranged party lines, and the Progressives believe that with Roosevelt in the State they can turn this to their advantage; without him they can not. In Michigan the Progressive vote, which was 152,000 in 1912, is now estimated at 36,000. It will take a visit from Roosevelt to bring it anywhere near to its former strength. In Oregon the Progressives were able to get only 3,500 voters to the primaries, as against 75,000 Republicans and 25,000 Democrats. The personal enthusiasm for Roosevelt which brought out the great vote of 1912 is lacking now, but the leaders believe he could reawaken it. Nor is it merely a question of votes; it is also a question of organization."

The Progressive failure in North Dakota to muster enough votes in the primary to win a place on the official election ballot is a straw that pleases the *Republican Philadelphia Press* and *Kansas City Journal*, and *The Press* calls attention to a Progressive primary vote of but 3,000 in Minnesota, a Roosevelt State in 1912. A correspondent of the *New York Evening Post* reports Progressive apathy in Kansas, and a representative of the *Washington Post* tells of similar conditions in many Western and Middle Western States, mentioning Nebraska, Iowa, Illinois, South Dakota, and Wisconsin. In California, a Progressive stronghold two years ago, the "Bull Moose" primary enrolment is about half that of the Republicans. This is tidings of great joy to Republican papers like the *San Francisco Chronicle* and *San Diego Union*. But Progressives explain that many of these Republicans intend to vote for Governor Johnson (Prog.), who will try for another term. A writer in *Harper's Weekly* predicts both his election and that of Francis J. Heney, the Progressive nominee for the United States Senate.

The *Chicago Post* (Prog.) is hopeful of the result in California and elsewhere. "The Beveridge tour through what used to be standpat land in Illinois has evoked," we are told, "a remarkable demonstration of vigorous Progressive sentiment." And the "great hopefulness and enthusiasm" shown at the Progressive convention in Colorado is no less pleasing. A West Virginia Republican leader is quoted in the *St. Louis Globe Democrat* (Rep.) as fearing that "the Bull Moosers are going to defeat us again in West Virginia," where they "are nominating a candidate for Congress in every district and a candidate for

A POLITICAL OLIVE-BRANCH.

Harvey D. Hinman, whose candidacy for Governor may bring about Republican and Progressive fusion in New York.

spectators, seemed to engage in a dialog like the characters on a stage." Unfavorable comment on French trial procedure as seen in the Caillaux case is expressed also by the *St. Paul Dispatch*, the *Louisville Courier-Journal*, the *Detroit Free Press*, the *Washington Times*, the *Brooklyn Eagle*, and others. But a more tolerant view is held by the *New York Sun*, which can not refrain nevertheless from giving a tabloid account of a trial day in these words:

"Gentlemen," cries M. Caillaux to the jury, 'I am a profoundly unhappy man. I had been a profoundly happy man since my second marriage.' Loud sobs from the present Mme. Caillaux. 'I return to that poor woman there' (gesture). Sobs. 'You know why I left you,' says the former Mme. Caillaux. Subdued applause. 'Monsieur Caillaux, you are disgracing yourself,' says the first wife. 'No, madame, I am not disgracing myself. Our characters were so opposed that a common life was impossible.' Every speech counted. Every cue is taken up. Dramatic dialog, monolog, invective, aside, development of character. M. Alfred Capus, who is in court, must think he is at a rehearsal. 'You know nothing about it,' the original Mme. Caillaux says to the judge, 'telling him his fact,' so to speak. Even Maître Labori weeps. He salutes the letters, likewise the sorrow of Mme. Gueydan. Everybody 'salutes' everybody. Mme. Gueydan, returning to her seat after her testimony, is hailed with bravas as at the opera."

The *Sun* nevertheless is emphatic in the assertion that it speaks "in no comic spirit or intention of disparagement," because it believes the facts can be brought out just as well under French law as under the more ponderous system of American or English law, and it adds that all dispute as to the superiority of one legal method over another is "an ancient and futile question." Yet *The Sun* is bound to admit that "it is impossible to regard the verdict in the Caillaux murder trial . . . as anything but a hideous miscarriage of justice," and it adds "that such a woman should be turned free by a jury is a disgrace to France." Considering only the methods of the trial, the *Boston Herald* rates "the smug English-speaking folk" who talk of the "theatricalness" of a French trial, and it claims that—

"All trials of importance are dramatic, theatrical. The plays within plays on the stage are as a rule less thrilling. The lawyer may smile at the pretense of realism; he may wonder why Charles Reade, called to the bar, blundered in the trial scene in 'Griffith Gaunt'; yet if he should see certain murder trials in this country staged, or described in fiction, he would be the first to exclaim, 'Preposterous!' Each one in the court-room plays his part. The accused, or the defendant in a civil case, may be the leading actor, but his histrionic ability is often disputed, and as trials are conducted in this country with floods of testimony from alienists, endless legal arguments, attempts to conceal rather than to discover the truth, the jurymen in the befogging atmosphere can not always be judicious critics."

The *New Orleans States* notes that "the ways of a French court of justice are not the ways of our courts," yet it asks, "Who shall say they are worse ways?" This judgment of the matter would seem to be that also of the *Baltimore Evening Sun* and of the *New York Globe*, which says that:

"It is by no means certain that our way is the surer to get at the truth. To foreigners our practise seems very strange. Where the French and most of the Continental European courts allow the jury to hear and see everything and everybody concerned and make up their minds untrammelled as far as possible by restrictions that may tend to conceal what might tend to reveal, American, and to a less degree, English, courts set up conditions which render natural disclosures difficult. We smile when we read some of the wrangling colloquies between witnesses and the accused woman. They smile when they hear our lawyers' demand for a yes or no answer to any question they choose to put."

"In France our method would undoubtedly fail. In America the French method would start a riot. Yet in both countries just verdicts are obtained."

Along this line the *Portland Oregonian* advances even further when it says that as between our criminal procedure and that of France "the judgment can not but be favorable to French methods as more expeditious, better calculated to draw out all the facts and motives, and far more likely to result in a just decision."

FOREIGN COMMENT

SERVIA'S DREAM OF EXPANSION

THE TRAGEDY OF SERAJEVO has not only acted like an earthquake whose shock has passed through Europe and the world, but, like an earthquake, it has laid bare things below the surface of which the world did not dream, and threatens to end in international catastrophe. It has not yet been shown that the death of Prince Francis Ferdinand is to be attributed definitely to any political party at Belgrade, but Serbia's reply to Austria's ultimatum did not deny the possibility that Serbian officers may have been involved in the intrigues against Austria. The deadlock that brought on the war lay in Serbia's refusal to let Austrian officials have a hand in finding and punishing the guilty. And the Berlin *Vossische Zeitung*, in a long article, traces the tragedy to certain "revolutionary anarchists" who claimed to be patriots because they were striving to bring under the direct control of Belgrade the very outlying Slav provinces which Francis Ferdinand was laboring to unite under the crown of Austria-Hungary. Serbia's culpability is thus indicated:

"The bloody crime of Serajevo was only one link in the long train of assassination and horror by which the revolutionary propagandists in Belgrade were working to promote the official policy of Serbia. As early as the coronation of King Peter the Serbian Minister of Foreign Affairs published the following program of the movement: Serbia was to form an alliance with Montenegro and to enter into some agreement with Bulgaria regarding Macedonia. Belgrade was to give support to the Serbian-Croatian opposition party in Croatia. Serbia was to be emancipated from the trammels of trade with Austria. A revolution was to be stirred up in Bosnia, and the Austrian authorities there were to be discredited; the Adriatic question was to be settled with Italy, and a traveling committee was to be formed for the carrying out of these projects, as it was impossible for Serbia to act officially in the matter."

This writer goes on to say that the program was directed to the end of uniting all the Slav inhabitants of the South Slavic countries. It was approved by King Peter in 1906, and his Minister of the Interior, Stojan Protitch, spoke of it as "a torpedo which Serbia is now in the act of hurling for the purpose of blowing up the Austro-Hungarian monarchy and the whole Triple Alliance." This history of Serbian intrigues, brought up to date, describes the methods by which the revolutionary propaganda was spread in the schools of the various Slavic populations:

"Since 1909, there has existed outside the governmental circles of Belgrade a band of revolutionary nationalists whose members were closely connected with the South Slavic youths of Austria-Hungary, so that in 1910 the nationalistic anarchistic propaganda reached a crisis and secret societies were formed in the grammar schools, the preparatory and other schools. The center of the movement, as hitherto, still remained in Belgrade. Measures were taken that the young men from the South Slavic countries of the monarchy in ever-increasing numbers should flock to Belgrade. These youths were received with open arms; and on the recommendation of certain politicians were permitted

to domicile there as trustworthy. They were employed at a wage of from ten to fourteen dollars a month on light clerical work for the office of the Skupstina, which only required of them from two to three hours' work daily. From these lads, on their return home, were recruited the agitators of the Greater Serbia propaganda. Among them mingled degenerates who adopted the ideal of Serbian expansion as the last anchor of deliverance for their almost shipwrecked lives. From people of this type sprang the man of violence, Savro Princip, the murderer of the heir to the crown, Grand Duke Francis Ferdinand. He was just such a beggar student. In the Belgrade free coffee-stands, where a meal for five cents goes with the coffee, some dozens of these fellows were lounging ready at any time to commit violence, indulging their morbid vanity in order to be fêted as national heroes."

THE CAT CAME BACK.

DAME EUROPE—"What, again! And I've not cleared the pieces from the last mess yet!"
—*Courier (Liverpool)*.

The hatred of Serbia for Austria-Hungary and the exultation felt over the fate of the Heir Apparent are reflected in the utterances of the Belgrade press. The *Pravda* is a liberal and progressive organ and remarks sarcastically:

"The public mourning for Archduke Francis Ferdinand made small excitement in Austria-Hungary. The only genuine tears shed for the Heir Apparent were those of his children. All others were crocodile tears."

The *Balkan* (Belgrade) had formerly among its chief contributors the noted anarchist

Cicevarics, who contributes an article on the assassination, in which he remarks:

"It is not the Heir Apparent as an individual that ought to be mourned over, but only his worth to the country, which was practically nil."

In Germany the Serbian threats and muttered complaints against Austria-Hungary were considered to be mere "sound and fury signifying nothing." The *Lokal Anzeiger* (Berlin), which is considered to echo the opinions of the military authorities and the court, said, in an article on "Europe's solidarity against the great Serbian agitation," that "Austria-Hungary will take no steps against Serbia," an idea which subsequent events have belied. A further quotation is interesting as showing how unexpected the Austrian thunderclap was to even this well-informed court organ:

"This self-restrained attitude of the Danube monarchy is more intelligible when we consider that no decided result of the inquiry into the responsibility for the Serajevo assassination has yet been arrived at. . . . But we believe that we are not mistaken when we declare that to men in other states where moral order reigns this attitude of the Danube monarchy is incontrovertibly correct."

In contrast with this was the statement by Mr. Clemenceau in his *L'Homme Libre* (Paris) that Europe was on the brink of war. He intimated that if Russia backed Serbia, Germany would side with her ally, the Danubian empire. To quote his words, which are echoed by the *Petite République* and the *Humanité*:

"Never since 1870 has Europe been on the brink of a war of such magnitude. Austria's present attitude toward Serbia can only be understood when we consider the weak complacency of

Europe in permitting Francis Joseph to appropriate Bosnia-Herzegovina."

A prediction comes from Turkey that Austria will get the worst of it in a conflict with the Slavs. As Ali Kemal Bey writes in his paper, the *Peyam* (Constantinople):

"The Slavs are proudly ready to face death in any form in their effort to destroy the enemies of their race. See what a conflagration a mere spark can touch off! In Austria the Slavs are at swords' points with the ruling races. Will not the Slavs of the Balkans and Russia rush to their help? If war comes, it is Austria that will suffer, while the Slavs under other governments will profit by the fight; for Austria has more than twenty million Slavs in her population, and inevitably they will, early or late, side with their compatriots. One of the English journals said yesterday, 'Whoever in Eastern Europe lifts his head against Russia or the Slavs will in due time share the fate of the Austrian Crown Prince. So it would have been with Prince Alexander of Bulgaria if he had not abdicated. The Bulgarian leader Stambouloff was killed because he was an enemy of Russia. Had not Russia a finger in the assassination of King Alexander of Serbia? Had not the taking off of Austria's Crown Prince the same cause?' This finding the end of the cord that forced these assassinations in Russia is correct, we know, but while the Crown Prince was politically opposed to Russia, he was friendly to the Slavs; and was not the Princess, so ruthlessly murdered, herself a Slav?

"National rivalries were in evidence in the last century in every part of Europe, but those principal nations, the Germans and Italians, for example, observed reasonable limits in their ambitions. The Slavs are of an earlier race, and have not been able to shake off the barbarities of their origin, bloodthirsty still even in their most sacred aspirations. Here is, in our opinion, Europe's most troublesome problem in the Balkans. The regions occupied by such people can not escape ebullitions of racial conflict attended by mad excesses. The established governments can not remain long at peace.

"It is the special bad luck of the Ottomans that they were mixed up with such people—in fact, almost buried among the Slavs. It is their good luck that they have now escaped."—*Translations made for THE LITERARY DIGEST.*

INCREASE OF RUSSIA'S ARMY

EVER SINCE the signing of the Treaty of Portsmouth, which closed the most disastrous chapter in the history of Imperial Russia, the Government of the Czar has been planning a large increase in its effective military force. During the last session of the Duma these plans took definite form. At a secret session the Russian Council of the Empire formed in conjunction with the popular assembly a scheme which was immediately accepted by the Czar and the General Staff and was enacted into law. Naturally the French press have taken the greatest interest in these developments, which are indeed of the highest importance to France as the offensive and defensive ally of the great northern Empire, and of interest to all the world in the present crisis. We gather from the leading paper of Paris, the *Temps*, that the main features of the army improvement consist in a prolongation of the time of conscript service and a numerical increase both in the forces kept upon a war footing and the reserves who are scattered through the country on a peace footing. The writer in the *Temps* says:

"It is apparent that Russia has vast facilities for the building up of an army, thanks to her almost boundless resources in the way of population. Rich as she is in her people of 180,000,000 souls, she has only to make a soldier out of every hundred of her subjects in order to create an army of 1,800,000 men. This is exactly the formula which she is now putting into practise and which will result in the marshaling of an armed force in exact proportion to the national birth-rate."

The writer proceeds to detail the measures by which the Russian Government will achieve its object. In the first place, Russia will be following France in her prolonged period of conscript service as well as by the increased number of recruits levied each year. To quote further:

"The ukase of March, 1906, modifying the military law of 1874, fixt the duration of conscript service to three years for

the infantry and artillery and four years for the other arms of the service. The result of the new law is to increase the number of the troops enrolled for active service and to incorporate in the reserves an order of younger men. These younger men of the reserves, being largely increased in number, necessarily become, on an order of mobilization, sufficient for active service without having recourse to regiments of more advanced age. . . . The new rule, providing for the increase in the number of recruits required each year, produces effects of still wider import. From 1908 to 1913 the size of the Army scarcely ever varied from 1,300,000. It is not difficult to see how such a measure, together with the lengthening of the time of service, is of great importance in obtaining soldiers who are young men, facilitating the mobilization of an army and insuring the highest standard of military service."

How large will Russia's standing army be under the new law? The *Temps* figures it out as follows:

"The present number of effectives will be increased by 400,000, bringing the peace force up to 1,700,000 by the middle of the year 1918. We may calculate that their number will be about 2,300,000 men by the first months of 1919, if we include those of the fourth class, who are barracked under the colors during the winter season. These enormous resources will be used to strengthen the existing regiments and brigades of the standing army and to establish new military commands."

The article concludes with a hint to those politicians who, like the Socialists, have opposed the new French military law, which is calculated to achieve in France what the Duma's new law is achieving in Russia, and we read:

"Is it necessary to add that we are the first to be interested in this Russian new order of military affairs and that if we would aid her by our military preparations, we must maintain a firm adherence to the rule of three years' service which Russia has made the essential basis of the military efforts?"

But a more searching and critical view of Russia's military development is taken by a writer in the *Revue Bleue* (Paris), who signs himself Maurice Lair. He speaks as follows:

"This Muscovite bear is certainly developing in a terrible fashion! He takes on weight; he sharpens his claws. Of course the territory of the Empire from the Baltic to the Bering Straits is of unequal value. It does not present such a surface of fertile lands as lie at the disposal of other peoples. Its forest wealth is immense. Its mineral resources are for the most part unknown. The vast rivers which cut through its plains are destined to become the arteries of trade, and all these boundless sources of wealth are only just beginning to be utilized. The population increase at the rate of a million a year. . . . But there are many shadows in the picture. This enormous population of nearly 180,000,000 is composed of some twenty different races, who do not always live in perfect harmony. There are

Great and Little Russians, Poles, Finns, Roumanians, Germans, Orientals of every tribe; they do not represent a homogeneous mass united for resistance. Nevertheless, they form a mine of men almost inexhaustible. . . . And the men vanquished at Mukden have learned the lesson of defeat, and now the Russian Army is on the way to complete regeneration."

Mr. Lair adds that the Russian rifles are inferior; that Russia's air-ship equipment is only rudimentary, that the extra corps that were projected have never materialized, and railroad communication with the frontier is deficient. He speaks of war with Germany as follows, after repeating the military details which we have quoted above from the *Paris Temps*:

"There are many disquieting signs in the relations between Germany and Russia. One of them is that Russia shows herself to be too touchy—Russia, the Eastern Empire whose recent defeat destroyed the equilibrium which has never been restored. Russia is now the object of international covetousness. . . . It would be too much to say that Russia desires a war with Germany and that she has been preparing for it. Predictions of war are rarely verified. War comes like a thief in the night. The two sovereigns concerned have too great a horror of blood to shed it wantonly. If the two peoples come to blows, it will be under the compulsion of inevitable necessity. Economic phenomena are the substructure of history. This means that history advances through the antagonism of peoples moved by the nature of their conflicting needs, and thus economic fatalities sometimes dominate the will of man as the blind divinities of antiquity were said to do."

Something bordering on contempt for the Russian Army is shown in a leader in the *Berlin Militar Wochenblatt*, which is a paper of a semiofficial character. It says:

"Just as the Austro-Hungarian Army is much underestimated by Europe, so the fighting power and worth of Russia's Army are overestimated. The Russian Army is numerically an extraordinarily strong one, as no one can dispute. Mere numbers in war are fortunately not decisive, as the wars of Frederick the Great teach that more important factors must be considered. Morale, good leadership, armament, and equipment are better than expanse of territory with a network of railroads.

"It may not be out of place to recall that Russia has in recent times never won a victory from an army which was its equal. In 1877, without the aid of Prince Charles of Roumania it would not have even defeated the Turks. When opposed to the modern Japanese Army Russia received a most serious defeat.

"There has been much talk in the press about the creation of five new Russian army corps. They do not exist. Without exaggeration it can be said that the German Army since 1870 has been working unceasingly with the greatest intensity and unremittingly to improve itself. . . . All needful military preparations for war will be made with German method and thoroughness.—Translations made for THE LITERARY DIGEST.

CANADA'S REJECTION OF THE HINDU

PRECISELY OPPOSITE TREATMENT is handed out by the British and the French to their dark-skinned fellow subjects looking for work. While the Sikh tries in vain to enter British Columbia and has actually been forced, under the guns of a Canadian vessel of war, to weigh anchor and turn back to Asia, the Kabyles from Algeria, agricultural Berbers settled in the uplands, are invited to take up their residence anywhere in France, from the Mediterranean to the British Channel. Consequently the coal-fields of the North and the vineyards of the South are now employing several thousand African laborers. The French are handicapped in the development of their unexploited lands by the low birth-rate and high death-rate demonstrated by their annual statistics. There has recently been opened up in France a Black Country equal in extent to that of England. "The satisfaction given by African labor in France," says the *London Times*, "has drawn attention to the vast national reservoir of labor which France has at her disposal in her colonies."

A like "vast reservoir" to be found for Canada in modern Hindustan, thinks the *Toronto Courier*, and a fair field for their industry would be found in "the Middle Western provinces of Alberta and Saskatchewan, where they would make good husbandmen and would eventually be absorbed by the rest of the population." This idea the *Vancouver Sun*, whose readers are more nearly interested in immigration problems than those of the more densely populated East, dismisses as "an absurd suggestion." To quote from its editorial on this point:

"We should imagine that the people of the prairie provinces are entitled to be consulted in a matter of this kind before it could be seriously considered, and we are greatly mistaken if our fellow citizens east of the mountains are any more inclined than we in British Columbia are to have Hindu coolies established in their midst. Of course the idea that these Orientals could be assimilated in the Middle West any more than they can be in British Columbia is an idle one and not worth discussing. They can not be absorbed anywhere in Canada—at least not within a hundred years' time. Nor have we any assurance that they would make good farmers. In fact, there is every probability that they would be unable to adapt themselves to that occupation on the Canadian prairies, would fall behind the rest of the agricultural population, and would drift into the cities and towns, where their trading instincts and their low standards of living would result in demoralization of the labor market and the business of the small shopkeeper. Nor would the fact that the presence of this coolie population, in that part of Canada, would constitute a source of cheap labor for the railway enterprises of Mackenzie and Mann, compensate the public for the peril to which they were thus subjected."

The Eastern papers as a general rule express their anxiety about the Hindu situation. Thus we read in *The Herald and Morning Star* (Montreal):

"It is singularly unfortunate that the first engagement of the Canadian Navy should have to be directed against fellow British subjects on a vessel owned by Britain's only ally in all the world. The difficulties of the Hindu situation on the Pacific coast are fully appreciated, and the law must be upheld, whatever the consequences. Yet we can not feel that the problem has altogether been well handled, and there are many thousands in Canada who deeply sympathize with their fellow subjects from India."

"These men, some of whom are retired service men, now find themselves absolutely forbidden, under any conditions, to set foot on one part of that Empire they have helped to preserve. They behold in the same country pagans from alien China admitted if they are prepared to pay the head money; nomads from southern Europe doing municipal labor in Canadian cities and working on Canadian railway construction; the debased Siwash Indians working in Canadian fisheries and Canadian factories; the lowest type of negro from the plantations of the Southern States admitted without question. They know all this, yet they, a proud race, of approved bravery and ancient and honorable lineage, are barred, under any and all titles."

"We should deal very gently with our Hindu friends. The resources of diplomacy should have been exhausted long before the present crisis. The first shot fired to-day will echo in the uttermost parts of Continental Asia, and will ring through Japan, and the troubles in Ireland may seem as a mere picnic in contrast."

The matter can only be settled, thinks the *Toronto Daily Star*, by "a conference of representative Canadians and representative Hindus," which "would very likely result in an amicable and satisfactory agreement." The next Imperial conference would be the best assembly for the discussion of the question, says the *Winnipeg Tribune*, which concludes:

"Canada might do a real service to the Empire by proposing some workable policy in regard to Hindu immigration. The question is one simply of numbers. We could not afford to allow Hindus to enter Canada in hundreds of thousands, and we do not believe that Hindus have any desire to migrate in such a way. They appear to be anxious to assert the right of freedom of movement within the Empire. The assertion of that right is quite compatible with restriction. We ought to make it plain that our restrictive measures are not offensive to the East Indian, but for our own protection. If this question is taken up at the next Imperial conference, Canada may uphold her own interests, and at the same time do a real service to the Empire."

The *French Patrie* (Montreal) regards the course taken by the Hindus as "a mere bluff" and speaks of the would-be immigrants as imitators of the English suffragettes. "They tried a hunger-strike, but if they fasted by day they feasted by night," and "when they saw a ship of war, even so insignificant as the *Rainbow*, approaching, they evidently concluded that their bluff game was up." "If other cargoes of Hindus are hereafter coming in, in spite of British Columbia, the Canadian authorities, knowing what kind of people they have to deal with, will not indulge in temporizing, but tell them plainly that they can not get in." "It is high time," declares the *Ottawa Evening Citizen*, "that some one in authority realized the gravity of the Hindu problem in British Columbia. . . . To use the little British Canadian cruiser *Rainbow* against British Indian subjects would seem to be the height of inconsistent Imperialism."

That the question of Hindu immigration is not yet settled for Canada is proved by the report that a second ship-load of 500 Hindus is heading for British Columbia and that Commander Hoss, of the *Rainbow*, has been ordered to search for and "arrest the ship."

Some more serious incidents of recent occurrence seem to point to the fact that the Hindus are actually bent on an armed resistance to Canadian expulsion and are secretly plotting against British Indian as well as the Canadian authorities. We read in the *Vancouver Sun* the following details of this smoldering Hindu sedition:

"Surdah Singh has been arrested at Huntingdon by Canadian officials after he had been escorted across the international boundary-line by United States immigration officers, according to word received in this city. The charge preferred against Surdah Singh is that of carrying concealed weapons, a number of revolvers having been found on his person."

"Surdah Singh's arrest followed after an effort had been made by the East Indian to buy firearms in wholesale lots in Sumas, Washington. The United States police are now assisting the Canadian authorities in the attempt to round up five other Hindus who, it is claimed, are trying to purchase large quantities of firearms in the small border towns of Washington State."

"It is believed that the attempt to purchase, in wholesale lots, firearms and ammunition by the local Hindus is part of a well-arranged plan to ship firearms and ammunition to India, where an attempt would be made to smuggle them into the country to assist in the declared intention of some of the Hindu leaders to carry on the work of sedition and revolt against British rule, following the action of the Canadian immigration department in refusing the *Kamagata Maru's* ship-load of East Indians to land on Canadian soil."

BURNING INFECTED BUILDINGS IN HAVANA TO HALT BUBONIC PLAGUE.

THE MENACE OF PLAGUE

IS THERE REALLY DANGER that the bubonic plague, now smoldering in various places on the American continent, may burst out into the flame of active pestilence? American medical journals have not hid the facts, but none of them has sounded a clear note of warning. This comes from over the water. In its issue for July 11, *The Lancet* (London) sets forth what it conceives to be the facts of the case in brief and succinct fashion, and altho perhaps they justify no present alarm, none of us can afford to pass them by or to minimize them. *The Lancet* heads its article, "Plague Clouds in the West," and it says:

"At the present time plague clouds are appearing on the horizon and threatening to approach the United States. Altho some of these clouds may as yet seem small and at a considerable distance away, they can not be altogether disregarded. We have already on many occasions called attention in these columns to the danger arising from the protracted and extensive epizootic of plague among the hordes of ground-squirrels which inhabit a large part of the State of California. American as well as other epidemiologists have long recognized the risks of a human epidemic originating at any time, by extension of infection from ground-squirrels to local rats, which often share the same burrows, and from rats through the agency of fleas to man.

"From time to time sporadic human cases of plague are reported in the affected districts of California, and these instances are invariably associated with infected ground-squirrels; the last reported case of the kind occurred this year in May, and was fully confirmed by bacteriological examination. To the north of California, and separated from it by Oregon, is the State of Washington, abutting on the Pacific. On the coast of this State is the rising port of Seattle, on Puget Sound, not very far from the Canadian frontier, having important connections with the interior by means of the Northern Pacific and other railways, and having also a considerable coasting as well as transpacific trade.

"At the end of last year plague-infected rats were discovered along the water-front of this city, and notwithstanding the strenuous local efforts to suppress the epizootic, other infected

rodents have been found since then, week by week, up to the present time. Only one suspected fatal case in man has so far occurred, but so long as the rat population of Seattle remains infected, so long will there be danger of the disease extending to man. A few days ago information reached us that on June 28 two persons in New Orleans had been attacked by plague; since then three more attacks have occurred with two deaths. Whether the first two cases were imported or were due to existing infection smoldering unrecognized in that city it is not possible as yet to say. Unless the sanitary condition of New Orleans has been greatly improved since 1912, it is hardly in a satisfactory state to resist the invasion of plague. The disease has also been occurring, in a dropping fire of cases, in the West Indian island of Cuba, which is under the protection of the United States, and with which it carries on a considerable commerce.

"It is possible that the two first cases in New Orleans may have been associated with the plague infection now existing in Cuba, as there is much trade between these ports. Lastly, it may be mentioned, in view of the increasing connections now being established between the United States and the Isthmus of Panama, that plague, said to be of the pneumonic type, has been for some time and is still manifesting itself in Colombia, of which State the Panama Canal zone at one time formed part before its transfer to the United States. The correctness of the diagnosis of plague in the Colombia cases has been denied, but it has to be remembered that many of the South American Republics make a practise of denying pointblank the existence of plague and yellow fever within their borders in order to escape the inconveniences of quarantine."

In the face of these facts it can scarcely be disputed, *The Lancet* thinks, that plague clouds threaten the United States, and it calls attention to articles published in *Public Health Reports*, the official organ of the U. S. Public Health Service, in one of which the danger arising from the infected ground-squirrels in California and the plague-stricken rats of Seattle is freely admitted, as also the advisability of giving exact information concerning the disease as far as practicable to all persons who

may at very short notice be called upon to take their part in a comprehensive antiplague campaign. The writer goes on:

"Another of the articles in *Public Health Reports* deals with some of the difficulties met with in the diagnosis of plague, mention being specially made of cases in which plague has been mistaken for filariasis; and an instance is quoted where a patient really suffering from filarial lymphangitis was thought to have genuine bubonic plague. The attention of practitioners in regions such as the West Indies, where filariasis occurs, was specially called to these cases. The Public Health Service of the United States has in its ranks a large number of highly trained and competent medical officers, many of whom possess special experience of plague gained in various parts of the world. The services of these experts would at once be available in the event of the disease showing any tendency to extend beyond its present limits.

"Against this, however, is the assertion, made by those who apparently know, that some of the towns and districts likely to be invaded, if the infection spreads, are hardly in a

signs,' a building inspector from an adjacent large city. It is not strange that such results as this are common when laymen legislators or administrators meddle with engineering matters."

AN ARTIFICIAL NIAGARA AT GATUN

ENGINEERS HAVE SPOILED many waterfalls, but those who have built the Panama Canal have endowed the world with a new one, discharging a greater volume of water than passes over Niagara, and wonderfully beautiful as a spectacle. This fall is the one that flows over the spillway of the great Gatun dam. Vaughan Cornish, an English engineer, who contributes an article entitled "Scenes on the Panama Canal" to *The English Review* (London, July), writes of it in the most enthusiastic terms. The Gatun spillway is of course but an incident in the construction of the mighty waterway that unites the eastern and western oceans; yet it is worth going far to see, Mr. Cornish tells us. He writes:

"The rainfall and the rivers have flooded the low valleys within the calculated time, the great dam has held the waters up, and the ground on which it was built has not allowed them to escape by percolation. Thus the engineers can afford to 'waste' water through the spillway gates. The spillway consists of a curved concrete wall covering a gap in the center of the great dam to a height of sixty-nine feet above sea-level, surmounted by concrete piers between which are fourteen flood-gates, great steel shutters which can be raised or lowered by electric power.

"One morning in February, seven of the fourteen gates were raised for a few hours. When I arrived on the spot these gates were already open and the waters of the lake, pouring through them in converging torrents, met in conflict on the northern side. The water is further broken by short pillars called baffle-piers and is flung up in a huge seething dome. This heaves up and down as if

panting in the struggle. A cataract of water flows out from the foot of the dome and races seaward down the smooth concrete channel to the sea. Great standing waves diverge in diagonal ridges from the side walls of the channel, and against the piers of the railway bridge below the water rises up in crests shaped like the bow-wave of a torpedo-boat and some fifteen feet in height. In the spillway-fall and spillway-rapid we have an artificial reproduction of the horseshoe falls of Niagara and of the whirlpool rapids, but with the latter brought close to the foot of the falls, instead of being separated by a long, deep pool of quiet water. When all the gates of the spillway are opened, the discharge is, indeed, greater than that of the Falls of Niagara.

"I was present during the closing of some of the gates. In response to the movement of an electric switch at a distant station the great steel shutters slowly and quietly sank into the flowing water, shutting off one after another of the seven convergent waterfalls. The accompanying changes in the waves of the spillway torrent were very remarkable. The quantity of water being reduced, the depth of the torrent was correspondingly diminished, and when not more than one or two feet, a great traveling wave with a foaming front and resembling the bore of the river Severn was discharged down channel at each partial subsidence of the seething dome of water which is formed where the cataracts converge.

"Engineers have spoiled many waterfalls, but at Gatun they have presented the world with a new waterfall which it is worth going far to see."

PART OF GATUN'S "ARTIFICIAL NIAGARA"

When all the gates of the spillway are open, we are told, Niagara is outdone.

satisfactory sanitary condition such as would enable them to repel successfully the insidious onset of plague. Perhaps the present season of the year is not altogether favorable for the immediate spread of plague in North America, but there is always the risk that the infection may gain a footing in one or more places where, under favoring conditions, later on it may break out with renewed virulence and spread to more populous districts in the interior."

AMATEUR CIVIC ENGINEERS—The absurdities resulting from bridge competitions, when they are conducted by the average city council, come to light, says *Engineering News* (New York), every time a competition is held. It goes on to say:

"The latest which has been brought to our notice is in a small city in the South. There were five entrants in the competition, which was for a concrete bridge to cost about \$75,000, but the council narrowed them down to two because the other three designs were ribbed arches, and, according to the council, public sentiment was against holes in a bridge! This council was made up as follows: One locomotive engineer, one street-car conductor, one drummer, one dentist, one insurance man, one ice-cream manufacturer, one grocer, one dry-goods man, and one lumber dealer. Obviously, they were quite competent to decide upon a bridge design. With unexpected modesty, however, they have called in, 'to decide upon the respective strength of the two de-

CALIFORNIA'S VOLCANO: ERUPTION OF JUNE 9.

A series of photographs, showing successive stages of eruption, appeared in our issue of July 18.

A VOLCANO OF OUR OWN

WHAT is apparently the first scientific account of the activities of Lassen Peak, the new California volcano, is contributed to *The Engineering and Mining Journal* (New York, July 18), by W. H. Wright, a San Francisco mining engineer who visited the mountain during the recent disturbances, and not only observed but photographed some of the most interesting features at considerable personal risk. Mr. Wright's party went by rail to Keddie and thence twenty-six miles by automobile to Big Meadows, where saddle horses were secured. A ride of thirty-five miles brought them to Drake's Springs, only seven miles from the summit of the peak. Says Mr. Wright:

"About fifteen miles from the mountain, in a direct line, the first sign of volcanic dust was seen. A slight film covered the ground. This seemed to lie in a narrow belt, as we soon passed through it when our course was changed. At various times during the ride glimpses of the mountain were caught, and a column of steam was always seen rising high above the summit. At Lee's ranch, in Warner Valley, ten miles from the peak, we witnessed the second eruption of the day. This happened at 7 p.m., and was an impressive spectacle. . . . A column of smoke and steam rose to a height of at least 1,500 feet above the mountain-top. In appearance it much resembled the dirty white exhaust of a coal-burning locomotive. . . .

"That evening, after reaching Drake's Springs, it was decided that the next day could be well spent in recuperating and visiting the wonderful hot springs that occur at many points in this little valley. The next morning, Monday, June 15, the party visited Tartarus Lake. This is a pool occupying a craterlike depression, completely surrounded by boiling springs and mud-pots. The steam from these has a decided odor of hydrogen sulfid. The area of this pool is approximately an acre. One large spring at the south end is almost a true geyser in its intense bubbling and spouting of steam. Two and one-half miles southeast of this lake is Geyser, a large boiling spring, which formerly spouted to a considerable height, but is now quite feeble in its action.

"Two miles northwest of Tartarus Lake, and in the direction of Lassen Peak, is situated the Devil's Kitchen. This consists of a large number of solfataras and hot springs that are on both sides of a ravine, through which runs a good-sized mountain stream. Some of the springs actually bubble up through the water of the creek. The action of these springs varies from the

sluggish mud-pots to the violently boiling springs that are, in fact, small geysers. . . .

"Tuesday morning, June 16, guided by Harry Kaul, the party left Drake's Springs for the summit of Lassen Peak. Kaul had made two trips to the top of the peak since the first eruption on May 30. The trail leads through a magnificent growth of timber. Above 6,000 feet altitude the traveling was done over hard snow, which as we neared the top became very deep. It easily supported the horses and made the ascent much easier than at other seasons. Even close to the peak only a slight amount of dust covered the snow."

The ridge at the top was gained at 12:30, and the party had its first view of the crater, afterward descending the slope into the cup-shaped depression that marks the site of the ancient crater. The new crater was seen to have broken out on the northwest side of this, seemingly formed by steam escaping under high pressure from a fissure. We read on:

"The steam forced its way through the fissure and formed a narrow crater, the sides of which had begun to cave, rapidly widening it. The pictures were taken at great risk. Aside from the danger of an outbreak of the crater, the danger from the caving sides was great. In order to get good views of the pit, it was necessary to go close to the edge. Huge cracks extended back 25 and 30 feet. Every few minutes great masses would fall from the sides. A short time after one of the pictures was obtained, the place from which it was taken suddenly fell into the hole, sending up a cloud of dust and making a spectacular display, which, unfortunately, was over too soon to be photographed, as the party was busily engaged in eating lunch. The volume of escaping steam varied from moment to moment. . . . In appearance and odor the steam resembles that escaping from the boiling springs previously mentioned; in fact, it was impossible to detect any difference. That the vapor is steam is evidenced by the fact that it condenses and disappears after rising into the air for a short distance. The hole is about 100 feet in width and 500 feet in length, and large quantities of huge rocks were thrown out. One . . . of them must have weighed at least two tons. The deep snow, on the north slope of the south side of the old crater, which was covered with dust, sand, and rocks, contained several hundred holes which had been caused by falling rocks. These must have been hot, as they were deep in the snow, which is as hard as ice; also, the sides of the holes are perfectly smooth, and there are many large stones lying on top of the snow beside these holes. Of course, it is possible that the unburied ones did not fall from as great a height as 11

that are buried. A stone lying 1,000 feet from the crater measured 30 x 54 inches. As it was deeply buried, the thickness could not be measured.

"Small heaps of crumbled rock lying on the snow showed that some of the stones crumbled upon being suddenly cooled by it. The lookout station of the Forest Service, situated on the highest pinnacle of the mountain and about a thousand feet from the crater, resembled a large salt-shaker, the roof having been perforated in many places by falling rock. The largest hole was 12 inches in diameter and clean-cut. At the edge of the crater, debris from the different explosions lay on the snow to a depth of three or four feet. This gradually diminished to a depth of 6 inches at the top of the ridge surrounding the cup of the crater. The deposit has been classified as descending from a great height. Upon the snow were stones of various sizes. Next is a deposit of coarse sand, upon which is a layer of very fine dust that closely resembles Portland cement. There were no cinders or lava. The only indications of heat were the hot stones and steam. The mountain is composed of dacite, which has the appearance of gray granite. If one could collect the debris from a blast in this rock, he would have exactly the same material that has been cast up by the present eruptions.

"The edges of the fissure are covered with a yellow deposit that appears to be sulfur. This could not be verified, as it was impossible to reach the fissure. The presence of sulfur is not unexpected, as deposits of sulfur are found at many of the hot springs. An odor of sulfur was noticed in the dust, but it was so faint that it could not be determined whether it was the hydrid or dioxid.

"The evidences on the ground bear out the belief that the material thrown out by the outbursts consisted of debris from the walls of the ancient crater broken and forced from the fissure by steam under great pressure. Much of this material fell directly back into the new crater or caved from the side, closing the vent and making other explosions necessary to clear the outlet. Lassen Peak is 10,437 feet high and is the southern terminus of the Cascade range. Like many other mountains in this range, it is an extinct crater."

TO GROW WHEAT IN ARID LANDS

A NEW METHOD of raising wheat in arid countries has recently been made public by two Italian agriculturists, Messrs. C. and F. la Marca. The essential feature of the method consists in inducing the plant to form a number of layers or "stages" of roots. It is thus described in *L'Illustration* (Paris, April 18):

"The process comprises two operations. The first of these is the superficial sowing. After the earth is made ready, having its furrows about fifteen inches apart, separated by ridges of earth, the seed-grain is planted in the furrows at a depth of an inch and a quarter. In these conditions germination is rapid, with the formation of primary roots in October. The second operation takes place at the end of November, and consists in heaping half the earth of the ridges against the lines of grain to right and to left as soon as the young plants have three or four leaves. This encasement buries the 'collar' of the plant deeper without injury and induces autumn suckering and the sending forth of a new set of roots, adventitious roots, sprouting above the collar. Consequently the stalks are multiplied. Then at the end of December a new encasement is made by heaping the rest of the earth in the ridges against the lines of grain.

"The plants are now well suckered with the collar buried three or four inches below the new level of the soil, which is now flat, the earth of the ridges having filled up the furrows. There is then a new sprouting (the second) of adventitious roots; the stalks develop and each one becomes a main stalk. Hence both the number of main stalks and the supply of roots have been multiplied.

"In February-March it is weeded to maintain the reserve of water in the superficial layer, according to the principles of dry-farming, and in April, shortly before the coming of the grain, it is earthed up, both to conserve the water in the soil and to protect it against the sun's rays. The La Marcas insist on the importance of the fifteen-inch distance between the furrows; the result is incomparably better. By following their mode of procedure a yield of over 45 bushels an acre was obtained with a profit of 351 francs (\$70), in spite of the loss to rust, hail, etc. These figures are of importance and

ought to encourage the practise of this mode of wheat culture in arid regions."—*Translation made for THE LITERARY DIGEST.*

ARE LIFE-BOATS LIFE-SAVERS?

AT THE TIME of the *Titanic* disaster, when it was realized that all on board could have been saved if the liner had carried more boats, a cry went up for compulsory legislation on the subject. So the ships now sail with their decks covered with boats—enough to float every passenger. But on May 29 a steamer so equipped met destruction in such a way that her boats could not be used, and the loss of life was again fearful. *The Scientific American* (New York), which has deprecated the life-boat agitation all along, and has favored making every ship "one big life-boat"—a plan that has been laughed to scorn by some authorities—points to several recent disasters as bearing out its contention. In an editorial headed "'Boats for All' a Failure," it says:

"Gradually, but very surely, it is coming to be realized that the only way to safeguard the lives of passengers at sea is so to build the ship which carries them that it shall act, in case of necessity, as its own life-boat—in other words, to make the construction such that no accident could send it to the bottom with the suddenness which marked the sinking of the *Empress of Ireland*.

"The principle of safeguarding the passengers by providing boats for all is faulty, for the reason that it assumes that certain conditions of wind, weather, and time, all of which must be present if the boats are to be launched, will exist when the emergency calls for their immediate use. In the case of the *Titanic*, these conditions fortunately happened to exist. There was no wind, the sea was calm, and the two hours and twenty minutes from the collision to the sinking of the ship provided sufficient time to utilize practically all the boats that the ship carried. In the case of the *Empress of Ireland*, however, altho there was no wind and the sea was calm, and altho there were more than sufficient boats to carry every one on board, the ship listed so heavily, and went under so quickly, that only a very few of the boats were got into the water."

The writer notes that *The Engineer* (London), a high authority in maritime matters, has come over to this point of view. In its issue of June 5, in discussing the recent disaster, it said:

"One can not help reflecting that here again, as in the case of the *Volturno*, the principle of 'boats for all' has signally failed. The *Empress* could have carried every soul on board in her boats, but she had no chance to use them. . . . The *Empress of Ireland* was built by Fairfields, in 1906, on lines that were considered the best before the loss of the *Titanic*. She had an extensive double bottom, and was well divided, but she had no inner skin. Whether an inner skin would have saved her, under the circumstances of the collision, is a question which the evidence of the divers may help to answer. . . . But there seems to have been no question of cutting her in two. The effect, from the meager evidence we have, seems rather to indicate that the plates were ripped off by the bow of the *Storstad*, as we rip the lid off a box with a screw-driver. If the divers can substantiate this view, a very strong case for the double inner skin will be presented. For it is probable that while many ribs would, of necessity, have been badly distorted, yet the inner hull might have held, at least for a time."

The writer of the *Scientific American* editorial goes on to say:

"We attach the more importance to this admission on the part of our contemporary, for the reason that its attitude at the time of the *Titanic* disaster was rather unfavorable than otherwise to inner-skin construction. The only valid objection against the inner skin, particularly if it consists of the inner walls of coal bunkers, is that the inflow of water is confined to one side of the vessel, and that heavy heeling, which might become disastrous, would be occasioned. The answer to this is that, if provision were made for flooding the corresponding compartments on the opposite side of the ship, it would be possible to maintain her equilibrium by quickly admitting sufficient water for the purpose. Battle-ships are built on this principle, and there is no constructional difficulty which would prevent its being applied effectively to large passenger-carrying ships.

"There is yet ample time for the consideration of amendments to the convention drawn up in London, last winter, by the International Conference on Safety at Sea. The insertion of a clause, rendering the use of some form of inner skin on the large passenger-carrying ships, not, as it is at present, optional, but strictly obligatory, would round out and complete the otherwise excellent work of that congress.

"As these words are being written, there comes the startling information that, for the third time in less than a month, a transatlantic liner has been run into by another ship. A little over two weeks after the loss of the *Empress of Ireland*, the *New York* was rammed by the *Pretoria*; and a few days later, the *Kaiser Wilhelm II.*, while crossing the English Channel, was struck squarely amidships by another vessel. Both ships, fortunately, are subdivided far more effectively than the average ocean liner—the *New York* having closely spaced transverse bulkheads, carried to an unusual height above water, and the *Kaiser Wilhelm II.* carrying a continuous inner skin throughout the engine- and boiler-room spaces. The *Kaiser* reports that water gained admission only to one compartment, probably a side bunker of small capacity. Had she been built as are 95 per cent. of the passenger-ships, the water would have had free access to the whole width of the ship."

WHY WE ARE RIGHT-HANDED

RIGHT-HANDEDNESS, we are told by Dr. Félix Regnault, in an article summing up the present state of knowledge on the subject, in the *Revue Scientifique* (Paris, June 13), is simply a matter of the division of labor. The right hand is the hand of skill—of artistry—while the left remains that of mere brute strength. Division of labor is an advantage, and hence we have adopted it in our evolution. The reason why the right hand has been chosen by nature to be developed in this direction is that the left side of the brain, which controls it, is somewhat better supplied with blood by the carotids than the right. But why this inequality in the carotid arteries? Apparently this, as Kipling would say, "is another story," and science is not ready to tell it. Writes Dr. Regnault in substance:

"Animals are ambidextrous, because with them there is no division of labor, or very little of it. Man is right-handed because with him the division of labor is pushed to its furthest point.

"It is for reasons of utility that man prefers to use one hand for delicate work. He selects the right, but if it is unavailable he is able to employ the left. It is well known that persons whose right arms have been amputated or paralyzed can educate their left arms and are finally able to use these as well as those that they have lost. It is also well known that certain professionals, pianists, for instance, or violinists, can execute very difficult movements with the left hand."

Dr. Regnault declares he has never seen any "really ambidextrous persons, if we are to understand by this persons who use both hands for all purposes, equally well and indifferently." Those who say that ambidextrous persons are not rare, he says, call by this name left-handed persons who have learned in infancy to execute certain difficult acts with the right hand, such as eating, sewing, or writing. But these same persons use the left hand spontaneously when they execute natural difficult motions, such as throwing a stone at a mark, etc. Moreover:

"It is not proper to say that a man is ambidextrous who has with difficulty learned to execute a single act indifferently with one hand or the other. I once knew a left-handed painter who had learned to paint with either hand. But no matter how skilful the movements of a pianist's left hand, the most delicate work is always reserved for the right. With musicians the left hand is the mechanical hand; the right is the artistic.

"Some physiologists have maintained that educators ought to try to make children ambidextrous. According to them 'the uniform development of our two hands would contribute to make a whole part of the brain, now neglected, an organ capable of doing the work of civilization.'

"Now we have seen that the left hand is not inactive, but

does a different kind of work from the right. To force our children to be ambidextrous would be to oppose their natural development, which tends to the division of work—it would be to struggle against the universal law of the least effort and to make them unskilful.

"Why does the child use his right hand generally for acts of skill, and why have the left-handed always been the exceptions? Daresey, the distinguished Egyptologist, tells me that the right hand has been used to eat with for over six thousand years.

"To explain this preference, many theories have been advanced. Some authors have invoked the influence of public opinion, which thinks little of the left-handed, regarding them as 'sinister' and giving them a bad name. This is to take the effect for the cause.

"It has also been asserted that a child becomes right-handed because of imitation and education. Even the form of the utensils he uses leaves him no other alternative. But these causes themselves could exist only by virtue of a natural tendency to use the right hand. Darcey has thought to explain this natural tendency by the mode of growth of the embryo, which at a certain moment turns over so that its left side is next the vitellus; hence the preponderant volume of the right side of the body and its superiority. In exceptional cases the embryo turns on the right side, which gives a preponderance of strength to the left, and consequently causes left-handedness.

"If this theory were exact, the subject having a total inversion of the viscera should be left-handed, whereas he is almost always right-handed.

"This fact, as well as the presence of the heart on the left side in the left-handed, also spoils the hypothesis of Herber, who asserts that our right-handedness is due to the fact that the heart is not so much affected by the muscular efforts of the right arm.

"Right-handedness is due to the predominance of the left hemisphere of the brain, which, owing to the intercrossing of the nerve fibers in the pyramids, controls the movements of the right limbs. It is, as Gratiolet has shown, heavier than the right. Consequently, as Broca has said, 'if we are ordinarily right-handed, it is because, at the moment when the child begins to use the hemispheres of his brain, the left one is more fitted than the right to direct a difficult or painful task.' And he adds, to explain this predominance, that 'the slight inequality in the circulation in the two carotid arteries gives this advantage to the left hemisphere and makes most men right-handed.'

"At present, we know no more about this matter than Broca did."—Translation made for THE LITERARY DIGEST.

MOONLIGHT AND TREE-GROWTH—In a recent article in *Steam Machinery*, by Dr. Leonard Keene Hirschberg, of Johns Hopkins University, on "Mahogany Forests," the writer says: "The felling of the tree is begun by the waning moon, partly on account of the superstition of the cutters, who have always been led to believe that moonlight offers the really proper illumination for such a ceremony; partly, also, because the experienced woodman has demonstrated that the mahogany-tree is the freer from sap, sounder, and of richer color than when felled before the full moon." After quoting this passage, *The Hardwood Record* comments on it thus:

"It may be asked in all seriousness how much longer the superstition will live which ascribes to the moon an influence over timber? This unscientific and unprovable claim has long held a place in the backwoods, where people were prone to accept the teachings of tradition without much concern about cause and effect; but it is rather late in the day now for educated people to attribute to the dead, inert moon an influence on vegetation. . . .

"If there is anything certain it is that the moon has no observable effect on the flow of a tree's sap or on the characters and qualities of the wood. It can be argued scientifically that it can not have, and it has been demonstrated in practice that it does not have, such effect. Apparently there is some mistake in the statement that the felling is done by moonlight, or with regard to any phase of the moon. Accounts of modern mahogany-logging operations in America and Africa do not mention that custom. In some of the tropical regions hauling logs from the woods is done at night because the heat by day can not be endured by the ox-teams; but the position of the moon is not taken into consideration."

LETTERS AND ART

AN ARTIST IN SPITE OF HIS FATHER

THAT GENIUS IS HEREDITARY is often doubted, but proof that it is may perhaps be found in the case of Karel Myslbek, of Prague, the son of Josef Myslbek, the most celebrated sculptor in Bohemia. That the son's growing

eminence is due to inherited gifts of the highest order, and not to the solicitous nurture of a slender talent by a doting parent in a favorable environment, is proved by the fact that the father gave his son neither instruction nor encouragement, and indeed withheld from him both moral and financial support. William Ritter, the well-known art critic, who contributes a sympathetic sketch of the son to the series of "Contemporary Artists" now running in *Emporium* (Rome), ascribes to this harshness of the father the somber nature of this young artist's work; for almost without exception his theme is that of human suffering, whether of body or of soul. The men and women he shows us are bent—but not broken—under the weight of poverty, illness, old age, or grief. Yet, poignant as is his portrayal of these mournful figures of the emigrant, the hospital patient, the beggar, the worn-out clown, they are never repulsive and never theatrical, but bear their burdens of human woe with the tragic dignity of patience and resignation. Of the father, Mr. Ritter says:

"He is the greatest sculptor in Prague, and, so to speak, the father of Czech sculpture. A man of veritable genius, a laborer silent, strenuous, and a trifle proud, it is to him we owe those grandiose and simple works whose value, tho they have not achieved fame outside of Bohemia, nor been reproduced in any of the art reviews, is known to every Austrian. The name of Josef Myslbek is in every mind, if not on every lip. The statue of St. Venceslav in the center of the largest plaza in Prague, the mausoleum of Cardinal Schwarzenberg, the group of legendary heroes of the original Czechs . . . the bust of Count Fr. Thun, are works which one day will be regarded as among the noblest and most beautiful examples of nineteenth-century plastic art."

It seems singular enough that such a man should fail to encourage his gifted son, give him permission to talk of art, or pay attention to his early efforts, but Mr. Ritter, who has long known both personally, assures us this was the case, and adds:

"Moreover, he gave him no aid toward his livelihood, and made no attempt to secure favors or protection for him, and the youth was obliged to become a professor in a lyceum in order to complete his studies. He had to find time outside to pursue studies in secret. Karel Myslbek was trained at the Academy

of Fine Arts in Prague in the spare time taken from his duties as a teacher. And history does not tell us that even to-day Myslbek I. is reconciled to the idea of a Myslbek II.; or whether the dean of sculpture in Prague recognizes as one of his best works the most serious Czech painter in the generation which to-day is in its fourth decade. But I have reason to believe

that this remarkable father may have seen clearly into the soul of his son and known what he would accomplish when he imposed upon him this harsh discipline.

"And now, in the analysis of such a character, we must consider the part played not merely by hereditary genius, but also by the influence of the ancient city, dark and cruel, whose history the artist knows so thoroughly; as also what he owes to that harsh, hard, headstrong nation. . . .

"Karel Myslbek recalls in a manner the Spanish painters. He has journeyed to Spain, has learned Spanish, and his favorite reading is in the Spanish classics. But it is certainly not for this reason that he is to-day an artist who seems to belong to Spain; on the contrary, it is because he is such an artist that Spain has attracted him. And it is because of this that he has wished to read 'Don Quixote' in the original and has delighted in Lope de Vega and the Romancero. And I defy any one to name a single one of this artist's works which would not have been different from what it is without the influence of Spain. It is true, of course, that outside Madrid the most numerous and most beautiful works of Velasquez are those in Vienna, and Karel Myslbek studied them at an early age as such a zealous workman knows how to study.

"Small, silent, and concentrated, like his father, he does not speak unless he is spoken

to. But if you question him you will be amazed; you will perceive that he has read everything and knows everything, without making any display of it. He has read some Greek and Latin texts which to-day are hardly known."

Mr. Ritter tells us further that his devotion to his art is almost religious, so intense and single-minded is it, so uncorrupted by concessions made for the sake of money or fame, and continues:

"I know some drawings of Karel Myslbek worthy to rank among the best of our time. They are not always pleasing to the eye, they are not made in order to attract or to be admired, but merely in order to be. . . . Few modern drawings are worthy to be placed beside them, and to find their peers we should have to search the museums of Italy and the Albertina of Vienna.

"There is no need to say that a character of this sort, mysterious, introspective, meditative, and solitary, which expands toward no one, which rejects all that is desirable in human life—material success, matrimony and family—must be a

DISILLUSIONED.

This "Pierrot" by Karel Myslbek has seen the ends of folly.

ventures, and friendship, as well as material pastimes or hours of dissipation—is not made to take art upon its joyous side. . . . This boy, who at an age when others abandon themselves to youthful joys, had already taken on the habit of heroism, whose nature was enamored of difficulty and austerity, who had sacrificed all the joy of life to his art, when he sought to express the depths of his thought and his convictions, went straight to what seemed to him, both in life and in art, most disinherited, . . . to poverty and grief. . . . He has proved by socialistic harangues the constant horror which he has of the graceful, the elegant, the dainty, the slightly, the magnificent. His subject is not the workman, the proletariat, the populace *en masse*, but human misery. He sees this misery, grave, noble, monumental, . . . when others would see in such creatures their ugliness, their filthy rags, their drunken gestures."

The critic observes further that to compare this wretchedness of Prague with the wretchedness of London life portrayed by Gustave Doré is to measure the distance between the Greek theater and the melodrama of the boulevards. In accounting for this acute sympathy with the disinherited children of earth, he says:

"The son of a man of genius, he has been, as it were, an orphan. . . . Close to one who thought only of grandeur and created naught but beauty, he felt himself feeble and disinherited. . . . Thus he thought of things which do not enter the thoughts of happy boys. And he found this grandeur and beauty which were a closed paradise for him, . . . with the natural intuition of a child deprived of love and of friends, in the mysteries of silence, of sorrow, of obscurity, of desolation, where others would have discovered nothing but lamentable spectacles, or merely an object of repugnance. . . . Old age, poverty, feebleness, the hospital, and death come in sequence."

But, Mr. Ritter observes, where others seek in such spectacles the gratification of a feeling for the spectacular, the melodramatic, or the *macabre*, Myslbek reduces the spectacular to the minimum. "A bundle and a staff tell the story of a departure for the New World, a metal lamp and the corner of a coffin tell the tale of departure for the next world. The thing that interests him, the grand and epic feature, is formed by a group of forlorn and weeping creatures. . . . No one can represent, with the directness which characterizes the work of this artist, the sculptural stateliness which is manifested in the exercise of such industries as paving the highroad or toiling in the marble quarries. In order to express his idea clearly, he refrains from the use of parallel movements and the rhythmical repetition of the same gestures. He takes ugliness and throws a light upon it, saying: 'Look at this; it is beautiful, it is grand!'"

Myslbek's first professorial appointment was at the provincial lyceum of Pisek, and the stern necessity of devoting daylight hours to teaching, and the evening to preparation, led him to give the twilight to his painting, with the result that such effects of light and shade as are then seen have become a characteristic feature of his work. Later he was appointed professor in Prague, and from this time date his studies of old men and women, or workmen, and of Pierrots. His professional duties in the Royal School continue to engage most of his time, and thus confirm his habit of working in the decline of the day, and it is said that in some of his paintings he seems to achieve the "impossible" in the representation of scenes under such conditions of light and shade as if he had the eye of an owl or a bat.

SOLVING THE "CINEMA'S" MORALS

ONLY TWO ATTITUDES toward the moving picture are discernible to the mind of Mr. Bernard Shaw—one is "ignorant meddlesomeness" and the other is *laissez faire*. Between the two "nothing sensible is likely to be done." Mr. Shaw's familiar method of putting any opponent hopelessly in the wrong at the start thus stamps the article as authentic. But he also seems to be playing the rôle of paradox-maker that we most commonly see Mr. Chesterton assuming. What neither of the two attitudes above distinguished appears to attain, he points out, is that "the danger of the cinema is not the danger of immorality, but of morality." No one is wrong in thinking that "the cinema is going to form the mind of England," he declares in *The New Statesman* (London), and of course the youth of other lands are no less susceptible. "The national

conscience, the national ideals, and tests of conduct, will be those of the film." Then he goes into an elaboration of his paradox: "Certain people who have never been inside a picture palace are alarmed at the hideous immorality of the film plays, and are calling out for a censorship and for the exclusion of children under sixteen. Certain others who, like myself, frequent the cinemas, testify to their desolating romantic morality, and ridicule the moral scare." The confronting situation is this:

"The cinema must be not merely ordinarily and locally moral, but extraordinarily and internationally moral. A film must go round the world unchallenged if the maximum of profit is to be made from it. Ordinary theaters in London and Paris can specialize in pornographic farce because the

relatively small class which tolerates and likes this sort of entertainment is numerous enough in huge cities to support one theater. Such farces, if they go to the provinces, have to be Bowdlerized either by omitting the objectionable passages or slurring them over. But a film can not be Bowdlerized; it must be as suitable for Clapham and Canterbury as for Leicester Square.

"The result may be studied at any picture palace. You have what an agricultural laborer thinks right and what an old-fashioned governess thinks properly sentimental. The melodramas are more platitudinous than melodrama has ever been before. The farces, more crudely knock-about than any harlequinade ever enacted by living performers, are redeemed only by the fantastic impossibilities which the trickery of the film makes practicable. There is no comedy, no wit, no criticism of morals by ridicule or otherwise, no exposure of the unpleasant consequences of romantic sentimentality and reckless tomfoolery in real life, nothing that could give a disagreeable shock to the stupid or shake the self-complacency of the smug. In the early days of the cinematograph, when it was a scarce and expensive curiosity, some of the films were clever and witty. All that is gone now. The leveling down has been thoroughly accomplished. The London boy is given the morality of the mining camp; and the Chinese pirate has to accept with reverence the proprieties of our cathedral towns.

"Now, leveling, tho excellent in income, is disastrous in morals. The moment you allow one man to receive a larger income than another you are on the road to ruin. But the moment you prevent one man having a more advanced morality than another you are on the same road. And here we are not concerned with the question of teaching the London boy the criticisms of current morality made by Nietzsche, Ibsen, and Strindberg, by Barker, Brieux, Galsworthy, Hankin, and self

AN ACCIDENT.

It is almost wholly the tragic aspects of life that appeal to this Czech painter—Karel Myslbek.

(pardon the popular phrase), nor the philosophy of Bergson. These authors would not be popular with children in any case. But it is quite a mistake to suppose that conventional morality is all of one piece the world over. London can not live on the morals of the Italian peasant or the Australian sheep-farmer. What is more, high civilization is not compatible with the romance of the pioneer communities of Canada. Yet commercialism forces such morals on the cinema."

The way to moralize the picture play is for the State to endow it, thinks Mr. Shaw, just as "it should endow all forms of art

GÉRARD D'HOVILLE.

Wife of the French poet, Henri de Régnier, and herself foremost among the French "femmes de lettres."

to the extent necessary to place its highest forms above the need for competition."

"The highest forms, like the lowest, are necessarily immoral because the morals of the community are simply its habits, good and bad; and the highest habits, like the lowest, are not attained to by enough people to make them general and therefore moral. Morality, in fact, is only popularity; and popular notions of virtuous conduct will no more keep a nation in the front rank of humanity than popular notions of science and art will keep it in the front rank of culture. Ragtimes are more moral than Beethoven's symphonies; the 'Marriage of Kitty' is more moral than any masterpiece of Euripides or Ibsen; Millais is more moral than Mantegna; that is why there is comparatively no money in Beethoven and Ibsen and Mantegna. The London boy can hear a little Beethoven occasionally from a London County Council band, and may see Mantegna's work in the National Gallery. Ibsen is to be heard cheaply (in Yiddish) at the Pavilion Theater in Whitechapel. But the nameless exponents of a world-wide vulgarity (vulgarity is another of the names of morality) have complete possession of the cinema.

"Already there is a cry, if not a very loud one, for educational films, meaning, as far as my experience goes, something ending with a fight between an octopus and a lobster. I suggest that what is wanted is the endowment, either public or private, of a cinema theater devoted wholly to the castigation by ridicule of current morality. Otherwise the next generation of Englishmen will no longer be English; they will represent a world-

average of character and conduct, which means that they will have rather less virtue than is needed to run Lapland. I shall be happy to contribute a few sample scenarios."

WOMEN JOURNALISTS IN ENGLAND AND FRANCE

SOME MARKED DIFFERENCES are discovered between the women of England and France who have entered the field of journalism. Those of England are singularly inactive in their own cause, according to a woman correspondent of the *London Times*. They have no voice in the editorial expression of the great general press, and they have no "opinion of any sort" to convey through the columns of the confessedly women's journals. These latter papers, declares this writer, "are popularly supposed to reflect the feminine mind, and if they are indeed a genuine mirror, we must reluctantly conclude that the woman of to-day is a poor thing, devoid of industry and enterprise, utterly without influence upon her time." It is particularly pointed out that "this deficiency is the more notable when one thinks of the great vigor and enterprise of the suffragist propaganda, which emphasizes the doctrine that women have important public interests of their own." The correspondent goes on to analyze the contents of the woman's paper:

"We have in our midst to-day intellectual giants among women. Lady Frances Balfour, Mrs. Humphry Ward, Lady Strachey, Mrs. Fawcett are all capable of leading us in matters of moment not necessarily connected with the suffrage. How often does a signed article by one of these acknowledged writers find its way into the pages of a woman's paper? In the place and to the exclusion of any article from an accomplished pen, we are given page after page of tittle-tattle of the doings of people in society, purveyed by an ill-paid woman journalist who hardly knows these great folk by sight. The trick is obvious, the reader in the suburbs is not taken in by it, and what can it matter to our youngest and loveliest duchess to know that Mrs. So-and-so of *The Lady's Scribbler* considered that she looked her best at Ascot?

"On no woman's paper, with, I think, one exception, have they a woman as dramatic critic, tho there are women competent and fully qualified to fill the post. The consequence is that the drama is never criticized from the woman's point of view. There are at this moment two plays before the public dealing with different phases of woman's existence, and surely a woman's opinion on the dominating character would have been of interest to women readers. Our dramatic critics are discerning and conscientious, but they must treat of the play as a whole, and almost invariably they leave the woman's side of it untouched. As our theater audiences consist almost entirely of women, this policy seems to an outsider to be singularly lacking in perspicacity. The rate of pay on these papers is the lowest in the market. No man would accept it if he were able to hold his place on the staff of a daily newspaper. The idea pursues us, we can not evade it, that the men who write regularly in the woman's press only do so because they have failed to sell their wares elsewhere—that it is, in fact, the dust-bin of Fleet Street.

"Every woman's paper runs, or is supposed to run, a woman's employment column. You may learn 'How to grow orchids for profit in your bed-sitting room,' 'How to supply your country neighbors with eggs by keeping two fowls in your back garden in London.' These sixpenny weeklies circulate almost entirely among women of leisure and means, and it is difficult to understand how a young unmarried woman enjoying an independent income of some £700 a year can derive either instruction or amusement from an article describing in detail how she may become a drudge in Canada.

"The fashion page is the glory of the woman's paper, the vagaries of *Madame la Mode* fill the editor's heart with joy and pride. Here at last he is in his element; no creation is too bizarre to find a place in his pages; he wallows in enthusiastic encomium, secure in the knowledge that the dressmaker's advertisement is his. In his opinion the great drapery houses of London constitute one enormous temple dedicated to the female form divine; women, young and old, pretty or plain, rich or poor, are encouraged to worship there; no establishment is

too great and none too small for his chant of praise. There are in London women of moderate means whose social position secures them an invitation to a friend's box at Ascot. Looking through the women's papers late in May the writer sought for a design that should be within the range of the present fashion, at once becoming and yet pleasantly obscure. The quest was useless; extravagance met her gaze on every side, and moderation was conspicuous by its absence; and to judge by the designs that receive the honor of print, these papers cater, not for the woman who is in, but for her who is 'out' of society.

"In contradistinction to all this, the daily press is throwing open its columns to those women who have something to say on matters that can no longer be ignored, compelling, as they do, the attention of both men and women.

"A woman it was who guided public opinion in England on the question of the abolition of slavery. It is safe to say that if Harriet Martineau were alive to-day she would not be invited to contribute to the woman's press. Who is to blame for this lamentable state of affairs? The men who thrust these papers upon us or the women who read them?"

This complaint has received so little support, says "H. W. M.," correspondent for the *New York Nation*, that "one may doubt whether the discontent is shared by more than a few women readers":

"Indeed, one of the ablest of women journalists, who writes for *The British Weekly* under the pseudonym of 'Lorna,' comes boldly to the defense of the women's papers for neglecting serious problems. 'What do we really require,' she asks, 'from the ladies' papers? Speaking for myself, I want, first, attractive, well-illustrated advertisements.' She then goes on to tell how, supposing she has bought a new evening dress of pink brocade and wants a pair of brocaded shoes to match it, she turns to the current number of one of these weeklies, and finds a full-page illustrating the latest evening shoes, the prettiest buckles, the daintiest and most economical styles. She declares point-blank that 'the *raison d'être* of the ladies' weeklies is to cater almost entirely for the practical requirements of women.'"

The article has called forth, however, a contrasting picture of the French woman writer from a Paris correspondent of *The Times*. At the outset it is said that there are no women "journalists" in France; that term would be considered an insult to them. "The moment a woman writes well enough to have her work published in a monthly, weekly, or daily paper in France, she is a '*femme de lettres*' or a '*collaboratrice*,' and, altho, in comparison with England, France has few women writers, their standard of work is higher and their number is increasing, for Frenchwomen are slowly but firmly making themselves felt in the press as well as in memoirs, romance, and poetry." Furthermore:

"There are women editors, women critics, women leader writers on several of the Paris daily papers, and a great many of the minor personalities on the staff of both weekly and daily publications are women. Fashion and advertisements in connection with feminine things are chiefly managed by women; and the practical, economical, purposeful mind of the Frenchwoman is quite at its best when called upon to organize the conflicting elements which make up a newspaper office. Philanthropy and feminism are opening out still wider opportunities to women in the French press, and altho they still remain a 'power behind the throne' in finance and politics, their influence in both is immense, and daily demonstrations of it are not wanting. A leading woman in the press told me only this week that it would make very little difference in the existing state of things if women were accorded the vote, because '*en France la femme est presque omnipotente*' [in France woman is almost omnipotent]. She is so closely allied to the man, so much a part of him, body and soul, that he is helpless without her, and her power is as much a tradition with him as his infidelity is with her. A Frenchman lives for a woman, not necessarily—indeed, very rarely—for the same woman long together; but always the influence of a woman marks his life, and it is to her he makes his speeches, plays his part, writes his books, and accounts for his existence. She is his strength and his weakness, and gradually, imperceptibly, she is working her way into public life, where she intends to make a place for herself, not by putting men out of theirs, but by creating new ones specially suited to feminine activity."

Some of the well-known women are then mentioned:

"There is Mme. Brisson, editress of *Les Annales*, whose efforts in the education of girls through her paper and her lecture-hall have produced amazing results. There is Mme. de Broutelles, editress of *La Vie Heureuse* and *La Mode Pratique*, by whose energy a most admirable scheme for dowering a number of poor girls every year has been proved successful and beneficial where benefits are due, and there is Mlle. Valentine Thomson, whose paper *La Vie Feminine* promises to be an organ of great importance in the world of women's work, especially in those branches which deal with hygiene and philanthropy.

LA COMTESSE DE NOAILLES.

This portrait of one of the foremost literary women of France was painted by Jacques Blanche and exhibited this year in the Salon.

Already Mlle. Thomson is a personality in the Paris press and her paper is a voice for women workers of all classes. Among the women leader writers who have made their name in literature and can command equal payment with men of the same literary standing are Gérard d'Houville, *Fœmina*, Mme. Séverine, Mme. Marcelle Tinayre, and Mlle. Thomson. The number of women who write about clothes, furniture, cooking, hygiene, and household matters generally is rapidly increasing; and it must be recognized that Frenchwomen write with admirable precision and some sense of style on any subject, no matter how trivial, if they write at all. They have the gift of criticism born in them, they see their subject as a whole and they attack it with method.

"There is nothing tattered or vague about a Frenchwoman's article. Her ideas are lucid and her manner of expressing them is concise, so that whether she writes of a philosophic abstraction or a cooking-stove, the impression she leaves of it is clear and decided.

"The subjects dearest to the Frenchwoman's pen in the press are those which deal with struggles against alcoholism, tuberculosis, and lack of maternal education. The eloquence of plain facts is theirs in the women's plea for the fighting of the evils which come from drink and disease. No time and energy are lost in sentimental reflections, and there is no attempt to hide ugly truths, so that as one reads the facts and statistics of the conditions under which men and women live and bring forth children in the 'workers' quarters of the city, the 'sting of sudden tears' comes without any attempt at literature on the part of the woman writer. The pictures drawn of the crèches and the baby clinics can also be painful; but they can also be the reverse, and if anything were needed to justify the power of women in the press the good it has done for the mothers and children of the poor would be sufficient."

RELIGION AND SOCIAL SERVICE

THE BELLEVUE STAR OF HOPE

FROM being the "scrap-heap of humanity," Bellevue Hospital is now called "a radiant center of health and happiness." The one declared mainly responsible for this change is a woman, formerly a New England school-teacher, Miss Mary E. Wadley. "What was once the human last stand, the ditch of despair, has become through her unselfish and indefatigable labors the field on which hope wages successful battle," says Ada Patterson in *The Continent* (Chicago). Her office is in the gate-lodge of the hospital, and by her doors all day "pours a stream of the great city's unfortunates." Their misfortunes at the time of their exit, "technically cured," may be as great as when they entered broken or ill. The woman at the gate is there waiting for the discharged patient. It is her province to provide him with sinews for the new conflict:

"Money, that may be unwisely spent? Not at all. The brain behind the brave, blue eyes and beneath the curling brown hair that is fast being silvered by active, unselfish years, is far too acute for that. Besides, there is a ban upon impulsive giving. Bellevue Hospital is a city institution, and the city may not donate money to the patients it has technically 'cured'; its charter forbids it. Yet there stands the problem. Probably he doesn't stand—he is too weak for that. He leans against her desk and looks hopelessly at the small woman. Often, especially if he be not an American, the look holds a remnant of the centuries-old contempt for a woman's ability to meet a great emergency. He is a big problem as he faces her, a great emergency, an economic riddle.

"Clearly, he is unable to go forth and do the work that was interrupted by the serious illness. Equally is he unfit to seek for new work. If he has a family, it is unable to help him or it would have prevented his entrance into that place of last resort. If he has friends able to assist him now, they would have sent him to other than a public hospital. What is he to do? Go back to his home? There is a strong probability that it is a poor home, poorly administered. If he goes back to the conditions of poor food, of illy ventilated rooms, underheated in winter and overheated in summer, of noise that irritates aching nerves and dust that irritates sensitive membranes, he will slip back into his old state of unfitness. If he has no home and goes to the municipal lodging-house, his tenure of a bed there will be short before he is apprehended as a vagrant. In the last instance he bids fair to become a public charge; in the first case he and his family will recruit the army of the municipal dependents.

"It seems a hopeless problem, but it is not. What is to be done? Miss Mary E. Wadley knows. Moreover, not content with merely knowing, she does. Dr. Richard Cabot, of the Massachusetts General Hospital, said: 'It is not enough for our institution to turn a patient out from its walls nominally cured. It must follow him to his home, and do its work there, that the first work need not again be done.'"

When Dr. Cabot's suggestion was incorporated into the work at Bellevue, Miss Wadley went about realizing it in a most vigorous way:

"She visited personally all of the relief societies in the city; for, with the wisdom of the practical worker, she knew that personality visualized is more potent than a voice at the telephone, that it has a hundred times the influence of a letter.

Therefore, she visited the offices of the charity organizations and benevolent societies whose purpose it is to relieve distress in its acute forms. She explained that the city might not aid the unfit whom it had to turn from its wards to make room for others who had more pressing need of its aid. She asked that the societies regard Bellevue as a great clearing-house of information.

Bellevue would guarantee that cases reported for help were bona-fide, deserving cases. Would the relief societies, on that condition, waive their usual and necessarily slow procedure of investigation? The societies would. Next she visited the eight convalescent homes within an easy radius of New York. She explained the great need and the greater impracticability of such an annex for Bellevue. She asked if the homes would not receive patients bearing cards of introduction from that hospital. In every instance, so great was the force of the ambassador's earnestness, so unquestionable her sincerity, that bureaucracy vanished, departmental red tape was abrogated. They promised.

"This preliminary clearing away of the jungle of departmental and bureaucratic difficulties done, Miss Wadley set about directing another and equally great force into the channel of this needed usefulness. With the aid of Mrs. William Church Osborn, sister of Miss Grace Dodge, and daughter of that philanthropist, William Dodge, who, leaving his millions to his children, said he had no fear that they would not employ them for the benefit of humanity, Miss Wadley slowly but surely engaged the interest of the richest and, in some respects, the most influential, women in New York.

"She showed them the need not only of their purses, but of their personal ministrations in the lives of Bellevue's dubious graduates. She told them how a discharged patient's life and future might turn on the

fact that when he walks out of Bellevue Hospital he is without a nickel to pay his car-fare to his home in Harlem. She told them how, in the psychopathic ward, minds were working on the means to commit suicide because they could not guess the riddle of how daily bread should be earned. Hope, courage, a reasonable certainty of success in the fray they feared, were what these sick minds needed for healing, she said. She interested them, not passively, but actively. Mrs. John Astor, whose name had appeared chiefly in descriptions of society functions, joined the psychopathic committee. Thus she enlisted to do service in cheering the discouraged. She helped to answer in the affirmative Hamlet's dispirited question. A man had become hopelessly demented and was taken from the psychopathic ward of Bellevue to a hospital for the insane for life. Mrs. Astor visited his family in the Bowery. Learning that the eldest son and chief support worked in a factory where his health was threatened by breathing dust continually, she obtained a more hygienic and profitable work for him. Again and again, her automobile stood before the Bowery tenement, while she furnished the family with groceries and clothing and provided it with tide-over work until a better time was reached. So with Miss Mabel Choate and Miss Caroline Choate, Joseph Choate's daughter and niece; with Mrs. Frank Lyon Polk, wife of the corporation counsel of New York. Miss Ruth Morgan, cousin of the late J. Pierpont Morgan, is an invaluable aid in the work. So efficiently have these women and their friends toiled to make grim Bellevue not a scrap-heap of humanity, but a radiant center of a new life, that Miss Wadley will have no more of the phrase 'idle rich.'"

Out of this material have been organized a general welfare-committee, a child's division of this committee to look after

MARY E. WADLEY.

Who has made Bellevue no longer the "scrap-heap of humanity."

child cases, the psychopathic committee that acts as a sympathetic sister to the deprest, a clinic committee, a day-camp committee, a ward committee, and a Bellevue settlement committee. What do they do?

"Home visits for investigation of needs are made. With the children follow-up work is done, giving mothers suggestions in home and personal hygiene. To the tubercular patients, special care is given, affording isolation where it is needed. For the patients suffering from heart afflictions, there is vigilance, first in the matter of securing work of the kind that will not tax too greatly the afflicted organ, and in giving immediate attention to their cases at the hospital, so that they may not lose time by long waits at ordinary clinics. In cases of special affliction of these patients, some one of the committee calls upon their employers and asks that a few days of rest be granted without danger of loss of work. The securing of employment, legal assistance, surgical appliances, loans, dental treatment, when needed, are among the activities of the committees and the nurses who work with them."

THE UNVENERATED CHURCH

THE SOREST SPOT in the malady afflicting Christian society in our land to-day, says an editorial writer in *The Christian Work and Evangelist* (New York), is the lack of veneration for the Church. "Neither as an idea nor as an institution is the Christian Church an object of veneration in our churches, scarcely, perhaps, an object of respect or serious regard." Quoting Canon Peile in one of his Bampton lectures, the writer asserts that "the next few years will decide whether it [the Church] is to shrink into a pietistic sect or spread and develop until it is actually the people viewed in its relation to God." The pass to which the Church is brought is due to the fact, the writer thinks, that "we have largely lost the vision of that corporate and catholic witness to the Lord Jesus Christ for which in all ages of Christian history the Church has stood." We read on:

"We have only to call to mind what lofty views the Reformers had to understand, again, some of their magnificent achievements. It is probably true, as Dr. Fairbairn has told us, that 'Catholicism is essentially a doctrine of the Church; Calvinism is essentially a doctrine of God.' Yet this same great authority, speaking of Calvin elsewhere, affirms: 'He was resolved, so far as he had power, to make the Church what it had not been, but what it ought to be—an institution organized for the creation of a moral mankind.' And the whole history of the Geneva of Calvin's day was but the wonderful and varied effect of which the cause was this lofty ideal of the Church of Christ in the soul and mind of that great reformer. We have only to refer to the Oxford Movement to see a modern instance of this high ideal of the Church largely inspiring a great religious revival. Can it really be otherwise? Is not the thought of the Church central to Christianity? And have we not come perilously near shifting the focal center of our Christian faith from the Church to the Brotherhood or the adult school or the Christian Endeavor

Society, or even the worshiping congregation? It may be that we shall need very much to reconstruct our doctrine of the Church; but some sound doctrine of the Church there must be if Christianity is to come to her own in our modern world."

A lofty ideal of the Church will naturally make more effective the claim of the Church upon the younger generation. It is estimated that we have ten million adolescents in this country to whom the qualities of nobility, heroism, self-sacrifice for which the Church stands, are especially appealing. The writer asks:

"Is the ideal of the Church, of which we have been speaking, being presented at all effectively to these who are the English people of to-morrow? If not, why not? It is estimated that fully seven millions of these young people have actually passed through the Sunday-schools connected with the churches during some years of their life. It is not the fact, then, that we have never had them in our hands for training and for influencing for discipleship. Yet we are told that something like 80 per cent. of all those who enter the Sunday-schools are finally lost to the churches. Why this terrible leakage? Are we satisfied that this loss is inevitable? Why should it be? Why should we not train the children in the Sunday-school, using, wherever possible, the newest, the most approved methods of teaching and of organization, so that the vast majority of them shall naturally pass on into the Church? Should we hear so much of arrested progress and declining membership among our churches if we were seriously attempting this great task?"

"The writer believes that these questions are being earnestly asked by many in our churches, by many in our own beloved Church. Is not one of the answers to them the one we have already suggested? We do not retain the Sunday-school children for the Church, we do not win other young people into it, because we have yet to regain a true ideal of, and inspiration from, the Church. We must at all costs regain this ideal and revive this inspiration. We must, then, begin, without delay, to teach our children in the Sunday-schools, and the young people without them, what the Church of Christ really means, and how it claims their whole life and their instant service."

There are three chief lines, it is pointed out, along which we shall have to travel, in giving such instruction:

"First, we must teach them what truths our own particular communion of the Church of Christ has been formed to witness to and to serve by. We shall tell them of the great heritage which has come down to them 'from holy men of old' in our own Church. Secondly, we shall surely tell them that our Church, beloved above all others to us as it must be, is only one part of the great

catholic witness to Christ in the earth. We shall tell them wisely and inspiringly of that 'Holy Church throughout all the world which doth acknowledge him.' We shall also be careful to tell them that eight hundred millions of our fellow creatures have never yet effectively heard of that Christ nor his witness. This will be our setting forth of the great missionary problem with its inspiring claim upon young lives and hearts.

"And, lastly, we shall tell them of the Church as 'an institution organized for the creation of a moral mankind' here in our own land. We shall get our young people to study, systematically and prayerfully, those serious social questions the existence of which is daily denying the witness of the Church to a Gospel of the Fatherhood of God and the brotherhood of man. When we more faithfully and more earnestly carry out this

WHERE HOPE SUCCEEDS DESPAIR.

The gate at Bellevue Hospital where awaits a ministering hand for discharged patients.

we shall find that our young people, instead of holding aloof from the Church of Christ, will be thronging into it, and that through its agency and by means of its inspiration they will be found offering themselves prayerfully and intelligently for the service of God and of their fellows, whether at home or abroad."

SOME CIGARET FIGURES

THE "HOPELESS HANDICAP" which cigaret-smoking puts on our youth impels Mr. C. W. Baines to ask in the *Philadelphia Sunday-school Times* whether it is not "about time that our Sunday-school leaders were beginning to sound the warning" against this habit. With its "attendant evils, the saloon and vice," he says, it is "sapping the mental and moral stamina of America's young men, gnawing at the very vitals of their physical well-being." Teachers throughout the country, we read, recognize in the cigaret "the school's deadliest foe, and confess without reservation that they find it practically impossible to educate a cigaret-smoking boy." Nor has the writer any toleration for the statement, "as fallacious as it is prevalent," that while cigarets may be harmful to boys, they do not injure young men. He cites from the records of Harvard University the fact that "for fifty years not one tobacco user has stood at the head of his class, altho five out of six (83% per cent.) Harvard students use the weed." On the whole, according to the writer, cigarets hurt in some way "every one who smokes them," and he is dismayed to find the habit on the increase, as one may judge from the government report which shows that in 1913 "we consumed the amazing number of 14,530,486,200" cigarets, "an increase of 2,186,633,708 over the previous 'banner cigaret year.'"

"This means that we smoked 39,800,551 'coffin-nails' each day. The money value of our 1913 cigaret crop was no less a sum than \$72,781,626. To take care of this rapid increase in the number of cigarets consumed last year, a conservative estimate is that it must have required that at least 1,500 American boys fall victims to the devastating cigaret-smoking habit each day of the year. Not only so, but it is unquestionably true that the habit is annually sending to the saloons at least 100,000 (one in five) of these boys to keep up the grind of the 'gin-mills,' to be turned into drunkards and bums, who will populate our jails, mistreat their wives, neglect their children, and disgrace their homes and parents a few years hence. Dr. Dennis, of Cornell Medical School, says: 'The tendency to beer-drinking is greatly strengthened by cigaret-smoking, because this habit becomes almost constant, causing a dryness of the throat and fauces, and hence irritating the throat.'"

Another baleful effect of cigaret-smoking, we are told, is that it leads "more of our boys to the police and juvenile courts than all other habits combined," and we read of a city magistrate who says: "Out of 300 boys brought before me charged with various crimes, 295 were cigaret-smokers." Yet even granting that not every boy who smokes cigarets becomes a criminal, the writer goes on to say, every such boy suffers costly impairment of efficiency. As for the college man who smokes, compared with the non-smoker, we read as follows of an assemblage of 201 students:

"These 201 college students were divided into three groups:

Habitual smokers.....	41 students.....	20.4%
Occasional smokers.....	52 students.....	25.9%
Non-smokers.....	108 students.....	53.7%

"Note that more than one-half of the men who pursued their studies to the point of entering college were non-smokers. (Non-smokers enter college about one year younger than smokers.)

"Of the total college enrolment, 31 students were either dropt or required to take an extra year to complete the prescribed course of study. Of these 31 men -

The habitual smokers.....	(20.4%) supplied	16 students, or 51.6%
Occasional smokers.....	(25.9%) supplied	8 students, or 25.8%
Non-smokers.....	(53.7%) supplied	7 students, or 22.6%

"While the smokers constituted but 46.3 per cent. of the student body, they supplied more than 77 per cent. of the dull students of the institution. Many of them lost a year before entering college, and then required an extra year to complete the course. Smokers leave college about two years older than non-smokers.

"In this college 41 men were classed as athletes, as follows:

Habitual smokers.....	9 men
Occasional smokers.....	15 men
Non-smokers.....	17 men

"The smokers supplied 24 athletes in all, or 58 per cent. of the athletes—25.9 per cent. of their enrolment. The non-smokers furnished 17 men out of their enrolment of 108. While less than 16 per cent. of the non-smokers were athletes, yet they won nearly one-half, or 41.9 per cent. of all athletic honors."

A "FOOL OF GOD"

THE REV. DR. RICHARD BEVERLY PALMORE, who was until his recent death the editor of the *St. Louis Christian Advocate*, was a man who seems to have mingled the life of devotion with that of romantic adventure. Most of the latter came to him unsought, however, and appeared only in the way he extricated himself from extraordinary situations. The Rev. Dr. James W. Lee, in his funeral sermon over the late editor, tells how Dr. Palmore escaped from a sinking ship during his first Atlantic crossing many years ago. He cut the life-boat loose with his pocket-knife, and put off alone in the craft without bread or water, chart or compass. A fortunate rescue by a steamer saved him from death. In later years he was booked to sail on the *Titanic*, but a Paris cab horse knocked him down and out, and thus left him to die in a bed. The story of the great renunciation of his life is quoted by the *New York Sun* from the sermon and characterized by that paper as "too romantic to be trusted save in a sermon." A fortune estimated at \$10,000,000 was in his reach, and with it he might have endowed works of charity, education, and piety dearest to his heart. But—

"Long after the Civil War, when the boy had grown to be a man, he found to his amazement, among his father's papers a deed to 5,883 acres of land, located in what is known as West Virginia. This deed was a great surprise to all who saw or heard of it. Putting this deed in his pocket, young Palmore, the only heir to the property, made a trip to West Virginia to look over his vast estate, which was far in the interior.

"Starting from the city of Charleston, West Virginia, he drove in a buggy into the region where his plantation was located. He traced the boundaries of his property and found that hundreds of families had settled on it without any right to it, but were living as if secure in the possession of their separate little patches of territory. He found that beneath the surface of this land there was almost limitless wealth, but the multitudes who had built themselves humble homes on the surface did not know of it, and had been living thus in undisturbed possession for a number of years. He quietly walked about at night and looked through the windows at the parents and children living on his estate. Great lawyers were ready to inaugurate legal proceedings that would have made him a millionaire, and such legal proceedings would doubtless have been instituted if the heir in person had not visited the scene of his great estate. He began to feel that, instead of such a fortune being a blessing, as he dreamed in the night-time about dispossessing such a multitude of people of their humble homes, it occurred to him that to secure his estate at such an expense would make it a burden.

"After earnest prayer and sleepless hours in the midst of his vast acres, he was seized with the conviction that each member of this multitude of families living on his property needed it more than did the heir, and there and then he made up his mind that he would leave them in quiet possession of his estate."

Naturally his friends told him he was a fool. Comments *The Sun*: "Well, so in a sense he was. Is it Celtic or medieval or both, that phrase which the 'Quixotic' course of Palmore brings up in the memory, 'The Fool of God'?"

CURRENT POETRY

POETRY owes much to Dr. Robert Underwood Johnson. He served it faithfully during his long and distinguished association with a great magazine, he has devoted himself with generous enthusiasm to the noble aims of the Keats-Shelley Memorial, and his collected poems, of which an enlarged edition now appears with the imprint of the Bobbs-Merrill Company, are a valuable contribution to America's literary heritage.

Dr. Johnson has none of the colonialism that makes some of our verse-makers fear to celebrate scenes and events peculiar to our continent. Bryant himself would feel the beauty and strength of this majestic apostrophe.

To the Housatonic at Stockbridge

BY ROBERT UNDERWOOD JOHNSON

Contented river! in thy dreamy realm—
The cloudy willow and the plummy elm:
They call thee English, thinking thus to mate
Their musing streams that, oft with pause sedate,
Linger through misty meadows for a glance
At haunted tower or turret of romance.
Beware their praise who rashly would deny
To our New World its true tranquillity.
Our "New World"? Nay, say rather to our Old
(Let truth and freedom make us doubly bold):
Tell them: A thousand silent years before
Their sea-horn lido—at every virgin shore
Dripping like Aphrodite's tresses—rose.
Here, 'neath her purple veil, deep slept Repose,
To be awakened but by wall of war.
About thy cradle under yonder hill,
Before thou knewest bridge, or dam, or mill,
Soft winds of starlight whispered heavenly lore,
Which, like our childhood's, all the work-day toll
Can not efface, nor long its beauty soil.
Thou hast grown human laboring with men
At wheel and spindle; sorrow thou dost ken:
Yet dost thou still the unshaken stars behold,
Calm to their calm returning, as of old.
Thus, like a gentle nature that grows strong
In meditation for the strife with wrong,
Thou showest the peace that only tumult can:
Surely, swifter river never ran.

Thou beautiful! From every dreamy hill
What eye but wanders with thee at thy will,
Imagining thy silver course unseen
Conveyed by two attendant streams of green
In bending lines—like half-expected swerves
Of swaying music, or those perfect curves
We call the robin; making harmony
With many a new-found treasure of the eye:
With meadows, marring smoothly rounded hills
Where Nature seemingly the myth fulfils
Of many-breasted Plenty; with the blue,
That to the zenith fades through triple hue,
Pledge of the constant day; with clouds of white,
That haunt horizons with their blooms of light,
And when the east with rosy eve is glowing
Seem like full cheeks of zephyrs gently blowing.

Contented river! and yet overahy
To mask thy beauty from the eager eye;
Hast thou a thought to hide from field and town?
In some deep current of the sunlit brown
Art thou disquieted—still discontent
With praise from thy Homeric bard, who lent
The world the placidness thou gavest him?
Thou Bryant loved when life was at its brim;
And when the wine was falling, in thy wood
Of sturdy willows like a Druid stood.
Oh, for his touch on this o'er-throbbing time,
His hand upon the hectic brow of Rime,
Cooling its fevered passion to a pace
To lead, to stir, to reinspire the race!

Ah, there's a restive ripple, and the swift
Red leaves—September's firstlings—faster drift:
Betwixt twin aisles of prayer they seem to pass
(One green, one greenly mirrored in thy glass).
Wouldst thou away, dear stream? Come, whisper
near!

What is behind
the Campbell label?

What are the facts and reasons which assure to you the surpassing quality of

Campbell's Tomato Soup

First the famous Campbell kitchens with their unequalled modern equipment—immaculate, scientific, complete. Next the exclusive Campbell blending-formula—the envy of expert soup-makers everywhere. Then the fertile farms so near to our establishment that they supply us daily throughout the season with their glowing harvest of ripe, fresh-picked perfect tomatoes. And finally, back of all this—the Campbell reputation, and the unquestioned Campbell guarantee which goes with every can of this delicious and wholesome soup.

Your money back if not satisfied.

The Quest of Cold Light

Talks about MAZDA No. 5

SWITCH on the current that causes an electric incandescent lamp to glow. What happens? You get light, but also heat. Since your eye is a special instrument particularly sensitive to light, since you read a book with light and not with heat, the more light that you get from your lamp the more satisfactory should be the result in every way. A light which is brilliant but cold would represent the ideal of efficiency.

Whether this ideal is ever reached, the incandescent electric lamp will grow steadily colder, steadily more efficient, thanks to the Research Laboratories of the General Electric Company at Schenectady.

In these laboratories a corps of picked men, each an expert in some phase of illumination, men who are in communication with the foremost European investigators of light, are constantly at work. After many months of patient experimenting the art of drawing tungsten into a delicate wire was developed in these laboratories. Thus it became possible to make

"Not the name
of a thing
but the mark
of a Service"

Suppose that chemists, for example, discover a way of preparing an element so that it is able to yield much light without breaking down readily under the electric current. Their discovery may mean the birth of a new lamp, or it may come to naught. It must be subjected to critical study by other scientists. The physicist

steps in with his analytical instruments to discover how much of the glow that comes from the new material is light and how much is heat, in other words, how much more efficient is the new material than anything thus far discovered; he estimates what is the candle power of the new material for a measured amount of current; he devises better physical conditions for the material to perform its function. Next, the microscopist, perhaps, studies it to learn how it withstands the pitting and the scoring action of the current.

Thus the new material is passed through successive laboratories, from scientist to scientist, from engineer to engineer. If the discovery proves to be of commercial importance the General Electric Company transmits it to its own lamp manufacturing centers at Cleveland and Harrison and to other companies entitled to learn of it.

This constant research, this ceaseless effort to improve the incandescent lamp, this transmission of an important discovery from the General Electric Company constitute MAZDA Service. When you see MAZDA on a bulb, think not of the shining lamp itself, but of the Service received by its particular authorized manufacturer, of the thousands of experiments

that had to be performed, in his interests and yours, of the hundreds of light producers that were developed and tested before one was finally selected and included in the MAZDA that you screw into its socket.

Because the work of the Research Laboratories is never ended, MAZDA Service is continuous. As new discoveries are made that bring us a little nearer the ideal cold light they will be applied in making new lamps, which like their predecessors will be marked MAZDA. Hence MAZDA will always be found on the latest lamp evolved by MAZDA Service—a lamp in which the best scientific thought of the time is embodied.

GENERAL ELECTRIC COMPANY

You can hold a glow-worm in your hand—the light is cold. It is one object of MAZDA Service to discover the secret of cold light

the new filament which glows in the MAZDA lamp of today and which has supplanted the old carbon filament because three times as much light can be obtained for a given amount of current.

The Research Laboratories of the General Electric Company represent almost every branch of technical knowledge—chemistry, metallurgy, physiology, psychology, physics, microscopy, engineering, optics.

In these laboratories scientists conduct many researches along advanced theoretical lines. What is the secret of the phosphorescent glow that emanates from certain marine animals and decaying organic matter?

Why can the glow-worm shine in your hand and never burn your skin? What is the exact color of daylight? Is the best artificial light a miniature sun or a body with a brilliancy not so white? Scores of such problems must be attacked in the quest of the ideal light.

But even more important commercially is research that gives promise of immediate results.

Specialists in every branch of science are engaged in MAZDA Service all with the aim of making MAZDA always the mark of the farthest advance in the science of illumination. Here a microscopist is shown at work.

I also of much resting have a fear:
Let me to-morrow thy companion be
By fall and shallow to the adventurous sea!

The Keats-Shelley Memorial testifies not only to the genius of the poets whose linked names it bears, but also to the energetic idealism of those who established it. The Keats House in Rome should contain, with its other precious relics, a copy of these moving stanzas.

To One Who Never Got to Rome (Edmund Clarence Stedman)

By ROBERT UNDERWOOD JOHNSON

(On his long-deferred and only trip to Italy, Stedman entered the country from the north for what proved to be a very brief sojourn, for, soon after reaching Venice, he was suddenly obliged to return to America. It remained his cherished desire to see the Eternal City, and the Roman Committee of the Keats-Shelley Memorial long hoped that he might be present at the proposed dedication of the Keats House, contemplated for the 23d of February, 1908. He died five weeks before that day, when the lines which follow were written. As the active and devoted Chairman of the American Committee, he took a leading part in this project. Probably his last words written for publication on a literary topic were in praise of the two poets, to which he added a transcription from "Ariel," his ode on Shelley.)

You who were once bereft of Rome,
With but the Apennines between,
And went no more beyond the foam,
But loved your Italy at home
As others loved her seen:

You knew each old imperial shaft
With sculpture laureled to the blue;
Where martyr bled and tyrant laughed;
Where Horace his Falernian quaffed,
And where the vintage grew.

The Forum's half-unopened book
You would have pondered well and long;
And loved St. Peter's listy look,
With vesper chantings in some nook
Of far-remembered song.

Oft had you caught the silver gleams
Of Roman fountains. To your art
They add no music. Trevi teems
With not more free or bounteous streams
Than did your generous heart.

I hoped that this Muse-hallowed day
Might find your yearning dream come true:
That you might see the moonlight play
On flex and on palace gray
As 'twere alone for you:—

That your white age might disappear
Within the whiteness of the night,
While the late strollers, lending ear
To your young joy, would halt and cheer
At such a happy wight:—

That you—whose toll was never done,—
Physicianed by the Land of Rest,
Might, like a beggar in the sun,
Watch idly the green lizard run
From out his stony nest:—

That you, from that high parapet
That crowns the graceful Spanish Stairs
(Whose cadence, as to music set,
Moving like measured minuet,
Would charm your new-world ears),

Might see the shrine you helped to save;
And yonder blast of cypresses,
That proud above your poets wave,
Warder of all our song, you gave
What loyalty to these!

That path to Adonais' bed,
That pilgrims ever smoother wear,
Who could than you more fitly tread?—

Or with more right from Ariel dead
The dark acanthus bear?

Alas! your footsteps could not keep
Your fond hope's rendezvous, brave soul!
Yet, if our last thoughts ere we sleep
Be couriers across the deep
To greet us at the goal.

Who knows but now, aloof from Ills,
The heavenly vision that you see—
The towers on the sapphire hills,
The song, the golden light—fulfill
Your dream of Italy!

And here is an exquisite epigram:

The Vines that Missed the Bees

By ROBERT UNDERWOOD JOHNSON

(To Count Cosimo Rucellai, of Florence, with a copy of his ancestor Giovanni Rucellai's poem "The Bees.")

Once, when I saw the tears upon your vines,
You told me they were "weeping"—but for what?
I find their secret in your kinsman's lines:
They missed the honied music he has caught.

Mr. Edson should find some less elaborate synonym for "birds" than "those feathery things on beating wings that ride the atmosphere." Aside from that phrase, his poem (which we take from *The Evening Mail*), is strikingly effective. It might worthily accompany a Pennell etching.

The City of Cities

By C. L. EDSON

I saw the city's cupolas swim through the vapors
Of the blue;
Its tall towers shone in the airy zone where the
singing sea-fowl flew.
Those feathery things on beating wings that ride
the atmosphere
Went veering by with a startled cry at the spires
encroaching near.
For foliate fret and parapet, gargoyle, arch, and
scroll,
Hung floating there in the ambient air that streams
from pole to pole.

The town, the town, it is gazing down from the
startled sky's abyss;
And a million feet are in the street where the trade
tides roar and hiss.
I feel the leap as my pulses sweep through my
veins of living clay.
For this is the dream my people dreamed before
the break of day!
Before they broke through the woods of oak or
fashioned the puncheon beam;
Or placed the stone for the wooden sills, my people
dreamed the dream!

And now I gaze through the misty maze at walls
that comb the sky,
In pink, and green of a gauzy sheen, where the
white-plumed vapors fly.
New York? She slips with her coral lips the wine
of the Upper Air;
Her white arms shouldering back the stars that
flutter round her hair.
And we have worked what our fathers dreamed—
in the sweat of our flesh and bone.
'Tis we have builded their prophecy in gossamer
stuff and stone.

And we who builded this citadel in fabric of brick
and brass
Shall build again for the city's Soul and the things
that will not pass.
In Babel the tongues were all confused; but that
ancient curse is done.
And here have the scattered tribes of earth fore-
gathered again as one.
Out of all lands we lift our hands to build with
steam and fire;
And towering vast we shall raise at last the City
of Man's Desire.

My Cry is— Votes for Men

"I am one of the men who prefer Van Camp's to any old-style Baked Beans. I like them ten times better than the Beans that mother baked.

"I like their wholeness, their nuttiness, their mealiness. I like the tang of the sauce.

"I believe millions of men are just like me. My lunch-room downtown—which serves Van Camp's—is fairly mobbed at noontimes.

"So I stand for votes for men—votes on the Beans to be served on their home tables. If men had the say, no Beans would be baked in the old ways."

But men do have the say. Just try it. Say how you like Van Camp's. Within 15 minutes your grocer will get a telephone order for them.

VAN CAMP'S
PORK & BEANS BAKED WITH
TOMATO SAUCE

Also Baked Without the Sauce

10, 15 and 20 Cents Per Can

Madam, you cannot compete with our chefs on Baked Beans. Nobody ever has. You can't get such raw beans as they get. And there is no other sauce like the sauce they bake into them.

You have not a steam oven, and Beans can't be baked as Van Camp's are without it. That is, baked until mellow without crisping or bursting.

These are new-style Baked Beans. Every process is scientific. Materials are specially grown for them. The ablest chefs prepare them.

Try them. They cost but three cents per serving. They are ready on a moment's notice. They come to your table with the fresh oven flavor. Find out, for your own sake, what it means to have such meals as these ready on the pantry shelf.

Buy a can of Van Camp's Beans to try. If you do not find them the best you ever ate, your grocer will refund your money.

The value of Good Light

is not always realized because it is so subtle. Customers avoid stores that are harshly or insufficiently illuminated; but where seeing is easy and comfortable, they stay longer and buy more *without knowing why*.

Employees do more work with less strain and fewer mistakes. They see better; feel better; have clearer heads, and don't stay away so often.

Poor light is usually poor planning. When you know the facts, it is generally possible to get good light by making a few simple changes.

Macbeth-Evans Lighting Equipment

(With Alba and Decora Glassware)

combines right globes and correct fixtures into efficient, artistic lighting units for stores, offices, homes, factories and institutions.

Alba or Decora globes and shades on Macbeth-Evans fixtures are handsome, make seeing easy and comfortable, diffuse and direct the light where it is needed, and make good light cost even less (less current) than poor light.

Learn How to Get Good Light for your particular purpose by sending for one of the following articles on Good Light and a portfolio of Individual Lighting Suggestions for your needs:

PERSONAL GLIMPSES

AN INVENTOR'S WINDFALL

WHEN an inventor has a little device he would willingly sell for \$10,000, and is suddenly confronted with a \$300,000 check for it, perhaps it would be hard to convince him of the rapacity of our great corporations. The corporation in this case has no regrets, either, it seems, for the royalties would have run far ahead of the big check in a few years. So both sides win. The inventor is Mr. H. J. Gaisman, and his invention is a practicable device for writing things on a camera film while it is still in the camera, so the snap-shotter can tell, after the films are developed, whether the one doubtful shot of the lot is the Empire State Express passing Canajoharie or a glimpse of little Freddie chasing butterflies. The young man at the seashore, too, who photographs the damsel who has promised to be his till death can get her signature on the film so that he can remember her name the next summer. The device with all these possibilities is thus described briefly by the *New York Times*:

By means of Mr. Gaisman's attachment it is possible to write a caption or signature on a film in the camera at the time a picture is taken. The writing may be done with an ordinary lead-pencil, and the letters appear in white on the prints made from the negative. Employees of the Eastman Company had worked for six years or so to perfect such a device, but the nearest they had come to the mark was a contrivance which punched holes through the film, so that it could be identified by referring to a record kept elsewhere.

Mr. Gaisman does not make the mistake of attributing his big check to the "generosity" of the buyers. He realizes that his own preconceived notion of what his receipts might be were determined by a full and bitter knowledge of the treatment often accorded inventors who were publicly unknown, and he recognizes in the action of the Kodak Company only a sincere and praiseworthy desire to play fair. It is justice that he has met with, not generosity. He says:

"The check was paid to me in a spirit unknown in the business world a few years ago. It was paid to me to make me independent, to remove from me as an inventor the need to fight further for a living. You have heard heartbreaking stories of the exploitation of inventors. This transaction was carried on by a great mercantile concern with a view to giving due recognition to one who had produced something which improved its product.

"In the negotiations for the sale of my kodak patent, the Eastman concern recognized, first, that it was only just to me to pay me the value of my time for the four years I worked on my device. That sum was arrived at and put down doubled as an element in fixing the price. Next came the cost of the laboratory in which I worked.

"Mum" Mfg Co 1106 Chestnut St Philadelphia

That was put down and doubled. And then enough more was added to make me a rich man, as far as the needs of one giving his time to inventions go. The spirit shown by the Eastmans made me feel that a glorious new era for the whole profession of inventors had arrived. The business of transferring my patents hasn't been concluded, and I must return to Rochester to complete the deal. I would have taken \$10,000 for my work, and would have jumped at \$50,000. Inventors have become accustomed to having to huddle, and to being worsted in the process.

"The real inventor becomes so absorbed in his invention that he doesn't reflect upon the problem of his own well-being.

"I could have taken a royalty and ridden along with the industry for years. I didn't want that. I wanted to have the whole matter off my mind, and so it was arranged that way. I never will have to worry for a minute in the future about the manufacturing problem of that invention."

That a new era for the inventor is dawning is doubted by many inventors who have not had Mr. Gaisman's good fortune. George Whigelt, of New York, President of the Inventors' League of the United States, is quoted as saying:

"When you hear reports of some one getting a fortune for some simple little article that gives promise of great popular demand it is often far from the truth. Fortune may come from years of work and struggle if the inventor has the courage to push his article in a small way until he can develop his product in a larger and more profitable manner. Few can do this, so they sell, and the fortunes go to the capitalist who makes the investment.

"The experience of many with whom I have come in contact shows that the man with an idea of value, backed up by patent rights, has just as hard a struggle to-day to get a hearing, to sell his invention, or to interest capital, as at any time. Of course, men like Thomas A. Edison are better off to-day than similar men in the past, because there is more demand for inventive genius, and such men have the means to make known and profit by their work.

"But the inventor generally is either compelled to sell out for a small sum or be prepared to do constant battle in the courts to protect his interests from infringement, which he can not do unless he gets financial support. If he attempts to market his invention in a small way, paying as he goes from the profits of small sales, and should his invention be a popular one, he more often finds that some one is reproducing his article and selling it without authorization."

George Eastman, the President of the Eastman Kodak Company, when interviewed in the Rochester offices of the company, declared that, in consideration of the expected profits from this invention, the price paid for it was not in the least exorbitant. He continued:

"According to an agreement which we made with Mr. Gaisman, we were to have an option on the invention until January 1, 1915, and to pay royalties on all kodaks sold equipped with the device. We sent samples of the autographic kodak to almost

Elgin Watches - Bikes

"Wear an Elgin - or be shot!"

NOTICE

"Every conductor or engineer found without an Elgin watch, from 17 to 23 jewels, such as the railroad inspection demands, will be shot for the penalty of hiding valuables."

Liberty and Equality, Plan of Ayala, issued in Salazar, State of Mexico, on the 25th day of October, 1912.
(Signed) EMILIANO ZAPATA

(By the colonel of the Freed Regiment)
JOSE LIMON

LORD ELGIN

SOME time ago the Zapatistas of Mexico took Salazar, the junction on the Pacific division of the National Railroad where the Toluca branch joins. All railroad men were robbed, and the station and cars were burned. Several of the railroad men were carrying "cheap" watches, as such hold-ups had been frequent. Upon leaving, the Zapatistas posted the above notice.

A severe ultimatum—conclusive evidence that the leaders of insurrection-torn Mexico know the watches which serve best in war and peace.

ELGIN Watches

LORD ELGIN—The Masterwatch. \$75 to \$85.
LADY ELGIN—A Dainty Timekeeper—pendant and bracelet.
A wide range of prices.
B. W. RAYMOND—The Railroad Man's Watch. \$80 to \$125.
G. M. WHEELER—The Foremost Medium Priced Watch. \$50 to \$25.
Ask Your Elgineer—your local jeweler—and write us for booklet.
ELGIN NATIONAL WATCH CO., Elgin, Illinois

"I, Personally, Make the Blend for 'Whip'"

There are great family names with whose mere mention we associate a field of endeavor. So associated are the names "Goodyear" and rubber, "Steinway" and pianos—"Patterson" and tobacco. For over seventy years the Pattersons have been identified with the best in smoking tobacco.

The pipe smokers of America can thank their stars for the latest product of the Pattersons' activity—the mildest, most fragrant, most satisfying smoke Virginia ever produced.

Mr. M. C. Patterson himself blends "Whip" because he is the kind of man who loves his art and wants to work. The life of leisure does not appeal to him.

Mr. Patterson says: "This art of blending is something unteachable. I can't explain how I do it."

"But I want all pipe smokers to know that at last I have perfected the blend I have been working on for years. I want to tell them that in 'Whip' I have produced the pipe mixture that satisfies me."

"I want to tell them that we're proud of our name and proud of 'Whip'—that we are willing that these two be judged together."

OUNCE TIN FREE

Mr. Patterson will gladly send you a regular 1-ounce can of "Whip" absolutely free, if you will write him a postal card giving your address and that of your dealer.

There is no profit in giving tobacco away, and you may be sure his only reason for doing so is his confidence that you will want to smoke "Whip" regularly once you try it.

"Whip" is put up in 1-ounce tins at 5c. and 2-ounce tins at 10c.; also in handsome Pottery Patented Self-Moistening Pound Humidors.

Patterson Bros. Tobacco Co., Inc.
Richmond, Va.

Also makers of "Queed"—the big 2½ oz. 10c. tin—a little stronger than "Whip" and, we believe, a little better than many 2 oz. 10c. tobaccos.

\$5.00

Prepaid

Money back if not satisfied

Genuine Cowhide Bag

This fine, large leather traveling bag sent you prepaid. Guaranteed to be as represented and to give satisfaction or money returned. Choice of 16 or 18 inch. Black or brown. French-seamed edges, solid corners. Lined. A bag for service. Dealers receive \$9 to \$10. Our price, by mail only, \$5. Send today! (Not valid on reg. ad.)

Wm. S. Shors, 21 Court St., Binghamton, N. Y.

every one of our dealers, and the reports that came back indicated that it was an instantaneous success. We accordingly determined to apply Mr. Gaisman's invention to all the kodaks and all the films that we make. When we estimated what the royalties would amount to we found that they would mount up to a large figure, so we offered Mr. Gaisman a round sum, based on the royalties that we probably would have had to pay, and he accepted the offer."

RASPUTIN

FEW personal histories of the present day are stranger than the career of the peasant-monk who is said to have been for many years the guiding force in the national and international politics of Russia. At one time he was only a tramp, a wayside friar; now he is one of the three or four most powerful men in the country. Before his rise to power he had little education and was apparently a nobody; when his murder was attempted a few days ago he was referred to everywhere as the "Russian Richelieu." Whether the concomitant denunciation of him as a scoundrel and an unscrupulous adventurer is deserved or not is difficult to say. It is easy to misjudge those whose good fortune is too conspicuous, or whose talents have never been peddled on the curbstone. If one must call him by hard names, says the *Washington Times*, at least one should first consider his case impartially. As to whether, when he was attacked by the fanatic in his native village, Rasputin was earning only his just reward, *The Times* remarks doubtfully:

Perhaps he was; it is curious how different the picture seems when the viewpoint changes. This uneducated monk became the trusted counselor of the Czar. While he was feared and dreaded by the court, none spoke ill of him; but now he is denounced as mountebank, mystic, fakir, hypnotist. Where lies the truth?

This son of the people, rising to power, seems always to have been a vigorous supporter of the people's cause. It is said that last year his influence alone prevented a war between Russia and Austria. The grand dukes and big-bugs of the court were for it; the wicked, interloping monk, Rasputin, was against it; and the monk prevailed. His success in determining a state policy of such tremendous importance is now cited as proof of his dangerous character.

But it hardly proves just that. To save Russia from a war in which she would have had to face Austria and Germany and almost certain defeat, was hardly the act of a dangerous mountebank. It would seem rather the patriotic service of a very big and useful man.

Later, Rasputin induced the Czar to dismiss—so the story runs—the ministry that had wanted war. This, again, is set forth as more proof that he wielded a mysterious and baleful influence over the weak Czar. But need we take it as more than evidence that the sturdy monk convinced the Czar that such advisers ought to go?

Rasputin, it is declared, became so

powerful that he dared defy the Holy Synod of the Russian Church: the conclusive and final evidence that he was a very emissary of the Evil One! But why? We know of the Holy Synod as the very citadel of reactionism in Russia, the enemy of all liberty, intelligence, progress: the chief inspiration to persecution of Jews, the procurer of ritualist trials, the instrument that so long served Pobiedonostseff's purpose of keeping Russia under the absolute sway of ultimate toryism. Wherein did Rasputin offend in breaking its power?

So powerful did this dangerous person become that people of all classes thronged to his house in St. Petersburg with petitions; and he was very often able to get them granted! What could be more conclusive proof of his essential malevolence and calculated villainy—especially when it is learned that he was especially given to getting favors for the poor and oppressed!

ON THE SEACOAST OF HELVETIA

SUPPOSE that a wealthy costumer should give a masquerade ball; if you were invited, would you or would you not feel under obligations to purchase your costume at his shop? Suppose, for example, that you knew that he knew that you had no costume of your own. A similar problem must confront the Government of Switzerland, if they consider seriously the kindly invitation given them by our Minister Stovall, to participate in the naval demonstration at the opening of the Panama Canal. Switzerland has had no sea force for nearly three centuries; but the United States would doubtless gladly dispose of some of her shop-worn battle-ships, for a consideration—as she did at the request of Greece. Switzerland must have a navy if she is to accept Mr. Stovall's invitation; *ergo* . . . it would certainly be better for us if Switzerland regarded our proposal in this light, as a somewhat barefaced hint to buy our wares, rather than as the result of mere absent-minded diplomacy. The Albany Knickerbocker Press is inclined to credit absent-mindedness for the affair, rather than any shrewder motive, and discusses the position of the Honorable Pleasant H. Stovall as follows:

Down in the barge office in New York, in the old days, when a new newspaper reporter was put on a ship-news reporting assignment, the veteran reporters always had one or two standardized practical jokes they attempted to put over upon the new man. One of these was the announcement of a ship-news bulletin reading, "Swiss man-of-war just crossed the bar." Another was, "The Peruvian bark *Calisaya* is anchored in the bay." Sometimes the old ship-news men put the joke over. Any victim of this joke will be capable of sympathizing with Mr. Stovall, one of whose latest acts of diplomacy and national courtesy has been to invite the Swiss

Fenestra

SOLID STEEL WINDOWS

(Patented)

"Man Cannot Make Light to Compete with Nature"

So said a scientist in a recent review. Because man-made light is 98% *heat*, destructive to eyesight, expensive, and a handicap to accurate workmanship. But in Fenestra Solid Steel Windows, man has found a way to use Nature's light to the utmost *human* advantage

"Fenestrated" Factories Control the Sunlight

They have window-walls open to light and air, but proof against fire and the elements. They strengthen energy and spur your men to 100% production. Their splendid lighting prevents accidents and averts mistakes.

Fenestra is the only window with *solid steel* sections throughout—equipped with patented, interlocking joints which *gain* strength at every intersection. Combined in standard sizes to illuminate every foot of wall-space, Fenestra gives abundant ventilation and longest possible daylight.

Fenestra is indestructible; lasts as long as your building, without the slightest upkeep or expense for repairs. Our Engineering Department will quote you without any obligations. Write for latest catalogue.

Don't Throw Away Your Worn Tires

For over three years French and German motorists have been getting from 10,000 to 15,000 miles out of their tires by "half-soiling" them with Steel Studed Treads.

In eight months 20,000 American motorists have followed their example and are saving \$50. to \$200. a year in tire expense.

We ship on approval without a cent deposit, prepay the express and allow you to be the judge.

Durable Treads double the life of your tires and are sold under a signed guarantee for 5000 miles without puncture. Applied in your own garage in thirty minutes.

SPECIAL DISCOUNT offered to motorists in new territory on first shipment direct from factory. A postal will get full information and sample within a week. State size of tires.

Don't wait—write today. Address nearest factory office.

nation to participate in the naval display for the Panama Exposition.

The Swiss Foreign Office no doubt was overwhelmed by the unexpected display of kindness and wisdom until the Swiss diplomats remembered that Switzerland is without a navy, its last war-vessel having been lost in a storm on Lake Geneva 287 years ago.

Switzerland has no place to keep a navy except Lakes Geneva and Lucerne.

Greece recently paid the United States \$12,000,000 for a pair of second-hand battle-ships. If Switzerland is anxious to please, it might make a small investment of this kind, but even such a trifle as \$12,000,000 would be likely to make the thrifty Swiss shudder. So it looks as if Switzerland would be bound to decline Mr. Stovall's invitation, even at the risk of hurting his feelings.

ONE OF THE DIRE RESULTS OF WARFARE

IT is presumable that the great majority of American readers have at one time or another seen the following example of alliteration's awful aid. Now that history is repeating itself for the fourth time, at least 67 per cent. of these readers are doubtless struggling to recall the slippery lines to mind. To relieve the dual strain upon their minds and upon the alphabet, the verses, in part, are submitted here:

An Austrian army, awfully arrayed,
Boldly by battery besiege Belgrade;
Cossack commanders cannonading come,
Deal devastation's dire destructive doom;
Every endeavor engineers essay,
For fame, for freedom fight, fierce furious fray,
Generals 'gainst generals grapple—gracious God!
How honors heav'n heroic hardihood!
Infuriate, indiscriminate in ill,
Just Jesus, instant innocence instill!
Kinmen kill kinsmen, kindred kindred kill,
Labor low levels longest, loftiest lines,
Men march midst mounds, motes, mountains,
murdr'ous mines,
Now noli, noxious numbers notice nought
Of outward obstacles overcoming ought;
Poor patriots perish persecution's pest,
Quite quiet Quakers "quarter, quarter" quest;
Reason returns, religion, right redounds,
Suwarrow stop such sanguinary sounds,
Truce to thee, Turkey, terror to thy train!
Unwise, unjust, unmerciful Ukraine!
Vanish vile vengeance, vanish victory vain!
Why wail we warfare? Wherefore welcome won,
Xerxes, Xantippus, Xavier, Xenophon?
Yield ye young Yaghtier, yeoman, yield your yell!
Zimmerman's, Zoroaster's, Zeno's zeal
Again attract; arts against arms appeal.
All, all ambitious aims, avaunt, away!
Et cetera, et cetera, et cetera.

Prescience.—"Get away from here or I'll call my husband," threatened the hard-faced woman who had just refused the tramp some food.

"Oh, no, you won't," replied the tramp, "because he ain't home."

"How do you know?" asked the woman.

"Because," answered the man as he sidled toward the gate, "a man who marries a woman like you is only home at meal times."—*Dallas News*.

Wall Board Facts to Face

WHEN you build, why not save much of the time and expense of the plastering job? Use Utility Wall Board instead of plaster. Saves all the lathing cost—Utility is nailed direct to studs and joists. Cheaper than plaster—applied in far less time. The first cost is the whole cost—never cracks, checks, chips or jars loose. Proof alike against moisture, cold, heat, mice and vermin.

UTILITY

The Only 5-Ply Wall Board

Think of the 5 layers of tough fibre board, cemented into one permanent sheet with hot asphalt under tons of pressure—thoroughly waterproofed outside. We use 5 layers because it gives that much more strength than the usual 2 or 3 layers. You can do anything with Utility that you can do with plaster and do it cheaper, quicker and more satisfactorily.

Free Samples and Book

Send today for free samples of Utility Wall Board and the book "Utility Interiors."

THE SPICE OF LIFE

As Usual.—"We are taking in boarders this summer."

"Have they found it out yet?"—*Baltimore American.*

Unanimous.—KRIS—"Who stood up for him when he married?"

KROSS—"Nobody. They all called him an idiot."—*Smart Set.*

Posted.—"Wil-yum, what can you tell us about Columbus?"

"It's next to last in the American Association."—*Buffalo Express.*

Restful.—MR. BOREM—"Shall we talk or dance?"

MISS WEEREIGH—"I'm very tired. Let us dance."—*Boston Transcript.*

The Reason.—MRS. WHITTIER—"What delightful manners your daughter has!"

MRS. BILER (proudly)—"Yes. You see she has been away from home so much."—*Smart Set.*

Candor.—"How is your wife this morning, Uncle Henry?"

"Well, I dunno. She's failin' dretful slow. I do wish she'd git well, or somethin'."—*Puck.*

Preferring His Suit.—CYNTHIA—"Oh, Tom, think of coming to ask papa's consent in such shabby clothes!"

TOM—"That's all right—I had one suit ruined."—*Judge.*

Their Descent.—HAMPTON—"Dinwidow told me his family is a very old one. They were one of the first to come across."

RHODES—"The grocer told me yesterday that now they are the last to come across."—*Judge.*

Tript.—FIRST PASSENGER—"I understand that your city has the rottenest political ring in the country."

SECOND PASSENGER—"That's right. But how did you know where I'm from?"

FIRST PASSENGER—"I don't."—*Toledo Blade.*

A Valuable Trait.—"Is dem you-all's chickens?"

"Cohse dey's my-all's chickens. Who's chickens did you 'spose dey was?"

"I wasn' s'posen' nuffin' about 'em. But I will say dat it's mighty lucky dat a chicken won' come a runnin' an' a waggin' its tail when its regular owner whistles, same as a dog."—*Washington Star.*

Magnanimous.—A Mobile manufacturer tells of a darky who came to him one day with a request to be excused from work the next day, explaining that his wife had died and that he must attend the funeral.

This request, seeming reasonable, was granted; but after a lapse of some weeks the darky again asked a day off.

"All right, Frank," said the boss.

"What's it for this time?"

"This time I gets married."

"So soon? Why, it's only been a few weeks since you buried your wife."

"Sure!" said Frank, "but I don't hold spite long."—*Harper's.*

Awake and Nervous the whole night

SHE knows just what you will say when you get back—if she tells you. You can't reassure her with words. You can't laugh it off.

But if you could be a woman through one lonesome, fearsome night—listening and alarmed—your wife or sister would not go through this torment another night. You would give her the solid assurance of a Savage Automatic Protector that she knows she can aim as easy as pointing her finger. That shoots lightning quick at each crook of her finger. That checks the vicious degenerate and heartless criminal.

Get one today—the greatest protection for helpless women ever brought into the world. And don't give her any other. If she needs protection at all she needs this 10 shot defender—not 8 shots or 6 shots.

This is the only automatic that guards against the old excuse—"didn't know it was loaded." A glance or touch tells positively.

Send today for free booklet "If You Hear A Burglar"—written by a famous detective.

A Brand New Savage Rifle

This .22 Tubular Repeater has all the original Savage features—hammerless, trombone action, solid breech, solid top, side ejection, etc. Price \$12. Send for circular.

DISTURBANCES IN THE WOOLEN AND SILK TRADES—BEACH CLOTH SUITS AND FIBER SILK STOCKINGS

"WHY complain about the high cost of living when you can buy a suit of clothes, partly wool, for \$6.50?" asks a writer in *The Journal of Commerce*. Reference is made to what are called "Palm Beach" suits, or sometimes "Panama" suits, the same being only partly of wool, light in weight, and for use in hot weather. They are now sold in department stores at as low a price as above named, tho a more regular price is \$8 or \$10. These "beach cloths," as they are known generally in the woolen industry, "have proved to be the sensation this season in that tariff-distressed trade." Manufacturers in large numbers "are putting out great quantities of beach cloths." They are made of wool and cotton, or of mohair and cotton. One manufacturer in New York was said to be turning out, in July, a thousand suits a day, and "could sell more." Some manufacturers contended that these half-cotton suits "would be short-lived," but others declared that "a change had come over the clothing trade that is rational, and would remain a feature of the business for some years to come." Other comments in *The Journal of Commerce* are these:

"Now, these are seasonable garments, the male part of our population, which has always been notoriously conservative about departures from the old-established ideas of dress, having finally awakened to the fact that this is a hot climate for several months of the year, and clothes could well be lighter than they have been. The Palm Beach suits, it is more than likely, therefore, are here to stay.

"The question then arises if American manufacturers of woollens can manipulate so successfully in producing a cloth that gives universal satisfaction for summer wear, what may happen when one of them starts to work on an article at a low price for general year-round wear? The high cost of wool at present, with the probability that it will not be much lower for many years to come, is the incentive for just this kind of branching out in new fields.

"Such an adaptation to circumstances shown in the woolen industry in the manufacture of cloths that can be bought by small pocketbooks has a deeper significance than merely appears on the fashion surface of this new business. It may not be a rash guess to say that the experience gained by our manufacturers in manipulating various yarns so that such a popular product as beach cloths results, will prove of importance in the future of that big industry, whether protection is high or low. It has always been the claim of the domestic manufacturers that their English competitors were experts at manipulating their production so as to bring out cloths that could sell at a price that would beat other products of this country. Added experience along the same line may raise the spirits of American manufacturers, just now depressed by low duties."

These suits are declared to mark "the most radical change in fabric styles that has taken place in years." They are now

"carrying everything before them for the next spring season." Meanwhile:

"Mill-owners are changing over their machinery to meet the demand for these cloths; worsted-yarn spinners are finding business much smaller than usual because mohair yarns are being used instead of worsted; clothing manufacturers are re-organizing their factories in order to be able to make up this new line of clothing, and retailers who have hitherto boasted they handled only all-wool goods either have or will put in lines of clothing made of these cloths in order to meet the popular demand. The development has been of relatively slow growth. A few years ago the number of men wearing mohair suitings was comparatively small. Each year, however, saw the number increase.

"When lines were opened for the next season—that is, for 1915—the buying was as heavy as the most sanguine advocates of these materials looked for. Large orders were placed by all of the leading specialty clothing houses and unusually good-sized commitments were made by many of the smaller clothing manufacturers. But the regular clothing manufacturers were not the only buyers.

"A clothing manufacturer with a fondness for statistics stated that, in his opinion, orders had been booked on cotton and mohair suitings for spring 1915 that would total 10,000,000 yards. As it takes only three yards of 54-inch goods to make a coat and a pair of trousers, over 3,000,000 suits containing mohair will be offered by retailers during the second quarter of next year. Orders for as much as 5,000 pieces have been placed by some buyers. Orders for 3,000 pieces have been nothing unusual this season. Indeed, copies of orders were shown that called for as much as 1,200 to 3,000 pieces of a single style. These goods were plain tan. While plain tan or champagne are the leading shades, tan grounds with colored pencil stripes or artificial silk decorations are also popular.

"The thing that is puzzling worsted manufacturers is the effect this development is going to have on serges, cheap worsteds, and cheap woollens. The prevalent opinion is that the sales of the old types of lightweight fabrics will be seriously affected and the falling off in the demand for some makes of serges is being attributed to the new fabrics that have entered the men's wear field."

The same paper reports another source of disquiet from the increasing use of fiber silk in making socks and stockings that can be bought for 25 cents. It is believed that this artificial silk is "on the market to stay."

"Manufacturers have, as a rule, been making it under compulsion and at a bare margin of profit. Fiber-silk stockings have all the luster of real silk and even more; as to wearing qualities, that is a different matter. There is a suspicion, indeed, among many hosiery manufacturers that a large part of the population of this country doesn't buy for wear anyway, looks being the real incentive.

"One prominent selling agency in the hosiery trade said recently that the whole fiber business made him think of the paper-collar era of not long ago. In those days people who wanted to endure the torture of a stiff collar around their necks wore paper ones as long as they could decently

and not offend the demands of cleanliness, and then throw the collar away, bringing out another to take its place. To-day he imagines that many persons are doing something similar in regard to their hosiery.

"It is not extravagance to throw away a pair of silk socks or stockings if they have given you a week's wear and only cost 25 cents to begin with. A pair a week under that system would cost only \$1 per month, whereas you used to pay \$1 a pair for real silk. It's all very simple in these days of keeping up with the styles at \$15 per week.

"But leaving out the human frailty side of the question, there is something weighty in the ability shown by our manufacturers in the hosiery industry to take hold of a new textile fiber, something outside the common experience, based on using the accepted textiles of animal or vegetable origin, and from it make merchandise that for appearance, and perhaps wear, gives satisfaction to so many millions of the population. There are mills making thousands of dozens a week of this fiber-silk hosiery.

"Then consider the situation in hosiery. This country is silk mad. The piece-goods manufacturers have been having everything their own way for several years with the strong backing of fashion. Enjoying a higher protection than any other branch of textiles under the new tariff act, they have had, in addition, all of the style support on their side. The expansion, therefore, of the industry in this country since January 1 has been marvelous. Silks are worn at the tango dances in the afternoon, are worn on the streets, and, of course, are the leading fabric for evening wear.

"What more natural than that hosiery also should be of silk, to give a finishing touch to the silk gown with the slit skirt. But pure-silk hosiery, it was found, would have to sell for a dollar a pair. This necessarily barred it from the masses. Poorer grades of pure-silk yarns, it was found, could be used, and thus bring the retail cost down to 50 cents a pair and even a little cheaper, but that did not catch the trade of the masses, the great purchasing power of the country. Along came artificial silk made of wood fiber, that could be bought by the hosiery manufacturer at \$1.70 per pound or thereabouts, against the \$4 or more per pound that real Japanese silk would cost him to-day."

THE NEW HAVEN SHAREHOLDERS

Just what the outcome of a dissolution of the New Haven railroad system under a successful issue of the Government suit will be is a matter of much speculation in financial circles. It is held by some good judges that the suit is not likely to reach a final decision under two years at best, while others think a decision might be reached somewhat sooner. In case a dissolution of the system takes place it is believed in good quarters that the parent company, operated thereafter simply as a railroad instead of a holding company, can readily be restored to a safe investment basis. The Interstate Commerce Commission itself, in the drastic report made public a few weeks ago, declared that honesty and efficiency in its management "would undoubtedly restore this property to its former standing." The strong point in favor of such a restoration is that, unlike many other roads, the New Haven does not need to wait for the development of new territory. As the New York *Evening Post* expresses it, "business is, and for years has been, right at hand sufficient to pay handsome dividends on a reasonable capital." The same writer comments as follows on the business of this road and the outlook for its restoration:

"According to the annual report of the

Shaving is always a nuisance

but there is no reason for it to be a torture as well. The nuisance cannot be eliminated, but the painful features of the shave can be.

The lather—not the razor—is the real cause of most shaving troubles. It doesn't properly soften the beard, and so even the best razor pulls. Or it contains an excess of caustic which eats into the skin, causing that terrible smarting.

Mennen's Shaving Cream, with a few strokes of the brush, works up a thick, full-bodied creamy lather which almost instantly softens the stiffest beard without the usual mussy "rubbing in" with the fingers. It will give you a quick, comfortable shave and a cool, refreshed face afterwards.

Shave just once with Mennen's and you'll appreciate how much the lather has to do with the comfort of a shave.

At all dealers—25 cents in air-tight tubes with handy, large, hexagon screw tops. Send 10 cents for a demonstrator tube containing enough for fifty shaves. GENIARD MENNEN CO., Newark, N. J., makers of the celebrated Mennen's Borated and Violet Talcum Toilet Powders and Mennen's Cream Dentifrice.

Corns Show That You Don't Know This

If you have a corn it clearly shows that you don't know this fact:

Blue-jay removes corns without pain or trouble. It ends them in 48 hours.

Apply it tonight, and tomorrow you won't feel the corn. Day after tomorrow you can lift it out.

Ninetimes in ten one application ends the corn forever. One time in ten it requires two applications.

Blue-jay has done this with sixty million corns. It does it every day with half the corns that develop. The other half are suffered by people who merely pare corns, or use some old-time treatment.

Let every corn pain remind you that 25 cents will end them. And the way is easy, quick and painless. It's the scientific way.

O.K. Addressing Co.

Batz Building

Philadelphia

Interstate Commerce Commission, the average railroad of the country is able to make passenger earnings show only 23 per cent. of gross revenue. That, however, is not true of New Haven. That company's percentage of passenger earnings to total gross is larger than any other road in the country, last year's figures showing over 40 per cent. compared with 23, the average for all other lines.

"New Haven operates in the most thickly populated section of the country, and that is why its passenger earnings are large. As for the company's freight traffic, the whole system is dotted with manufacturing cities and towns. Besides being permanent, that class of freight bears a high rate. The last annual report gives the average rate received by all of the railroads for hauling a ton of freight one mile as 0.757 cent. Last year New Haven's average rate, because of the high-class freight it handles, was 1.345 cents. The difference between 0.757 cent and 1.345 cents appears insignificant until the figure is applied to New Haven's own freight movement. Last year that company hauled 2,532,746,840 tons of freight one mile. With those figures to deal with, a fraction of a cent quickly runs into money.

"In 1903, the year New Haven began its reckless expansion policy, the company was earning \$23,329 gross. Ten years later gross per mile amounted to \$31,049. That gain of over 30 per cent. appears large until the company's fixed charges per mile are examined. For 1903 that item stood at \$3.985. Ten years later it was \$10.103, or larger by over 50 per cent. The trouble with New Haven has been that fixed charges created by buying outside properties increased faster than earnings. That is the whole story.

"A dissolution under the supervision of the courts would enable New Haven to get rid of a lot of outside properties in a way that would bring the least harm to the company's security holders. With that object once accomplished, the management would be able to see the end of costly and disorganizing litigation. With harmony restored, accidents would occur less frequently, the operating ratio would be greatly reduced, fixed charges would be lower, and the company could recover the good will of the public."

A Spoil-Sport.—It was a sweet, sad play, and there was hardly a dry handkerchief in the house. But one man in the first balcony irritated his neighbors excessively by refusing to take the performance in the proper spirit. Instead of weeping, he laughed. While others were mopping their eyes and endeavoring to stifle their sobs, his face beamed with merriment and he burst into inappropriate guffaws.

At last a lady by his side turned upon him indignantly.

"I d-don't know what brought y-you here," she sobbed, with streaming eyes, and pressing her hand against her aching heart; "but if y-you don't like the p-play you might l-let other p-people enjoy it!"—*Tit-Bits.*

CURRENT EVENTS

Austro-Servian War

July 23.—Demanding among other things the suppression of all anti-Austrian societies, and the punishment of all the accomplices in the murder of the Archduke Francis Ferdinand, Austria threatens invasion if Servia does not return a favorable answer by 6 o'clock.

July 25.—Servia requests an extension of time, in order that her Ministers, in a special session, may formally consider Austria's ultimatum. The extension is refused.

July 26.—Servia concedes practically all of Austria's demands, except that for Austrian participation in the investigation of anti-Austrian conspiracies in Servia, and asks mediation at The Hague.

Declaring the Servian reply to Austria's ultimatum to be unsatisfactory, the Austrian Minister leaves Belgrade.

King Peter of Servia withdraws from Belgrade, on the frontier, establishing a temporary capital in the more sheltered city of Kragujevatz.

July 26.—Efforts for peace are made by London, Paris, and St. Petersburg, altho it is reported that hostilities between Servian and Austrian forces have already begun.

July 27.—Especially efforts are made by Sir Edward Grey to secure non-interference by other Powers in the Austro-Servian conflict, and to

obtain a conference of Powers to assure neutrality.

July 28.—Austria declares war formally upon Servia.

Germany refuses to consider the peace conference in London suggested by Sir Edward Grey. The Kaiser holds an all-day conference with his Ministers.

Socialist antiwar riots take place in Paris.

Russian forces are definitely beginning to be massed upon the western border.

July 29.—Mobilization continues in Russia, Germany, and France.

The British first fleet leaves Portland under sealed orders.

General Foreign

July 24.—Ex-President Huerta and his suite arrive at Kingston, Jamaica.

July 25.—As the first formal ceremony in celebration of the hundred years' peace between English-speaking countries, the Duke of Teck, at Sulgrave, England, hands over to Ambassador Page the keys of Sulgrave Manor, the ancestral home of the Washington family.

The Khedive of Egypt is shot by an assassin, but is not seriously injured.

July 26.—Following an attempted confiscation of smuggled arms in Dublin, troops fire upon a mob, killing four and wounding many.

July 27.—A collision occurs in midsea between the Red Star liner *Zerland* and a British

freighter, *Missouri*, but without fatal injury to either boat.

Twelve hundred American surgeons meet in conference in London.

July 28.—Mme. Henriette Caillaux, on trial for the murder of Gaston Calmette, editor of the *Figaro*, is acquitted by a Paris jury.

Domestic
WASHINGTON

July 23.—President Wilson withdraws the nomination of Thomas D. Jones, of Chicago, for membership on the Federal Reserve Board.

July 26.—Secretary of the Treasury McAdoo announces that the Government will deposit \$34,000,000 in national banks to move crops and for other business purposes.

July 28.—Republicans in caucus formally decide against any filibuster on the Democratic trust program.

GENERAL

July 23.—William Barnes, chairman of the New York Republican State Committee, begins a suit for libel against Colonel Roosevelt.

July 24.—In order to insure justice to the creditors of the H. B. Claflin Company, John Claflin pledges his personal fortune in payment.

July 25.—Lieutenant Porte and Glenn H. Curtiss agree to postpone the transatlantic flight in the *America* until October 1.

July 27.—District Attorney Whitman announces his candidacy for Governor on the New York Republican ticket.

Tooth Insurance

One-third of a brushful of Pebecco used regularly night and morning is insurance against the ravages of "acid-mouth."

That means practical certainty of keeping teeth sound, for dentists say 95% of tooth decay is caused by "acid-mouth."

It also means clean, white teeth, almost entire freedom from bad odors and tastes, and a refreshed feeling of the mouth.

PEBECO TOOTH PASTE

is the scientific dentifrice originated in the hygienic laboratories of P. Beiersdorf & Co., Hamburg, Germany.

It is the one preparation that counteracts "acid-mouth."

Prove this for yourself by sending for

Free Ten-day Trial Tube of Pebecco and Acid Test Papers

The little Test Papers will infallibly detect "acid-mouth" if you have it—as nine out of ten people are said to have. The experiment is simple and interesting. The trial tube of Pebecco will show how pleasant is the use of this real dentifrice.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"E. A. A." Chicago, Ill.—"Please inform me as to the derivation and meaning of 'Manhattan.'"

Manhattan is said to be from the American-Indian *manah*, "island," and *-atin*, "hill," and means "the island of hills."

"V. W." Portsmouth, Va.—"Is there any authority for the plural 'radiuses'?"

The English plural of *radius* is *radiuses*. The Latin plural is *radii*.

"C. H. D." New Haven, Conn.—"Kindly advise me which is the correct form of salutation, 'My dear Frank,' or 'My Dear Frank,' and why?"

"My" begins the sentence, and, therefore, is correctly capitalized. If "Dear" began the sentence that also should be capitalized, but in the case submitted it is merely a common adjective and should be used with a small initial letter.

"C. C. B." Spokane, Wash.—"In speaking of the purchase of honey direct from the keeper and owner of the bees, which is correct of the following: 'We buy our honey direct from the grower, the producer, or the manufacturer'?"

As honey is a product resulting from the keeping of bees, *producer* is correct.

"S. G. H." Chicago, Ill.—"I find the word *procedure* spelled with only one *e*. From the dictionaries that I am able to get hold of, I find that it comes from the same source as *proceeding*, and other like words. I can find no rule or reason why the same stem should drop an *e* in taking on one affix, or take on an *e* when taking on another affix. Can you explain this for me?"

The original forms of *procedure* and *proceed* were *procedura* and *procede*. From the 14th to the 17th century *proceed* was spelled *procede* and *proceeding* was spelled *proceding* and sometimes *procedying*. *Procedure* was occasionally spelled *procedura* in the 18th century, but used repeatedly in law in its original form *procedure* that has survived. As to *proceed* and *proceeding*, no plausible reason can be given for the change. It may have been due to idiosyncrasy, but probably is the result of what we know as the genius of language—an influence that, working on the minds of men, determines what shall be the forms that words shall take.

"G. B." St. Louis, Mo.—"Please suggest correction of the following notation on bill-head: 'Orders received and shipments made subject to delays in transportation, scarcity of cars, strikes, accidents, or any cause beyond our control.'"

Insert *other* after the word *any* and the sentence is correct, because *some* of the causes have already been cited, and "*other causes*" is what is meant.

"G. C. B." Detroit, Mich.—"Please let me know if the following expression is grammatically correct: 'But no organization was effected nor no stock issued.'"

The rule in English is that two negatives make an affirmative; hence, "nor, no," in the sentence you submit are incorrect. Say, rather, "But no organization was effected and no stock issued."

"H. B. E." Holyoke, Mass.—"What is the meaning of *Rubaiyat*, as used in 'the *Rubaiyat* of a Persian kitten'?"

Rubai is a Persian quatrain or epigram or a composition in imitation of it. *Rubaiyat* is the plural form. A quatrain is a stanza of four lines in poetry.

"F. R. H." Greenfield, O.—"Please explain the correct use of the apostrophe in such phrases as 'Andover Boys' School,' 'Students' Work Benches,' 'Girls' Gymnasium.' Should the apostrophe be omitted when the idea is clearly descriptive and not possessive as in the above phrases, or must the apostrophe be used in all such cases?"

The sign of the possessive should be retained, for, under the phrases however you may, the dominant idea is "Andover School for Boys," and therefore "Boys' School" is correct. This applies in like manner to the other phrases cited.

When You've G-O-T to Stop!

There are times when the motorist must jam on his brakes, and STOP.

He's GOT to stop!

A man steps off the curb, a child runs out for his toy, a cyclist turns out from behind a wagon—and what wouldn't you give for a brake lining that would stop your car as a broncho throws a steer—on the spot?

Thermoid HYDRAULIC COMPRESSED Brake Lining - 100%

will grab your brake drums instantly if necessary or will grip gradually as desired. It is 100% control clear through and not merely on the surface. It grips just as you want it and more effectively than ordinary brake lining and is good until worn ribbon-thin.

Thermoid is not affected by oil, water, gasoline, heat or dirt. Sold under the

Thermoid Guarantee

Thermoid will make good—or WE will.

Specify it on your new car; order it put on your present one.

THE EUROPEAN BATTLEFIELD.

Readers will note the strategic positions of the Kiel Canal, Liège and the series of strongly fortified French towns near the German border.

WHO WILL WIN?

SUCH tremendous forces are unleashed by this war, and so many novel conditions are involved, that predictions of the outcome can be offered with no great degree of confidence. It is nevertheless interesting to note what expert observers have to say, and the arguments on which they base their various conclusions throw interesting side-lights on the situation. On one point, moreover, there is general agreement—namely, that the resources of the world are not sufficient to maintain a conflict of such dimensions for a long period. Estimates of the war's duration by military experts, says a Washington dispatch to the New York Sun, range from one month to a year. Few, however, according to the same authority, expect to see the decisive blow struck inside of six months. For, while the great bodies of men involved, the tremendous increase of the rapidity of communication and transportation, and the enormous cost of modern warfare, all make for quick results, on the other hand—

"The tremendous area of the probable field of hostilities is pointed to as a factor which may offset some of the influences which would ordinarily shorten the struggle.

"Instead of one or two points of contact for the opposing forces, it is expected that there will be a dozen widely separated

struggles, each one on a scale surpassing that of the important conflicts of modern times."

In this country the majority of non-professional observers look upon Germany, hemmed in by a wall of enemies, as doomed to almost certain defeat. Figures published in last week's LITERARY DIGEST place the combined land forces of Germany and Austria-Hungary at 6,400,000 men, and those of France, England, and Russia at 10,600,000. In naval units the Triple Entente outnumbers the Dual Alliance 1,039 to 401. Against Germany's numerical inferiority, some authorities remind us, may be balanced her greater preparedness for the conflict and her more efficient military organization. And Professor Roland G. Usher, author of a volume entitled "Pan-Germanism," argues that while Germany's central position would be weak for a nation on the defensive, it possesses enormous advantages for a Power taking the aggressive. He says:

"She holds the great strategic points of northern Europe—Alsace-Lorraine, the door to France; the Kiel Canal, giving her access to the Baltic without exposing herself to the necessity of utilizing the Sund. Her allies hold the Swiss passes and the vital points affording passage into Russia and the Balkans.

"Everything vital to Germany—indeed, everything she owns—forms a compact territorial unit, which can be defended with the minimum force and the maximum ease. She has no land

BRITAIN'S RELIANCE—HER HOME FLEET.

chain of forts or islands to guard, no great stretches of land in Africa or Asia to protect, no subject races to pacify like the Hindus or Moroccans."

While no less an authority than Rear-Admiral Alfred T. Mahan predicts that "the most decisive strokes in the general European warfare will be delivered upon the sea rather than upon the land," there are many who regard Germany's land campaign against France as the real crux of the situation. Still others maintain that it is in Russia, rather than in France, that the principal scenes of the war-drama will be enacted.

In the meantime, writes the military correspondent of the *London Times*:

"During the next week or ten days combats and battles of which we shall probably read will not be the shock of main masses but of covering troops which are organized on all the Continental frontiers and have a special mission. This mission is to cover and protect from hostile incursions the zone of concentration of the main armies, and the mission may or may not include offensive operations."

HOW THE WAR AFFECTS AMERICA

OUR INTEREST in the European struggle has its broadest basis in the fact that we are a nation of European immigrants, observes one editor, who also notes how the war affects us all in numberless specific ways. Those Americans who have felt it most are, perhaps, the hundred thousand tourists who have been caught in Europe and have either returned rejoicing over even crowded steerage accommodations, or who still remain waiting assistance from their Government, with the transatlantic passenger service practically discontinued, with checks and drafts worthless, or nearly so, and with customary means of transportation of communication cut off. But those of us who have remained at home and have no friends abroad have discovered that the elimination of Germany from the seas means our doing without articles "made in Germany," and we are face to face with a shortage and high prices in every kind of imported goods. More serious still, observes one jesting editor, behold our "first-nights postponed and international sporting contests cancelled!" Yet with all these lesser evils and the greater evils to come from the disarrangement of the world's commerce, editors bid us rejoice in our country's "permanent good fortune." The United States, says the *New York Sun*, "will suffer inevitably to some extent from the waste and destruction abroad, but it has permanent cause of gratitude in its insulation from the worst."

A pressing call to duty and opportunity, voiced by many

a newspaper, urges our Government and our men of business to take up the world's trade, which Europe has forsaken for the battle-field. This means, says the *New York Sun*, that our merchant marine, once our pride, is "now perhaps to be resuscitated by the calamities across the Atlantic." It means, says a notice appearing in another New York newspaper, "a supreme opportunity for American manufacturers to gain world-wide markets"—

"While the energy and resources of Great Britain, Germany, France, Russia, Austria-Hungary, Belgium, and the other countries involved, are directed to carrying on war, the needs of the world must be supplied.

"Our country stands in an isolated position of complete neutrality. Our commerce and manufacture will be uninterrupted. It is our duty as well as our supreme opportunity to prepare to care for the demands that will be made upon us. . . .

"American manufacturers can make lasting trade connections now with South America, Asia, Africa, and all insular countries."

Other trade possibilities are thus sketched by the optimistic *New York Commercial*:

"War will have an important bearing on textile and shoe manufacturers. Supplies of flax and hemp from Russia, and possibly of jute from India, will be cut off or seriously interrupted while this war lasts. Wool will probably become scarcer in supply, tho that will depend on the control of the seas. This leaves cotton, of which the United States produces about two-thirds of the total free supply, the one great staple on which the world will have to depend, because silk can hardly be taken into account as a necessary of life. The effect of war on the price of raw cotton in this country is problematical. If supplies from Egypt and India are cut off even the waste of war may not reduce the price in the South altho this country will lose a large part of the trade formerly done with the important cotton-mills of Germany, Austria, and Russia.

"Whatever may be the effect of war on raw cotton itself, the chances are that it will vastly expand the markets for cotton cloth into which our manufacturers can enter in South America, Africa, Asia, and parts of Europe.

"In our metal industries the outlook is extremely complicated, because some products will be in greater demand than ever, while others which we export freely at the present will be seriously hurt. . . . A protracted war throughout Europe would give us the control of the trade of the rest of the world and would put us beyond the reach of competition in years to come."

If England can keep control of the Atlantic, continues *The Commercial*, "our trade in breadstuffs and meats will be enormous and highly profitable because Russia, the chief wheat-growing country of the world, will be shut in and the grain crops of the valley of the Danube will be practically destroyed." This may mean high prices for American consumers, admit several editors, but they prefer to emphasize the fact that "it will add millions more to this year's income of the interior States."

THE KAISER'S BATTLESHIPS IN THE NORTH SEA

Europe, asserts the *New York Evening Post*, "will simply be compelled to buy our wheat, and to find the way to pay for it and transport it."

A similar benefit to our coal trade is seen by the *Philadelphia Record*. The *New York Commercial* believes that a long-continued war will divert much traffic from the Suez to the now nearly ready Panama Canal. Our security market will profit, declares the *St. Louis Republic*.—

"As the shock of the present experience passes away the capital of the world will be invested in such quantities as never before in the industrial and commercial enterprises of a country 4,000 miles from the crossed bayonets of Europe."

So much for the bright side of the picture. On the other hand, tho the exporter may see new markets and greater demands following the temporary paralysis of ocean trade, the importer can see no silver lining behind his dark cloud. The cutting off of foreign wool supplies means higher prices for clothing, we read in the *New York Journal of Commerce*. The same paper notes scarcity and high prices in rubber, copper, and tin. Gown importers, says one trade authority quoted in the *New York Sun*, will suffer, and "American women will have to wear home-made gowns at last." Editors of fashion magazines will have no Paris styles to display and "American fashions" may thus be established through war.

Even tho the interruption of commerce is temporary, many industries, particularly those connected with shipping, or with exportations to continental Europe, will suffer severely. The Standard Oil Company, for instance, has had to curtail production. As a result of the almost complete destruction of our import trade, tariff receipts "are already falling off in a serious degree," and the "choice of a form of taxation as a substitute for the tariff will be of great significance." The *New Haven Journal-Courier* fears a labor famine because of the rush of reservists to Europe.

Those who regard the European war as an economic benefit to the United States, "are the shallowest of superficial reasoners," declares the *New York Journal of Commerce*. "As a matter of fact," it says, "the immediate phenomena will be scarcity and higher prices of necessities; the next, readjustment of industrial demand and of manufacturing; the ultimate falling off of consumptive power, the destruction of markets, and the erection of inflated and temporary enterprises." Then, when the war is ended, remarks the *Salt Lake Tribune*, we shall "find the demand for our goods in Europe reduced to a minimum far below the normal demand of the last few years." A general

war, declares *The Iron Age*, is not a "bearer of real prosperity."—"one country, like the United States, might profit for a time from the distress of others, but in the long run the heavy burdens under which the warring nations would stagger on when peace had come would be handicaps from which no part of the world could wholly escape."

THE FINANCIAL SIDE

THE PRICE the United States pays for the madness of warring Europe is the upset of our money market and the blockade of our commerce. The general "destruction of capital," in the words of one writer, is one of the "most striking effects" of war, and *The Commercial and Financial Chronicle* (New York) tells us that just as the Europeans are mobilizing their armies, so should we "mobilize our financial resources," which means that we must "strengthen our gold reserves . . . by keeping our gold here at all hazards." As to our export trade, it is estimated, we read in the press, that not less than 50,000,000 bushels of wheat are "tied up at seaboard points," and while it is said that the congestion of miscellaneous merchandise is not yet so serious, "fears are felt that even this situation may soon be beyond control." Pending the appeals of commercial organizations that the Government lend its aid to a solution of the tangle, editorial comment at large approves what *The Sun* calls the "Government coalition with the banking and commercial community" resulting in "authorizations of emergency currency and Clearing-House certificates." Far from causing alarm, *The Sun* adds, this action "should establish confidence," since it "will prevent an outflow of gold, provide ample circulation for pay-rolls, and crop-moving demands, and place the merchant in a position where he can better sustain the strain of unusual events." The issuance of Clearing-House certificates, *The Sun* points out, is "the tenth in number within fifty-four years," occurring at periods of financial and commercial disturbance among us, but it adds:

"There is no panic now and none is likely to occur as a result of the highly disturbed situation abroad. . . ."

"Europe has declared a general moratorium, and American merchants and exporters are unable to collect their accounts. In addition, all shipping has been placed upon a war basis, which seriously clogs the wheels of commerce. To say that the machinery of international trade has broken down completely is to put the case none too strongly, for the conditions prevailing in international exchange are unprecedented."

A testimonial to the soundness of our condition proceeds, also

from Secretary of the Treasury McAdoo in a statement given out when the President signed the amended Aldrich-Vreeland Currency Act to provide what a Washington correspondent of the *New York Times* calls "a practically unlimited supply of emergency currency." Secretary McAdoo is reported as saying that:

"The situation throughout the country is excellent, and no greater testimonial to the inherent strength of our financial and economic position and condition could be given than the way in which the country has withstood the shock of the greatest European disturbance that has occurred in the last hundred years."

Another precaution "to meet a condition which never before confronted the great nations of the world," the *New York Times' Annalist* tells us, is that "the plans for putting the new Federal Reserve Law into effect are being rushed," and it adds that "the inherent soundness of our own position is giving ground for much relief." In this connection we note the warning of the *New York Journal of Commerce* that "neither excessive hopelessness nor baseless optimism founded upon the expectation of making large profits" is the proper mood for this time, and it points out that "the urgent demand of the case is for conservatism and good judgment in the handling of business." Of the general state of things, this journal says:

"Our financial situation will necessarily be affected by the inevitable difficulties of trade and exchange with other countries. These can not be wholly overcome for some time, but we can safeguard our own domestic interests and do much to offset any adverse influence from the complications abroad.

The gold movement can be substantially controlled by the closing of the stock exchanges and concerted action of bankers, and we are in no danger of failure to maintain entirely adequate reserves for our own credit operations. The unanimity with which the bill providing for emergency currency by associations of national banks was promptly passed by both Houses of Congress was a gratifying evidence of a non-partizan spirit in dealing with the present exigency. The liberal limit allowed for issuing the new notes, which are amply secured, will preclude all danger of a lack of funds for crop-moving and other exceptional requirements. There is no likelihood of any approach to the limit permitted or any uncertainty about the safety of this currency when there is practically no speculation going on. Our business will necessarily be under some repression, but there is a chance for exercising unusual foresight, careful judgment, and watchful effort, and there is wholesome discipline in that."

In considering the "destruction of capital" through war, *The*

Journal of Commerce remarks that "one of the worst results of past losses of capital" is "the higher 'cost of living' for all business enterprises using—as most do use—borrowed funds as the basis of their operations," and it explains that—

"As domestic business men find that they must increase their interest payments, owing to shortage of funds from foreign sources, they will also find that they must seek to recover from

consumers in higher prices. Ultimately the consumer will, as usual, bear the brunt of the reduction of wealth. He will either restrict his consumption materially, or else he will have to part with much more of his money in order to provide himself with his customary quantity and quality of commodities. The effects of this shortage of funds will not be wholly passed on to the consumer in this way, but will, in part, at least, stop the intermediate capitalist who will not be able either wholly or at the outset to transfer them. But ultimately there will be a wide diffusion of the consequences of the war, and in the directions just suggested. Before these results are fully felt, and more or less incidental to them, the reduction of employment due to the higher cost of business and the lower returns realized will have wrought their effects upon another large section of the population."

The material injury we suffer on account of the war is widely deplored by other financial writers. We read in *The American Banker* (New York) that "the advantages of the record crops of 1914 will be materially lessened by the conflict across the sea," and *The Economist* (Chicago) calls attention to the fact that whatever "temporary increase in trade" we gain through war demands we shall "lose ultimately in the

diminution of capital normally coming to this country for investment," while *The Financial World* (New York) asks bitterly whether the world is "to toil and struggle and sweat for years to maintain itself in peace and plenty, only to be plunged into utter destitution in a night in order that war heroes may be created on pyramids of the slain?" Other journals occupy themselves with "the duty of the hour," which the *New York Financier* defines as remembering that the resources of our banks belong to commerce "and are not to be regarded as war funds," and it adds:

"If the flow of gold abroad is shut off, even through the exercise of drastic measures, and if the reservoirs of cash of the United States are closed against those who would use them for war purposes, then the effect will be to make war abroad more difficult, and the more difficult war is made, the less the world suffers."

MRS. WOODROW WILSON.

President Wilson's tender to the warring nations of his good offices for peace in Europe was written while he was sitting at the bedside of Mrs. Wilson. Every moment that could be spared from his office the President spent here, by her side who had been his constant coworker in the past. Mrs. Wilson's death occurred at the White House on the afternoon of August 6. That morning the Senate, realizing her condition, passed in silent concurrence her "Alley Bill" for the destruction of Washington's slums, a bill in which she had been deeply interested. This cheering news was brought to her while she was still conscious. Mrs. Wilson's death is regarded by the press as the President's greatest burden during these weeks of heart-breaking care and responsibility. "The people grieve," one editor has said, "that at such a time as this there is no way . . . for any mortal man to lighten the load and lessen the grief of President Wilson."

THE RATE DECISION

THE NEW DAY of understanding between the Government and the railroads is believed by some editorial observers to begin with the decision of the Interstate Commerce Commission which grants, with qualifications, the freight increase of 5 per cent. pleaded for by the Eastern lines. The public and legislators, say such writers, realize now something of the problems of the railway companies, and this advance in knowledge can only tend to make the roads better properties for all concerned. Impatient, however, that it should take the Commission a year and a half to issue its report, and grieved that the allowed increase applies only to the roads west of Pittsburg and Buffalo to Chicago, other commentators rake the board as "bureaucrats," and see in the ruling nothing more than proof of the inefficacy of "government by commission." Among railroad officials the verdict is not enthusiastically received even by those that are grateful for a crumb of comfort, tho they see in it hope for a brighter future; but the disappointed ones are severe in their strictures. The roads east of Buffalo and Pittsburg, according to the Commission's recommendation, are to reduce their expenses by cutting out "special services" and outside investments, except those of New England, which are described as being looked after "locally." Altho it is estimated that the rate increase will bring an additional annual revenue of from \$10,000,000 to \$15,000,000, still, in the view of the *New York World*, "no one will ever be able to compute the damage that has resulted to business of all kinds" through the delay of the Commission in reaching a conclusion which "comes at last when interest in it is reduced to the minimum." The main features of the report are summarized by one of its admirers, the *Philadelphia North American*, as follows:

"The railroads are not receiving adequate revenues.

"Rates are too low in the Central territory, between the Buffalo-Pittsburg line and the Mississippi, and will be advanced approximately 5 per cent., excepting on coal, coke, ore, cement, and like commodities.

"No increase is warranted in the territory east of Pittsburg, including New England. The important systems will benefit, however, by the Central territory increase, since their lines extend for thousands of miles into that region.

"Passenger-fares that are too low should be raised, upon proper authorization of State railroad commissions.

"Recommendation is made that revenues of all railroads be increased by the promotion of more efficient methods of operation, the reduction of waste, and the elimination of free services and special privileges. Costly practices of this kind are specified, such as passes and private cars for persons not entitled to them, free collection and delivery of freight, free storage, switching, loading, unloading, reconsigning, etc.

"The rate increase granted will add between \$15,000,000 and \$20,000,000 to the railroads' revenues, while millions more will be derived by abandoning practices which divert earnings."

In the judgment of this journal the ruling is "one of the most momentous ever delivered by a judicial body in this country," and it adds that "three vital issues have been definitely settled," of which we read, in substance:

"There is a clean-cut decision that the railroads must be operated not as private enterprises, but as institutions which must pay due regard to the rights of the public from which they have derived their powers. This principle underlies the whole case. It has not been originated, of course, by the Commission—it appears in numerous decisions of the Supreme Court—but here it is plainly stated as a governmental policy.

"It is reaffirmed that private capital thus employed, while subject to regulation, possesses the right, in view of that regulation, to make charges high enough to return fair dividends upon honest capitalization under efficient management.

"Further, it is plainly declared that before the railroads can claim such rights—which would underwrite every dollar of honest railroad investment—they must show to the court 'clean hands,' must abandon wasteful, uneconomic, and illegal methods of doing business.

"The second big accomplishment is the laying down of definite rules of conduct for the greatest single industry in the country. Railroads know what they may and may not do. They are specially favored, for they have a plain chart of procedure, while other businesses are still groping.

"Thirdly, the fidelity of the Commission to its obligation to decide according to the evidence, in the face of extraordinary pressure, will go far to restore waning public confidence in the judiciary as a whole.

"Finally, a great forward step has been taken toward a condition when railroad securities will be in a preferred class. For the accepted policy is that, if honestly capitalized and efficiently managed, railroads can be assured of the right always to earn dividends."

The *New York Herald* does not overlook the interesting fact of the increased revenue assured by the decision, but it thinks that "of vastly greater importance is the recognition . . . of the principle that the railways are entitled to a fair return on the capital invested," and the *New York Sun* says that "the decision as a whole lends itself to the conviction that a day of fair play has dawned for the railroads after a long night of darkness," and again that "the Commission extends the hope of much relief to the railroads in the future." The result is "worth the long waiting," says the *Albany Journal*, which believes that the railroads gain "a complete victory," and explains that "their victory is partial only in respect of the advances actually allowed at this time." Belated tho the decision be, remarks the *Pittsburg Chronicle Telegraph*, "to the extent that the railroads are strengthened . . . it will have a steadying effect." The *New York Globe* also criticizes the Commission's long wait, but finds that the report "meets public demand for fair play," and interprets it in the statement that "the roads in the western district got a large part of the increase they asked and an implied invitation to submit proposals for a more general advance in conformity with their requirements." The *Springfield Republican* says that the Commission, "after all has been said in criticism of it, has taken a step in the right direction," and while the *Newark (N. J.) News* is sure that the decision is "somewhat disappointing" to the carriers, yet it argues confidently that "in the long run they will find it a source of a sounder strength than they have yet known," and the *St. Louis Globe Democrat* hopes they "will accept this finding in a friendly spirit, and that it will be found to provide such relief as will materially lessen their difficulties." As for the dissenting opinions of Commissioners Daniel and McChord, this journal asserts that neither one nor the other "undertakes to deal with the mass of evidence the majority opinion shows, nor to controvert it in any way," and yet it realizes that the report is "evidently a disappointment to some railway managers who are injudicious enough to criticize severely the refusal of the Commission to grant all that was asked." As an instance of such criticism may be cited from the *New York Herald* the statement attributed to F. D. Underwood, president of the Erie Railroad, in which we read:

"As it has turned out, the Erie Railroad is not interested in the decision one way or another. I predicted months ago that the Commission would give the railroads little or nothing, and this prediction is now borne out by the facts. First, the Commission denied the railroads east of Pittsburg and Buffalo any increases, but permitted the roads west to increase rates five per cent., after, however, carefully excluding all commodities from this increase that would render any benefit to the railroads. The commodities excluded from the advances represent on the railroads west of Pittsburg by far the largest percentage of their traffic, so the final result will add very little revenue to any of the carriers.

"Again, the Commission spoke in hopeful terms of the possibility of increasing passenger-fares, but apparently there is no way to do this, for already we have the two-cent passenger laws in Ohio, Indiana, and Illinois, and there is every probability that we shall have it in New York when the legislature convenes."

Union Pacific, regrets that the roads east of Buffalo and Pittsburgh are denied an increase, while William H. Truesdale, president of the Lackawanna, admits general disappointment at the decision. Ralph Peters, president of the Long Island Road, is of like frame of mind, and is reported as saying:

"A ray of hope lies in the making of extra charges for delivering cars on side-tracks, and for other services. If the railroads can not raise rates, they can not raise wages, and they can not continue extensive improvements. The decision means the railroads will have a hard road to travel for some time. They will not be able to increase their capital because they will not be able to show sufficient earning capacity."

In dispatches from Chicago we read that Frederic A. Delano, president of the Wabash Railroad and chairman of the Eastern Roads Committee as well as lately nominated candidate for the Federal Reserve Board, says that "about the only feature of the decision that is at all satisfactory is the mere recognition of the fact that the railroads need some relief," while E. P. Ripley, president of the Santa Fé, is quoted as follows:

"The decision was a decided disappointment to all railroad men. The Commission appears to have given very grudgingly a fractional part of what was asked and what was proved to be needed. While I have not studied the decision, the published summary sounds to me as if it were a stump speech on the part of

political aspirants. It is far from being the utterance of a judicial body. I can not see where the roads interested will get much relief."

On the other hand, press reports inform us that Frank A. Vanderlip, president of the National City Bank, and a director of many railroads, considers that the decision gives more than

he had expected, while L. J. Spence, traffic director of the Southern Pacific system, is reported as saying that "the chief importance" of the decision lies in its "sympathetic attitude" toward "vested interests." This, he thinks, will encourage investors. Among the various editors that look upon the rate decision unfavorably we find the *Philadelphia Evening Telegraph* saying that it is "a good deal of jugglery," while the *New York Times* observes that the Commission reports the need of an increase in rates, "but refuses immediate relief and will continue its investigation." Similar criticism appears in the *New York Commercial*, the *Boston Transcript*, the *Boston Traveler*, and *The Public Ledger*, *The Record* and *The Inquirer* of Philadelphia, while the *Baltimore News* remarks rather satirically that "it is not complete proof of the success of regulation that the regulating agency unanimously agreed that more revenue was needed, and then by a divided vote refused adequate relief."

FOREIGN COMMENT

THE EUROPEAN ARMAGEDDON—WHO CAUSED IT?

IT MAY at first sight appear that the Austrian Government by formally declaring war against Serbia set the match to the train which ended in the explosion which is now shaking the world. But, on the other hand, the Austrian press maintain that little Serbia had been vexing, heckling, and badgering the representatives of the dual monarchy until exasperation was driven beyond bounds. France, naturally enough, looks upon Kaiser William as the serpent who has risen up to disturb the Eden tranquillity of Europe. Another suggestion has been made regarding the origin of the present war which implicates Russia as the chief agent in stirring up strife. Russia, we are told, is at present distracted by semirevolutionary labor disturbances, and as Napoleon III. plunged into a war with Germany in order to distract the attention of France from her own domestic grievances, so the Czar mobilizes his troops and breathes out defiance against his western neighbors in order that his people may have something else to think about than their scanty supply of black bread, the burden of their taxation, or the oppression of the police.

The Austrian press are of course unanimous in blaming Serbia for its defiance of the Danubian empire, and the vituperation which rages against the Government and even the person of Francis Joseph. The wrongs done by Serbia to its great trans-Danubian neighbor culminated, we are told, in the murder of the Hereditary Grand Duke and his consort. Thus the *Neue Freie Presse* (Vienna) declares that "the situation between our Government and that of King Peter has become intolerable. Our ultimatum has been the natural result."

The *Tageblatt* (Vienna) talks about the wrongs suffered by Austria at the hands of Serbia. To quote its words:

"When we consider the provocations of which Serbia has

been guilty for so many years, the solemn pledges made and broken, the defiance which we have put up with from an unscrupulous neighbor whom no kindness can appease, we experience a sense of relief on this outburst of war."

The same tone distinguishes the utterance of the *Reichspost* (Vienna), which is considered to be the organ of military circles as it used to be the mouthpiece of the Hereditary Grand Duke Francis Ferdinand. The paper encourages the Government to lay aside all hesitation and to take strict measures against the Servian foe, "who is as implacable and relentless as he is dastardly."

Among the German papers, too, the governmental *Kölnische Zeitung* lays the blame on Serbia and talks about "Serbia's wrong-doing," justifying Austria's action in the words, "it would have been a most desirable ending to the affair if Serbia had given the satisfaction asked of her and the relation between the parties concerned had resumed their normal condition."

"That the Austro-Hungarian Government, after its long altercations with Serbia," says the *Berliner Tageblatt*, "has at last come to this final decision is naturally to be expected." "Serbia," says the *Vossische Zeitung* (Berlin), "has forced the conflict to a climax. Since the year 1909 Serbia has been trying to bring on a European war and with the help of Russia to deal the death-blow to the Danubian monarchy. That indeed is her present aim." "No great Power," declares the *Kreuzzeitung* (Berlin), "can allow an insignificant neighbor to torment and injure it, especially when this insignificant Power relies on its ability to rattle the saber of another great Power."

The French press are unanimous in attributing the tragic condition of things in Europe to the intrigues of Germany, and

FRENCH GENERAL—"The Senate tells me to order two million military shoes."

GHOST OF 1870-71—"I hear the same beckoning call!"

—*Amsterdammer*.

EUROPE'S TRANQUILLITY DISTURBED.

"Oh, how lovely it is to sleep in the woods, where the little birds build their nests!"

—*L'it* (Berlin).

as an interpreter of general French opinion we may quote the following striking words from the *Paris Temps*:

"Up to the last moment France and Russia had believed in the good faith of Germany; but now there is no doubt whatever but that the Government of the Kaiser had determined on laying an ambush for us and our allies. Russians, Frenchmen, and Englishmen must unite in a struggle against these brigands of power who at last have dropt the mask.

"The English Government had informed the German ambassador that England could not remain neutral. We should not desire war, but since we are forced into it we will fight with a light heart. For forty years Germany has been prowling about us with the fixt idea of at last dealing us a heavy blow with the minimum of risk. Germany now attacks us at a moment when all the material and moral forces of Europe are directed against her. The war into which we have been forced is war with a pirate. The French people with an unanimity which is superb flings itself as one man into the thick of the fray."

Among the English papers the *Manchester Guardian*, the principal Liberal organ of the north, thinks that Austria was wrong in demanding that certain army officers and civil servants of the Servian Government should be arrested. But this paper "deeply regrets that Russia has decided to encourage Servia in resistance to Austria. Russia's threat

GRAND DUKE NICHOLAS
NICHOLOVITCH,
Who Commands the Russian Army.

But an important weekly, the *London Outlook*, lays the responsibility upon Servia, who, we read, "is frankly impossible as a neighbor." As this paper says:

"It must be contended that Servia has been receiving an amount of sympathy which is quite unwarranted by circumstances. The highly colored portrayals of her as a gallant little nation fighting against odds in defense of downtrodden fellow nationals is utter fudge. The Serbs have shown treachery and cunning to friends and foes alike until they have alienated every ally except the great Power which may now find it awkward to offer practical support.

The United States, thinks the *London Statist*, an eminent fiscal and economic authority, is likely to play an important part in averting world-wide financial catastrophe during the war, and we read:

"The United States can become, as it has this week, the world's greatest market for capital, and if the American people rise to their opportunity they can do a great deal to mitigate the disastrous economic consequences which would otherwise result in many countries from a great European war.

"It is obvious that for the time being the money markets of Europe will be closed to the demands for new capital of Canada, Brazil, Argentina, Mexico, and other countries, and at such a time the prestige of the United States would be

GENERAL JOFFRE,

of war against Austria is a piece of sheer brutality."

"But labor unrest is chronic in centers like St. Petersburg and Viborg and Odessa," says *The Daily News* (London), "and the public services are paralyzed. War is resorted to by the Czar as a diversion." To quote further:

"The crisis in the Balkans presents to the embarrassed Russian bureaucracy a time-honored method of escape; foreign war has been the habitual palliative for domestic discontent with shallow, incompetent, and unscrupulous governments from time immemorial. The chance of setting Pan Slav sentiment against the uprising labor sentiment may well strike the Russian official mind as too good to be lost."

Referring to the note which was Austria's ultimatum to Servia, the *London Times* blames Austria as under the suspicion of provoking the war.

immensely enhanced if it were to take the place of Europe and meet the pressing needs of these borrowing countries.

"It is possible that the United States may participate in the great loans that will have to be raised in Europe if almost the whole continent becomes engaged in war. Possibly the participation will be indirect rather than direct.

"It is essential that American investors should not only have confidence in the future of their own country, but also believe that, war or no war, the world will continue to progress.

"In brief, a great war in Europe will give the United States an opportunity of assuming the post of world banker, by supplying capital freely to countries and individuals in all parts of the globe who need it and can provide the required security. Should the American people take advantage of the golden opportunity afforded them by the outbreak of war, it will mean not diminished but increased prosperity for the United States."

FIGHTING GRAFT IN JAPAN

THE EXPOSURE of naval scandal, coupled with the conviction of high priests of the Honganji Temple, whose irregularities were reported in these pages a few weeks ago, seems to be awakening the moral sense of the Japanese to such an extent that a movement has been inaugurated to combat corruption and to strengthen the moral vitality of the nation. One of the unmistakable signs of this moral awakening, the Tokyo editors point out, is the total collapse of the political faction which for the past ten years or so had the municipal government of Tokyo in its grip. This political clique, affiliated with the Sei-yu-kai, or Constitutionalists, has been called the Tammany Hall of Japan, and has been managing the municipal affairs of Tokyo much as Tammany managed the government of New York City. But the citizens of the Mikado's capital had been gradually organizing their forces against the corrupt faction, and when the naval scandal shocked all Japan these forces found a good opportunity to come out in the open and fight the Tammany of Tokyo to a finish. In the municipal election just held, the Constitutionalist faction was completely defeated by the so-called "Righteous Party," representing the public-spirited elements of citizens.

The movement for the moral uplift of the Japanese nation is about to take a definite shape, as a coterie of wealthy men have agreed to donate liberal sums to finance the movement. Mr. I. Morimura, who has a large interest in American trade and who maintains a mercantile establishment in New York, has volunteered to contribute \$100,000 for this purpose and called upon a number of his colleagues to follow his suit. This business man recently called a meeting of prominent educators and publicists in Tokyo to discuss the problem of moral reform. According to the Tokyo press, Mr. Morimura spoke at this conference as follows:

"The disclosure of the corruption of certain naval officers brought untold disgrace upon the Navy as well as the whole nation. True, corrupt officers are comparatively few, and the integrity of the Mikado's Navy can not be questioned. Yet the fact remains that the appearance of even so few officers who permitted themselves to be bribed has shocked the world, for the world has looked upon the Japanese Navy as a model of integrity and efficiency.

"The misappropriation of funds by high priests of the Honganji Temple is even more deplorable; and when we learn that a certain high officer in the Department of the Imperial Household is implicated in the Honganji affair, we are forced to consider whether our country is not facing the greatest moral crisis it has ever faced.

"In such a critical period no public-spirited man can sit down and with folded arms watch the drift of moral current which is not flowing in the right direction. We must rouse ourselves and combine our resources to stay this tide of corruption. With this end in view I propose to contribute \$100,000 for a campaign of education and ask all public-spirited men to assist in the promotion of this cause."

The prompt decision rendered in the naval-scandal case has revived to no small extent public confidence in the Navy, and the metropolitan journals of Japan are expressing satisfaction over the steps taken by the naval court martial in charge of the case. Vice-Admiral Matsumoto has been sentenced to three years' penal servitude and to make restitution of \$204,900, while Captain Sawasaki has been sentenced to a year's imprisonment and the restitution of \$6,250. The two officers had ac-

cepted, it was discovered, commissions from the Vickers Company, the British concern which built the Japanese battle-ship *Kongo*. The three directors of Mitsui & Company, who offered commissions to these officers for the Vickers Company, have also been sentenced to imprisonment. The case of Engineer Rear-Admiral Fujii is still before the court martial, which is waiting for data from the German court.—*Translation made for THE LITERARY DIGEST.*

JAPAN ON THE LAND-LAW DEADLOCK

THE LONG and bitter controversy over California's Antislavery Land Law, which at one time loomed large as a possible cause of war between this country and Japan seems now to have simmered down to an exchange of diplomatic notes. While the Japanese and the American press agree that the publication of these official communications between Wash-

ington and Tokyo throws little new light on the controversy, the Tokyo editors commend the "manly" attitude of their new Cabinet in making the diplomatic documents public with the determination to discuss the question before the whole world. They make no effort to conceal their disappointment with our replies to Japanese protests, yet the majority of the metropolitan press are remarkably calm in commenting upon the question. The tone of their comment betrays despair rather than bitterness, resignation rather than aggressiveness. In former discussions they have taken a firm and aggressive tone that is now absent, as they seem to realize that no further progress is to be expected.

Notable exceptions to this are the editorials of the Tokyo *Nichi-nichi* and the Osaka *Manichi*, both under the same management. On the eve of the publication of the official communications in question, the Osaka *Manichi*, in a very spirited editorial, had this to say:

"What kind of an answer does the United States intend to offer us relative to the California question? Days have passed, and we have shown every courtesy expressing our desire for an amicable settlement.

If the United States does not retract her course, she means to insult us. Even little Greece is showing a determination to meet in a manly way the anti-Greek movement in Turkey. Weak as Japan may be, does she not possess the spirit of the Greek? Premier Okuma and Foreign Minister Kato should prove equal to the situation with firm resolution."

And the Tokyo *Nichi-nichi*, upon the publication of the documents, ridicules the weak-kneed foreign policy of its Government, which in spite of our "shilly-shallying attitude" in dealing with Tokyo, decided to participate in the Panama Pacific International Exposition. The Tokyo journal points out the audacity of Italy which threatened for a time to hold off from the San Francisco Exposition if the literacy test were not struck out from the immigration bills pending in the legislature at Washington. The Tokyo journal resorts to a clever historical argument and says:

"The present situation with regard to California reminds us of a page in our history half a century ago when our country was still under a feudal form of government. In the latter days of the old régime the Shogun at Tokyo was so impotent that he could not stay the antiforeign agitation in southern provinces. When the clans of Cho-shiu and Sasshu acted insolently toward the foreign war-ships and representatives, the Powers of Eu-

ICHEZABEMON MORIMURA,
Japanese philanthropist and patriot,
who denounced the naval scandals.

and America, which suffered injustice at the hands of these clans, demanded of the Shogun the punishment due to the obdurate local chiefs. But the Shogun was powerless, and the Powers took the matter in their own hands and bombarded the ports of the two provinces. The United States, which is to-day pleading that the Government at Washington is powerless to interfere with the legislation of a Western State, did not hesitate to take part in one of these bombardments. Would the Washington Government allow Japan to ignore its authority and handle the California situation much as the United States handled the Japanese situation half a century ago?"

The *Tokyo Jiji*, the most influential organ in the financial world of the Far East, sees no use in merely answering argument with argument, altho it has no alternative to suggest for the solution of the mooted question. The *Tokyo Asahi* approves of the Government's action in refusing Washington's

AN OPTIMISTIC OPIUM INSPECTOR.

The *North China Daily News* reports that a British Consul with two Chinese officials, specially appointed to inspect a certain district for poppy cultivation, found no seedlings, although "the inspection was scrupulous" and "every secluded place was visited by them."

—*National Review* (Shanghai).

offer to compensate the loss which may be suffered by Japanese farmers in California as the result of the land law, for, the journal believes, the fundamental question which has to be settled is not a question of dollars and cents, but the question of whether or not the Japanese in America should be treated as the aliens from other countries are treated. The *Asahi* does not see how the question can be settled, unless the United States agrees to extend to the Japanese the privileges of citizenship. The *Japan Times*, regarded as the spokesman of the Government, thus explains why Japan does not care to accept Mr. Bryan's proposition that the case be submitted to our courts:

"What we demand is the faithful observance of all treaties and the principle of equal treatment for all aliens resident in the United States. The court's decision would be final as to the United States Government, but it can not be binding on us unless the Imperial Government goes before it as a party in the suit. We do not expect that Japan would do this, at least in the present case or in matters of a like nature. Such as our demand or complaint is, the fundamental remedy should be, as it appears thus, a new treaty providing for the elimination of racial incapacity for our nationals and also for the elimination of the right of the individual States of the Union to interfere in any way with treaty rights granted by the Washington Government to the nationals of a foreign country."

The Japanese editors are curious to know the contents of the convention or treaty which Ambassador Chinda, under instruction by the Yamamoto Cabinet, attempted to conclude, but which the new Okuma Cabinet instructed the Ambassador to withdraw. Neither the American nor the Japanese press have been able to ascertain the real nature of this proposed treaty, and the Tokyo editors are wondering why the Government did not publish it together with the other documents.

translation made for THE LITERARY DIGEST.

OPIUM PROHIBITION IN CHINA

A LESSON to America in our antidrug crusade comes from the other side of the world. China is reported nearly free from the opium evil. The recent destruction by fire of many costly chests of opium, with pipes and paraphernalia, outside the Temple of Heaven, Peking, is a remarkable event in the struggle against opium—"the dull weed that rots itself at ease on Lethe's wharf." This is an outcome of the spirit in which the Chinese and the English Governments have made an opium agreement by which Great Britain will see to it that Indian imports of the drug shall steadily be diminished so long as China on her part continues to diminish her home-grown opium. The *Atlas Syndicate News* (Peking), "a record of Social Reform and Progress in China," has the following hopeful account of the antiopium movement:

"China's latest successes in the suppression of opium will appeal more than anything else to the nations of the West. If China can root out her own pleasing vice, what can she not do? the people of Europe will ask. And while sentimental considerations of this kind may be minimized by the financial kings, they carry much weight with the great investing public.

"Hupeh has been added to the list of provinces cleansed of opium. Nine of eighteen provinces of China proper, and the three provinces of Manchuria in addition, are officially free from poppy crops, and consequently free from the necessity of admitting Indian opium. And in most of the remaining provinces suppressive measures have been carried out, with the result that opium is beyond the reach of all but the very rich in almost every corner of the Empire. What this means can only be appreciated by those who lived in China in the days of opium—who saw ruin and degradation brought to the homes of the people by black poison, and who could not take a day's journey overland without being delayed while their coolies took their opium *siesta*.

"It is a great thing that China has achieved—the greater in that the campaign of suppression has gone on steadily through the years of internal strife. Yuan Shih Kai's Government, busy as it has been with the regeneration of the administration and the lopping off of the heads of rebels, has yet had time to reorganize the campaign against the opium vice and to behead poppies by the billions."

The importation of British opium has hampered the reform, but it is decreasing under the agreement mentioned above. The following particulars are given with regard to the consumption of British and Chinese opium in China. A tael is equal to \$1.40 United States currency:

"What must have been galling to the Chinese was that 1,800,000 taels of this trade was in Indian opium and less than 500,000 taels in Chinese. In former times the foreign trade had been less than one-fourth of the native, but in their determination to prove their sincerity in the suppression of the traffic the Chinese authorities had reduced their native trade to practically nothing, while the 'British' drug could still be brought in freely and had increased in quantity and still more in value.

"The Chinese opium-traders saw what was happening. They reviled the Government for promoting the foreign opium-trade while prohibiting their own people from selling even the stocks in hand. But the Government stuck to its guns. And it has its reward—Hupeh province declared clean and the importation of Indian opium prohibited. Only two great ports, Shanghai and Canton, now remain open to the poison, and the treaty provides that they must admit Indian opium until all China is cleansed."

But there is a darker side to this problem of opium abolition. The *London Times's* Shanghai correspondent shows the untoward economic effects of opium suppression. He dwells upon the extensive smuggling in of cocaine and morphia into the country and declares that the use of these drugs in China "is rapidly increasing," and he adds:

"Indirectly, the suppression of the trade in native opium is responsible for much of the paper money which afflicts the country, paper notes being invented to supply a currency when opium failed. That it is also responsible for the enormous numbers of 'out of works' potential and actual bandits—can not be questioned."

SCIENCE AND INVENTION

THE "TWILIGHT SLEEP" AGAIN

MOST of the medical critics of the recent article on painless childbirth in *McClure's* have laid stress on the fact, as they assert, that the method used in Germany has been known to American physicians for some time, and that its exploitation as a new discovery was therefore unwarranted. This being so, a correspondent of *The American Journal of Clinical Medicine* (Chicago, August) writes to that journal to ask the pertinent question, Why have not American physicians applied this knowledge in their own practise? Is not knowledge, if use be withheld, even more blameworthy than ignorance? With the implication that the profession in America has not lived freely up to its lights, the editor of the journal named above seems rather in sympathy than otherwise. Commenting on his correspondent's communication, he says in part:

"Why has there been a conspiracy of silence? Nay, it is not even a merely passive attitude of silence; for the editor of *McClure's*, in a communication to us, says: 'There seems to be a highly organized opposition in this country to this new treatment,' and asks, 'Could you inform us as to the reason for this?'"

The explanation that occurs to this writer is that "organized medicine" is displaying the natural hatred that any organized body always has for new ideas. As we read:

"In explanation of this attitude on the part of the powers that be, we have only to point out that such bitter opposition has always been, and we suppose will continue to be, the early attitude of organized medicine—as, indeed, it is of all constituted authority—toward innovation and progress.

"It is safe to say that no real innovation ever originated within the organized constitution of any science or craft. It has always come from some individual, or a non-conforming group of individuals, and pushed its way in the teeth of organized opposition.

"In medicine, in particular, it would seem as tho this organic opposition to innovations which were on the face of them worthy of adoption has been a factor of great hindrance and embarrassment. And this very branch of medicine of which we are now speaking—midwifery—furnishes a most conspicuous example.

"Without doubt the two most epoch-making innovations in the annals of obstetrics were the demonstration of the infectious nature of childbed fever by Holmes and Semmelweis, and the application of chloroform anesthesia to labor by Simpson.

"Yet orthodox medicine abused Holmes and hounded Semmelweis to a madhouse for his pains, and constituted medical authority set its smug face against Simpson's sacrilegious violation of the primal curse until (God save the mark!) fashion did what science and common sense failed to do, and the use of chloroform by Queen Victoria in her confinement brought obstetric anesthesia into vogue.

"This, we think, is the true explanation of the 'highly organized opposition in this country to this new treatment'—to the twilight sleep of hyoscin and morphin. It is the natural resistance of an organized body to change. It is what the Greeks called *misocainia*—the hatred of new ideas, which would wrench us from our fixtures; for to quit our old fixtures, especially if we have sat in them in comfort for a long time, is no easy business, hence we demur, we resist, we even give battle, and, while we may suspect that the new idea is above us, we try to persuade ourselves (laziness and vanity earnestly consenting) that it is below us. . . .

"Of course there is a certain element of danger in the twilight sleep, as there is in every anesthesia. Of course the procedure is not the simple June-holiday matter that the writers in *McClure's* would make it appear. Of course the half-truths about medical subjects exploited in the popular press misinform and mislead the public.

"But whose fault is it that they are only half-truths? And

is it not much more blameworthy to suppress truth altogether, as organized medicine has done?"

RESEARCH BY MOVING PICTURES

THE part played by cinematography in scientific and technical research, together with some of the things that may be expected of it in the future, are set forth in an interesting lecture before the German Engineers' Society by Dr. Hanz Goetz. After giving statistics, describing apparatus, and outlining the history of the invention, the lecturer defined the position of moving-picture photography among the means of reproducing phenomena to the senses. According to him it differs from other means in that it correlates two of the basic quantities that physics deals with, time and extension in space. We quote the following paragraphs from an abstract of Dr. Goetz's lecture made for *The Journal of Engineering and Industrial Chemistry*, and printed in *The Scientific American Supplement* (New York):

"The most obvious way in which the cinematograph may act as an aid to science is in recording rare phenomena, such as scenes in the life of seldom seen or difficultly accessible animals, unusual surgical operations, etc.—fields in which considerable success has been attained. Its usefulness only begins here, however.

"Just as the scale of objects may be varied when they are represented graphically, so the time scale of actions may be changed when they are represented by the cinematograph. By an increase in speed, Professor Pfeffer, of Leipzig, has been able to produce in three minutes a ten-day period of growth of a horse-chestnut twig; pictures for this reproduction were taken at five-minute intervals. A large field for the study of the growth of both plants and animals is thus opened up. Just as slow motions can be hastened so that it is possible to see the total effect in a truer perspective, so it is possible to retard and analyze quick movements, and the limits are only those of the speed with which the pictures can be taken. With the most refined mechanical devices it is not possible to take more than 250 pictures per second, but by illuminating the moving object with regularly succeeding electric sparks and photographing on a film moving continuously rather than intermittently, it was found possible to increase the number of exposures to 2,000 per second. Bull, for example, has made valuable studies of the flight of insects in this manner.

"From an engineering point of view the cinematograph has been most useful in studying projectiles and their effect on armor-plate. Much higher frequencies had to be used than Bull obtained, and the apparatus employed differed from his in not using a mechanical interrupter; in series with the illuminating spark-gap was a large condenser, and in parallel with it a small one; the large condenser is charged by an induction machine, and when it is discharged the small condenser is alternately charged and discharged across the gap.

"The period of the alternations can be judged with fair accuracy by the tone. Since an explosion can take place in the 5-1000th part of a second, the speed of 9,000 to 50,000 exposures per second, obtained by this method, is sufficient to furnish interesting results. Since it is obviously impossible to have the camera near the object photographed, a special arrangement is used.

"The cinematograph can also be used for making quantitative measurements of movements. The fall of a body has been studied by photographing on the same film the falling object and the hand of a chronograph, and in the same way the action of a steam-hammer has been timed.

"In these lines the cinematograph has just begun to be developed, and offers great possibilities in solving problems dealing with time and space in fields as wide apart as engineering and biology, and makes possible the study of motions so slow that it has hitherto been impossible to form conception of their whole meaning, or so fast that it has been almost impossible to form any conception of them at all."

ELECTRIC FANS IN INDIA

CITIZENS who complain when the mercury goes above 90 degrees should be sent to India, where it frequently touches 120 degrees just before the big monsoons. Such a country would seem an ideal region for the exploitation of the electric fan, and we learn from an article by U. S. Consul Henry D. Baker, of Bombay, in *Daily Consular and Trade Reports* (Washington), that its use in India is continually increasing and that it has done valuable work in making it possible to live comfortably in places where nothing like comfort was formerly obtainable in the hot season. Writes Mr. Baker:

"It is often remarked by persons who have resided for some years in cities like Bombay that conditions of life in the summer-time, which were formerly almost unbearable because of the great heat and closeness of the atmosphere, are now, thanks to the plentiful supply of electric fans in private houses, offices, etc., fairly comfortable. The city of Bombay for about six years, since electric fans were possible of introduction on account of current becoming available, has been a far more agreeable city to live in than hitherto.

"It is possible for theaters and churches in cities like Bombay to be open now all summer, whereas formerly, owing to the almost stifling heat, it was very difficult to induce people to enter such structures in that season. The popularity of such places is now largely dependent on the number of efficient electric fans used to force circulation of the air. All the leading hotels in the chief cities of India must have electric fans in every room in order to secure and retain their patronage.

"The old-fashioned system of cooling rooms by fans in this country, such as is still practised in most communities where electric current is not available, as in country districts, is by means of the personal labor of coolies known as punkah-wallahs, who work spacious fans hung from the ceilings, with ropes through a hole in the wall, the punkah-wallah doing this work outside of the room and out of sight. Sometimes at dances and big dinner parties the punkah-wallahs, dressed in picturesque costume and with huge ornamental fans, work inside the rooms, a great number being employed. For such arduous and persistent work which they are expected to carry on without intermission for nine hours, they are paid about \$2.60 per month. At night the punkah-wallah fanning a sleeping person in his bed will often fall asleep, too, so that the sleeping individual can get no refreshing rest. Notwithstanding the very cheap wages paid, a great number of punkah-wallahs who have to be employed all day and all night cause considerable expense; moreover, such human labor, not being always steady nor easily regulated, nor fast, can not compare favorably in any degree with modern electric fans.

"Ceiling fans which will operate directly over a person's bed and force air through the mosquito netting or over the dining-table or over the business man's desk, are the most popular type of electric fans used in India. The table type of fans, usually attached to walls, are much used in theaters and other places of popular amusement, where it is desired to force a current of air along particular side directions. The churches usually have a great number of large fans suspended from the ceilings.

"Spirit-stove fans are also used in India. These are attached to and operated by small spirit-stoves, especially in country bungalows and in tents, where no electric current is available. These spirit-stove fans, often mounted on tripods, have added immensely to the comfort of trips into the jungles and in camp life generally. They can easily be packed for transport by mules, elephants, carts, or boats, as the case may be. They sell according to size from \$20 up to \$50. A leading firm dealing in these fans advertises that there are over 20,000 Europeans in India using them. [An advertisement showing a picture of one of these fans may be had from the Bureau of Foreign and Domestic Commerce, Washington.]

"As an instance of the popularity of electric fans in India it may be mentioned that one leading corporation (the Calcutta Electric Supply Co.) at present has connected to its system over 40,000 fans.

"The United States is one of the most important sources of supply for the electric fans used in India. A leading firm in Bombay in the electric-supply business, which deals largely in American fans, states:

"There is a very big demand for all types of fans, for direct and alternating current, and for ceiling, table, desk, and wall

In building the new government offices at Delhi artificial cooling on a much larger scale than can be obtained with individual fans is to be undertaken, Mr. Baker tells us. It has frequently been noted with surprise that we are willing to spend money to keep our houses warm in winter, but not to keep them cool in summer. Apparently the English in India are no longer to be open to this reproach. Further:

"It is understood that in connection with the large amount of building necessary in connection with the new capital at Delhi, the authorities who have charge of the work are now considering the possibility of constructing buildings with inner and outer walls between which artificially cooled air can be circulated by means of exhaust fans, the cooling being effected by drawing currents of air through wetted screens. It is thought that possibly by such cooling of the walls during the heat of the day, when the buildings would for the most part be closed up, conditions of comfort might be considerably promoted. Already devices known as thermantidotes for cooling air by rapid evaporation of water are largely used in India, especially on railroad carriages. During the hot-weather months in India, especially before the breaking of the monsoon, the temperature in the shade is often 120° F. It is not unusual for the temperature in rooms to rise to 110 degrees. It is thus evident how great is the necessity for giving special attention to proper cooling of buildings."

AGE-SPOTS ON MOTHER EARTH'S FACE

THE AGE of an animal organism—a human being, for instance—may often be estimated from its appearance, sometimes from superficial markings, such as wrinkles. Were there some marking that appeared at birth and grew slowly larger at a uniform rate, a knowledge of that rate, easily obtainable, would enable us to know exactly the bearer's age. Such markings, it is now known, appear on the face of our Mother Earth in the form of microscopic spots, called "pleochroic halos," found in certain rocks. The method of estimating the earth's age from these has already been alluded to here. We are now enabled to give additional facts, with microphotographs of the halos, from an article contributed by G. Bresch to *La Nature* (Paris, July 4). We read here:

"Radioactive substances . . . are descendants, for the most part, of one and the same metal—uranium. The uranium atom explodes, throws off helium (alpha rays), electrons (beta rays), and gamma rays, which resemble x-rays, and changes into another atom which decomposes in its turn. Each radioactive atom has, as a distinctive characteristic, besides its chemical properties, a probable length of life. When this is at an end the explosion of the atom takes place. Among radioactive substances, some live a very long average life; uranium lives 9,000 million years; others disappear almost as soon as they are born, such as Radium A, which lives, on the average, three minutes. In a rock that originally contained a certain amount of uranium will be found now, by reason of the explosion of a certain number of its atoms, its whole series of descendants, in proportions depending on the length of life of each. There will also be found helium, the constant product of the destruction of radioactive matter. It will be easily understood that the quantity of helium accumulated in a rock depends on the importance of the primitive stock of uranium and on the time during which this stock has been decomposing; that is to say, on the age of the rock. This method of determining geologic age has been used by Strutt.

"Another method has led Sir John Joly, professor at Dublin University, to interesting conclusions about the earth's age. Certain micas have long been observed under the microscope, owing to their dark circular spots, with a little crystal of zircon in the center, included in the rock at the moment of its formation. The origin of these spots, or 'pleochroic halos,' had never been explained. Strutt recognized the fact that the crystal of zircon is radioactive; it sends out alpha rays, which, acting on the mica as they act on glass, produce the halos observed through the microscope.

"We may go even further. The alpha rays, coming from the zircon, travel through a certain thickness of the crystal and then stop. Their action is not felt beyond this point. . . . The halos thus are due to prolonged action of the rays emitted by the

zircon. Zircon is only slightly radioactive; experience shows that several years may elapse between two consecutive explosions. And the effect of a single particle is excessively feeble; the palest halos must indicate an accumulation of unimaginably weak effects, dating from extremely distant epochs. In fact, the halos are not observed in recent rocks. Biotite is an ancient mica that has recorded and preserved the effects of the alpha rays; we see the halo in the same way that we know of the existence of stars, invisible to the eye, through the accumulation of their luminous effects on the photographic plate.

"The recent experiments of Joly and Rutherford were made on brown mica from County Carlow. The halos are due to elements of the uranium family. By exposing a sheet of mica to the action of a powerful source of alpha rays (radium emanation) there is produced in a short time a spot resembling the natural halo seen under the microscope. The quantity of emanation used gives the number of alpha rays that have acted, and consequently that of the alpha particles emitted by the mica since its formation. This is in the neighborhood of 200 millions. It is now sufficient to know how many alpha particles are sent out per century by the zircon crystal at the center of the halo, when simple division will give the age of the mica. The numbers obtained vary between 20 and 400 millions of years. The agreement with the numbers given by Strutt's method, noted above, is satisfactory."—Translation made for THE LITERARY DIGEST.

WHAT MAKES WOOD WATERPROOF?

WHY SHOULD white oak be good for barrel-staves when the barrel is to hold a liquid, while red oak is not? The answer is quite simple, tho possibly unintelligible to the uneducated. It is the tyloses that make the white oak waterproof. Those who do not know what a tylose is may find out by consulting a paper on "Tyloses: Their Occurrence and Practical Significance in Some American Woods," in *The Journal of Agricultural Research*, issued by the United States Department of Agriculture. Our quotations are from a review in *The Hardwood Record* (Chicago), from which we learn that a tylose is a white substance that grows in wood pores and stops them up so that air and liquids can not pass through. Under favorable conditions the naked eye can detect it. It looks like white foam or chalk, in the pores of white oak. If a stick is split and polished smooth, white threads of it may sometimes be seen. It develops inside the pores and cells, and is a natural growth in some woods, but is rare in others. To quote the Chicago journal:

"The investigation has followed practical lines, the presence of this substance in many woods where it was scarcely suspected has been discovered, and it has been found that it has much to do with the durability of wood. Those woods which contain tyloses abundantly resist decay better than those which have little. It is not claimed that its presence alone is responsible for the durability of one wood beyond another, but it helps. There are other things, however, to consider.

"Woods filled with this substance resist decay because the pores and cells are plugged; air and water are largely excluded, and consequently the threads of fungus, which cause decay, can not readily enter, and if they do enter, the supply of air and water is so limited that decay proceeds slowly.

"It is well known that a white oak fence-post or cross-tie lasts longer than one of red oak. The structures of the two woods are almost identical, but white oak is sealed up, while red oak is open, and the agencies of decay are free to enter.

"The bulletin lists sixteen durable woods, every one of which contains much of the tylose substance; five that are moderately durable, and these are not well supplied with the plugging material; and nineteen which are well known as quickly decaying woods, and they contain little of the material. The durable woods are black locust, catalpa, Osage orange, mulberry, chestnut, black walnut, live oak, sassafras, white oak, post oak,

A piece of mica with several pleochroic halos.

Mica under the microscope, showing a pleochroic halo.

AGE-SPOTS FOUND ON MICA.

black ash, honey locust, cherry, persimmon, slippery elm, and bur oak.

"Some of the non-durable woods follow: Cottonwood, red gum, maple, white ash, beech, cucumber, black gum, basswood, buckeye, sycamore, aspen, and willow. It is not claimed that the presence or absence of tyloses alone is sufficient to preserve wood or to permit its speedy decay; but the evidence clearly shows the tendency of its influence. This element has not, heretofore, been much discussed by those who have written of wood decay and durability."

Timber engineers who inject creosote and other substances into wood to retard decay long ago made lists of species that were hard to treat, and others which were easy. The preservative fluids, we are told, penetrate certain woods to a considerable depth when moderate pressure is applied; while others are almost impervious, no matter how great the pressure. Those hardest to penetrate by preservative fluids are those best supplied with tyloses. This throws a new light on the subject. To quote further:

"Some woods are so filled with solid deposits in the heartwood that fluids can not be forced in, and such are hard to treat, whether they contain tyloses or not; but there are others where the difficulty of penetration seems largely due to the presence of the tyloses substance. This is often seen in sapwood where chemical deposits, due to the aging of the tree, are yet slight. It was formerly quite generally believed that tyloses were confined to heartwood; but the investigations have proved that they occur in the sapwood also, even to the inner layer of bark, and therefore are an important factor to consider by those who give timber preservative treatment.

"Millions, perhaps billions, of feet of logs have been lost by sinking in rivers and lakes while on their way from the forest to the mill. Nobody then thought anything about tyloses in the logs; but it has been shown that those most abundantly supplied (hardwoods especially) float longest. The water is hindered from penetrating the cells and pores and filling the cavities. The author's experiments showed that woods in which tyloses were few or wholly lacking invariably sank before those containing abundant tyloses. A piece of black locust heartwood floated forty-six days while dogwood and persimmon sank in eighteen hours.

"Hardwoods are most affected by this substance. The softwoods contain little of it, for the probable reason that they have no pores, which are the usual places where the growths are developed."

WORLD-BIRTH BY EXPLOSION

THE FIRST EVENT in the birth and development of a celestial body is an explosion—such a phenomenon as we may see daily in the nebulae, with their vast spiral whirls. These forms, to be sure, persist for a lifetime, and there may be difficulty in referring them to explosive action, using

the word in its ordinary sense. Dr. J. Meunier, a Parisian chemist, in a lecture before the French Association for the Advancement of Science, on "A Photographic Study of the Flames of the Nebulae," assures us that certain astronomical disturbances may really be explosions and yet may last for years, the mass of gas through which they are propagated being so vast that even great speed will not carry them quickly from one end to the other. The nebulae, Dr. Meunier is sure, are gaseous masses in a state of explosion or violent combustion; and this combustion is the first stage in an evolutionary process that will ultimately form a planet like our earth. Dr. Meunier relies chiefly on the comparison of photographs, some of which are reproduced herewith. To critics who are unwilling to admit that such an apparently stable form as that of a nebula can be that of an explosion actually proceeding before our eyes, he replies:

"It has been objected that an explosion is practically instantaneous; how, then, can its phenomena persist so long in a nebula? This objection depends on an inexact idea; an explosion is rapid, but not instantaneous. The explosion that I obtain with my tube lasts a few tenths of a second. The explosions that occur in the course of great fires—oil-wells, for instance—may last several minutes. There are in the solar system explosions that last several days—explosions of solar protuberances or of comets, and I am fortunately able, thanks to Mr. Quéniisset, the learned and able astronomer of the Juvisy Observatory, to show you a cometary phenomenon whose duration is easy to measure approximately. It took place in Morehouse's comet, which appeared during the autumn of 1908. On October 15, there took place in this body, an explosion that was photographed at 9 p.m. shortly after its beginning. By attentive examination cyclonic whirls may be seen in it, and these same spirals can be recognized on subsequent photographs. Quéniisset has found that the speed of displacement of the masses of gas reached 30 to 40 miles per second in certain places. The comet was at the distance of about one astronomic unit; that is to say, at the distance of the earth from the sun, which is traversed by light in eight minutes. The distance of a light-year is 65.7 times as great; consequently an explosion having the same apparent magnitude as that of the Morehouse comet, at the distance of one light-year, would last 131,400 days, or 300 years. Now astronomers think that the nearest nebulae are distant from us by a great number of light-years. Divide by 10, or even 100, and there will remain to us, to explain the apparent permanence of the nebular explosions, a very respectable number of years."

Nebulae, the writer concludes, are purely phenomena of explosion and flame, assuming generally a spiral form. The

fact that these spirals retain their form for a long time is no evidence that they are not due to a cause that is primarily explosive. What happens after the explosion? Says the writer:

"After this, the stars undergo incandescent combustion on their surfaces, and when this has been extinguished for lack of fuel, cooling and condensation result, as on our own earth, giving rise to mineral and organic products, with all their marvels.

"Stars, then, are formed under the influence of the phenomena of combustion, and evolve after these phenomena, quite like living creatures; for, in fact, our own lives are nothing, from the physiologic point of view, but the result of combustion that begins in the lungs and takes place in the tissues.

"We thus reach the conclusion, which no one will be able to deny, that the properties of matter in the celestial spaces are the same as those continually in evidence on our own planet."—*Translation made for THE LITERARY DIGEST.*

SUDDEN DEATHS IN THE WATER

ONE of the most familiar features of the news from watering-places at this season every year is the report of some young, strong, and vigorous person, apparently in perfect health, who has gone into the water and suddenly sunk before aid could be given. Various surmises to explain such a death are offered—heart-failure, a stroke of apoplexy due to excessive fatigue or violent change of temperature, or going in before digestion is complete. These theories are not very plausible, according to *La Revue* (Paris, June 1), since autopsy rarely reveals heart trouble, especially if the victim was young, vigorous, and able to swim. A different explanation is offered by a German authority, Dr. Güttlich, of Frankfort, who has made a study of the subject. Says *La Revue*:

"Dr. Güttlich, an attaché of a Frankfort hospital, and a member of the staff of a well-known medical journal, thinks that we must seek the explanation in the condition of the vestibule of the internal ear, whose troubles provoke deafness and nystagmus. These phenomena present themselves in certain subjects who have a lesion in the membrane of the tympanum, and cold water thus penetrates the ear. Sudden deaths are caused by these alternations in the apparatus of the vestibule. Moreover, in many persons this pierced condition has existed since a very tender age without their having been aware of it. Thus a sudden plunge may cause a disturbance of the auditory organ. The cold water rushing suddenly into the cavity of the ear may fatally affect either stomach or brain. It follows that to have the stomach full when he enters the water is dangerous for the bather.

"Dr. Güttlich advises those whose tympanum is imperfect to

plug the ears with cotton. This prevention should be taken particularly when diving."

It may be added that it would be wise for all persons who are conscious of any defect in hearing, or who suffered in childhood from such a disease as scarlet fever, to have the ears examined by a competent aurist, so as to be informed whether the tympanum is still perfect.—*Translation made for THE LITERARY DIGEST.*

A DEAF BAND THAT PLAYS FOR THE DEAF.

The pupils of the New York Institution for the Education of the Deaf and Dumb have a band made up from their own number. They "rise in the morning to the call of life and drum; led by the band, they march to their meals and to school in perfect step and time." Tho they do not hear the music with their ears, they feel it through their whole being.

MUSIC FOR THE DEAF

THE IDEA of musical training for the deaf may seem absurd, but experience has shown it to be possible and useful. Enoch Henry Currier, principal of the New York Institution, who has given much study and experiment to this subject, said at a conference of superintendents and principals held during the summer of 1913 that he regarded music as a more important factor in the education of deaf children than of hearing children. Edward Allen Fay writes on this subject in the last Report of the United States Commissioner of Education. The following quotations are from a reprint in the columns of *The Volta Review* (Washington). Says Mr. Fay:

"Mr. Currier's attention was first attracted to the possibility of musical training for the deaf by observing that the children in his school liked to beat against a wall or other solid with a club. 'A boy would stand and pound by the half hour on a brick wall. It was not done once or twice, but was a habitual practise.' Inquiring of the children why they did that, he was told that the resultant sensations 'gave pleasure and enlivened the body.' He concluded that music might be used to advantage in stimulating the deaf to greater activity.

"First he introduced the drum as an aid to the military drill, for the New York Institution has been organized upon a military basis for many years, and its pupils have attained a high degree of excellence in drill. He found that the marching and manual of arms improved very much when the drummer was 'hurling sound-waves against the battalion.' Next he added fifes and then bugles, until now he has a trained band of between 40 and 50 members composed entirely of pupils of the school. In the band are 16 pieces—5 B-flat cornets, 3 E-flat alto horns, 1 B-flat tenor, 1 B-flat barytone, 2 E-flat basses, 1 trombone, 1 snare drum, 1 pair of cymbals, and 1 bass drum. The repertoire includes 185 selections. The execution of the band is so good that it is often invited to participate in high-grade concerts given by hearing musicians in New York City.

"The pupils in the New York school 'rise in the morning to the call of life and drum; led by the band, they march to their meals and to school in perfect step and time.' When the band plays they crowd around it just as hearing persons assemble around a body of musical performers. They do not hear the music in the ordinary meaning of the word; they receive no more sensation through the auditory apparatus than through other parts of the body; but, as Mr. Currier says, their entire system responds to the series of harmonious sound-waves. He finds that, as the effect of the sound-waves, 'the minds of the pupils

become more alert; they become more ready to take initiative action; they get out from that dormancy which is peculiar to any person who lacks the stirring up that comes from the hurling of sound-waves against him.'

"In some other schools for the deaf the piano is used as an aid in teaching speech. With their hands resting upon the piano, the pupils note the length of vibrations when chords are struck, the volume of tone, and, to a certain degree, the relative pitch. Mrs. Sarah A. Jordan Monro, a successful trainer of teachers of the deaf in Boston, regards the piano as 'very valuable in leading deaf pupils so to concentrate thought upon vibrations and their meaning that the organs of speech are left as free as those of hearing children, and are thus in a condition for a natural use. Unfettered muscles and their unconscious freedom of action thus give to speech the beauty of definiteness without force and fluency without laxity.'

Under the leadership of Miss Sarah Harvey Porter, an instructor in the normal department of Gallaudet College, a society of teachers of the deaf was formed last year, Mr. Fay tells us, for the study of the psychological effect of musical vibrations upon the deaf.

THE COST OF NOISE—In a recent conversation reported in *Metallurgical and Chemical Engineering* (New York, July), the superintendent of a large stamp-mill made the observation that "noise costs money." The reporter goes on to say:

"We have been discussing the use of stamps as crushing-machines and the comparative merits of various devices for crushing ore. One of the arguments advanced by this superintendent against the use of stamps was the tremendous and never-ending noise produced by the falling weights. In his opinion the din was responsible for many misunderstood directions and orders to employees, resulting in confusion, loss of time, and expensive mistakes. The point is readily perceived. The average mill employee is anxious to give the impression that he understands the boss's orders, and rather than ask a question for further information he will sometimes pretend to understand and then go and seek advice from a fellow workman. The order may be wrongly executed or not at all. The noise of the stamps contributes greatly to this condition, makes it difficult to give and receive orders, and undoubtedly causes many mistakes. The cost of noise may not be estimated exactly, but it is a real factor."

LETTERS AND ART

IRELAND'S MOST DISTINCTIVE PAINTER

SOMETHING of the same service that Goya did for Spain is being done for Ireland by Jack B. Yeats. Thus the Irish writer, Mr. Padraic Colum, speaks of Yeats's drawings of Irish national types, drawings that "no one who wishes to understand Ireland can overlook." The artist bears the same name as his father, Mr. John B. Yeats, who is "himself in the foremost rank of Irish painters." The father, Mr. Colum observes, deserves well of his country, for "he has endowed it with genius." The significance of the speech is enhanced when an Irishman, not the most lenient of his countrymen's

From "T. P.'s Weekly."

THE GOYA OF IRELAND.

Mr. Jack Yeats here gives his own idea of himself. An Irish poet says no painter knows Ireland so well.

critics, speaks thus of another Irishman. Moreover, "his eldest son is Ireland's greatest poet, and his youngest is Ireland's most distinctive painter." The daughters of the family also are contributing to Ireland's fame, for at the Cuala Press in Dundrum they "print fine books beautifully." They also issue a small monthly of four pages called *A Broadside*, and here the pictures of Irish life done by Jack Yeats appear. "No other painter knows Ireland so well," says Mr. Colum, in *T. P.'s Weekly* (London):

"One might take a stranger into a gallery of his pictures, or show him a collection of the double sheets he issues monthly, or open the book of drawings that Messrs. Maunsell have published, and say with conviction, 'This is Ireland.' And if it is an Irishman who shows it he might well feel proud of the pageant. There is no lack of vitality in these people of the West of Ireland. They are daring, exuberant, aristocratic. Above all, they are faithful. Jack Yeats reveals Ireland's most significant secret—

the secret that has not been disclosed in political debates nor revealed to special correspondents—the secret that the Irish are a youthful people like the fresh peasant communities of Servia and Bulgaria. Like the Balkan countries, Ireland stands outside declining Europe—outside the great tired States that Mr. Chesterton has spoken of as 'Byzantium of the West.' Because they are youthful, Romance makes them hold their heads high and put extravagance into their movements, their gestures, their speech.

"I do not think that Jack Yeats ever reads a book that a boy would find tedious. The people he knows are boxers and sailors, clowns and circus people. His own literary productions have titles that would arouse the imagination of any boy—'James Flannity, or the Terror of the Western Seas,' 'The Scourge of the Gulph,' 'The Treasure of the Garden.' The speech he puts into the mouths of his characters are in the right vein: 'Then,' says Flannity, 'then you are in earnest—this is to be a crushing blow?' 'Ay,' says the Lieutenant, 'a crusher; every gun double-shotted, every man full of fight. We have a crew, Mr. Flannity—ah, such a crew! The cream of fighting men, picked from four frigates on these coasts. Not boys, you understand me, but toughened men. Men who have hung by Seraw Wallaw—the shaking seraw that hangs o'er the mouth of Hell—and come back again.' Superficially, no two contemporaries could be greater contrasts than the poet and the painter, W. B. and Jack B. Yeats—one noticeable in the street for a personality that dress, manner, and carriage make more remarkable, the other reserved and curiously observant, like a sailor or a rancher, one turning everything into intellectual terms and speaking constantly of art, the other turning everything into terms of life and speaking little of anything else."

George Moore is quoted as saying that "Synge in a literary salon and Jack Yeats in the National Gallery are hardly imaginable figures, and that they were alike in being artists who cared less about art than about life." They were close friends during the lifetime of the man now counted Ireland's foremost dramatist, and will be always associated, since two of Synge's books on Ireland have illustrations by Jack Yeats. His work is another testimony to the accuracy of Synge's observation about which so much controversy has been waged. We read:

"Romance is present in nearly all his pictures. A few of the figures are untouched by it, but they are the damned souls. Look at the young man he calls *The Squireen*! He has been taught to despise the romance of his countryside—the romance that makes yonder farmer stride his horse as if it were the magic steed of the folk-tale. And observe *The Minor Official*, who crosses the street of the country town with such desperate hurry! Unfortunate man! The struggle to gain and to keep that minor appointment has worn away in him the romance that flares up in *The Barrel Man*—that disreputable creature who lets sticks be flung at him, three for a penny. And look at the cunning book-makers at the country races! They have perverted the romance that makes the amateur jockey face for the winning-post as if his mount was one of the steeds of Cuchulain. But such unhappy creatures are not frequent in Jack Yeats's gallery. He prefers to give us the Aran Islander standing arrogantly on Galway Quay, the group of country men clutching their sticks as the barefoot stroller sings a lament for men who have died for 'The Cause,' sailors ashore rolling toward a low and lighted house, or a tinker sending vigorous curses down the road.

"A stranger might ask was there not something extravagant in these pictures. Do the horses really prance with such exuberance? Is there so much sombrero in the hats the peasants wear? Do scrubby fellows tell across counters to stolid shopkeepers such extravagant falsehoods—'Nine years on the plains of Arabia and the battle-fields of Europe'?"

"Yes, in the West of Ireland there is an extravagance of movement, of gesture, of words. I open a Connaught newspaper and find denunciation given in this measure: 'I know that in

Ireland of to-day we have tyrants as unscrupulous, cruel, and murderous as ever Turk, Bulgarian, or Mexican could be; monsters who, if they dared, would, out of sheer fiendish delight, crucify the father on one side of the cross and the mother on the other, and to glut their appetites would gouge out the eyes, tear off the nose, cut out the tongue, pluck off the ears, split open the breast to watch the heart beating—tyrants who would be capable of any atrocity, any enormity, any barbarity—creatures to whom crucifixion would be nothing more than antepandial recreation.' The extravagance that is behind a statement like that Jack Yeats puts into movement and gesture."

A MORIBUND PROFESSION

IF the war correspondent is not dead he must be described as moribund. His case is not one of inanition; he is as anxious as ever to live, but he has been almost literally "put out of business." Censorship has become so stringent that, as the *New York Evening Post* points out, "the days of Forbes and Burleigh, not to go back of 'Bull Run' Russell, are gone." This editorial continues:

"Never again will army commanders give a free run of their headquarters to 'chiefs' taking notes to be incontinentally printed. The change from the old times, for which the reasons are obvious, has been slow in coming, but is now almost complete. Grim soldiers like Kitchener never had any love for newspaper correspondents, tho he was forced to tolerate such a man as G. W. Stevens both in the Sudan campaign and in the South African. Our own war with Spain showed a relapse from the growing practise, and seemed, as everybody remembers, to be waged by and for the newspapers. The Japanese, in their war with Russia, kept the correspondents at a safe and inglorious distance; and by the time the last Balkan War came along, the shut-down was complete. The military argument for it is convincing. In informing the public, the newspaper informs the enemy; consequently nothing must be published until long after the event, and then only in a form agreeable to the army authorities. This may seem hard on the press, and also on a news-eager public, but it is war."

For all this the newspapers are using titanic efforts to get news, and mobilization of their forces began as soon as military activities began. *The Writer and Publisher and Journalist* (New York) reviews the first week's sources of our war news:

"The strictness of the military censorship is shown by delays in sending and deletions in all dispatches from Austria. Martin H. Donohue, correspondent of the *New York Times* and the *London Chronicle* at Semlin, who sent the first and only telegram outside the official reports of the bombardment of Belgrade by Austrian troops, has been expelled from that city by the Austrian military authorities, together with other correspondents there.

"The *New York Times* correspondent tried to file a telegram from Berlin to Carlsbad, but the German telegraph authorities refused to accept the message, saying it would get there much quicker if sent by mail.

"Both the Associated Press and the United Press have already covered by correspondents the important strategic points in the Austro-Servian struggle, but are depending upon their regular correspondents at the various capitals for news from diplomatic centers.

"At the Associated Press offices it was stated that more than 15,000 words of cable news skeletonized, but not in code, had been received in twenty-four hours. Only official news comes from Austria, but to reach Serbia a most circuitous cable route had to be resorted to, at great expense. The International News Service received over 8,000 words by cable on Wednesday night.

"The International News Service was fortunate in the presence in London during the past week of Bradford Merrill, publisher of the *New York American*, and R. A. Farrelly, general manager of the service. They are now directing the distribution of correspondents at important points. J. L. Eddy, for three years head of the European bureau, is in charge here.

"Orton W. Tewson, who is in charge of the London bureau, is now in general charge of news from the sovereign capitals. He is considered one of the best-equipped war and diplomatic correspondents on the continent. News from Berlin is under the watchful eye of A. C. Wilkie, and the French capital is

covered by C. F. Bertelli, formerly of the *Paris Temps*. In Vienna, Dr. A. Lippe, is in charge, and at St. Petersburg, Catherine Kolb, the only woman on the foreign staff, is sending news from the Imperial Court.

"The *Sun News Service*, which exchanges news with the *London Daily Chronicle*, has at its correspondent in Vienna, Dr. E. J. Dillon, one of the best-known journalists among the chancelleries of Europe.

"Charles Hodson, who served as correspondent for the *Central News*, both in the Balkan War and in the war between Italy and Turkey, left London on Saturday for Serbia, where he will represent the *Central News of America* and the *Central News, Ltd.*, of London.

"Mr. Hodson is well equipped for the discharge of the duties devolving upon him as a war correspondent. He fought through

From "The Broadside," Doodrum.

THE TATTOOER'S SHOP.

A bit of life caught by Jack Yeats along the quays of Dublin.

the Boer War as a member of the Imperial Yeomanry and received favorable mention several times for his gallantry in the field. London and other Continental correspondents of the *Central News* will cover other important points as they arise."

At the outset the war correspondent is a "clipt daisy," says a London dispatch to the *New York Herald*. The general attitude of newspapers is thus reviewed:

"Several London newspapers sent representatives to be with the Austrian Army. The *Chronicle's* correspondent lasted for two days and was expelled. The *Telegraph's* correspondent managed to get to Semlin, only to be told to pack back to Vienna.

"The *Express* failed to get a man there because of discouraging reports of the difficulties placed in the way of reporters, and is holding its principal correspondent at Athens. After the experience of the Balkan War, newspapers hesitate about entering on any extensive arrangements to send their men into the field.

"One New York newspaper expended £50,000 (\$250,000) in the Balkan War, but got nothing in return. Hence it is highly probable that if a general war occurs little effort will be made to 'cover' it in the usual way. A censorship for most newspapers has already been established in Berlin, Vienna, St. Petersburg, and other capitals.

"Even at the capitals of Europe correspondents are practically useless. One proprietor said to me last night:

"I have a good man in Berlin, but all he has done has been to telegraph for gold."

"I think generally the London newspapers will husband their resources for the present," another said. "Newspapers that send their special correspondents into the field will court bankruptcy. They will expend large sums and get no returns."

A HUNDRED YEARS OF "WAVERLEY"

THE CENTENARY OF A BOOK is something not commonly observed. On July 7 was passed the first hundred years of Scott's "Waverley," and while its survival for a century proves it a classic, some doubt if it has much longer to live in popular interest. "The art of fiction has changed and is changing, and particularly in the realm of the historical novel," says the London *Morning Post*, and while it is true that "Sir Walter's contemporary popularity was immense and unprecedented, to-day it is waning fast." In fact, *The Post* doubts "whether the average young person of the present, given a volume of Scott, would ever survive reading the initial chapters, except in rare instances." The reason for this is that "Scott, whatever his greatness, was essentially a leisurely writer," and "understood nothing of the feverish fretfulness of these later days and their perpetual craving for crazy excitement." He is called "dull" by many, but, replies this critic:

"Not a few of us are thankful for such dulness, for it is the inevitable dulness of Nature, the dulness of winds and the sun, the dulness of one's friends, the dulness of every-day life. Ever and anon, like them, it has its gleams of warmth and exhilaration, and at such times one thinks that the most negligent of readers must be fascinated. It has also its easy and quiet movements, but these are equally necessary and productive of that air of sanity and well-rounded repose which marks the great masters of all ages.

"Scott saw life steadily, and saw it whole. Not unconscious of his excellence, he could say with some truth: 'The volume which this author has studied is the great book of Nature.' The characters of Shakespeare himself are hardly more perfect men and women as they live and move than those masterly creations Calcb Balderstone, Bailie Nicol Jarvie, Dandie Dinmont, Dominic Sampson, Mr. Oldbuck, Cuddie Headrigg, or, to take the female characters, Jennie Deans, Dr. Vernon, Rose Bradwardine, and Lady Margaret Bellenden. Carlyle, in a peevish, unworthy essay, denied him 'greatness' because he had no definite message to deliver, and urged that he imitated the surface of life. But that unhappy critic was at pains to add: 'Be this as it may, surely since Shakespeare's time there has been no great speaker so unconscious of an aim in speaking as Walter Scott.' The great novelist reminds us irresistibly of Shakespeare. He, too, has fallen on evil days and evil tongues, and has been consigned to the limbo of the great but unknown. The octology of Stuart romance beginning with 'Waverley' is as intrinsically great an achievement as the dramatist's triple monument to the Lancastrians. And, like Shakespeare again, Scott put the man before the writer. That is the secret of genius. . . .

"There is a vividness, a *ressemblance*, about the 'Waverley Novels' which is above niggling particularizations. It was the work of Thackeray, Macaulay, and Charles Reade to study and ransack the musty pages of the past. For Scott there was no such laborious lucubration. Perhaps his methods of composition most nearly resembled Shakespeare's in their extempore effusiveness and unfailing reliance on a teeming imagination and a marvelously sympathetic sensibility. And again, like the master, Scott was impersonal, impartial, sketching on a wide canvas, and ready, as are few writers of his class, to sacrifice mere accuracy for lasting vital truth."

As a literary curiosity the London *Nation* brings forward a criticism written for *The Feast of Reason*, a weekly London paper, soon after the anonymous book appeared in 1814. It illustrates the extraordinary unreason of the reviewing of that and a later period which fell foul of nearly every great name on the calendar of literary achievement. The writer starts out

with a half-hearted praise of Scott and goes on to the author of "Waverley," whom he takes to be one of Scott's imitators.

"Mr. Scott is a poet. He is known to the world by the 'Lay,' 'Marmion,' and 'The Lady of the Lake.' So far as we are aware, beyond a few critical essays, he has published nothing in prose. His facility in riming probably makes poetry an easier medium for the expression of his imagination. But with his imitators the case is different. The latest and most flagrant instance comes to us in the shape of a three-volume novel, entitled 'Waverley, or 'Tis Sixty Years Since' (Constable). The authorship is concealed, and it appears to afford subject for wide conjecture. Probably the excitement of mystery lies at the root of the incredible accounts we hear of the novel's popularity. For when we are informed that 1,000 copies have already been sold in five weeks, during the present 'dead season,' and that 2,000, or even 4,000, more are being prepared to meet the insane demand, we are almost driven to despair of public taste and the appreciation of sound literature.

"The style is so lax as to be at times ungrammatical. The last two volumes especially, tho less unbearable in their boredom than the first, display evidences of a careless speed that almost amounts to insolence. A 'running pen' is all very well, but what can be said for a pen that stumbles and flounders through page after page in its attempt at a gallop? We do not deny that this much-applauded, but none the less uninspiring, imitator (who often strikes us as being a female) may plead the excuse of Mr. Scott's own dangerous, tho not fatal, facility. But in this writer the haphazard fluency is mingled with a stilted pretension, that only increases the offense, and is rarely to be detected in the poems of his model. This pretentiousness is repeatedly seen in such circumlocutions for very simple affairs as 'The female empire of the tea-table,' or 'A situation of all others the most interesting to a husband,' which is the author's manner of saying motherhood. . . .

"Nor is it only a turgid and slipshod style that offends us. Form and arrangement combine to make the narrative intolerably tedious. We admit there are two passages of comparative interest: one an account of the battle of Prestonpans; the other a description of the last hours of one of the Northern rebels and malefactors who were deservedly executed at Carlisle after the Pretender's collapse. Here we attribute the interest to the subject rather than the author's skill, for even Grub Street could hardly fail of creating interest in an execution or a fight. But the possible effect of such passages is ruined by their juxtaposition with lengthy dissertations upon such subjects as 'Romeo and Juliet,' or with the unutterable boredom of a Scottish pedant, called the Baron of Bradwardine, whose tedious conversation is scattered throughout the three volumes as comic relief. Perhaps we must forgive it, for North of the Tweed this sort of thing appears to be the substitute for gaiety, and certainly any reader who has toiled through the weary chapters of introduction deserves all the relief he can get. But when we put all these errors of style and method together, we are astounded at the complacency of a public in which even one thousand nominally educated people can be found to advance a considerable sum for such a production."

With a certain irritation against things because they are Scotch this writer entered "a protest against the whole subject of such a book and the whole school to which it belongs." His irritation is amusing at this late day:

"We object to this onset of barbarism. We are sated with these unbreached savages, their claymores and their shields. We are sick to death of mountain fastnesses, stupendous rocks, roaring torrents, and shaggy woods. We regard with the utmost apprehension the fictitious revival of 'Gray Specters,' 'Ghostly Visitants,' 'Ladies of Faery,' and all the other trumpery raked from the Dark Ages. That way the gate of superstition lies, and already we seem to hear the dogs of priestcraft barking upon its threshold. Have we ceased to be rational and cultivated beings that Mr. Scott should thus engage our interest in pibrochs and Lochaber axes? Or that Lord Byron should thus seek to transport us with 'Corsairs' and 'Giaours' and 'Laras,' while 'Childe Harold' sheds over our urbanity the enchantment of a wilderness? These real and original masters of the school we may, perhaps, continue to admire, but their imitators we can no longer tolerate. 'I don't so much mind the assaults of men and noble animals,' said the dying lion, 'but d——n that ass's heel!' That phrase, we confess, very nearly expresses our feeling in regard to the author of 'Waverley.'"

"DEMOBILIZED" GRAND OPERA

SO FAR we have comforting assurances that America will not be a great economic sufferer in the *débâcle* that seems engulfing Europe. But we can not escape in other ways, and one is pointed out by the *New York Tribune*. "There are threatened deprivations and changes in our lives which such a vast conflict will cause, the three thousand miles away. For example, what are we to do for tenors and barytones when the grand-opera season opens?" *The Tribune* draws for us a gloomy picture:

"When one listens to the warblings of the sublime 'Caruso' one is apt to forget that this embodiment of a voice is, in another capacity, simply an Italian subject with brains enough to obey orders, shoulders strong enough for the musket and the blanket-roll, and legs sufficiently stout to propel the ensemble. As such he must obey his country's possible summons to mobilization. And the same is true of those other artists, Scotti and Amato and Toscanini, all Italians, and likely to pass the recruiting-officer's inspection. And what is true of the Italian is true of the French and German and Austrian and Russian singers. They are, most of them at any rate, abroad now, and whether their hearts beat with patriotic eagerness for the fray or with regretful trepidation, they must hold themselves in readiness to fight.

"There is, perhaps, a ray of hope for our grand-opera season in Italy's express intention of remaining neutral. But neutrality in the midst of such a conflict must be defended. Italy, like Holland and Belgium and Switzerland, will find it necessary to mobilize. Will this mean the drafting of her song-birds? We shall have to wait and see.

"As for Rudolf Berger and Carl Burrian, the Austrians; Reiss, Goritz, Weil, Braun, Hageman, and Morgenstern, the Germans; Gilly, Ananian, and Rothier, from *la belle France*, and Jörn and Didur, the Russians—it looks indeed like the cannon's mouth for most of these gentlemen. Heaven grant they may number among the survivors!"

The *Boston Transcript* finds it possible to be light-hearted even in the face of calamities and proves its Americanism in being able to joke on the edge of the abyss. The delays imposed upon the opening dramatic season are already a reality, Mr. Charles Frohman announcing considerable modification to his plans. We quote *The Transcript*:

"The crippling of grand opera in America may be one of the minor embarrassments of wide-spread war in Europe. A few years ago, when the Italian conflict in Tripoli began, Mr. Zonatto or his press-agent announced that the tenor of the Boston opera was eagerly awaiting the call to his nation's colors. Fortunately for us, the Italian Government found it possible to extend courtesies to the gentleman which permitted his appearance here as his contract demanded. Doubtless a similar leniency will save us from losing many a Continental voice this winter. It will also save us from the spectacle of Caruso in the ranks, spurring his comrades on to battle with 'See, the Conquering Hero Comes!' or cheering their souls at evening round

the camp-fire. Perhaps a certain sensitiveness over such a spectacle is the secret of what holds Italy in check. And yet, what a devastating vocal attack its singer-army might make on some modern Jericho!

"The embarrassment to music in America is likely to be serious enough. Our opera-houses and concert-halls will not close down, as those of Germany and France and Russia will to a great extent. For it is some time before the regular season will be in swing—January before our own opera-house opens—and in spite of the progress of 'militancy' the female contingent

is as yet free from military levies. Yet even the such genuine patriots as Fritz Kreisler do not join their regiments, as the violinists prepared to do when Austria seemed likely to be involved with the Balkans a few years ago, it is not going to be easy for foreign musicians to reach our shores by steamer even if they escape compulsory service. At the present moment the American stage is feeling some doubts over whether the situation of actors and managers now abroad, particularly those in Germany, will not seriously delay the opening of many plays booked for early production. War was once the inspiration of art. From Euripides to Byron, poets served at the front. Nowadays, it seems more likely to be a great benumbing cloud over such forms as opera and drama, where a great organization of effort is imperative."

From "A Broadsheet," Donatien

SCENE AT AN IRISH FAIR.

One of Jack Yeats's pictures of the Irish gleeman, a type that has withstood the changes of time.

WORD - SQUEAMISHNESS—

Euphemism is the fashion and people object to calling persons and things by their right names, complains the *Boston Herald*. We have grown so sensitive to words that such plain speech as "theft, arson, and murder" are disagreeable words; other words long in use and accepted gladly by illustrious writers are thought coarse, unpleasant, low." *The Herald* considers the

consequences of our dropping "coffin" and "pauper":

"The specific term 'pauper' is gradually passing out of use in connection with the poor, and there has been a marked change in recent years in the attitude of the state and public toward those who are unable to provide for themselves. . . .

"The genteel 'casket' is now used for 'coffin' and the poets stand in need of revision. In 'The Burial of Sir John Moore' we should now read, 'No useless casket enclosed his breast.' In 'Richard III.' there should be the cry: 'Stand back, my lord, and let the casket pass.' In Walt Whitman's burial hymn of Lincoln, this version will be preferred:

Here, casket that slowly passed,
I give you my sprig of lilac.

"Fortunately 'coffin' and 'casket' are words of two syllables, each with the accent on the first; but, what is to be done with 'pauper'? Take Nolan's grim poem, for example:

Rattle his bones over the stones,
He's only an indigent that nobody owns.

Somehow this does not sound right. 'And sue in *forma pauperis* to God—how will this line be tinkered? Many have committed to memory 'Over the Hill to the Poor House.' 'Over the Hill to the Infirmary' hardly takes the place; 'Over the Hill to the Home for the Aged and Infirm' would be an example of what the French call 'free verse.'"

RELIGION AND SOCIAL SERVICE

ASKING GOD TO BLESS SLAUGHTER

WHAT has God to do with all the blood and carnage opening upon the eyes of an astonished world? It is pointed out in our papers, at least, that these "Christian Emperors" expect he will work for them, and that they exhorted their subjects to call upon him for aid. "But it is better

that it should be better in innocent Kovno than in equally innocent Poland."

And the Christian Czar commends his subjects to God that they may have strength of arm in a quarrel they do not understand; that they may inflict more sufferings than they are required to endure and the name of Romanoff be greater than the name of Bonaparte; that it may be greater than the name of Bonaparte; that its territories shall be wider and the territories of Bonaparte and the territories of Hapsburg less.

The Christian Emperor of Austria commends his subjects to God to seek divine assistance to crush the peasants of Serbia, "gathered from the wheat-field when it was ready for the scythe and given to the scythe themselves."

The despair of an indignant and helpless world is found expressed in lines by Clinton Scollard that the New York Sun used at the head of its editorial page on Sunday, August 2:

THE RECKONING

What do they seek who sit aloof on thrones,
Or in the chambered chancelleries apart,
Playing the game of state with subtle art,
If so be they may win, what wretched groans
Flow from red fields, what unrecorded bones
Bleach within shallow graves, what bitter smart
Pierces the widowed or the orphaned heart—
The unnumbered horror for which naught atones!

A word, a pen-stroke, and this might not be!
But vengeance, power-hunt, festering jealousy
Trumpet, and grim carnage stalks abroad.
Hark! Hear that ominous bugle on the wind!
And they who might have stayed it, shall they find
No reckoning within the courts of God?

If Divinity enters here, thinks the writer in the Chicago paper, "it comes with a sword to deliver the people from the sword." "It is the twilight of the kings," continues the writer. "The republic marches east in Europe."

"This is, we think, the last call of monarchy upon Divinity when Asmodeus walks in armor. The kings worship Baal and call it God, but out of the sacrifice will come, we think, a resolution firmly taken to have no more wheat-growers and growers of corn, makers of wine, miners and fishers, artisans and traders, sailors and storekeepers offered up with prayer to the Almighty in a feudal slaughter, armed against one another without hate and without cause they know, or, if they knew, would give a penny which way it was determined.

"This is the twilight of the kings. Western Europe of the people may be caught in this *debacle*, but never again. Eastern Europe of the kings will be remade and the name of God shall not give grace to a hundred square miles of broken bodies."

With a more vehement judgment on those who are responsible for the decision of war, the New York *Evening Post* thus treats the case of the "three Kings":

"The human mind cannot yet begin to grasp the consequences. One of them, however, seems plainly written in the book of the future. It is that, after this most awful and most wicked of all wars is over, the power of life and death over millions of men, the right to decree the ruin of industry and commerce and finance, with untold human misery stalking through the land like a plague, will be taken away from three men. No safe prediction of actual results of battle can be made. Dynasties may crumble before all is done; empires change their form of government. But whatever happens, Europe—humanity—will not settle back again into a position enabling three Emperors—one of them senile, another subject to melancholia, and the third often showing signs of disturbed mental balance—to give, on their individual choice or whim, the signal for destruction and massacre."

The New York *Tribune* preaches a lay sermon on the subject of Christianity and war, pointing out that a Christianity which

THE CITY OF THE

Illustration

Caricature in the New York Sun by [unclear]

asking hell on earth the Christian Kings commend their subjects to God," observes the Chicago *Tribune*. What they really do is to "seek the Lord's sanction for the devil's work." Their real words translated into the inevitable facts that they imply are here vividly imagined:

" 'And now I commend you to God,' said the Kaiser from his balcony to the people in the street. 'Go to church and kneel before God and pray for his help for our gallant army.'

"Pray that a farmer dragged from a Saxon field shall be sponder with a bayonet thrust than a wine-maker taken from his vine in the Aube; that a Berlin lawyer shall be stouter with the rifle than a Moscow merchant; that a machine gun manned by Heidelberg students shall not jam and that one worked by Paris carpenters shall

"Pray that a Russian hop-grower, armed in a quarrel in which he has no heart, shall outmatch a wheat-grower from Poltava; that Cossacks from the Don shall be lured into barbed-wire entanglements and caught by musketed guns; that an innkeeper of Salzburg shall blow the head off a baker from the Loire.

" 'Go to church and pray for help'—that the hell shall be hotter in innocent Ardennes than it is in equally innocent Hessen;

would restrain men from engaging in mutual efforts for slaughter has never had a real chance:

"The sudden flaming forth of the war madness in Europe will again raise the question, often discusst before, why it is that great nations which acknowledge their allegiance to the Christian religion appear to be absolutely uninfluenced by its teachings. War is contrary to the fundamental ideals of Christianity, which was first proclaimed as a religion of peace and good will among men and whose teachings look to the ultimate gathering together of all mankind in one great human brotherhood ruled by love. Yet the leading Christian nations of the world are preparing to fly at each other's throats just as their remote ancestors, the cave men, might have done. Is not this fact, it may be asked, a serious indictment of Christianity?"

"The answer is that the indictment lies not so much against Christianity as against those who profess to accept its teachings and don't even pretend to live up to those teachings in their daily lives. Not only in the matter of war, but in hundreds of other matters, people are every day doing things forbidden by the religious creed they profess; and this fact proves not that their creed is bad or futile, but that average humanity has not yet reached the point where it can obey Christian teachings. As a matter of fact, Christianity has never yet had a fair trial in the world. Its noblest idealisms have always had to be more or less diluted in order to make them acceptable to humanity in the rough.

"Nevertheless, it would imply a very shallow judgment to assert that Christianity has had no influence, even in the case of war. Who shall say that a majority of civilized men and women in the world to-day are not opposed to war? They have no way of expressing themselves; they do not sit in the seats of the mighty. But they are quietly registering their judgment against war as a crime against humanity. And some day, when there shall be ushered in the era of 'sweeter manners, purer laws,' foretold by the poet, the verdict of these plain people will be respected and obeyed by those who will then rule the destinies of the world."

THE JEWS' PLACE IN THE WAR

AMONG the more obvious melancholy features of the European war the peculiar position of the Jew, as certain Hebrew editors note, is characterized by a pathos all its own. His patriotism in "the various countries of his birth or adoption," remarks the *St. Louis Modern View*, impels him to risk life and limb in time of war even tho it means that "Jew will be fighting against Jew." But in a crisis such as the present, says this editor, "even the strong band of union which exists among our people, racially and religiously, is severed," yet he can not repress a feeling of regret that the circumstances oblige "hundreds of thousands of Jews" to march under the standard of their persecutor, Russia. Elsewhere it is different, he explains, and the Jew who falls in battle realizes that he falls for a country which will hold his memory "in grateful remembrance." This is as it should be, we read, because—

"The Jew is an integral part of every nation whose citizenship he enjoys. This he has always felt and always demonstrated. In countries where data are available the war records show it clearly. In Germany, for instance, where the Jew has been permitted to render military service since March 11, 1812, there were 731 Jews and one Jewess, Esther Manuel, in the German Army during the wars of 1813-1815. In the war of 1866 the number of Jewish soldiers in the German Army was 1,025, while the number of Jews serving in the German Army during the Franco-Prussian War of 1870-71 was 4,492, of which number 448 were killed or wounded and 373 decorated. A similar record is contained in the war annals of other European countries, as France, Austria, and Italy. In the last-named country, where Jewish emancipation dates back only to the year 1848, during the war of 1866, when the entire Jewish population of Italy was 36,000, there were 380 Jews in the army."

In France or in Germany, however, the writer goes on to say, the Jews fight for "the standing and the standards of their

respective countries," but, he asks, what are the Jews in the Russian Army fighting for? And he adds:

"If in the armies of the other nations the fear of the soldier will be minimized by the consciousness that, should he fall fighting, his memory will be held in grateful remembrance by his fellow countrymen, what is there to allay the fears of the Jewish soldier in the Russian Army, unless, indeed, it be the consciousness that by his death he might help to bring about the defeat of a barbarous and nefarious nation?"

The irony of the situation is also observed by the *Chicago Reform Advocate*, which recommends to our thoughtful consideration the fact that in "one of the warring States," Russia, "there are six millions of men and women who have been reduced to the condition of rightless persons, who must pay for the enjoyment of human rights as if they were privileges granted by

—AND AGAIN THE PITY!

"To feed on hope, to pine with fear and sorrow."

—Weed in the *New York Tribune*.

a benevolent sovereign to men and women worthy of no consideration, but who will be expected . . . to stand forth and bravely and with enthusiasm fight the cause of the Romanoff dynasty." And the writer continues:

"They know that they may fight as valiantly as they do who have home and right to fight for, yet from the ranks they may never rise. They know that others of their blood may volunteer, because of their skill and training, won only under difficulties and under the hate of the bureaucracy, to bring healing and life to the broken on the battle-field, but will be answered, as indeed they have been answered before, that Jews are not wanted as physicians. But strangely enough when the call comes they will respond. They responded before when Russia fought its last war. And they will fight again with the strength and fire of their whole makeup, that their land and their armies be not shamed before the world. They will forget how their army, their Cossacks, rode down defenseless men and women and children, will forget Kishineff and the authorities that might have stopt the fearful and unspeakable outrages but held back to let the mob satisfy its brutal thirst, but with a Shema Yisroel and some Russian soldier song they will fight for the glory of the little Father."

"After all," concludes the writer, "it may be quite useless to argue with the hope of a near solution of war or prejudice."

THE ILL OMEN OF SACRÉ CŒUR

WHAT FATALITY overhangs the hill of Montmartre? might be asked at this time, when events seem likely to interfere with the consecration of the Church of the Sacré Cœur. October 17 was the day chosen for this ceremony, and this is thirty-nine years after the beginning of the building. This date is the fête-day of Marie Marguerite, who heard voices commanding her to build a church on the top of Montmartre. Louis XVI. formed in prison the pious intention to carry out the behests of the voices, but the scaffold robbed him of the chance. Napoleon had a more secular idea and proposed building there a temple where each successive peace might be proclaimed, but he never ceased warring. It was the events of 1870-71 that directed the Catholic mind to the project, says a Paris correspondent of the *London Times*. We read further:

"Pious people at Poitiers wished to invoke the protection of God by erecting a temple to his worship in Paris. Momentarily allowed to lapse, the idea was taken up by Catholics in Paris. The difficulty was to establish communication with the outside world, for the city was invested. Balloons were tried, the pigeon-post, and even the bribery of secret agents; but all failed, and it was not until the Commune had added its horrors to the war that the enterprise took practical shape.

"The War Minister wanted the site for a fort; but, better inspired, Mgr. Guibert, the Cardinal-Archbishop of Paris, cried: 'Your fort will do no good and may be turned against you. Better build my citadel than yours.' Whether or not he was moved by the argument, the Minister gave up his project, and, on July 23, 1873, the National Assembly authorized the purchase of land for the church and even permitted the Cardinal to proceed by expropriation. The large majority which supported the Bill shows how feeling in Parliament has since changed on questions of Church and State.

"Two years later the first stone was laid with impressive pomp and in the presence of 12,000 persons gathered from all parts of France. Almost inevitably the plan of the architect, which prescribed a Byzantine church, was severely criticized; but it ultimately triumphed. The public saw the folly of attempting to rival the Gothic glories of the thirteenth century by adding Montmartre to the splendid series of Chartres, of Amiens, of Rouen, and Notre Dame.

"Slowly the domes and campanile and the cluster of side chapels arose on the Mount of Martyrs—near, indeed, to the spot where, according to the legend, St. Denis was decapitated and carried his head under his arm as if it had been a crown. Centuries after temples to Mercury and Mars had disappeared, a deaf and almost blind abbess, with the ladies of her Order, was hurried to the guillotine on the tumbrils of the Convention. Mount of Martyrs it was also for two generals shot by Communards while M. Clemenceau was Mayor of Montmartre. The people had dragged guns, for the second time in the history

of Paris, up the steep slopes of the hill—the first was on the morrow of the taking of the Bastille, when the mob feared vengeance from the Royalists and the Army at Saint Denis—and the two officers had gone to parley in the name of the Government. In their excitement, the Montmartois slew the emissaries, without the knowledge and in the absence of their youthful mayor.

"On pillars within the sanctuary appear the arms of towns of France which have contributed to the building fund. Each stone may be said to bear the name of some community—a town or village—or of an individual Catholic. Altars to St. Patrick and to St. John the Baptist mark the offerings of Ireland and Canada. Deputies, working men, students, and even schoolboys have their part in the erection of this striking and majestic monument to the Catholic spirit of France."

Only now, after all these years, "is the fair fabric complete enough to be ready for consecration":

"The great bronze doors have lately been put in; the paving is scarcely finished, and some of the altars, bespeaking the devotion of different parts of France, are still unbuilt. In its present state the huge white building, under its imposing dome, has cost £1,600,000. This is precisely the sum which Napoleon proposed to spend on his Temple of Peace. It has been the aim of those who have founded the church to address themselves to all classes of society, and the same spirit prevails to-day in the great Sunday

services, at which from 1,500 to 2,000 men are present in the nave. These worshipers are drawn from every section of the community; Academicians and officers of the Army and Navy sit side by side with artisans, small shopkeepers, and the very poor. The Church of the Sacred Heart has no parish attached to it; it is a place of pilgrimage, and scarcely a day passes without some band of pilgrims climbing the sides of the mount. In the evening, lights glimmer from the summit of the rock upon which is perched this symbol of 'Gallia penitens et devota.'

CUTTING OFF DRUGS—A warning as to the drug habit is emphasized by *The Congregationalist and Christian World* (Boston) from the episode of the rebellion among the prisoners on Blackwell's Island, New York. The trouble was mainly due to the attempt to cut off supplies of cocaine and other dangerous drugs. We read:

"Put together the restraint and essential loneliness of prison life and the opportunity of resort to these drugs, and you have one of the worst possible combinations of opportunity and temptation. We shall never solve the prison problem until we find a way to handle the prisoner as a human being, and to keep his days full of healthful and, if possible, interesting occupation. But the warning of what happens to men in prison through the temptations of cocaine and its devilish sisters is a warning also for us outside. Bad as the liquor habit is, the drug habit is more perilous and more easily started by the average man. We must take warning for ourselves, and we must encourage everywhere the suppression of the traffic in these dangerous drugs."

WAITING FOR CONSECRATION.

The Cathedral of the Sacré Cœur on Montmartre, Paris, which was begun after the Franco-Prussian war and just ready for consecration.

PERSONAL GLIMPSES

GLIMPSES OF WAR'S BEGINNINGS

WERE the strict European censorship removed, there would doubtless be hundreds of war anecdotes in the news, humorous, farcical, pathetic, and grim. But news has been scarce, and little space has been afforded "color stories" whose only value lay in their human interest. Nevertheless, a few have crept in, here and there, presumably authentic. When the *Kronprinzessin Cecilie* turned back at the orders of the German Government, it brought the account of the efforts of startled passengers to induce the captain to proceed, among these the romantic and characteristically American offer to buy the ship and sail it under the American flag. The New York *Tribune's* account of another earlier incident of the same sort is as follows:

The story of the receipt of the wireless message calling the *Friedrich der Grosse* off the seas into the nearest neutral port, which happened to be New York, was told by a prominent Baltimore woman, who, with her husband, was en route to Europe to tour the Continent.

"Friday night," said Mrs. Preston, "at about half past ten, I was sitting in the lounge, playing cards with Mrs. J. Hull Davidson, two German gentlemen, who were passengers, and Captain Fritze, commander of the ship.

"Just when the game was becoming really interesting an orderly, or a ship's officer of some sort, came into the room, saluted the captain, and handed him a marconigram that had just been received by the wireless operator.

"Captain Fritze took it, scanned it closely, then took a book from his pocket and compared the wording of the message with the text. The message was in code and it took him several minutes to decipher it. When he finished he scribbled the actual meaning of the words over the message as it was written, and showed it to the two Germans at our table. All were perturbed and begged to be excused at once. Half an hour later we learned what the message contained."

Half an hour after the vessel reversed her course all the decks were enclosed in canvas, such as is lasht about them in heavy weather; all electric lights were extinguished, and oil-lamps furnished the only illumination about the decks and saloon. In the staterooms there was electricity, but over every port-hole were hung towels and linen. Even the gingham aprons of the stewardesses were used to keep a ray of light from glancing over the water.

"Saturday night we sighted searchlights of two ships, which the officers thought might be English cruisers, up from the West Indies. All that day if any one laughed aloud on the deck he was reprimanded and warned by the officers that the English might hear them.

"The climax came Saturday night, however, when a dance was started in the saloon. When the orchestra was in the midst of a maxixe, which practically every

one was indulging in, because we needed some recreation, what did the captain do but stop the music!

"It might attract the attention of the British," he explained."

Meanwhile, the great, panic-stricken retreat of the tourists was beginning. The stories of all that they suffered would take much space to tell. To the Europeans, stirred to the depths of their natures by the call to arms, these parasitical creatures, who had come to their countries only to spend money and be idle, were an annoyance and an exasperation. Men, women, and children alike, were given scant courtesy. And, added to these discomforts, they were compelled to suffer, along with their unwilling hosts, the horrors of the universal lapse into semibarbarism. This is concretely illustrated by the following refugee story clipped from *The Tribune*:

Hugh Sutherland, director of the Canadian Northern Railroad, reached here from Bohemia with his nerves somewhat shattered by the arduous journey and the first sight of the horrors of war.

"At a small station near Prague I noticed confusion among the soldiers entraining," he said. "I then saw four Serbs struggling violently against being forced to proceed with their Austrian regiment to fight their fellow Slavs on the Russian frontier. The officer commanding issued a few crisp commands and immediately the wretched four were led away a short distance, lined up and shot to death in plain sight of myself and everybody on the train. The women screamed and fainted, and a terrible uproar ensued, in the midst of which the train was ordered to proceed.

"I was obliged to change from one train to another ten times on Thursday night, traveling to Belgium through Germany, owing to the sudden embarkation of troops, necessitating the turning out of all regular passengers. I passed through a thousand miles of lands rich with harvest, but nobody was working in the fields except here and there a few women and children. The crops are in beautiful condition, but it is impossible to save them now. This loss is terrific."

The temper of the Europeans is shown in the tenor of many dispatches. So slight an encounter as this from the New York *Times* illustrates the French attitude:

Every Frenchman has a calm conviction that the nation is now going to avenge Alsace-Lorraine. An incident that happened to the New York *Times* correspondent illustrates how every man conducts himself. Leaving the American Embassy, the correspondent obtained one of the few remaining cabs. As he entered it a young Frenchman ran up on the opposite side, raised his hand to his hat, and said: "I am arranging my departure. Will you permit me to ride with you?" The correspondent asked what day he would leave. He answered, "Immediately." He remained silent all the way to the Opéra. Asked, "You are confident?"

ACTUAL SIZE

COLGATE'S
SHAVING STICK

Consider it

¶ When you need a shaving stick ask to see Colgate's.

¶ Notice how large it is — that means economy. The pure, wholesome whiteness of the soap and the tinfoil finger-grip mean shaving comfort.

¶ And the nicked-box (the original one) with its screw top keeps the soap clean and fresh. The last half inch or so you can stick onto the new Stick and use every bit. The same Comfort and Economy are found also in Colgate's Perfected Shaving Cream and Rapid Shave Powder.

A trial size of any one sent for 4c in stamps.

COLGATE & CO.

Dept. Y. 199 Fulton St., New York

ACTUAL SIZE

Williams' PATENTED Holder Top Shaving Stick

This is the box to look for on your druggist's shelves. It contains the stick with the patented Holder Top—the top that gives your fingers a dry, firm grip all the time that you are applying the soothing, refreshing soap. Your appreciation grows bigger as the stick grows smaller.

Send 4 cents in stamps

for a miniature trial package of either Williams' Shaving Stick, Powder or Cream, or 10 cents for Assortment No. 1, containing all three articles.

THE J. B. WILLIAMS COMPANY
Dept. A, Glastonbury, Conn.

he replied, "I am sure—besides, we are not alone."

Alighting at the Opéra, his politeness not failing him, he raised his hat, saying, "Many thanks, monsieur, au revoir," and plunged into the entrance to the subway.

The Savannah News mentions a more forcible bit of evidence on the other side of the conflict. The story is credited to an Austrian count, sailing for home, to take his part in the war against Serbia as lieutenant in a cavalry regiment:

He said that the officers of the Austrian Army "are to be supplied with small vials of poison, which, if they are captured by the Serbs, will be used to destroy themselves rather than undergo the indignities which they will suffer at the hands of their enemies."

Prisoners of war in any country have to undergo some indignities, and it may be that the Austrian officers have cause to dread being captured by the Servians, yet it is recalled that in the recent report of the Carnegie commission that investigated reports of atrocities in the two recent Balkan wars the Servians were much less severely criticized than their Greek allies, or the Bulgarians. There will be many terrible incidents in the Austro-Servian conflict, but it is astonishing that all Austrian officers are supposed to prefer suicide to capture.

In so great a struggle there are many features that do not suggest themselves readily to the average individual. By way of example is this one, wherein we are involved, the Cleveland Plain Dealer giving it slight mention:

Will the Missouri mule be drafted for service in Europe? Will that patient, oft-maligned beast of burden pull the heavy cannon and keep the commissary department close to the men with appetites, or will the motor take his place?

Across the veldt in South Africa, when Boer met Briton, the Missouri mule patiently pulled the guns and the supply-wagons for each. Buyers hunted the animals out of the pastures of Missouri, and boats waited in Southern ports for railway trains racing to get more mules to the front.

It was the same in the war with Spain, when the Missouri mule was drafted and later distributed over Cuba and Porto Rico, there, beneath the tropical sun, to wear away his days if he escaped the dangers of war.

Raising mules in Missouri is a fine art and is one of the big industries of the State. Whether fate decrees he shall tramp the cotton fields of Georgia, or take service with the armies in lands beyond the sea, the mule assumes his burdens and performs his daily duty. If his master be appreciative he may have pleasant days, but mule history is written mostly in sorrow.

If there be a call from the land of the Slav the Missouri mule will go into new and strange lands. His is ever the duty of bearing burdens for man. In war or peace that duty remains his portion.

One singular glimpse of what such a war
(Continued on page 280)

After the Auto Ride

The fine run remains in your memory—the dirt and dust in your hair and skin.

Let the cleaning-up process include a restful shampoo with Packer's Tar Soap.

After Golf and Tennis

Don't forget that your scalp needs exercise, too. Systematic shampooing with Packer's Tar Soap gives your scalp the proper exercise necessary to the continued health of the hair.

For Prickly Heat and Sunburn

and irritations of scalp and skin; soothe by using Packer's Tar Soap.

This mild soap brings speedy relief to itching, chafing and irritations so uncomfortably common in Summer time.

And now the Shampoo

A cooling and refreshing shampoo is particularly grateful in warm weather. After salt water bathing, authorities agree you should shampoo with Packer's Tar Soap.

Three generations of users have found rest and refreshment in

Packer's Tar Soap

(Pure as the Pines)

Its use in the bath is attended by healthful cleanliness and followed by sensations of vigor and physical comfort.

THE PACKER MFG. CO.
Suite 34A, 81 Fulton St., New York

Let this machine be your partner!

It asks no share in your profits, but—

It will lighten your work—eliminate worry—and increase your personal efficiency.

It will save you money—prevent mistakes—and banish drudgery for your bookkeepers—by providing endless economies and safeguards in every branch of your bookkeeping work.

It will help you plan more wisely—execute your plans more surely—by making it easy to analyze, classify and

properly interpret the mass and maze of detail that confront the manager of every business.

It will cut the cost of doing business—give you better control of your business—and help you make the most of the billion bushel wheat crop and the prosperity our farmer friends are passing on to us.

It will help you do a bigger fall business!

How the WALES cuts bookkeeping costs

The Wales provides a simpler, easier way to extend and check invoices received and rendered, —a surer, shorter method of auditing, recapping and summarizing sales tickets and daily sales—a safer, quicker and more satisfactory method of handling pay-rolls and time-records, customers' statements, deposit slips, general recaps and summaries, trial balances, inventories, fiscal statements and, in fact, every conceivable bookkeeping and accounting process.

It is versatile—adaptable—convenient—easy to operate—sure.

It lists, tabulates, adds, subtracts, multiplies, divides, cross foots, performs every commercial computation.

The WALES Visible

Adding & Listing Machine

How it lightens the manager's burden

The Wales makes it possible to get an accurate, boiled-down summary of today's business—and to map out tomorrow's plans for buying and selling—in time to go home and play with the babies!

It makes it *easy* for a merchant to know what lines are moving, what departments are most active and what each clerk is selling—not

approximately or by estimate—but accurately and absolutely.

It makes it easy for both merchant and manufacturer to know what each detail of business is costing,—to detect losses before they grow large and menacing—to save and economize wisely.

It makes it easy for a manager to get his vital facts *daily*—and to classify, tabulate and arrange these facts for more and more scientific buying, selling and cost cutting in the future.

By bringing the myriad details of your business into order and proper perspective with little effort on your part—it leaves you mentally free to deal with the larger and more profitable aspects of your business.

It places your business more securely in your grasp.

SPECIAL OFFER TO MERCHANTS:

Our Wales Way Bureau has recently been investigating the time and labor saving methods employed by representative concerns in purchasing and handling stocks of goods, handling and reorganizing sales forces and other preparations for fall and winter selling. The improved facilities for checking invoices of purchases and shipments and for analyzing current and past sales records, made possible by the Wales, was the object of the inquiry, but the information secured is of the utmost practical value to any merchant whether the Wales is used or not.

This timely data will be sent free to any responsible business executive—in the form of booklet, bulletin or special report—who will attach one of the coupons below to his letterhead.

Special data for

- Dept. Stores
- Dry Goods Stores
- Grocery Stores
- Clothing Stores
- Millinery Shops
- Shoe Stores
- Hotels and Restaurants
- Theatres, etc.
- Public Service Corporations

has recently been collected by the WALES WAY BUREAU, showing the uses and advantages of the adding machine and will be sent on request—see coupons below.

Barrett Specification Roofs

Owner, National Biscuit Company, New York City
 Architect, A. G. Zimmerman, 11 East 24th Street, New York City
 General Contractor, Cauldwell-Wingate Company, 381 Fourth Avenue, New York City
 Roofing Contractor, Tuttle Roofing Company, 322 E. 20th St., New York City
 Waterproofing Contractor, Germania Roofing Company, 26 Sullivan Street, New York City

Photo copyright, Irving Underhill, N. Y.

A Barrett Specification Roof was put on this building because—

The architect knew all about the different types of roofing and further knew that the National Biscuit Company were mighty particular people.

They had a big plant and they wanted it covered with a roofing that would give long service at a low cost.

Under such conditions the architect knew there was only one choice, namely: a Barrett Specification Roof, because it gives longer service at a lower unit cost (the cost per square foot per year of service) than any other roofing he could specify. This building is now covered with a Barrett Specification Roof and it will probably last

twenty years or more with no maintenance cost. Many such roofs have lasted thirty years.

Every permanent building, whether large or small, should carry a Barrett Specification Roof because that means the most economical roof, and one that will be free from leaks and maintenance.

Ask any first-class architect regarding this proposition and he will verify all of the foregoing statements.

Copy of The Barrett Specification with roofing diagram mailed free on request.

Special Note

We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding.

If any abbreviated form is desired, however, the following is suggested:

ROOFING: Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

PERSONAL GLIMPSES

(Continued from page 278)

as this can mean in Europe, where the nations have stood shoulder to shoulder for so long, is given by a New York American Paris dispatch. In Paris were many thousands of Germans, engaged in industry and commerce, for the most part long resident, and on terms of intimacy and friendship with the French people. All their interests lay in France, yet at the call of the Kaiser they must return to Germany. In becoming Parisians they had not changed the Teutonic blood in their veins, and for this reason they must go:

They lined up several thousand strong in a double file, and at the Northern Railway station to-day wealthy men who yesterday headed big banks and controlled hundreds of employees, stood shoulder to shoulder with laborers or hotel servants. Bravely they were held together in a common bond of birth, not with any hatred of France, but bitter in their resentment at the Kaiser, who, they believe, provoked this gigantic *débacle*. For one and all it means complete ruin.

Some had lived here twenty years, but had not become naturalized Frenchmen; therefore they shared the common lot of Germans who arrived only a week ago. That they love the fair land of France, now about to be drenched with blood, was shown by the fact that when a procession of Frenchmen passed the station, waving flags and singing patriotic songs, they all doffed their hats respectfully.

Before the nations were yet embroiled in the war one severe blow was struck at the cause of peace, in the killing in Paris, on the night of July 31, of Jean Léon Jaurès, leader of the "United Socialists" and a strong opponent of international war. He was one of the most brilliant men in France. The New York Times describes the scenes of his assassination:

M. Jaurès was seated at a dinner-table near an open window, facing the Rue Montmartre, chatting with several Socialist Deputies and the editors of *L'Humanité*. As tho by prearrangement, the curtain covering the window was lightly brushed aside and a hand holding a revolver was thrust through.

Before M. Jaurès could make a move he received two bullets in the back of the head. Without uttering even an exclamation he fell forward and expired with his head on the table.

The reports of the shots startled the diners and passers-by, and the assassin was seized. In his pocket was another loaded revolver. The police rescued him from the crowd, who shouted "Assassin! Death to the assassin!"

The body of the noted Deputy was placed in a city conveyance, which, surrounded by weeping comrades and friends, proceeded through the streets to his home, followed by a detachment of Republican Guards.

THE ROMANCE OF WIRELESS

AT the tip end of Manhattan Island, near enough to the South Ferry entrance of the Subway so that copy-boys can in ten minutes reach the city editor's desk up-town, stands the little wireless station of the New York Herald. When first erected it seemed little more than an editorial caprice, but in these days there is Romance there, and the operator, picking up through the night the gossip of battle-ships and liners for miles around, is one of the most valuable reporters in the city. Out there beyond, great ships may be deploying in the dark, and, with spurt and flash of wireless, striving to signal friends and mislead foes. Down on the end of Manhattan the operator hears it all and, giving his imagination rein, spells out the drama of the night. *The Herald* prints his report on a night early in August, when the great liners, their sailings just countermanded, lay in port, waiting for a chance to reach the open ocean safely:

From the time it grew dark last night some of the crew of the *Vaterland*, which lies almost directly opposite the *Lusitania* at her pier in Hoboken, used a powerful search-light to sweep the river. Its rays have searched out the identity of every craft that has passed the pier, and at intervals the spot of light would dwell covetously on the trim stern of the *Lusitania*.

The Germans were watching for the loosening of the first line that held the English ship. That they intended to flash the report of her start to the station of the Telefunken Company, at Sayville, L. I., was evident from the actions of the operators there.

Ever since dark, the Sayville station, which is owned and controlled by a German company, in which the German Government holds a majority of the stock, has been sending code messages to the two cruisers and to the *Kronprinz Wilhelm*.

Some of them have been from Berlin, others from New York, and one came from Havana. The sluggish spark of the German station pounded and pounded during the evening hours, but toward midnight there were intervals of quiet, as if the operators there were listening—perhaps for a signal from the *Vaterland* that would be relayed instantly to the *Dresden* or the *Karlsruhe*.

Once in a while one or the other of the cruisers would interrupt the steady flow of German code, and when they did their sparks showed them to be within ten miles of the Sea Gate station of the Marconi Company. The signals from them came in fresh and clear, and, as the night was not particularly adaptable for the transmission of wireless because of the natural atmospheric interference, the war-vessels could not have been farther away.

England, too, has her cruisers drawing in close to New York, and the *Essex* and the *Launceston* were to be heard last night, but their distance from this port is greater. It was approximately seventy-five miles at nine o'clock and it was for their closer approach that the *Lusitania* was waiting.

When their radio signals were heard a

How the Bell System Spends its Money

Every subscriber's telephone represents an actual investment averaging \$153, and the gross average revenue is \$41.75. The total revenue is distributed as follows:

Employees—\$100,000,000

Nearly half the total—\$100,000,000—paid in wages to more than one hundred thousand employees engaged in giving to the public the best and the cheapest telephone service in the world.

For Supplies—\$45,000,000

Paid to merchants, supply dealers and others for materials and apparatus, and for rent, light, heat, traveling, etc.

Tax Collector—\$11,000,000

Taxes of more than \$11,000,000 are paid to the Federal, state and local authorities. The people derive the benefit in better highways, schools and the like.

Bondholders—\$17,000,000

Paid in interest to thousands of men and women, savings banks, insurance companies and other institutions owning bonds and notes.

Stockholders—\$30,000,000

70,000 stockholders, about half of whom are women, receive \$30,000,000.

(These payments to stockholders and bondholders who have put their savings into the telephone business represent 6.05% on the investment.

Surplus—\$12,000,000

This is invested in telephone plant and equipment, to furnish and keep telephone service always up to the Bell standard.

COMPANY

little more distinctly, indicating that they had elipt some fifteen or twenty miles off their distance, preparations for the steaming of the *Lusitania* were made, and she left her pier at twenty minutes after one o'clock this morning with only her sailing lights showing. Twenty minutes later she slipped silently past the Battery, and it was only with the greatest difficulty that she could be seen.

Some other means than her own wireless will be used to apprise the French and English cruisers of the *Lusitania's* going. Her set will not make a sound, because the wireless spark has as much individuality as the human voice, and the *Lusitania's* is too well known along the steamship tracks.

WOMEN OF HUNGARY

IN war-time the agitation for woman suffrage goes into a natural state of coma. Then the women are apt to assume an equal position without argument, and the question of their place in the state needs no discussion. But in no country, apparently, is woman in a better position to share equally with man the home and state rights than in Hungary. Madame Hons Timko, a Hungarian in this country, who, in connection with the Y. W. C. A., has done much for Hungarian immigrant girls, when interviewed by a representative of the *New York Evening Post*, paid the following tribute to her countrywomen and to the men who are not too jealous to give them the respect and admiration that they earn:

From the highest class to the poorest peasant, the position held by the Hungarian woman is one of respect and equality. She is the head of the household, and all the money which the man earns is turned over to his wife, who has full financial control. It isn't at all strange in a Hungarian peasant family to hear the husband ask the wife for a few cents with which to buy tobacco.

The women are consulted on all subjects. In the upper classes no man makes a business move or a political move without discussing the matter with his wife. Her judgment is important to him. And the women themselves are bright, clever, and keen, interested in all that concerns their family and their country. If the woman is brighter than her husband, he acknowledges it, and lets her go ahead and manage things.

The women of my country are brave and fearless. They will fight again just as they did in the revolution of 1840, when they went as officers and common soldiers and stood shoulder to shoulder with their brothers and husbands.

One of the favorite stories which Hungarian women tell again and again to their children is the one of the capture of Fort Egri (*Egri vár beretele*) and how Dobo Katka, the wife of the chief whose territory was being besieged by the Turks, led the women against the invaders. She rode out into the center of the town and called the women together, asking them in the name of their country to arm themselves and follow her. They disappeared, and she was afraid for a while that they were

not brave or patriotic enough to fight; but soon they returned, armed with pitchforks and stones, and followed her to where the Turks were climbing up a rope ladder to the fort, which stood on a cliff.

They heated tar in earthen pitchers and as the Turks climbed up, poured the boiling stuff down on them, and when the leader of the enemy advanced up the ladder, Dobo Katika herself climbed down to meet him and took the red flag from his hand.

"No wonder God is with the Hungarians when their men and women fight together for their country," said the vanquished Turk as he turned his forces and fled.

"THE WAR IN THE AIR"

WITH the earliest distant rumblings of war came a dispatch purporting to recount the first battle in the air. Whether this report, now that the world's news-service is being more and more crippled and mangled, will ever be confirmed, is more than doubtful; yet there are many giant *Zeppelins*, and the undaunted courage of the aviators of France's hundreds of aeroplanes can not be doubted; hence it can be safely asserted that, if this account is not the truthful history of an actual battle, it may well be, at least, a fairly accurate prophecy of a conflict inevitable at one time or another. Airships have been used before in warfare, in the Balkans, in Mexico, and elsewhere, but never until now against each other, establishing a new kind of warfare. In the *New York Sun* we read:

Who the Frenchman was who sacrificed his life and machine to destroy the German dirigible could not be learned to-day. It was reported at first that he was Roland Garros, a well-known Paris aviator. Later dispatches from Paris stated that Garros was safe there.

The first battle of the air occurred at Cirey-les-Forges, on the French border. The French aviator deliberately sacrificed himself. The big *Zeppelin* was seen first at Cirey-les-Forges late in the afternoon. It had been reconnoitering the frontier for some time when a whir of an aeroplane engine was heard and the French machine was seen rising.

The aviator went up until he was close to the big gas-bag of the *Zeppelin*. Then he pointed his machine straight at the German air-ship. The powerful engine drove the aeroplane into the bag. There was an explosion and the two machines crumpled up. The force with which the aeroplane had struck the air-ship carried it clear through the gas-bag, but as it came out on the other side it was seen that it, as well as the air-ship, was mortally hurt.

The *Zeppelin* crumpled up, staggered for a moment, and then dashed straight to the earth. Almost every one of the twenty-five men of the crew were thrown out at the first shock and dashed to death far below.

The French aeroplane, shattered from her encounter, went crashing to earth, too, taking along the body of France's first hero of the war.

A Cool Kitchen Means Better Food

It's hardly fair to blame the cook for a poorly prepared dinner if your kitchen is hot, close and smelly.

But how often in summer the heat from the range combines with the steam and odors from cooking food to make the kitchen almost unbearable. The

Sturtevant

Ready-to-Run Ventilating Set Keeps Your Kitchen Cool and Odorless

It draws the steam, odors and hot air from the range through the hood and discharges them out of doors. It keeps the kitchen very nearly as cool as the surrounding atmosphere and prevents the fumes and hot air from escaping to the other parts of the house. Equally useful too when the windows are closed in winter.

Very easy and inexpensive to install and costs about the same to operate as an ordinary electric light.

Write for full information, asking for catalogue 927.

Belle Didn't Worry:—

"Might have been anxious before we got a Basline Autowline—but now, a breakdown is just a matter of letting some nice young man tow us home; that's all!"

Basline Autowline

"The Little Steel Rope With The Big Pull"

gives the motorist a feeling of real security. He knows that ordinary road troubles won't leave him crippled miles from repairs. He can receive help—or give it—and is satisfied.

Basline Autowline is made of Yellow Strand Powersteel—the sturdy steel wire rope that is used for constructing and engineering purposes the world over. About 25 feet long, 1/4-inch diameter, 6 1/2 pounds weight. Sold by all supply dealers. Price east of Rocky Mountains, \$1.50. Also made in larger and heavier size for commercial trucks. FREE—Illustrated circular giving all Autowline information.

BRODERICK & BACON ROPE CO.

222 N. 2nd St., St. Louis, Mo. New York Office, 109 Warren St. Mfrs. of Famous Yellow Strand Powersteel Wire Rope.

A New Way to Break in a Pipe

A man had just bought a pipe and had made a remark about "breaking it in."

The dealer took out of his mouth the pipe he was smoking and said, "That pipe never was new."

"How's that?" asked the customer. It's a question anybody would ask.

Then the dealer gave out this original suggestion.

"When I first took this pipe out of the case, for my own smoking, I opened up a package of Edgeworth Plug Slice, took out one of the flat, oblong slices, and right there a Great Idea hit me as suddenly as a slap on the back.

"I took out another slice and simply lined the bowl of my pipe with slices of Edgeworth tobacco, cutting it off even with the top. Then I took some of the Edgeworth Ready-Rubbed from a tin and filled up the bowl and struck a match.

"The first puff told me that my idea was a winner. It had the mild,

cool, smooth taste that comes from a properly educated pipe."

We pass this man's experience along to you. If we know pipe smokers, and we think we do, this little trick will be worked around the world.

Just to help out, we'll go farther and send you, free, a sample package of Edgeworth Ready-Rubbed, and you can find out in a few minutes how good Edgeworth is. It is the finest Burley tobacco that grows on the ground, is Edgeworth, and it comes in two forms, Plug Slice and Ready-Rubbed, and is on sale practically everywhere.

The retail price of Edgeworth Ready-Rubbed is 10c for pocket size tin, 50c for large tin. Edgeworth Plug Slice is 15c, 25c, 50c and \$1.00. Mailed prepaid where no dealer can supply. A sample of Ready-Rubbed is free if you mention your dealer's name. If you love good pipe tobacco, you will really favor us by asking for this sample.

Write to Larus & Brother Co., 5 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well known Qboid—granulated plug—a great favorite with smokers for many years.

To Retail Tobacco Merchants—If your jobber cannot supply Edgeworth, Larus & Bro. Co. will gladly send you a one or two dozen carton, of any size of the Plug Slice or Ready-Rubbed, by prepaid parcel post at same price you would pay jobber.

INVESTMENTS AND FINANCE

MOVING THE WHEAT CROP—ARE THERE CARS ENOUGH?

RESERVOIRS of the West are pouring out their contents and threaten to swamp the railroads and water routes," declares a writer in the *New York Times* *Analyst* in commenting on the movement, that set in early in July, of wheat from Western fields to Eastern markets. In the Southwest, while the movement had not so early got under way, yet in July it "attained such volume that the railroads stand in danger of being completely swamped," and the elevator facilities at terminal points were "proving inadequate." From many points came reports in which the same figure of speech was used, that of a reservoir with its floodgates suddenly opened and the contents pouring forth in a stream that engulfs the surrounding territory. At Chicago, on Wednesday, July 14, all records for a single day's receipts were broken; nearly 1,200 cars were that day brought into Chicago. In consequence, the railroads "had all they could do to handle the grain." Officials had begun fully to realize how great was the problem confronting them for the next few weeks in furnishing transportation for 650,000,000 bushels of wheat, to say nothing of other grains that have been harvested this year in abundance, notably oats. The same paper has more to say on this interesting subject of the year's grain crop:

"There has been an unusually heavy engagement of ocean tonnage for the shipment of wheat to Europe within the next few weeks. The movement has developed so rapidly and has reached such large volume that grain men are finding it difficult to estimate the amount of wheat that has actually been engaged for export so far. Chicago has been credited with selling a million bushels a day. At Kansas City, where Gulf engagements are usually arranged, the trade has been particularly active, and St. Louis has also sold a large amount of both wheat and flour to go out by way of the Gulf.

"Most of the available tonnage on the Great Lakes for this month and next is said to have been engaged, and an extraordinary amount of chartering has been done at Montreal, to which port the greater portion of the early grain moves for export because of the lower water rate. But as nearly everything in the way of vessel room has been engaged that runs regularly to Montreal, the movement is being forced to the North Atlantic ports, where large commitments are beginning to show, especially at New York.

"Supplies of old wheat in Europe—in England and France particularly—are reduced almost to the point of exhaustion, and crop prospects in the leading countries outside of Russia are none too flattering. On the other hand, the United States is blest with the largest wheat crop on record, and, because of the lower prices which have resulted from the bumper harvest in the Southwest, this country is at the present time the cheapest market in the world from which Europe may replenish its bins. Prices of cash wheat at Chicago last week averaged about 10 to 12 cents a bushel lower than quotations of a year ago.

"The surplus of wheat in the United

States this season, it is figured, will be about 250,000,000 bushels, providing no serious damage overtakes the spring wheat crop, and it is estimated by reliable authorities that Europe will take all of that amount, if it is available."

The ability of the railroads to haul 'his crop is discussed in the same paper. More than 700,000 cars will be needed:

"The opinion prevails in some quarters that any shortage this year will be due more to lack of motive power and terminal facilities than to a lack of cars. The indications are that shippers and carriers are cooperating more closely this year than ever before in their efforts to avoid a car shortage on the present crop movement. The belief that there will be a shortage is most prevalent in Kansas. This is quite natural in view of the tremendous crop that has been raised in that State this season. Expressions from terminal elevator points indicate that there will be a shortage in all States.

"The railroads, through local and traveling agents and through various agencies of publicity, endeavor to keep growers and elevator men advised in regard to the available supply of cars. Besides the purchases of new cars, assurance is given this season that all available cars are being overhauled and put in condition to carry shipments of bulk grain.

"In some instances large numbers of stock cars are being temporarily fitted up for handling grain. As far as possible, foreign empties have been held by the grain-carrying roads, and the first rush of the wheat movement found the country sidings well filled with empty cars.

"The average car-load of wheat contains 1,250 bushels. On this basis it would require 524,000 cars to move the estimated crop of winter wheat for the entire country the present year, and 308,000 cars to the seven States mentioned heretofore. But as only a little more than half of the wheat is shipped out of the country where it is grown, it is estimated that it would require to move the entire wheat crop of the United States—winter and spring combined—432,000 cars. Fifteen of the large roads in the seven States covered by the investigations of the Agricultural Department reported that they had on July 30, 1913, 60,445 miles of road and 223,487 box cars. Their aggregate mileage increase for the two years from June 30, 1911, to June 30, 1913, was 3 per cent., the increase in the number of their box cars was 3 per cent., and the increase in box-car tonnage was 7½ per cent.

"The figures for individual roads vary from a decrease of 14 per cent. in the number of box cars to an increase of 32 per cent., and in tonnage capacity from a decrease of 5 per cent. to an increase of 50 per cent. These fifteen roads contain, approximately, 25 per cent. of the entire mileage of the United States, and own, approximately, 22 per cent. of all the box cars. The seven States in question produce, approximately 40 per cent. of all the wheat in the United States. What the percentage of increase is over the 1911 crop is hard to determine for the area served by these fifteen roads, but it is without doubt greater than the increase in car supply, inasmuch as the estimated yield of winter wheat for the entire United States for 1914 exceeds the 1911 crop by 52 per cent., and the increase in car supply during 1913-1914

6%

has been below normal throughout the country.

"These figures do not furnish an exact formula for estimating the car-supply, but indicate some of the factors to be taken into consideration. The terms used by different individuals in estimating car shortages are by no means uniform. The majority express it in terms of percentages, which is accurate enough if it is understood thereby that for a given period only a certain percentage of cars ordered are furnished. No statement of car shortage means anything unless the time limitation is known. In the long run every shipper gets all the cars ordered, and from that viewpoint there is no shortage."

THE SPICE OF LIFE

Unnoticed.—SHE—"Herbert, I can't find my bathing-dress anywhere!"

HE—"See if you've got it on."—Punch.

He Was Off.—On that Monday when France was first threatened with a German invasion, a New York Times correspondent met an imperturbable, monocled Englishman at the Gare de Lyon, in Paris. He was carrying a full equipment of luggage, canes, and rugs. Asked whither he was journeying, he replied: "It's the August bank holiday, you know. I am taking this train to Switzerland." He did it, too.—New York Times.

Advance Notice.—At the club the other night a member of the Seventh Regiment found himself the center of a group who were discussing the likelihood of an invasion of Mexico by the National Guard. Cheerful remarks about the penetrative powers of Mauser bullets peppered about him. Everybody had kindly suggestions to make—such, for instance, as that a medal neatly adjusted over each bullet-hole would make him look as good as new. The victim took it very well.

"I'd like to contribute just one remark to this discussion," he said. "If I'm reported shot in the back, remember that I may have turned around to encourage my men."—New York Call.

Taking No Chances.—One of the shrewd lairds of Lanarkshire had evidently experienced the difficulties of collecting money lent to friends.

"Laird," a neighbor accosted him one morning, "I need twenty pounds. If ye'll be guid enough to tak ma note, ye'll hae yere money back agin in three months frae the day."

"Nae, Donald," replied the laird, "I canna do it."

"But, laird, ye hae often done the like for yere friends."

"Nae, mon, I canna obleeze ye."

"But, laird—"

"Will ye listen to me, Donald? As soon as I took yere note ye'd draw the twenty pounds, would ye no?"

Donald could not deny that he would.

"I ken ye weel, Donald," the laird continued, "and I ken that in three months ye'd nae be ready to pay me ma money. Then, ye ken, we'd quarrel. But if we're to quarrel, Donald, I'd rather do it noo, when I hae ma twenty pounds in ma pocket."—Tit-Bits.

There's a Havoline Station Wherever You Go!

HERE'S a Motor Oil that is sold from Coast to Coast and from the Gulf to the Great Lakes. Motorists are assured of the same high-quality lubricating oil regardless of where or when it is purchased, because:

It is made only from one uniform base crude oil of tested quality.

It is manufactured by our "special process," which leaves the individual molecules of the oil intact, thereby conserving its vitality.

It is entirely devoid of floating carbon and impurities and burns up so cleanly that it leaves minimum carbon deposits.

Hence it forms a live, lubricating "cushion" of equal thickness between the moving metals of the motor, vastly decreasing the frictional loss and increasing its efficiency.

Buy the Oil in the Blue Can. Tell Us Your Make and a Five Gal. Can with the Case. We'll Tell You Your Grade

Sold Wherever Motors Turn

Ask your garageman or write us direct for testimonials of Havoline users who own your make of car.

CURRENT EVENTS

European War

July 30.—Germany sends an ultimatum to Russia, demanding that Russian mobilization cease within twenty-four hours, else Germany will mobilize.

July 31.—Negotiations by telegraph are carried on between the Czar, the Kaiser, and King George, seeking a peaceful solution of the impending quarrel.

Germany, with the exception of the Kingdom of Bavaria, declares martial law.

Jean Léon Jaurès, French Socialist leader, is assassinated in a Paris café.

August 1.—Germany declares war upon Russia, withdrawing her Ambassador from St. Petersburg, and commencing mobilization.

King George makes a final effort to avert war. France begins to mobilize her army.

August 2.—There are reports of Russian invasion into the northeastern border districts of Germany.

Germany violates the neutrality of the Principality of Luxembourg by invasion and occupation, and menaces Belgium.

August 3.—The German Fleet in the Baltic Sea is reported to have met and dispersed a fleet of Russian battleships.

Germany sends ultimatums to Sweden and Holland, requiring avowals of neutrality.

England attempts to avoid the necessity of declaring war, but announces that she will protect the French seaports from attack.

August 4.—Urged by Germany's declaration of war upon Belgium, England declares war against the Teutonic alliance and definitely binds herself to the support of France and Belgium.

August 5.—It is reported that a German ultimatum has been sent to Italy, demanding her support, since Germany "is attacked by France and England."

Reported engagements include repulse and heavy loss of Germans by Belgians at Liège, Belgium; the capture of two fast German cruisers by French and English fleets in the Mediterranean; Russian raids upon German mercantile ships in the North Sea; the repulse of Austrians at the Save River, with a Serbian incursion into Austria.

Lord Kitchener goes into the British Cabinet as Secretary of State for War.

General Foreign

July 30.—Premier Asquith postpones indefinitely further action on the Home Rule Bill. Three London suffragists attempting to invade Buckingham Palace are put under arrest.

July 31.—An indecisive battle at Puerto Plata, Santo Domingo, results in fifty casualties.

The Russian Cabinet forms a bill for universal education, to be put before the Duma.

August 1.—Prince Oscar, the fifth son of the German Emperor, marries the Countess Ina Bassowitz, daughter of Count Basewitz Lawetzow.

August 3.—Bank holiday, occurring in England to-day, is declared extended until the 7th, to enable the banks to recuperate from heavy runs.

August 4.—Provisional President Carbajal and his cabinet receive the demands of General Carranza for the surrender of Mexico City, now surrounded by Constitutionalist troops.

The Russian Government's ice-breaking steamer *Taimyr* sails from Nome, Alaska, to rescue the crew of the *Karluk*, stranded on Wrangell Island.

Domestic WASHINGTON

July 30.—Washington officials attempt to influence Carranza to declare an immediate armistice in Mexico, but without success.

July 31.—The President receives word from Federal Reserve Board nominee Paul M. Warburg that he will submit, as a result of the President's earnest solicitation, to inquiry by the Senate Committee.

August 3.—Congress places \$250,000 at the disposal of the President for the relief, protection, and transportation of the 100,000 to 150,000 Americans in Europe.

August 4.—Frederick A. Delano, of Chicago, is nominated for membership on the Federal Reserve Board.

President Wilson proclaims to the nations of Europe the neutrality of the United States.

August 5.—President Wilson, as head of the greatest neutral state signatory to The Hague Convention, tenders his good offices for peace to any and all of the conflicting nations of Europe.

The President issues an order censoring all

wireless dispatches sent from this country and forbidding any wireless station on United States soil to give particular aid to any of the European nations at war.

GENERAL

August 1.—The Interstate Commerce Commission announces a rate decision granting an increase to railroads west of Buffalo and Pittsburg to the Mississippi River.

Fifteen hundred emigrants are held in New York City, owing to canceled sailings of Atlantic liners.

August 3.—The North German Lloyd liner *Kronprinzessin Cecilie*, carrying \$10,000,000 in gold from New York to Europe, and advised by wireless to flee the danger of capture, puts in at Bar Harbor, Maine, seeking refuge.

August 5.—Four army officers on the staff of the United States Military Academy leave West Point to go to Europe as military observers.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"I. R. B." Moscow, Idaho.—Kindly explain the relation of the words *laughed* and *scorn* in the following sentence: "They laughed him to scorn."

A verb in the infinitive is governed by another verb, a noun, or an adjective; as "he delights to please you." Here "to please" is in the infinitive, and is governed by the verb "delights."

In the sentence submitted, "to scorn" is in the infinitive, and is governed by the verb "laughed."

"P. R. R." Seabreeze, Fla.—"Kindly inform me whether the expression 'she looks good,' meaning 'makes a good appearance,' is correct, and also 'she looked well,' with the same meaning?"

"She looks good" means that the person referred to does not look wicked. "She looks well" means that she looks in a perfect state of health. "She looks good" does not mean "makes a good appearance," and, altho the expression has some vogue among careless speakers, it is not correct.

"J. H." Edgewater, N. J.—"A claims that the Siamese twins were born in North Carolina, and declares that their mother lived in that State; B denies this and maintains that they were born in Siam. Who is right? Will you please furnish a brief sketch about them?"

The Siamese twins, Chang and Eng, were born in Bangassau, Siam, April 15, 1811, and died near Mount Airy, N. C., January 17, 1874. Their father was Chinese, their mother Chino-Siamese. Bought from their mother at Meklong, a town forty miles southwest of Bangkok, Siam, they were brought to America by a Mr. Robert Hunter in 1829, exhibited there and then were taken to England by Captain Coffin and exhibited there and in Europe for several years. They returned to America with about \$80,000 and established themselves on a farm in the South, marrying two sisters. Chang had six children and Eng five, of whom eight with the two widows survived them. Two of the children were deaf and dumb, the rest had no malformation or infirmity. They lost some of their property, which consisted in part of slaves, owing to the Civil War, and in 1865, in declining health and impaired fortunes, they were in North Carolina. Their losses embittered them against the Government, and they resorted to further public exhibitions which met with ill success. This determined them upon making another tour of Europe, and they exhibited themselves in London, February 8, 1869. In 1870 Chang had a paralytic stroke and was subsequently weak and ill, while Eng's health greatly improved. Chang died first, in America, January 15, 1874, and within two hours (January 17), Eng's death followed.

"G. G. W." Cleveland, Ohio.—"What is meant by the 'personal equation'?"

The *personal equation* is any error common to all the observations made by some one person; commonly, in astronomy, the constant error made in estimating the moment of a transit of a star across a thread in a telescope.

Zinc

in paint makes paint complete. It is the ingredient that should be added to all paint to make the other ingredients more effective.

The chief cost of paint is the cost of putting it on. Paint without Zinc must be more frequently renewed. Paint with Zinc in it lasts.

There are other reasons also for Zinc in paint. The booklet, "Your Move," tells. The man-whose-house-needs-painting should send for this book today. It will give him the knowledge to insist on Zinc to his painter.

THE LIGHTEST TOUCH TYPEWRITER IN THE WORLD

IS THE LIGHT RUNNING FOX TYPEWRITER

The touch of the Fox Typewriter is— and always has been—exactly 2½ ozs. If it takes a 6½ ounce "blow" to print a letter on other typewriters and only a 2½ ounce "touch" to print a letter on the Fox Typewriter, then there is a saving of 4 ounces, to every character printed, by using the Fox Typewriter. A reporter copied 100,000,000 characters on his Fox Typewriter, in four years, all the fastest telegraph wire out of New York. By saving 4 ounces on each character printed he saved 22,000 tons of energy in the four years, or nearly enough for eight years' more work.

He says: "I did not spend a cent for repairs or make a single adjustment to my typewriter."

Low Prices on New Exhibition Sample Typewriters

We are making a special offer on a few Fox Visible Typewriters, new, that were used for exhibition purposes only at the Grand Rapids Industrial Exposition. These are not second-hand and have never had a letter written on them. Low price—easy payment terms—ten days' trial. Mention Literary Digest.

FOX TYPEWRITER COMPANY
2808-2818 Frost Avenue, Grand Rapids, Mich.

Sixty-One per cent Increase in the Sale of Franklin Cars—Explained

During the past year the sales of Franklin cars have increased sixty-one per cent.

Today, that a car in its thirteenth year should show such a growth can mean but one thing. A few years ago it would not have been extraordinary. But conditions in the automobile industry have changed. Competition is keen. The demand no longer exceeds the supply. There are many good cars. The customer no longer has to wait indefinitely for deliveries. He has a wide choice and has learned to exercise it.

An increase of 61%, therefore, particularly in a car of a distinctive type of construction, can mean only the deliberate preference of buyers, expressed after comparing many cars and studying efficiency, comfort and economy.

A Tendency—Not Chance

A few purchasers might for slight reasons happen to select the Franklin rather than some other car. But 61% increase represents not mere chance, but a tendency.

This tendency toward the Franklin we ascribe to these facts:

We have been manufacturing on the same basic idea for thirteen years.

In all essentials we have been producing the same model continuously for the past four years.

As fast as improvements are developed they are added to the working model and incorporated in all subsequent production, without waiting for the expiration of some arbitrary period. The refining process goes on continuously.

Scientific Light Weight

At the beginning we adopted as the fundamental of Franklin construction *light weight, scientifically obtained*. Toward that end we have directed the experience of thirteen years. During that time came the vogue of big, heavy cars. We continued striving more and more for light weight. Today light weight has finally become the chief demand of discriminating automobile buyers. They have, therefore, been turning to the Franklin as the dominant light car—the car which as the result of the uninterrupted production of light cars for thirteen years is scientifically light—which means greater comfort, less depreciation, greater endurance and greater mileage from gasoline, lubricating oils and tires.

The other influential features of Franklin construction include flexibility, direct cooling, large tires.

Flexibility

Flexibility is obtained by constructing the frame of laminated, shock-absorbing wood instead of rigid steel, by four full elliptical springs and by the absence of strut rods or torque bars. It results not only in increased comfort and reduced strain on the driver, but also in greater durability of the car.

Direct Cooling

Franklin direct cooling has proved a success because it is the simple method. The Franklin can be driven on low gear all day

without trouble. Its service on mountains is phenomenal. There is no freezing and no overheating under the most extreme conditions of weather or driving.

Large Tires

Tire size, in proportion to the weight of the car, is given as much thought in Franklin design as the axle, transmission or any other part. The Franklin car is not only light but it has for many years been equipped with large tires, which has had much to do with the exceptional service obtained from tires by Franklin owners.

The Latest Franklin

We are now beginning to sell the "Series Six" Franklin. This series will demonstrate once more the refining influence of continuous production of the same model. Among the numerous improvements, it contains none that is radical. No startling departures such as were necessarily made when we brought out the first four-cylinder in the days of one and two cylinders, or when we brought out the first six-cylinder. Consistent, however, with the Franklin policy of constantly increasing efficiency, we have made one important advance in the matter of tires. The Franklin is now regularly equipped with Goodrich Silvertown Cord tires or Goodyear Power Saver tires. As is well known, these tires are higher priced and increase the efficiency of the car itself about 25%. Your dealer will point out a number of other refinements, all making for increased style, convenience or efficiency.

Send for new catalogue of the Series Six Franklin, to Franklin Automobile Co., Syracuse, N. Y.

(Engine and vehicle patented July 2, 1908)

New Series Franklin Six-Thirty Five-passenger Touring Car, \$2150

Specifications:

Wheel base 120", tread 56".
40" full-elliptical springs, 4½" opening in front, 6" opening in rear.
30 H.P.; valves in head; seven bearing crank shaft.
Aluminum body and hood.
Eisemann magneto with automatic spark control.
Needle valve, oil, hot and cold air controls on instrument board, all operated without stopping car or engine.
Re-circulating individual pressure feed oiling system.
Semi-floating type rear axle with bevel differential and spiral bevel gears.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnall Company (Adam W. Wagnall, Pres.; Wilfred J. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; William Neisel, Sec'y), 354-360 Fourth Ave., New York

VOL. XLIX., No. 8

NEW YORK, AUGUST 22, 1914

WHOLE NUMBER 1270

TOPICS OF THE DAY

THE WAR IN BELGIUM

IT IS IN PERFECT keeping with the nature of the amazing war in Europe, observes the *New York Times*, that the first serious fighting should have been done "upon the soil of a

neutral State between the forces of one of the belligerents and the troops of that State." And our writers confess to a thrill at the sight of the spirited resistance made by the Belgians against the powerful invader, and at thought of allied France, England, and Belgium fighting Germany on Europe's old battle-ground—the battle-ground, as the *Brooklyn Citizen* recalls, "of the armies of Louis XIV. and Marlborough, of the famous army of the Meuse and Sambre, of the Revolution, and, finally, of Napoleon's last stand against the might of Europe." Belgian resistance, in particular the defense of Liège, where the German armies are reported to have lost heavily before taking that strongly fortified "strategic" city, is interpreted by the newspaper experts as a serious check to the German advance toward Paris, and a serious disarrangement of German plans. Germany's Belgian campaign, asserts the *New York World*, "has been the most disastrous set-back that German arms have received since the time of Napoleon." Here *The World* speaks for a great number of its contemporaries. Yet the

few censored dispatches from Berlin which have been allowed to cross the Atlantic admit a check at Liège, but deny French and Belgian stories of large German losses, and assert that these losses were anticipated, and that "the German forward move-

ment continues along the very lines selected by the General Staff." And some of our editors are inclined to believe that the campaign in Belgium is but a "screen," to hide a serious

forward movement elsewhere, either through Luxemburg, along the Franco-German frontier, or even in Eastern Germany, against Russia. While it agrees with other American dailies that the troops of King Albert have done France a mighty service in delaying the advance of the foe, the *Charleston News and Courier* concludes that the check is but temporary: "Unless the vaunted German Army is very far from being the formidable fighting machine which the world believes it to be, the Belgian defenses will be broken down and the Teutonic tide will pour through into the territory of France and roll mightily on toward Paris."

The complete absence of news from German headquarters, and the establishment of a censorship in London, Paris, Brussels, and in the field, prevent our editors from giving their readers any comprehensive review of what has happened in Belgium, or from forming any authoritative basis for conjectures as to plans of campaign. Along the French border south of Belgium numerous cavalry and infantry skirmishes are reported. One

French force penetrated Alsace as far as Mühlhausen. But its operations, says the *New York Times*, "were achievements in the nature of exploration rather than of invasion." No one in this country knows the size of the armies now facing each other from

THE KING OF THE BELGIANS.

Albert I., whose armies have shown remarkable efficiency and courage in checking the advance of Germany's invading host.

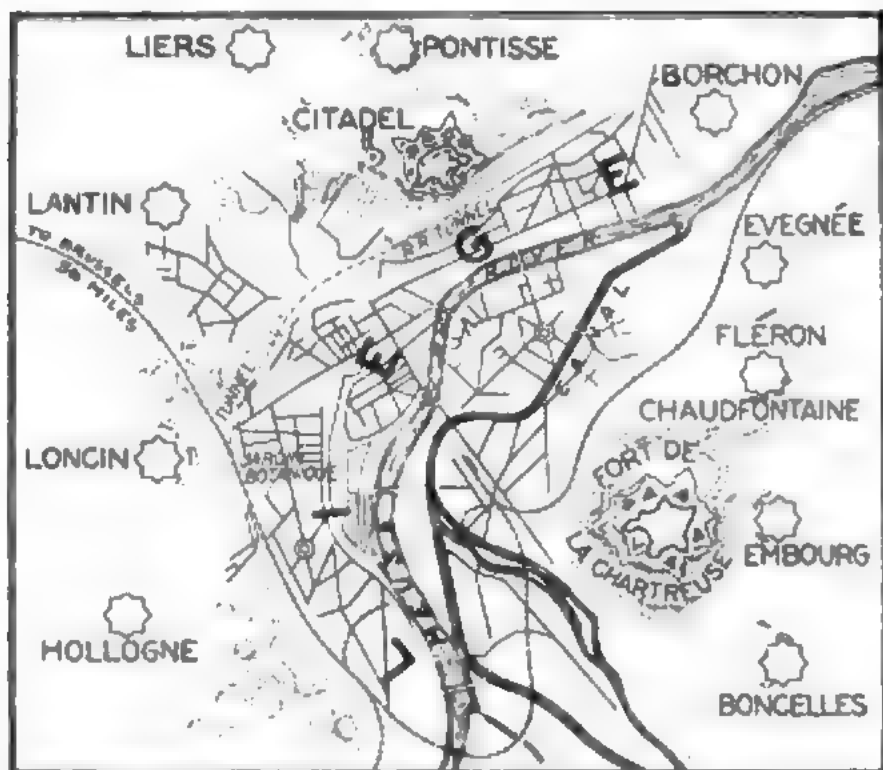

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE** or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as Second-class Matter.

Louvain to Basel. The New York *Evening Sun*, which has been studying closely the strategy of the campaign so far as it is disclosed, thinks that besides 200,000 men watching the Russian frontier, Germany has some 800,000 men facing an approximately equal French defending force. Geographical conditions, it adds, "seem to compel the division of the German forces advancing into France, with three armies: the Army of the Meuse, which has already stepped over into Belgium and attacked Liège; the Army of the Rhine, which in some measure at least has been con-

From the New York "Herald"

LIÈGE AND HER FORTS

Liège is a valuable prize of war, because of its strategic location, because it is Belgium's chief center for the manufacture of railroad equipment, and because of its great arsenal. Twenty thousand people are employed in its manufactories of firearms, making every kind of modern weapon, from the smallest to the largest. It lies in an area rich in iron ore and coal and, according to report, possesses a military strength that had been underestimated by strategists.

cerned in the Alsatian campaign; there remains the Army of the Moselle, whose advance guard invaded Luxemburg."

In Belgium, where the opposing forces have come into contact, at Liège and at points north, south, and west, *The Evening Sun* estimates the allied force at not less than 350,000 men; about 250,000 French, 80,000 Belgian, and 20,000 British.

It is the prevailing press opinion in this country that Germany first showed her hand in Belgium in the hope of stealing a march on the French by getting across Belgian territory and moving into France either along the Meuse and the Sambre or across the plains to the west. Thus the German Army would avoid the line of French fortresses from Verdun south to Belfort, and crush the French Army and threaten Paris before the slow-moving Russian forces menaced Prussia. The New York *Evening Sun* reviews the actual operations in Belgium as follows:

"To begin with the Liège operations, the most considerable so far. On Monday, August 3, German soldiers, evidently an expeditionary corps, kept ready for a sudden, swift invasion of Belgium, crossed their own frontier near Aix-la-Chapelle and moved on Liège. They were in front of Liège on Tuesday. The obvious purpose of this invasion, as the German official statement has explained, was to seize the town by a *coup de main*.

"The attempt failed, and German official reports do not claim that German troops entered the city until Friday night. Confused stories of bloody battles and terrific losses have come from Brussels, but should be accepted under great reserve. What is vital is the comment of the German War Office that there was a delay due to the resistance of Liège."

According to the best information available, the battle was prolonged by some of the forts, at least, after the capture of the city. This review of the now historic "resistance of Liège" concludes:

"To sum briefly, then: the German offensive by the Meuse

seems to have been seriously delayed and then deflected, giving the French time to seize the Meuse barrier and the English to land troops on the Continent. Instead of being in France now with their army ready for a decisive struggle, the Germans are still in Belgium and around Liège. . . .

"All this is wholly explicable as the consequence of the unexpected resistance of the Belgians. They and they alone seem to have brought the huge German machine to a halt, to have at the very least delayed it for five precious days, whose real value may prove incalculable. But so far the Franco-German operations have been trivial and the main German advance is yet to be reckoned with, either between the Meuse and the Moselle or west of the Meuse in the Belgian plain where, perhaps, the fate of Europe will again be decided."

Belgian dispatches telling of German soldiers suffering from lack of food at Liège are taken by the New York *Herald* and Philadelphia *Record* as showing that the German Army expected to march through Belgium without serious resistance, getting its supplies as it went along, hence the reported failure of the commissariat. The New York *Evening Post* wonders if it is not a sign of weakness in the German military machine, "just as the reports of charges in solid masses on heavily armed forts indicate a failure to bring the German battle tactics up to date." The chief authority for the use of such tactics by the Germans is a correspondent of the London *Standard*, to whom a fugitive from the German Army related how "we advanced always in close formation . . . while the rifle-fire of the Belgians mowed down our men in dozens, scores, hundreds."

At any rate, thinks the Minneapolis *Journal*, "Liège proves to the hilt what already had been demonstrated by the war in South Africa and the war in Manchuria, that with modern arms of precision, the long-range rifle, the machine gun, and scientifically sighted artillery, the offense is inferior to the defense." And the New York *World* remarks: "Perhaps it will not be an ill turn for mankind if the final lesson of Liège is the great advantage of defensive positions to the discouragement of wars of aggression."

WAR AND OUR MERCHANT MARINE

A CONFLICT ALL OUR OWN over the revived issue of the merchant marine is precipitated by the war in Europe. One week of war, as *The Wall Street Journal* notes, ties up shipping in our ports to the value of \$700,000,000, while the New York *World* (Dem.) reckons that 80 per cent. of the foreign carrying capacity of our ocean commerce is "out of service," which prompts it to say of the Administration's emergency shipping bill that "no measure could be better timed to the moment and the need." The bill, as Washington dispatches report, chiefly provides for the admission "to registry in the United States foreign-built ships when owned by citizens of the United States or any State." The Chicago *Tribune* (Prog.), among many others, believes that "now is the time to put the American flag back on the seas. . . . Not by the faulty method of subsidy," but by making it "possible for American money to take over foreign-built ships and make them American ships." Europe's need of our products is "our great opportunity," *The Tribune* points out, and as the Civil War destroyed our shipping, it ventures to hope that "what we lost in war we may gain in war." Opposition papers, even when they are willing to try the experiment of the bill censure the Democrats of the South and West for having in the past fought against ship-subsidy proposals, and the Democrats in reply blame the Republicans for restrictive laws that prevented the admission of foreign-built ships to our merchant navy. Severest adverse criticism of the present bill is heard from New England. The Boston *Herald* (Ind.) says that "Boston does not approve the form or method of the bill in Congress for the emergency 'whitewashing' of foreign vessels, most of them now under belligerent flags," and

So, too, thinks the *Boston Transcript* (Rep.), which tells us to "beware of 'whitewashed' ships," and points out that:

"International law and practise absolutely forbid the evasive transfer of foreign merchant ships to another national flag after the actual outbreak of hostilities. The American delegates advocated and accepted such an agreement in the London conference of 1909. A law has been upon the nation's statute-books for nearly two years allowing American registry for the overseas trade to all efficient, sea-worthy foreign-built ships less than five years old owned and controlled by American citizens. Not one ship of any kind has hoisted the American flag under the terms of this free-ship policy, which, under normal trade conditions, has been proved to be wholly ineffective. If any foreign vessels are now admitted to American registry under such a plan as the President proposes, the very act will of itself be an acknowledgment that the motive of the transfer is a desire to escape capture, and a ship thus 'whitewashed' will be held an outlaw all over the world. It will be particularly liable to attack and confiscation, and if our Government endeavors to defend it in defiance of the soundest principles of international law and morality, we shall find the whole world arrayed against us."

Considering the prospect of building up our merchant marine simply from an economic standpoint, the *Chicago News* (Ind.) questions whether "merely opening the way for foreign vessels to register under our law" will be sufficient, "especially if the registry is to be but temporary, the ships seeking another flag to sail under as soon as the present war is over," and we read in the *Norfolk Virginian Pilot* (Dem.) that:

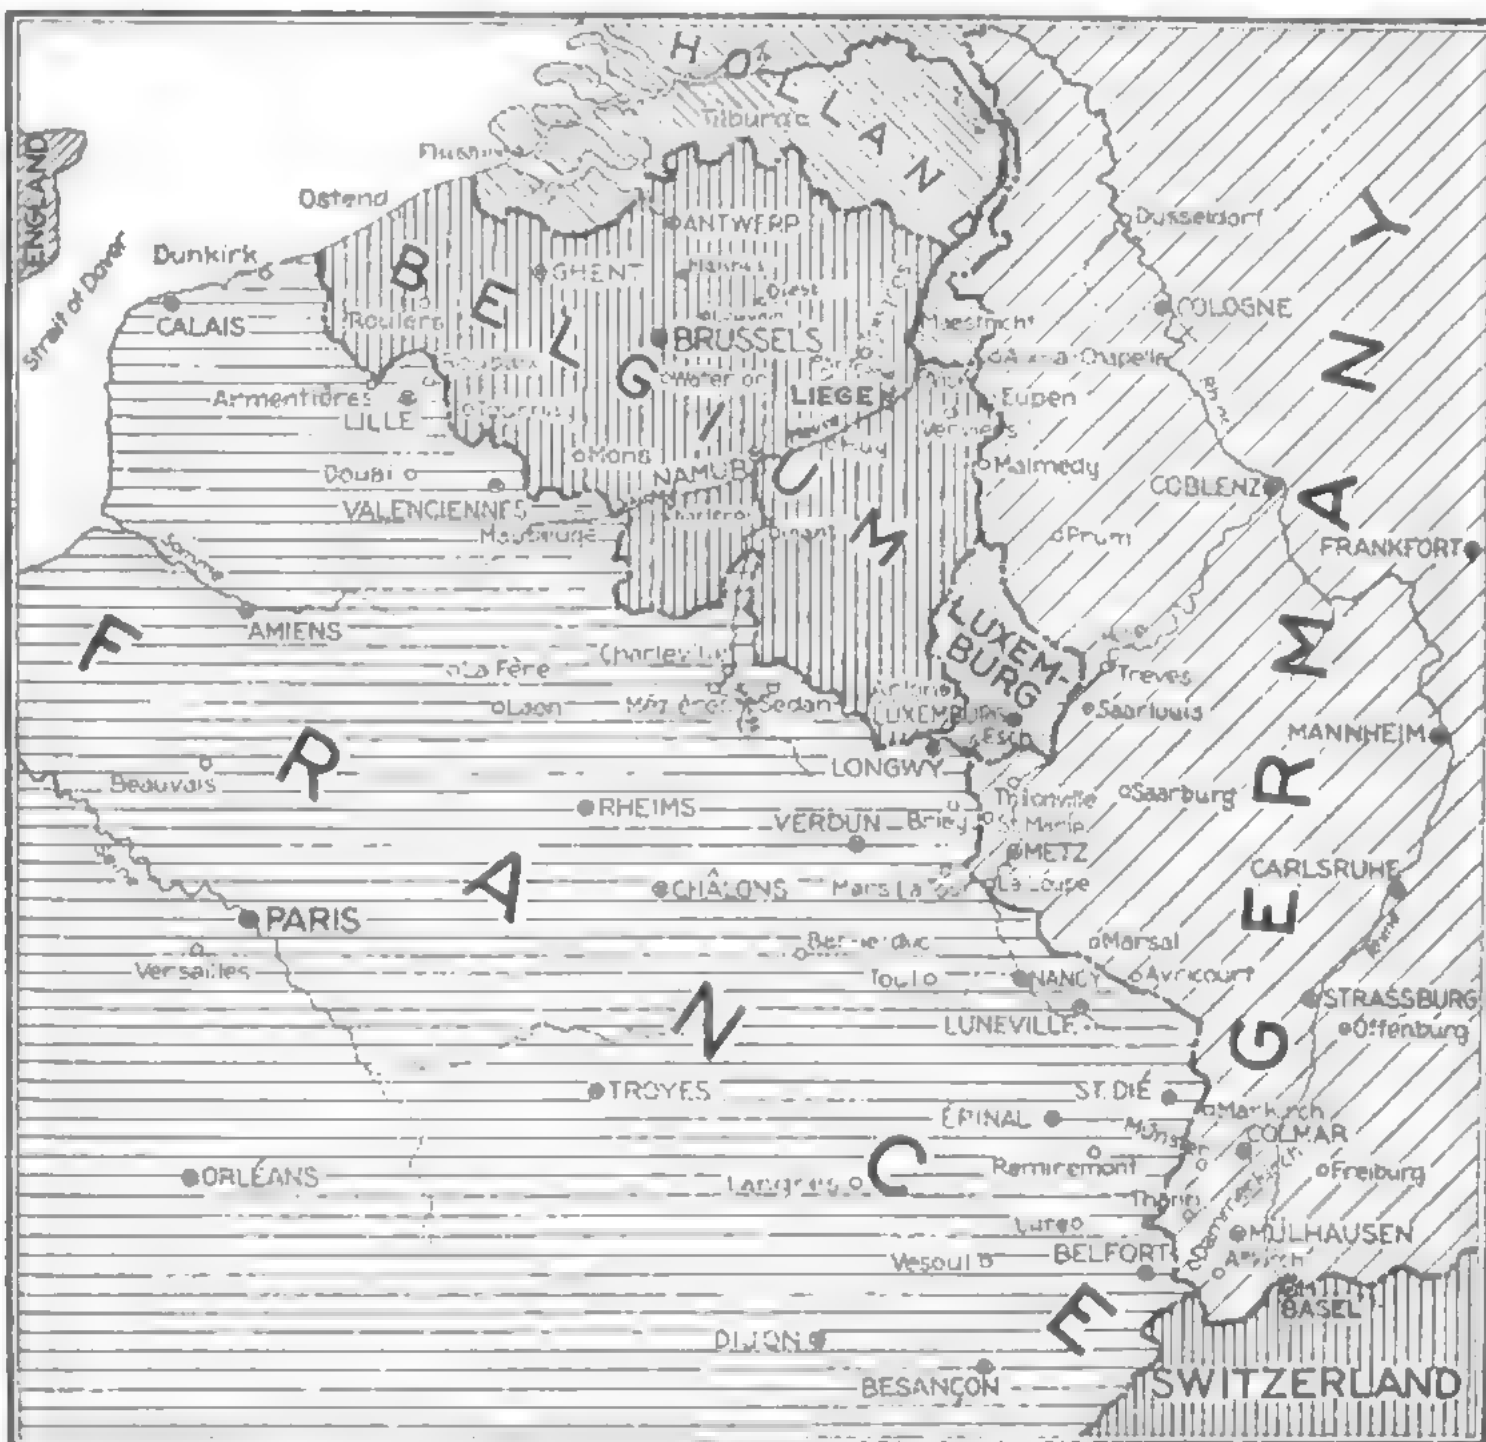

"The additions to our merchant tonnage which would follow upon the letting down of the bars against foreign-built and foreign-owned bottoms would naturally be more or less temporary. Upon the restoration of peace in Europe, or shortly thereafter at best, the vessels which had come under the American flag as a matter of emergency, would return to the respective registries under which they originally operated—and this for the same reasons which now induce American-owned bottoms engaged in the foreign trade to sail under foreign flags, chief of which is the notoriously cheaper cost of operation under such flags."

So also the *New York Evening Mail* (Prog.) says that "we do not want a merchant marine stamped 'good during war-times only';" but the *Springfield Republican* (Ind.), which is one of the journals that believes we should take due advantage of our present opportunity, disposes of this argument, and the many like it, as follows:

"Criticism is made by those who have sought in earlier years to develop our marine through obnoxious subsidies that when the war is over our newly registered ships will return to other flags. That is assuming much and overlooking more. It will

not do to forget the burden of taxes which the war will leave in its train. There lies before us an article written just a year ago in the *Berliner Tageblatt* by a German captain, who pointed out that the burden of European taxes was making it possible for the United States to build ships more cheaply than her rivals. When the war is done Europe's burden will be heavier still and economic conditions will be changed in many ways."

Nor does *The Republican* share the fear that the transfer of foreign vessels to American registry may involve the United

TWO HUNDRED MILES OF BATTLE-LINE.

From Altkirch and Belfort at the south to Louvain and Diest at the north, German and Austrian troops are facing Belgian, British, and French soldiers, and along this line the first battles of Europe's great war are taking place.

States in serious international complications. We may be sure, it thinks, that government officials will "exercise the most scrupulous care in admitting to registry only such vessels as now belong to, or may formally be purchased by, American citizens or American corporations duly chartered," and it goes on to explain that:

"No one, we take it, would be so absurd as to doubt the validity of the transfer to our flag of vessels belonging to such companies as the United Fruit and the United States Steel Corporation, which, altho built, owned, and operated by American capital, have sailed under other flags because of the burdens of our registry laws. . . . The suspension or annulment by order of the President of the requirement that ships of American registry must be officered by Americans would make it possible for these ships to continue to operate with their present personnel, for it would be obviously impossible to find at a moment's notice American officers sufficient in number and adequate in training for the command of a large number of vessels.

"The case of foreign ships which have been neither owned nor operated by American citizens and corporations, but which may be taken over by them, may be less clear than that of the numerous vessels of the Steel Corporation and the United Fruit Company. But it seems doubtful that any complication can arise over a bona-fide sale, and, aside from the interests of the United

A GERMAN FIELD BATTERY ON THE MARCH.

States, it will be well for the peace and commerce of the world to have this principle well established by a conspicuous instance."

As for molestation on the high seas, *The Republican* considers that "none of the warring Powers, burdened as they are; will seek difficulties with the United States." *The New York Commercial* (Fin.), mincing no words on the subject, asserts that "if countries now at war dispute this right" to buy foreign ships and give them registry, "we will have to go to war with them just as we did in 1812, and the surest thing in all this welter of confusion and blood is that no Power in Europe will seek war or even a rupture of diplomatic relations with us." *The Philadelphia Public Ledger* (Ind.), among many other journals of like conviction, says that "this is no time for mollycoddles, and least of all a period when Americanism should hesitate to vindicate its rights and place in the world," and it continues:

"We must not shilly-shally. . . . We sell to all nations; we shall buy from all nations. We have no desire to save belligerents' ships from the consequences of war. We have no plan to sail them under false colors. We merely mean to buy what is on the market, no matter what the nationality of the seller, for no other reason than that we need the carriers. Our first obligation is to ourselves. We have no chip on our shoulder, and the world knows we have not."

NEUTRALITY AND CONTRABAND

THE RISK WE RUN of being dragged into Europe's war is no "idle dream," in the judgment of some editors, and the *St. Louis Globe Democrat* issues the warning that "it would be unwise to delude ourselves with the notion that a mere declaration of neutrality issued in a spirit of equal friendliness for all combatants can wholly safeguard us against the possibility of evils which may touch us, nearly or remotely, as the result of continuing hostilities." If the war is prolonged, thinks this journal, "the desperation of the combatants reaching to seizures on land and sea, either for points of tactical advantage or for any of the many commodities now listed as contraband, might easily lead us into complications with one or more of the warring powers." Such a possibility is remote, we read further, so long as we remain absolutely impartial in our neutralities, which is "what the public opinion of this country will demand." Complications of some sort are bound to ensue, the *Baltimore News* believes, "for our relations with each country, if advantageous to her, are as distasteful to her enemies," and it tells us in advance that "we must expect attempts at abuse of our neutrality, and we must fight as desperately to guard it against the slightest infraction, intentional or otherwise, while still offering to each of the warring Powers the hospitable consideration of a friendly nation." In explaining "what American neutrality means," the *Philadelphia Public Ledger* points out that

the President's proclamation "makes it clear that no expeditionary force against any of the European belligerents may be organized within the territory of the United States," and it adds:

"War-ships may not be fitted out, and the equipment of privateers is forbidden, as well as the use of American waters for spying on war-ships, privateers, or merchant vessels of the belligerents. Such spying will be regarded as an unfriendly act by the United States, and an offensive violation of neutrality. But under the law of nations, privateers and war-ships may sail the high seas in our waters, that is, may hover along our coasts so long as they remain three miles from land. That limit, according to the American contention, is measured from headland to headland and not along the indentations of the coast.

"Belligerent war-ships may use our harbors, however, without violation of neutrality so long as they remain only 24 hours, unless they are forced to remain longer by stress of weather or by taking on supplies. They may take on only such supplies as will sustain the crew and the ship to the nearest home port. Munitions of war may be manufactured and sold here, but if an attempt is made to deliver them to a belligerent outside of American jurisdiction, he who makes the attempt does so at his own peril and forfeits the right to claim protection by this Government."

A later proclamation of the President establishes a precedent, according to the *New York Times*, "which will presumably govern the use of wireless in future wars." It followed upon the report that German-owned wireless telegraph stations in the United States have been sending information and orders to German ships at sea, and states that "all radio stations within the jurisdiction of the United States of America are hereby prohibited from transmitting or receiving for delivery messages of an unneutral nature, and from in any way rendering to any one of the belligerents any unneutral service during the continuance of hostilities."

"Overzealous efforts to avoid breaches of neutrality," says the *Boston Herald*, may lead the Government into "unneutral conduct," an observation suggested by the report that officials at Washington are said to be considering the prohibition of the exportation of wheat which Great Britain classes as conditional contraband, and it calls attention to the fact that "if Great Britain won a great sea victory, so that trade routes to her ports were open, it would be a gratuitous aid to the other side to cut off the grain trade with England." The whole subject of contraband, *The Wall Street Journal* remarks, "is not free from difficulty." It recalls that in 1909 ten leading maritime Powers entered into an agreement defining articles of contraband:

"They made three classifications—absolute and conditional contraband, and a free list not liable to seizure. . . . Absolute contraband means all goods designed solely for military use, like arms and ammunition, if destined for a place within the jurisdiction of a belligerent. . . . Conditional contraband means articles which can be used both in peace and in war but whose ordinary use is innocent."

A DIVISION OF FRENCH FIELD ARTILLERY.

BLAMING GERMANY FOR THE WAR

BITTER PROTESTS are coming from German newspapers, German societies, and many German Americans of high standing among us against what they declare to be unfair treatment by the newspapers of this country. They complain of anti-German editorials, of "abysmal ignorance concerning German conditions," and of suppression or obscure display of news favorable to Germany. Our editors find no difficulty in acquitting themselves of blame for unfairness in handling the news, replying that practically no military information is allowed to leak through the German frontiers, and that practically all our press reports undergo a censorship in Brussels, Paris, or London before reaching us. But when blamed for anti-German sentiments, many editorial writers hasten to make a distinction between the German people, whom they highly honor, and the German Government, which they hold primarily responsible for a general European war. And this position is one which weeklies like *The Outlook*, *The Independent*, and *Harper's Weekly* hold, tho they are careful to present the German viewpoint. Most spokesmen for Germany, however, reject such efforts to distinguish between the rulers and the nation, and reiterate, in a series of letters and statements to the press, their view of the war as one forced on Germany or as a necessary conflict between Slav and Teuton, the latter, of course, standing for civilization. They agree with the Kaiser that the war is "the result of ill will existing for years against the strength and prosperity of the German Empire." Who are the real aggressors? asks Professor Kuno Francke. Can William II., who has devoted his whole life to bringing Germany to the front in all the arts of peace, all the higher domains of civilization, "reasonably be supposed to have been carried away by the suicidal mania of destroying everything that his life has stood for?" Can Germany be reasonably thought to have wilfully brought on a conflict which, even if she wins, "can add nothing to her present greatness, and which may wreck her whole national existence?" Finally:

"Is there any reasonable doubt that Germany's three chief competitors, Russia, France, and England, have each her own incentive for an aggressive policy against Germany? England, the incentive of crippling German commerce; France, the incentive of reconquering Alsace-Lorraine; Russia, the incentive of undermining German commercial influence in the Near East and of supplanting Austria in the Balkans."

Similar statements are made by Professor Hugo Münsterberg in a widely quoted letter to the *Boston Herald*. The Kaiser, he points out, has often averted war. But—

"This time every effort was in vain, and all good will for peace was doomed because the issue between the onrushing

Slavic world and the German world had grown to an overpowering force. The struggle between the two civilizations was imminent, and where such a historic world-conflict arises, the will of individuals is crushed until they serve the will of the nations. The Slavs of the Southeast, the Servians, had defeated their oppressors, the Turks. It was inevitable that their new strength should push them to ambitious plans. It was necessary that they should aim toward a new great Slavic empire which would border the sea and embrace Austria's Slavic possessions. That had to mean the end of Austria, the crumbling of its historic power. Such an inner, passionate conflict, such an issue of existence, must lead to explosions. Servians kill the Archduke. That was Austria's opportunity for an effort to crush the power which aimed toward its downfall. But it was no less historically necessary that the largest Slavic nation, the Russians, should feel that Serbia's cause was their own. Russia knew well that while it had recovered from the wounds of the Japanese War, the Slavic strength was still unequal to that of the German nations, but it knew also that it could rely on France's latent longing to revenge itself for Alsace, and on England's grumbling jealousy of the great German rival in the world's markets. At last the chances seemed splendid to strike the long-delayed blow of the Slavic world against the German. The Czar was unable to resist the gigantic pressure of the hour; his Government mobilized against both Austria and Germany."

In this situation, Professor Münsterberg goes on, "neither Russia nor Germany could really act otherwise." But in the conflict between Slavic and Germanic culture, he protests, American sympathies ought not to be so "wilfully misled" and "whipt into the camp of the Cossacks." "Since the days of Napoleon," it is asserted, "Germany has never gone into a war which was more justified by the conscience of history." The writer points to the joining of the allies against Germany as proof that Germany has had to keep armed, for she "would have trampled on her own sacred rights if she had laid the armor away and had relied on the judgment of the other nations. . . . Unless the Cossacks with their pogroms were to crush the culture of Germany, she had simply no resort left but to trust in her sword and in her prayer."

Another German, in a letter to the *New York Evening Post*, describes the situation of his country by saying that "here were three cowardly assassins entering into a combination to attack and destroy a nation which neither of them had the courage to attack single-handed."

The repeated statement in the American press that the Kaiser and a Prussian military autocracy forced a war which the German people do not want is ridiculed by many Germans here. Take, for instance, these paragraphs from the *New York Staats-Zeitung*, perhaps the leading German-American daily:

"It is frequently stated here that the attitude of the American people is directed not against the German people, but against the Kaiser. He is the one to be 'defeated.' The intention is to 'free' the German people from the Kaiser and his régime. What

groundless folly! The Kaiser is good enough for the German people. Even the Socialists have shouldered their guns.

"You can not separate the German Kaiser from the German people. It will be in the interests of both countries to avoid any permanent disarrangement of the friendly feeling between the German and American people."

Professor Ernst Richard, of Columbia University, President of the German-American Peace Society, heads a German-American committee of protest against the attitude of the American press. He argues that Germany is not an autocracy, that her army is "a citizens' army" for national defense, and says of the Kaiser: "I have been often assured by German working men that the people, by a free vote, would vote for the Kaiser and against having a republic." And he plainly informs our editors that "it will take a long time and strong proof of good will before Germany and Austria will forget for which side the American public stood in this, their fight for the defense of the Western world against Muscovitism and all that it implies."

These protests from our German fellow citizens are quite justified, in the opinion of the *Milwaukee Free Press*, which has "gone through our exchanges since the beginning of this war in an endeavor to find a just and reasonably correct representation of Germany's position," and has "not found one." The *Chicago News*, *Boston Traveler*, and *Hartford Times* fear that we are making up our minds hastily and without sufficient knowledge about Germany's position, and that public opinion here may be unwarrantably inflamed against the Kaiser. A Socialist daily, the *New York Call*, finds one cause of this "undeniable disposition to unload the responsibility for the war upon the Kaiser" in the feeling among business men that the German Fleet must be annihilated before the seas will again be open for commerce.

Turning now to the other side, we find Mr. Horace White writing to the *Boston Herald* that there is no prejudice or political feeling against Germany in this country, "but much that is favorable, and justly so." If, he says, "our opinions have undergone a change within a few days, it is due to the belief that if the German Emperor had simply sat still and done nothing, the present European war would not have taken place." With this statement, and the statement of the *Paris Temps* that the war is "a war of piracy," thrust upon the allies by Germany, many of our newspaper editors agree. And strong editorials expressing that viewpoint appear in papers like the *Lowell Courier-Citizen*, *Brooklyn Citizen*, and *Philadelphia North American*. The obsession that precipitated and supports the war is not confined to Germany's rulers, says the *New York Journal of Commerce*, but "has evidently extended to the mass of the subjects of the Empire and filled them with enthusiastic loyalty."

"It is the policy of blood and iron, of the mailed fist, of preparation for war as a means of preserving peace and dictating its

terms, the militarism that has begotten a swollen pride and a brutal cast of loyal patriotism under a dominating power, which has bred this obsession that all the world is in arms against Germany, and that she must fight and conquer or die as a great Power of the earth."

Nevertheless a distinction is insisted upon by those who, like the *Syracuse Post-Standard*, see American sympathy generally felt "against the German Emperor—not against the German people," and they include, among newspapers, names like the *Worcester Gazette*, *Rochester Herald*, *Springfield Republican*, *New York Globe*, *World*, *Tribune*, *Times*, *Evening Post*, *St. Louis Republic*, *Philadelphia Press*, *Baltimore News*, and *Salt Lake Herald-Republican*. The *New York Times* endeavors at some length to prove that there is no newspaper prejudice against Germany. Our papers, indeed, have put upon the Emperor a

large part of the responsibility for the war—

"They have remarked upon his remonstrances against Russian and French mobilization when, according to reports from many sources, reports confirmed by the direct statement of the French Minister of Foreign Affairs, mobilization within the Empire was moving swiftly forward. These things, after all, are only details, and possibly the American press is mistaken, tho its error ap-

pears to be shared by pretty much all the world not directly involved in the strife. What the American newspapers have more directly and emphatically condemned is the military system of Germany, the imperial system based upon immense military power, the autocratic form of government, the persistence in Germany, as in Russia and Austria, of the ancient doctrine of the divine right of kings, a monstrous absurdity in these modern times, a source of woes unnumbered to peoples who might be continuously happy, peaceful, and prosperous were the affairs of their governments in their own hands.

"Why should Germans who have sought homes in this Republic resent American criticism of European militarism and European absolutism?"

A similar argument appears in the *New York Evening Post*, which attempts to make a distinction between "the Germany of the mailed fist" and "the Germany of high aspirations and noble ideals, the Germany of intellectual freedom" and "spiritual leadership." This Germany is being plunged into war by "a Kaiser who vows that he rules by divine right." Now—

"The mighty commercial edifice erected by German enterprise and toil is already crashing to the ground. Ruin already claims tens of thousands. Germany's merchant fleet is being swept off the ocean. Her internal development is at an end; her schools and universities are idle; the whole nation is being brutalized and, through the hot haste of the Kaiser, Russia and France and Belgium as well. From now on its whole thought must be to shoot and kill people with whom ten days ago the country was at complete peace. It is to be for years to come the most hated nation in Europe. . . . Out of the ashes must come a new Germany, in which pure democracy shall rule, in which no one man and no group of professional man-killers shall have the power to plunge the whole world into mourning. If this be treason to Germany, our readers must make the most

of it. To our minds, it is of profound significance that so many Americans are saying to-day: 'We wish that the Kaiser might be beaten and the German people win.'"

"Not since the rise of the first Napoleon," says the *Colorado Springs Gazette*, "has there been an instance of a ruler so obsessed by the craze for military glory and imperial aggrandizement." And the *New York World* declares that "wantonly and deliberately the Kaiser has plunged his sword into the heart of civilization," and there can be only one answer to his challenge—

"German autocracy has made itself the enemy of mankind. Its destruction will be the emancipation of the German people themselves as well as the salvation of European republicanism."

ADOLPH C. MILLER.

FREDERICK A. DELANO.

THE FEDERAL RESERVE BOARD.

"The importance of the Federal Reserve Board is not yet fully realized, I think, by the people of this country. It is our duty to make it understood and our business to thoroughly organize these banks and get them into effective operation at the earliest moment. I feel that by cooperative effort we are going to be able to make this system, in a short time, a bulwark against financial disaster, the basis for commercial development at home and for the expansion of our commerce abroad. The present crisis which has been precipitated by the European difficulties is already well in hand.

"Fortunately, this system having already been authorized by legislation, was a reassuring factor in the situation, and the fact that the Board was able to be

confirmed and about to actually take the oath of office, and that these banks have been organized to a point where they can be put quickly into operation, has had a reassuring effect also."

And President Wilson, addressing the Board on the same occasion, thanked the members for the personal sacrifice involved in their service, and went on to say in part:

"Recently in the extraordinary circumstances now existing in the world at large, we have been obliged to resort to legislation intended for unusual circumstances, a resort which would not have been necessary if we had had the organization which you are now about to consummate and put into operation. I think it is very fortunate, therefore, that just at this time the country should feel that it has the instrument by which to do everything that it is necessary to do for itself in the way of the activity of the banking community without resorting further to extraordinary measures of any kind.

"I look forward with the greatest confidence to the result, because I believe we have devised a system which, tho novel in some particulars, is clearly adjusted to the circumstances of American industrial and commercial life; that has an element of local self-government in it which is quite consistent with the analogies of our political life and the habits of our regional life—for we have developed by regions, and there is reason why we should function by regions if the regions are drawn together in a common organization and with a common spirit and guidance. Therefore, to have just at this time of expanding life, and of critical life, an entirely suitable instrument will in itself be a reassurance; and not only a reassurance, but a distinct and consciously felt benefit to the country."

While the prevailing tone of editorial comment is one of

THE RESERVE BOARD AT WORK

THE FINANCIAL MOBILIZATION of the United States to resist the strain imposed by the European war, remarks the *Boston Transcript*, will be greatly expedited now that the membership of the Federal Reserve Board is at last complete. For while the immediate financial strain has been met by the authorization of a billion dollars of emergency currency under the Aldrich-Vreeland Law, it is generally conceded by the press that the country will breathe more freely when such emergency issues are made unnecessary by the actual inauguration of the new banking and currency system provided for in the Currency Act of last December. Under the shadow of the war, Senatorial opposition to certain of the President's appointees largely subsided, and the confirmation of Paul M. Warburg and Frederick A. Delano finally cleared the way for the actual organization of the Board, which, it has been predicted, will be the most influential financial body in the world. The swearing-in of the members last week marked almost the last step in our transition to the new system. The organization of the reserve banks under the direction of the Reserve Board, according to Secretary of the Treasury McAdoo, can now be completed by October 1. Addressing the members of the Board immediately after they had taken the oath of office, Mr. McAdoo said:

satisfaction that the Board is at last completed, we hear an occasional voice raised in warning against too hasty a transition from the old system to the new. It is inadvisable to change financial horses, remarks *The Wall Street Journal*, while the whole world is struggling to keep its feet in the rapids. And in the *New York Journal of Commerce* we read that many prominent bankers, while welcoming the organization of the Reserve Board, "are strongly opposed to the immediate establishment of the reserve banks." For—

"Financial conditions, they say, are so unsettled—the security and commodity exchanges closed, the clearing-houses resorting to the old relief measure of issuing loan certificates, the Treasury Department generously permitting the taking out of large volumes of emergency currency and the foreign exchange market in an unprecedented condition of demoralization—that the introduction of a new banking system would manifestly add to the confusion already prevalent and cause more trouble for everybody concerned."

Many papers, on the other hand, are impatient for the speedy inauguration of the new system—a system which, as the *Atlanta*

Journal sees it, "will stand as a mighty bulwark to American interests in the present crisis." "There will be universal rejoicing that the personnel of the Board is complete and that the organization of the new system can proceed apace," remarks the *Washington Times*, which goes on to say:

"It is just now of world-wide importance that the full power of American wealth, resources, and good fortune in a condition of peace shall be summoned to cushion the terrific shock that has come upon the world of business.

"The new system is not ideal, and it unfortunately must be given its first trial in a time of vast difficulty. But it is yet immeasurably better than what we have had before. If it shall work half as well as its sponsors have expected, it will make this country a safety-valve instead of a defective tube in the boiler that must carry the pressure of an unprecedented economic strain.

"Gold will be freer and easier to get in every corner of the world because of this new system of handling our huge stock of it. Specie payments will be the more easily maintained at Buenos Aires and at Tokyo, as well as in Europe. Our immense crops to feed the nations will represent no larger help to a stricken world than this measure of relief."

FOREIGN COMMENT

BRITISH PRESS ON THE WAR

PARTY LINES VANISH when war appears, and we find the press of the British possession to the north of us united in a blaze of patriotism. Only a few days ago they were fighting about free trade, reciprocity, naval expenditure, and a preferential tariff, behind their own bulwarks, the flag of Borden waving on one side, that of Laurier on the other. It would appear, however, that on the question of the present European war, its expediency or necessity, party conflict is generally hushed from the Atlantic to the Pacific. The Canadians are at once united, and Ottawa votes \$50,000,000 for the subvention of the British war-chest. The French Canadians are the

with which our readers are already acquainted, remarks emphatically, "Britain had no alternative." "The Emperor of Germany," declares the *Toronto Morning Star*, "is placing himself in the same position as Napoleon" once took as "the enemy of civilization," - whose end was St. Helena. Great Britain is "sick and tired of the European insanity and plunges into war in the hope of putting the madmen in the madhouse." Equally condemnatory is the verdict of the *Halifax (N. S.) Herald*. Germany is declared accountable for a war which the Kaiser entered upon under false pretenses, and we read:

"In view of such facts, it is surely not possible to consider that

WAR MINISTERS OF FRANCE, GERMANY, AND ENGLAND.

most enthusiastic in joining the shout of the *Patrie* (Montreal): "When England is engaged in war, Canada is engaged in war." But the declaration of a Liberal organ that "Canada's place is by the side of the motherland" gives the Conservative *Herald* (Calgary) an opportunity for twitting the Liberal party with side-tracking Premier Borden's measure for adding Canada's quota to the British Navy. Thus runs the *Herald's* comment:

"Talk about nerve!

"What cant and hypocrisy!

"It is right, but, unfortunately, impossible for Canada to take her place beside the motherland on this occasion, and the reason it is impossible is because this same Liberal paper and its party prevented."

The *Morning Chronicle* (Halifax) speaks the mind of loyal Nova Scotia in the ringing words, "Canada will take her proper part in upholding the prestige and strengthening the hands of the mother country." "It is now or never with German militarist despotism," cries Laurier's most important organ, the *Toronto Globe*. This paper then proceeds to inveigh against such "appeals to party passion" as inflaming them against the Liberals, who checked Borden's naval policy. "If ships are purchased at all," says *The Globe*, they should be "fast armored cruisers," not added to the British Fleet, but used for "the protection of Canadian trade routes on this side." Of England's declaration of war this writer, after relating the preliminaries

Germany has gone to war merely because she is the ally of Austria.

"It is also surely plain enough that her reason for going to war as she has done was her determination to try military conclusions with France and naval conclusions with Britain.

"These were the things which Germany clearly sought, and now, as Sir Edward Grey is reported to have said, she should get what she sought to the full measure."

"The world's menace," is the uncompromising description which the *Toronto Daily News* gives of the Kaiser's designs, and concludes:

"If Germany were to dominate, the feet of progress would be turned backward toward autocracy and oppression. She has kept mankind in anxiety long enough, and the world will breathe easier if the Kaiser's Navy can be sent to the bottom of the sea."

The same newspaper, which proclaims in another article, "we fight for the world," expresses a hope that the issue may result in the liberation of the German people as well as the victory of the allies:

"While anything but the ultimate defeat of Germany is unthinkable, there is one enormous gain which the German people ought to achieve from this war. It ought to mean for them the absolute overthrow of autocratic government. This is not a war originating with the masses of the German people. This is not a war waged by a people in the vanguard of civilization. It is a war waged by an autocrat, by a man who, clinging in mad

desperation to the obsolete belief in the 'divine right' of kings, has held back the progress of his nation toward freedom, and kept it in a state of almost feudal servitude. Freedom and liberty, such as we know them in the British Empire, have never existed in Germany."

The bold and defiant spirit which animates the English people at home may perhaps be judged from the determined tone of the London press. In the judicious and unexcitable *Times* (London) we read: "'Now let everything go in' must be our motto, as it was the motto of our kinsmen across the Atlantic when all they held worth life was at stake. We must suffer much, but we shall suffer more for the great name of England and for all her high ideals as our fathers before us." "We mean to be worthy of our partnership with France," explains *The*

BETWEEN ALLIES.

"Come to my heart, my Italy!"

"To judge from the looks of your heart, I think I had better put on a special costume first."
—*Fischietto* (Turin).

Telegraph, "where all men have assumed with undaunted spirit a burden heavier than our own." With trumpet voice *The Standard* reechoes: "War! They have chosen war with all stern confidence. Britain accepts the ordeal of battle. Never have we drawn sword with more reluctance; never with more resolute determination will we wield it with energy and effect." And *The Daily Mail* answers: "It is a great, splendid force which stands waiting the moment to engage in battle. With no haughty pride, but solemn resolve to be faithful to Nelson's last and noblest signal, it will face the shock of battle if the German Fleet forces the attack." *The Express* summarizes the matter in these terms: "Fighting must now go on until either Germany's power to intimidate Europe has been taken from her forever or until Britain has been beaten to the knees and can fight no more. We are fighting for our own existence as a great world Power."

The New York *Freeman's Journal*, considered to be one of the most representative organs of the section of our people who remember and resent the admitted injustice and rapacity which characterized England's rule in Ireland, warmly approves John Redmond's declaration in Parliament that "every British soldier in Ireland might be withdrawn to-morrow and her coast would be defended by her own armed sons—the Catholics of the South and the Protestants of the North." This advocate of Home Rule comments as follows:

"This is a patriotic utterance."

"Ireland wants no 'change of masters.' As she objects to British rule, so would she to German or Russian or Austrian rule, or to any rule but Irish. Ireland for the Irish from the center to the sea, undivided and indivisible—that is the national motto and the national purpose, admitting of no alteration or compromise."

"And now that national object being all but an accomplished fact, Irish national self-government being practically on the statute-book, Ireland is ready to take charge of her own affairs, including national defense against any enemy outside or from within—guaranteed by 300,000 National Volunteers from South and North and East and West, and as many more as may be necessary."

"And under the direction and counsel of John Redmond and his colleagues of the Irish party, the elected and trusted representatives of the people, Ireland's 'war policy' may be confidently relied on as the best and wisest for Ireland."

ITALY EXPLAINS HER NEUTRALITY

AS A MEMBER of the Triple Alliance, which included Germany and Austria, the Government of Victor Emmanuel was naturally expected to join the forces of the allies and fight against France, England, and Russia. A sensation was caused when Italy proclaimed her neutrality and declined to mobilize. Even on this side of the water there were heard murmurs of disapprobation. This was the "unkindest cut of all," and we find in the last issue of the *Giornale dell'Italia* (New York) a very spirited article in which Italy's position is vindicated. Italy, we are told, had full right to remain neutral. She did so at a sacrifice and declined the bribe of Germany. To summarize this article:

"Italy has to-day refused the offers of territory made her by Germany on condition that she would take the field against France and England, just as in 1870 she refused the much more tempting offers made to her to induce her to join arms with Germany against the French. Italy has never gained any advantage from the Triple Alliance, and the conquest of Libya was accomplished in spite of the ill-concealed hostility of Austria and Germany."

Italy has many complaints to make against those who now desire her cooperation. To quote further:

"Many may be aware or have forgotten that while Italy was in the war with Turkey and England on one part and France on the other side, she was subjected to many impositions. Austria assumed an attitude of hostility in order to prevent Italy from striking a blow, as she was justified in doing, at her enemy in the latter's European possessions, a course of action which prolonged the war to our serious inconvenience and loss. Whoever may forget these circumstances, we never shall."

Nor is there anything tricky or crooked in Italy's neutrality. The Italians are no pupils of Bismarck, we are told:

"In spite of the circumstances referred to, Italian neutrality is not based on Machiavellian casuistry nor upon the cynical political philosophy of the 'Iron Chancellor,' nor upon the insincere reflection that the treaty was renewed somewhat prematurely and hurriedly in 1912, and is still binding. Italy is still observing its provisions when she refuses to participate in a war of aggression not contemplated in an agreement which is simply a defensive alliance. The malevolent have little consideration for us, but the friends of Italy should do us the favor of refraining from questioning the motives of the Italian neutrality."

The question of Italian neutrality is treated with the full knowledge of an experienced Italian statesman by Mr. Leonida Bissolati, of Milan, a deputy in the Italian Parliament. He writes in the *Progresso Italo-Americano* (New York), and supports the policy of King Victor Emmanuel, who has recently caused to be printed and put in circulation the text of the Triple Alliance Treaty which vindicates Italy's contention that it does not bind the parties concerned to any support of a war of aggression, but is merely a defensive alliance. Deputy Bissolati, in 1909, declared in the Assembly:

"What can the Powers of central Europe really demand of Italy? What, in fact, do they now ask? They can only ask what Italy is able to give, because they know it would be useless for our Government to make compacts which the Italian people would refuse to support. Italy is not able to give her promise of active participation in an Anglo-Germanic conflict in the sense of taking

STAIRWAY LEADING TO THE CITADEL.

PLACE DU THÉÂTRE, THE CENTRAL SQUARE.

SCENES IN LIÈGE, THE BELGIAN CITY WHICH FIRST BORE THE BRUNT OF THE GERMAN ATTACK.

up arms against France or England. The Powers of central Europe have no authority for asking such a thing. Italy in turn is able to give a promise of not attacking them when war bursts out."

Mr. Bissolati thus states the proletariat view of Italy's treaty obligations:

"Italy is merely saving herself from being submerged by greater nations. But, it will be asked, is not Italy bound by the Triple Alliance? When Russia and France descended into the field of war did not the conditions in sight come under the provisions of the Alliance referred to? We are not going to discuss the question whether the Italian people are disposed or indisposed to keep compacts of which they have learned nothing. One thing is certain, the people of Italy govern themselves by nothing else but the consideration of their own interests and of their own predilections in acting either in conformity with or in opposition to the compacts signed by the Government."

The writer emphasizes particularly the position which the Socialists have taken toward war in general, and especially toward any alliance which binds them to take arms under the leader of another country who is bent on a war of aggression. The Socialists are patriotic, or profess to be, and the only war in which they will take part is a war in defense of their own country and of their salvation as a unit among European people. To quote his words:

"The Socialists are unwilling to take up arms against an ally. The Socialists, moreover, have declared their sympathy with the Servian people, now threatened by Austria, but they do not be-

lieve that even the Servians should ask Italy for succor by taking action in arms against Austria-Hungary. The Socialists, like all popular parties, recognize the fact that the line for Italy to follow is that of neutrality toward those who neighbor on both the eastern and western frontiers of the land. They will not entertain the thought of mobilizing against Austria in favor of Servia, much less mobilizing against France in favor of Austria and Germany. In this way Italy discharges, as far as possible, the duties imposed upon her by the treaties, while she escapes being immersed in this vast conflict. . . . Italy can not but be in-

terested in the struggle now going on, altho fortunate circumstances permit her at this time to maintain her neutrality. The neutrality of to-day may serve to give her opportunity to conserve her strength unimpaired in order that she may take her part to-morrow in insuring the rise of a better era for the people in Europe."

The *Secolo* (Milan) approves the decision of the Italian Government to keep hands off in the world-war of Europe, and condemns what it styles "Austria's usual system of perfidy and outrage." The dual monarchy, we are told, can not openly make war upon

Italy under present circumstances, but revenges itself for the neutrality of King Victor Emmanuel by treacherously bombarding Antivari and Dulcigno. Italy is therefore advised to employ all its strength in protecting the coasts of the Adriatic, for the safety of which so many Italians settled there are deeply concerned. The article adds that the only motive for taking arms which would influence the people of the Peninsula would be a hope of recovering the former Italian provinces which Austria still holds.—*Translation made for THE LITERARY DIGEST.*

BEFORE A BELGIAN RECRUITING-OFFICE.

Such crowds as this one, outside the recruiting-office in the Belgian town of Roux, give an idea of the determination and heroism of the victims of invasion, of whom over 40,000 are reported to have volunteered since war with Germany was declared.

THE GERMAN PRESS ON THE WAR

IN THE ABSENCE of newspapers from Germany, we are fortunate in finding German opinion ably and abundantly represented by the German-American press. The criticism of their homeland as the aggressor in the great European conflict they hotly resent, and expect to see it answered by a German triumph. They quote with approbation the saying of Bismarck: "Our God will not permit the most obscure German to be conquered, much less a great country like Germany." Paris is spoken of as the goal which lies before the German Army after the capture of Liège. The difficulties attending that capture, we are told, were foreseen, and the *New York Staats-Zeitung* remarks:

"No one was so foolish as to suppose that the German troops would capture the Belgian stronghold of Liège at the first assault. This stronghold has lately been essentially strengthened and the several forts are constructed in the modern style. It was certain that the capture of this strong position was only possible at a heavy cost in bloodshed. But this sacrifice brought the first great German success of the war."

"It also proved to be the first blow dealt by Germany against France, opening the free march by the north into the land of the enemy. From Liège begins the first march to Paris."

This same paper resents the somewhat severe criticism which has been dealt out by the press here and in London against the so-called German aggression. Germany has always acted with pacific generosity toward England, we are told. To quote further:

"While Germany has declared the war, she is not the aggressor. Germany has been the defendant ever since she claimed her place among the nations. Germany's revilers and evil-wishers have made life miserable for her for decades by calumnies and malicious public utterances against her."

"More than once Germany was tempted to take advantage of some other country, but she always resisted the temptation. When England was engaged in the Boer War Germany refused to take advantage of England's weakened condition. When England drove Russia into the Japanese War and brought an end of Russian aspirations, the loyalty of Germany for Russia, in return for her indirect assistance in 1870, went so far that Russia was able to withdraw her best soldiers from her western boundary."

"The Gordian knot has been cut and Emperor William has requested the people to pray that victory may come to the German arms. With the German battalions marches the good German conscience which has been mobilized with the troops."

The war policy of Germany is thus outlined by the *Chicagoer Volkszeitung*:

"We are well aware that England has strained every effort to obtrude itself into this quarrel. It is true that in England, as well as in Germany, there is a war camarilla which for years has been stirring up mutual bellicose hatred."

"They say: 'Germany is not so powerful on the sea as we are, we can destroy her fleet, we can seize her colonies. Let us not wait until it is too late.' English people are above all a calculating folk. They know what a war even under the most favorable circumstances must prove to be. It is true that for every single German war-ship two English ships are built. They

are able to do this; they have the wherewithal and do not need a powerful standing army on shore."

A striking article in the evening edition of the paper cited above represents Germany as "fighting against the world." Germany will fight with "the back to the wall, like Frederick the Great." Then follows the enthusiastic outburst:

"Against the world! Counting upon its right to take the first place in the sunshine, a united Germany marches forth without fear of Tories or Socialists against the world's enemy. This is a titanic undertaking. Without any outcry it presses on to the fray. Silent, eager, with its mind made up, this Germany marches to the world-war which has been long expected and has been unavoidable, but which England undoubtedly as a war-proclaiming enemy has all along counted upon."

An outline of Germany's plan for the carrying on of the war is very plainly set forth by the *Westliche Post* (St. Louis). To quote from the editorial of this paper in speaking of Germany's present situation:

"Hemmed in between two hostile Powers, it must be Germany's first work as quickly as possible to subdue France, the weaker of these two enemies, and then to attack the other adversary. In such a situation as involves the very existence of the country many a treaty will be broken. The weak must naturally pay the price, even at the sacrifice of ethical consideration. An example has been set by the recent history of the United States in which reasons of state have overruled ethical considerations."

It is well worth noticing that the press of Austria-Hungary

seemed as unconscious of the approaching cataclysm as the rest of us. Just on the eve of the war the *Neue Freie Presse* (Vienna) remarked in a tone of protest:

"A great world-war would be such an absurdity, such a monstrous outcome from relatively trivial causes and such an exaction on peoples who, knowing nothing of Serbia, would be asked to shed their blood for that unknown land, that any reasonable calculation of probabilities would yield only a slight percentage in favor of such an eventuality."

This paper subsequently lays all the blame for the war upon the Czar's reckless support of Serbia, and we read:

"The older Nicholas, who made the Holy Alliance with Austria and Prussia, would never have engaged in such a war in support of Serbia. A Czar who would let his army march to Serbia's aid would not be a conservative. . . . A conservative ruler will not entertain such thoughts. He can not undertake a campaign for Serbia the occasion for which was furnished by a crime."

Germany, on the other hand, lays the whole blame on Austria, and the *Berliner Tageblatt* remarks:

"The German Government announces that it neither caused nor influenced the Austrian ultimatum and, indeed, only became familiar at the very last moment with the contents of the Austrian note."

The Socialistic *Wahrheit* (New York) speculates thus:

"William's defeat would mean the downfall, not of Germany, but of German militarism. A German triumph would signify the end of Pan Slavism, but if Nicholas conquers it will be a misfortune for Russia and for the whole world. A Russian triumph would signify utter defeat in future for the Russian people."—Translation made for THE LITERARY DIGEST.

THE WAR DRAMA

NICHOLAS—"No. Our little drama must appear anonymously."
—Simplicissimus (Munich).

SCIENCE AND INVENTION

SOLAR-POWER PLANTS

THE EFFORT to get power from the sun's heat is almost as old as the search for a flying-machine. These efforts are both succeeding in the present generation. The flier is a little ahead and is certainly more spectacular; but the solar-power plant is not far behind in time and promises

to be far in advance in utility. Frank Shuman, in a paper read before the Manchester Association of Engineers, and abstracted in *The Engineering Magazine* (New York), says that scientists have known for a century that practically unlimited power comes to us with the sun's rays, and that every one who will give the matter a thought must know this instinctively. But the practical engineer generally thinks that this power is so diffuse that it can not be profitably utilized. There have been

many intermittent efforts to utilize sun-power in the past, but generally by isolated inventors who have never been able to go far enough to accomplish results from which industrial data could be gathered. Says Mr. Shuman:

"Unless sun-power can be utilized profitably, there is of course no incentive to spend work and money upon it. It is a question altogether of the cost of the construction, upkeep, and labor. If a sun-power plant cannot be so constructed that an ordinary engineer can run it, and that its wear and tear will be reasonable, and, further, that excessive labor will not be required to handle it, then there is also nothing in it. These are the important factors to consider, and therefore it is necessary to give definitely the cost of the construction, maintenance, and labor, and to show definitely that sun-power can be profitably produced throughout the vast areas in the tropics, where coal is an expensive item of consideration.

"For the next twenty years or so, we will all of us have plenty of room for our sun-power plants reasonably near the equator. I am told that all of the coal mined and oil produced throughout the entire world during the year 1909 would be represented by 270 million horse-power operating for twenty-four hours per day throughout the year. Assuming that sun-power shall produce an equivalent amount, and basing our figures on the actual results already obtained by the plant at

Cairo, then it will be only necessary for us to plant a square of 143 miles, or 20,449 square miles of surface, near the equator with sun-heat absorbers, spaced as wide apart as they are in the Cairo plant.

"We started into the work of utilizing sun-power about seven years ago, and have had the assistance of half-a-dozen good en-

gineers and scientists, and large sums of money have been put at our disposal. Our work was first devoted to the determination of the amounts of heat obtainable from the sun which could be practically utilized. The first apparatus for determining this was a little 'hot-box' containing ether in which the number of heat-units which could be caught on a given surface were determined. The next was a small apparatus of about $\frac{1}{8}$ horse-power, also running with ether. Then a considerably larger one of $3\frac{1}{2}$ horse-power. The reason that ether was used in all these preliminary experiments was that high pressure could be

produced at fairly low temperatures. We knew, however, that ether as a means of converting heat into power was an inefficient fluid, and impracticable on a large scale, and therefore soon dropped it. We then constructed a whole series of various heat absorbers for generating low-pressure steam from water. These experimental absorbers finally resulted in the construction of a fair-sized sun-power plant at Philadelphia, which generated a maximum of 32 horse-power at midday, with an average of

about 14 horse-power throughout eight hours of the day. From the experience gained in running this plant for one season, we constructed the sun-power plant now in operation at Meadi, a suburb of Cairo, Egypt. Very careful tests of this plant were made.

"Steam can be generated from the sun's rays from water in a flat vessel painted a dull black, covered with two panes of ordinary window-glass with an air space between, and protected against loss of heat by conduction and convection on the bottom, sides, and ends, leaving only the glass top fully exposed to the

sunlight. We made many determinations of the amount of steam which could be produced in this manner, but found that in order to intercept a given area of sunlight in this way would cost considerably more than if we intercepted the sunlight by properly placed mirrors and we concentrated several square feet of sunlight on one square foot of boiler. Therefore our present plant at Cairo has five concentration-

A HEAT ABSORBER OF THE CAIRO SUN-POWER PLANT

Five of these absorbers, focusing the sun's heat upon a central boiler, produce an average of 1,100 pounds per hour of 15-pound steam for a 10-hour day.

ENGINE OF THE CAIRO SUN-POWER PLANT.

of sunshine by means of mirrors upon a centrally located boiler.

"No matter what kind of heat absorber was used, it must be turned to face the sun at all times throughout the day. To find a method of doing this in a simple and practicable way took much time and thought.

"This plant was erected at Cairo because it was the nearest place to the tropics easily accessible, tho Cairo is by no means yet the ideal position for a sun-power plant, as it is 30 degrees north, and therefore the sun hits at a lower angle than it would farther south. The equator, of course, would be the ideal position for sun-power plants, but up to 20 degrees north and 20 degrees south sun-power is quite satisfactory.

"Experience has shown us that low-pressure steam used at atmospheric pressure (14.7 pounds absolute) gives the greatest return in power per pound sterling invested. If we attempted to generate high-pressure steam we could easily do this by means of the sun's rays, even up to 500 pounds to the square inch. This, of course, would give us very high engine efficiencies, but, on the other hand, we would lose much more than we gain because, on account of the higher temperatures of the boilers, the losses by conduction and convection into the atmosphere would greatly increase. Also the cost of constructing the boilers, owing to the strength of metal required, would greatly increase, and, as stated before, the cost per foot-pound of energy produced is the deciding factor.

"The engine is a special low-pressure engine designed to utilize low-pressure steam to the highest advantage, and this engine will give a British horse-power with 22 pounds of atmospheric steam. The pump in the case of the plant mentioned is a reciprocating pump, but, of course, any sort of pump could have been used.

"The steam is generated in the sun-heat absorbers, five in number, which are each 13 feet 4 inches wide at the top, and 204 feet long approximate parabolic troughs for catching the sun's rays, and concentrating them upon the boiler swung at the focal point.

"The heat absorbers are placed about 25 feet apart in the clear, so that they will not shade each other when the sun is low in the morning and late afternoon. Their axes point north and south as does that of the earth, and they turn from east to west on their axes to face the sun.

"The mirrors are set in a light steel framework, each one at the proper angle to throw the light upon the boiler, and consist of ordinary sheets of third quality window-glass about $\frac{1}{16}$ inch thick, silvered on one side, and the silvering protected in the proper manner from the atmosphere. At the focal point of all of the light rays there hangs in the present plant a cast-iron boiler which is tubular at the top and flat at the bottom where the water space is. This boiler is 15 inches high, and is hung on light rods in such a manner that the expansion and contraction will not interfere with it. These heat absorbers are set on crescents, which roll in a system of small rollers. Racks and pinions are provided for turning the sun-heat absorbers from a low eastern aspect in the morning to a low western aspect in the evening. The heat absorbers are turned by the engine by the ordinary shaft-drive and friction-clutch. An adaptation of the thermostat throws this friction-clutch in and out. The thermostat is located right under the boiler. As long as the thermostat is in the shade, this means that the heater is pointing correctly at the sun. When the sun moves ahead a little, and the edge of the sunlight strikes the thermostat, it immediately throws the small friction-clutch in, and then the heat absorber turns westward a fraction of an inch or so. As soon as the thermostat is again in the shade the clutch is released, and the sun-heat absorbers stand still. In this way by short intermitences the heat absorbers are always kept facing the sun throughout its course during the entire day.

"In the morning—according to the degree of latitude—the heater will start to make steam. At Cairo it would start to make steam in midsummer about 7.30 o'clock, and will make steam in quickly increasing quantities until the maximum would be arrived at, between 10 and 2 o'clock. Then the amount would gradually decrease until 5.30 in the evening. Tests of the steam-producing capacity of this heater show that the average production would be 1,100 pounds per hour of 15-pound (absolute pressure) steam for a ten-hour day.

"In other words, the plant at Cairo is capable of giving on an average 50 brake horse-power. This same plant, located 1,000 miles or so further south, should give about 65 brake horse-power. The steam in the boiler is produced at practically atmosphere, altho the engine will do good work when the steam is at considerably lower pressure."

When the sun is put out of commission by night or by intervening clouds, stored heat is used, by keeping, in large tanks properly insulated from the atmosphere, the necessary quantity of water at the boiling-point. From this water is drawn, during the night or during a rainy day, low-pressure steam to run the engine, which is constructed so as to run economically down to four pounds absolute pressure. To quote further:

"As the cost of upkeep is an important factor, the heat absorbers are constructed entirely of reenforced concrete for the foundations, steel for the frame, cast-iron for the boilers, and glass for the mirrors and boiler covering—all of which materials are practically indestructible in the tropics, barring accidents. If the steel framework is painted about every eight years or so, it will last for centuries. . . .

"The heat absorbers of the Philadelphia (1911) plant had an efficiency of 43 per cent. The Cairo plant has a thermal efficiency of 57 per cent."

MUST OUR CITIES GO?

NOT so very long ago we were lamenting the trend of population and industry toward the great centers, and looking forward to the time when our people should be gathered chiefly in huge towns. Now, according to George H. Cushing, who writes in *The Technical World Magazine* (Chicago, August) on "The Last of the Cities," this tendency has been reversed by a movement born of the desire for efficient industrial operation that has revolutionized so many of our methods and views. It is possible, Mr. Cushing thinks, that the United States has built its last big city, and that our present great centers have already reached their zenith. The impulse for efficiency, he tells us, was born in the small towns. To save themselves, they had to speed up. And they learned to get speed with a purpose—one thing the cities still lack, as a rule. As examples, he gives us the following:

"Within the year, I visited Spartanburg, South Carolina. The place is so small that when you leave the public square you are in the country. One might expect it to be so slow that its movement would not be perceptible. However, I spent two days with one business man who but recently had spent \$2,500 to hire an efficiency expert to teach his workmen how to get real speed. They are, to-day, the fastest men in their line in the country. In the cotton-mills, I found everything keyed to an appreciation of the value of time. Everywhere it is the same. Last week, I heard a carpenter from a hamlet in Michigan criticizing a Chicago carpenter because he was slow. Only last night, a farmer from Iowa said, as we sat together on the car:

"Chicago men let too many things distract them. They work too hard for the results they get. Come out to my farm and I'll show you real speed—eight hours a day devoted to a purpose—to getting things done without delay."

"This other thing is true: The small-town workman is healthier and stronger than the city workman. His living conditions are better; his food is purer. He can go, when trained, faster and further than the city man for those reasons.

"The small-town manufacturer, because of his better workmen, the lower cost of the real estate upon which his buildings stand, and his less congested railroad yards, can produce faster, and hence undersell the city manufacturer. That is why so many manufacturing companies are outside the big cities. A few big examples tell the story. The Steel Corporation did not select Chicago as the site for its new mills; it built a town at Gary, Indiana, instead. The National Tube Company did not build at Cleveland, but chose Lorain, Ohio. The Western Electric Company did not locate its new factories in Chicago; it built at Hawthorne, Illinois. The great General Electric Company did not go to New York, but to Schenectady. The tendency is general. The movement is away from the cities.

"With even so little evidence, it is easy to predict the death of the big cities. Great congested centers are doomed, if for no other reason than that they are no longer economical. The one thing that is doing more than any other influence to bring this about is the appreciation by nearly every small city in the land that 'time is money.'"

We have decided, says Mr. Cushing, that the railroads must

treat all patrons alike. They do so, apparently; for city and country merchant alike gets his switching facilities free. Yet this means that the city man receives something of immense cost and value, while the country man's service is cheap to the roads. Mr. Cushing explains:

"The ordinary bustling, jostling, and busy railway makes a bee-line through small towns. It only throws off a few switches here and there to grab up the traffic which such places produce. This is a cheap way of getting the small towns' traffic on and off the company rails.

"The same railroad does not really enter, but stops at the edge, of a big city. There it is broken up into nothing but a labyrinth of switches. It resembles nothing so much as a rope frayed first into its strands and then into threads. All semblance to a 'through' line is lost. It has lost all apparent order and direction and has become nothing but a tangled network of tracks. Every track is a switch to somewhere. Every switch goes off after business. This is complex and intricate. The service is costly. The real estate is expensive. It is far from a simple or easy way of getting traffic upon the carrier's rails.

"In a small town, few railroad switches are longer than a thousand feet. The Chicago switching district, for one example, is more than thirty miles long and more than fifteen miles wide. It is filled with tracks, cross-overs, and storage yards.

"Although the railroad as well as the merchant must, to-day, call for and deliver the freight it is paid for carrying, the switching charges in both the village and the great city are the same—that is, the service is free. At least, no direct charge is made for it. The railroad may not send out a bill for this service, but that does not say it costs nothing. On the contrary, this switching service costs tremendously. Since it costs money and since that money is paid by the carriers, they must get it in some other way. And they do. They 'lump' the cost of switching and charge it into 'general expense.' Then they adjust their rates generally to cover adequately and fully that expense. Seattle, for example, pays its portion of the expense of maintaining Chicago's big passenger station. Paducah, Kentucky, pays its portion of the expense of maintaining the New York terminal station. All the little towns pay their portion of the expense of maintaining the costly real estate, the myriad of tracks, and the countless switching engines in the freight-yards of the big cities. At least, that has been the system up to now. It is the proposed change from this system which threatens the big cities."

Again, says Mr. Cushing, in our present system the country produces the wealth and the city absorbs it. The rural districts are coming to realize this and to resent it. The uprising against the middleman system is, even when standing alone, an influence sufficiently potent to begin the disintegration of the cities. The impending change, foreshadowed by a recent proposal made by Louis D. Brandeis before the Interstate Commerce Commission, is practically, as Mr. Cushing sees it, that in future there shall be two rates—one for the cross-country haul, paid by all alike; the other a switching or terminal rate, proportional to the extent and complexity of the service. Says the writer:

"Under such a system, the small-town man would have practically only the cross-country rate to pay. To the city man, the cross-country rate would be insignificant; the city rate covering the cost of city real estate would be too high to be paid by any one. His higher cost of transportation alone would rob him of anything but the business in the one city where he did business.

"The thing has become an issue. The country is discriminated against in favor of the city, and knows it. That is plain. The country is vastly in the majority. The majority rules—in the end. The Commission may 'stall,' but that does not dispose of the issue. When the majority rules in this matter, the discrimination will end. That will mean that the city's pre-eminence will be gone. As matters now stand, abundant and

cheap transportation alone gives the city any edge on the country in the fight for the nation's business. To take away that transportation advantage causes the city to fall. It causes the city to lose the chief thing which holds it together—business advantage."

TELEPHONES THAT TALK OUT LOUD

THE ordinary telephones whisper, or at least talk in an undertone; but that a telephone may be loud of speech, or even shout, upon occasion, is a familiar fact to those who have heard trains called by this means in some of our large railway stations. For usual domestic service, a whispering telephone is more intimate and less disturbing, but it may well be that in the near future every instrument may have its loud-

DISPATCHER'S DESK, SHOWING LOUD-SPEAKING TELEPHONE RECEIVER.

speaking attachment for use whenever the speaker desires to raise his voice. An instrument through which one might say in stentorian tones, "Henry! It is time to get up!" might, for instance, be very useful in the morning. The latest industrial use of the loud-speaker is on the Lackawanna Railroad, which has attracted attention in the past few months because of its successful experiments with the wireless telegraph for communicating with moving trains. Loud-speaking telephones are now used on this line for train-dispatching, says *The Railway Age Gazette* (New York, July 31):

"No one disputes that the telephone is far superior to the telegraph for transmitting and repeating train orders; but the telephone has its disadvantages. Wearing a telephone constantly on the head is not the pleasantest thing in the world, especially when there is an electrical storm at some point on the line. . . . Loud-speaking instruments have been installed on two train-dispatchers' lines, including all the Lackawanna lines in New Jersey. The two dispatchers are stationed at Hoboken.

"The device is quite simple. The transmitter is much like the ordinary transmitter, but is much more efficient. The receiver in like manner is very sensitive, and, in addition, is furnished with a horn similar to that used on a phonograph. It is placed on the dispatcher's desk in the position shown in the illustration, or maybe on the wall. . . . The telephones are simply intended to

reproduce at the receiving end the normal conversational tone of voice at the same volume used by the speaker at the transmitting end. . . . It is necessary that the loud-speaking transmitters be used in all stations on the circuit on which a loud-speaking receiver is installed, but no other change in the standard equipment is necessary. The cost of the instruments is small, there being no amplifying devices. . . .

"With complete installations at all stations a circuit can be worked without the use of selectors for calling. Without the calling-bell, the dispatcher, to call a station, merely speaks the station's name into his transmitter in an ordinary tone of voice. The name is heard in all the loud-speaking receivers on the line and for a distance of at least 15 feet from any one of them. The operator who is called can respond at once. An operator can call the dispatcher in like manner.

"The operator at a station equipped with the loud receiver can keep track of all that is going on, the same as with the Morse telegraph. As is well known, one of the chief objections to the use of telephones on the train wire has been the isolation of each office from all others except when the operator could take time to put the receiver to his ear. . . . The added opportunity for supervision on the part of the dispatcher himself is also worth mentioning. The Lackawanna dispatchers are glad to get rid of the head-telephones. Disturbances on the line sometimes cause a continual buzzing which is most annoying to the person using the head-receiver. In regions where electric storms are common there is the additional chance of receiving violent sounds in the receiver, and the shock sometimes is dangerous as well as inconvenient."

A STUDY OF MUSICAL SENSATION

DOES the musical critic actually hear the faults that he blames and the virtues he praises in opera and concert, or do his training, sound-habits, nervous system, and so on, betray his ear? An interesting study of the effect of musical sounds upon persons of various degrees of training and temperament has been made by a French physicist, Professor Marage, whose experiments in acoustics have made his name familiar to all students of the subject. His object, we are told by *The Chemical News*, as abstracted in *The Scientific American Supplement* (New York, July 25), was to ascertain the impressions experienced by an audience of musicians, savants, literary men, and society people while listening to the same pieces of music of the sixteenth and seventeenth centuries, performed successively on the piano and on instruments of the period: clavecin, clavichord, lute, and viol. Says the paper named above:

"To realize this experiment, the three hundred pupils at the Sorbonne who follow the classes of the physiology of speech and singing have been divided into two series. The pupils were to note their physiological and musical impressions. Out of an audience of 300, only 142 copies were given in; that is to say, that over 50 per cent. of the pupils had no impressions or did not wish to write them down. And yet the copies were anonymous. The other half, however, on the contrary, experienced very diverse sensations. The pupils who gave in their copies were divided into 51 professional musicians or singers; 25 cultivated persons—that is to say, with a good knowledge of music and studying it from a taste for the same; 34 with no musical knowledge; 13 scientific persons, professors, pupils of the Polytechnic School, of the Central School of Civil Engineers, or of the Sorbonne; and 19 literary professors or pupils. The copies, judged from the point of view of the analysis of the sensations, have given the following results: The cultivated come out at the top of the list with 77 per cent. of good copies; professors of singing and music come next with 62 per cent. The scientific pupils are greatly superior to the literary; 47 per cent. of the first against 35 per cent. of the second gave in excellent copies. The literary people make long descriptions, interesting and agreeable to read, but it is often difficult to discover what are the sensations they experience. The scientific, on the contrary, have clear ideas expressed in a few lines. Concerning the physiological impressions, it is to be remarked that almost all the audience is at first disagreeably impressed by the thin and metallic sounds of the clavecin, then the ear gradually gets used to these chords, new to it, and then it finds in them certain qualities. The grave sounds of the viols are immediately agreeable to the audience. A curious phenomenon of suggestion

has also been observed by M. Marage. After a first performance, it was decided to change the piano. The instrument was new, and it had been thought that the sounds it gave forth were not very harmonious. Twenty musicians had expressed the desire to be present at the second series, at which the same program was to be performed. They all noted down that the new piano was very superior to the first one. Now, for some reason unknown to M. Marage, the instrument had not been changed, and was the same at both series. To sum up, Dr. Marage wonders if musical critics are not often influenced by the special dispositions of their auditive nerves. The particular action of vibrations on each nervous system, the habit of hearing certain sounds, and, lastly, the previous education, must deprive the artistic criticism of the value possessed by the scientific criticism."

ANABIOSIS—LIFE IN DEATH

THAT AN ANIMAL may be revived even when it is apparently dead, and when no tests known to science will show that life is still in it, has long been known. The possibility of assuming this condition, where life exists only as a possibility of revival, and which is now known to scientists as "anabiosis," is limited to the lower orders of the animal kingdom and to such of the higher as are known to "hibernate." Anabiosis, in many cases, may indeed be described as a sort of artificial hibernation. It is not only interesting but important for us to know the exact conditions under which this state may be assumed. The present state of knowledge on the subject is summed up in *La Nature* (Paris, June 27), by Emile Gouault, in an article parts of which we proceed to quote. He says:

"Microbes are paralyzed by cold, and the destructive action that they exert on organic matter then ceases. All the cold storage of perishable goods that has for forty years been modifying so strangely the economic conditions of the globe is based on the rational utilization of this phenomenon, made possible by invention of artificial refrigeration. But nature realizes this phenomenon also in more complex animals. . . . Numerous insects, fish, and certain mammals are plunged into a state of anabiosis during the cold of winter, and during some years past numerous investigations have been undertaken in different countries to reproduce anabiosis artificially. Thus, at the French Refrigeration Congress, held at Toulouse in 1912, Messrs. Mir and Audigé described experiments made on trout frozen slowly in a block of ice, kept thus imprisoned for several hours, and then brought back to life by slow melting. Professor Bachmetieff successfully repeated these experiments in 1913, and some of the discoveries made in the course of his work would seem likely to hasten the day when the utilization of the anabiosis of living creatures, in general, will offer humanity many wonders and new benefits.

"The experiments of Professor Bachmetieff were made first on butterflies. The insect was placed in a vessel surrounded by a cold envelop, and its interior temperature was measured to a precision of about one Fahrenheit degree by a thermoelectric device whose two electrodes were buried in the insect's body. . . .

"From the first, Bachmetieff noted that the interior temperature of a butterfly depends much on its state of repose or agitation. An immovable butterfly has a temperature equal to that of the surrounding air; a butterfly that is fluttering its wings has a temperature that may exceed that of the air by 15 or 20 degrees.

"Thrusting a butterfly at the normal temperature into a vessel kept at -20°C ., Bachmetieff found that the temperature of the insect dropt slowly to -9.3° , then suddenly rose to -1.7° , and finally fell again slowly to -20° . He attributed the sudden rise to a phenomenon of superfusion made possible by the capillarity of the vessels that contain the liquids of the insect. The sudden increase of temperature would be the result of the almost instantaneous freezing of all the liquids of the organism. . . . Bachmetieff found that when a butterfly was removed from cold storage before this rise of temperature it rapidly revived . . .; when it had undergone the rise and was taken out immediately afterward, it would remain in the state of anabiosis several minutes before reviving. When the insect had undergone the rise of temperature and then had been cooled to -8° or -9° , it remained much longer in the anabiotic state.

and finally when the second cooling reached -10° , the insect died."

Did the insect freeze to death? Apparently not, for it could be revived after a long period of congelation, provided only the temperature had not reached the lower limits below which life ceased. The insect thus lived in a state where no vital activity was possible, as we have usually understood it. What condition is "life" of this sort? Bachmetieff compares it to that of a watch whose balance-wheel is obstructed in some way. Remove the obstruction, and the watch starts off again. These experiments succeeded with various sorts of insects, reptiles, and fish, but it was not until 1913 that he extended them to warm-blooded creatures, choosing a hibernating species as most likely to suit his purposes. These experiments seem to prove that hibernating animals, marmots, etc., may be thrown artificially into anabiosis by chilling them.

Such investigations, the writer reminds us, are not useless, but enable us to comprehend better the mechanism and causes of death, and they have their practical uses as well. For instance, the anabiosis of microbes is important in food-preservation. The enemies of insect pests are now often handled and placed where they are needed, when in a state of hibernation; artificial hibernation would evidently add to their usefulness. It has also been proposed to keep bees in a state of anabiosis in winter, thus saving the honey that they would otherwise consume.—*Translation made for THE LITERARY DIGEST.*

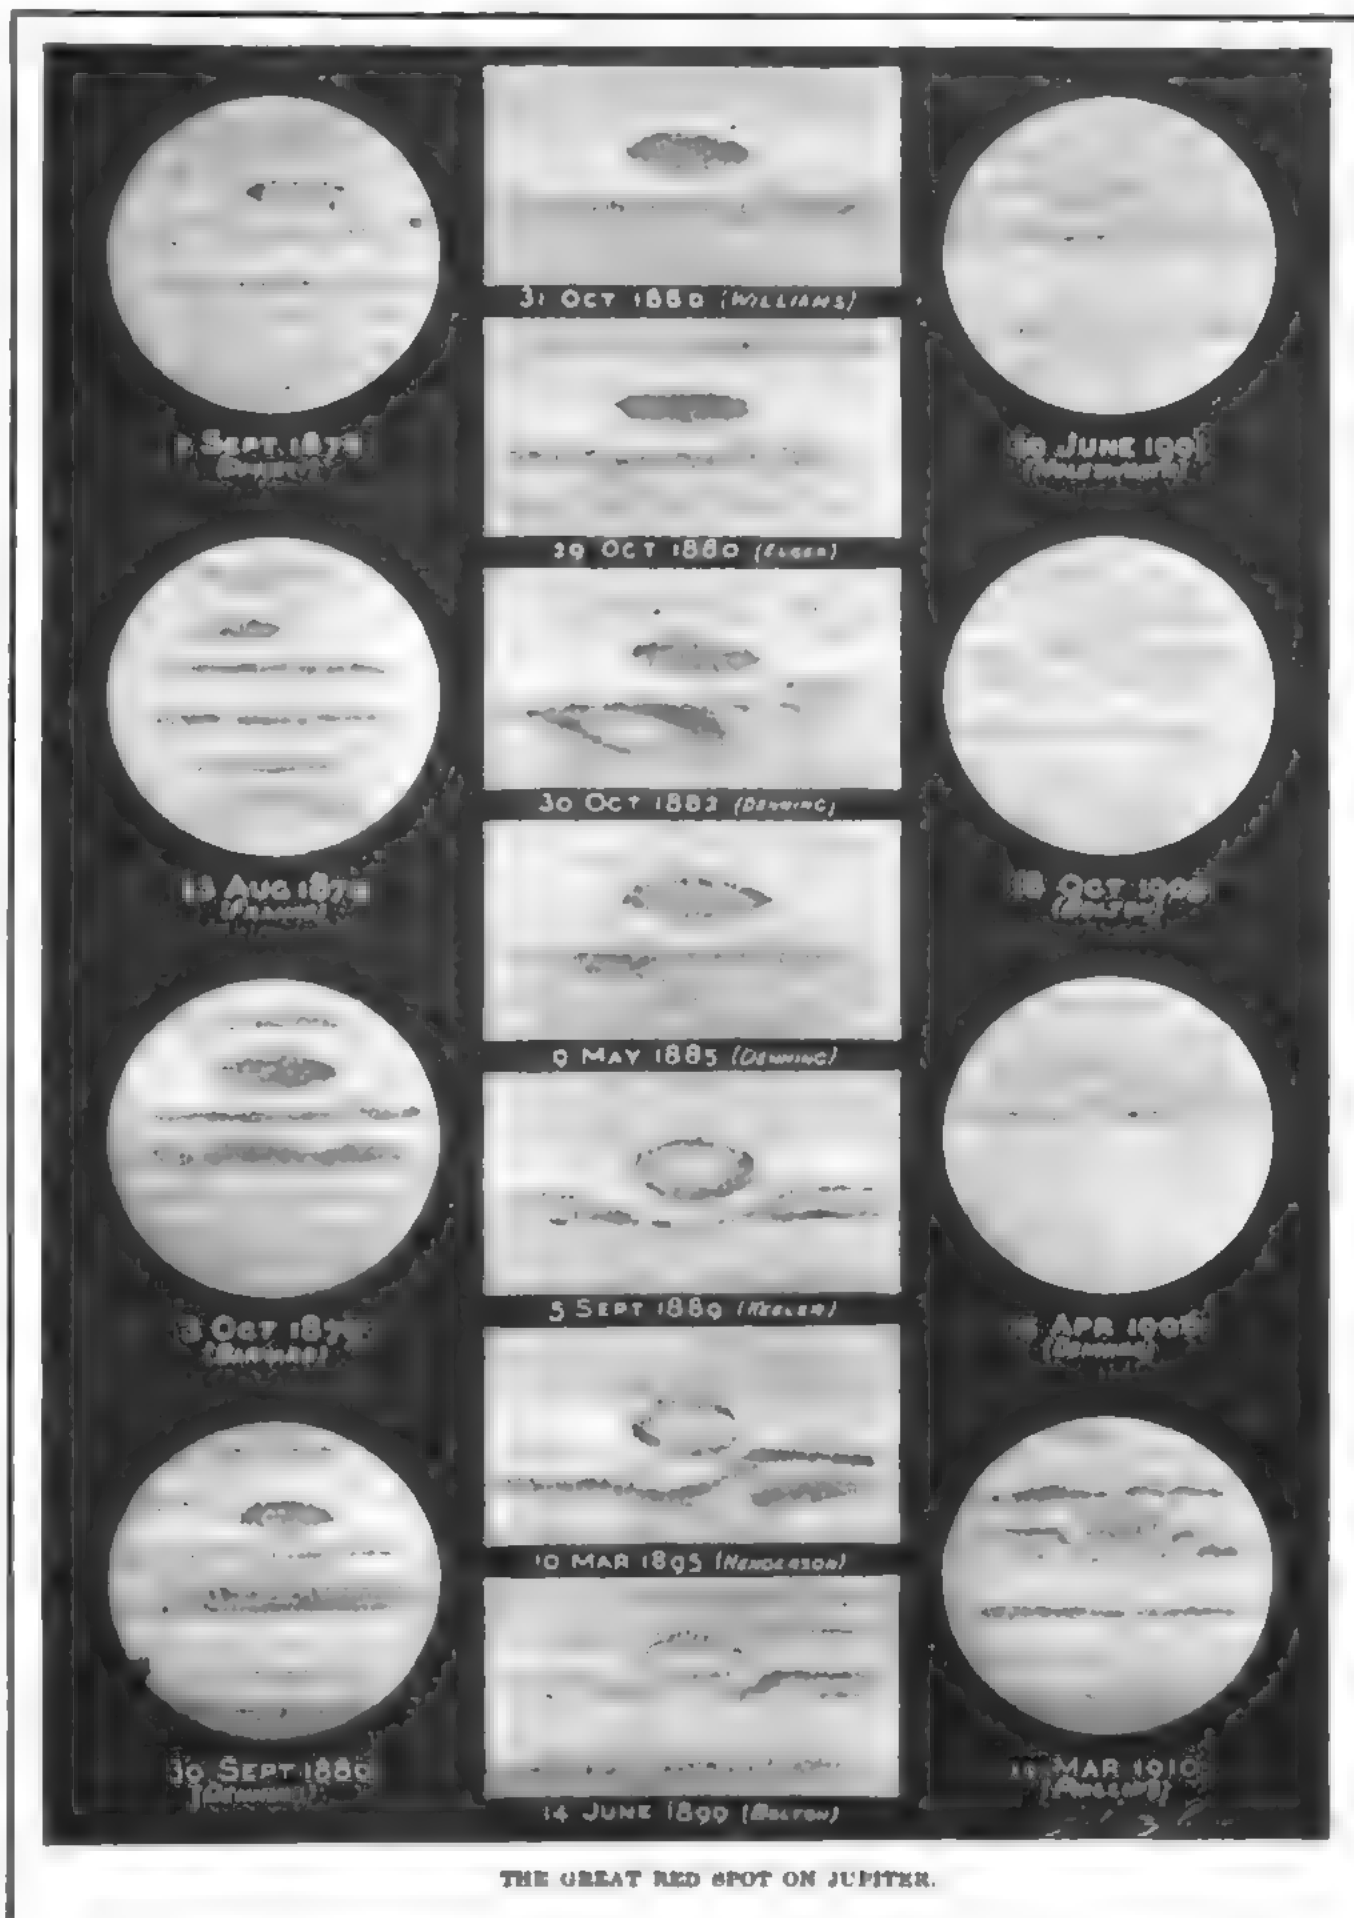

ARE NAVAL SALUTES EFFICIENT?—While we are considering the question of efficiency in government service, we might as well turn our attention to some matters of form that serve no useful purpose, suggests an editorial writer in *The American Machinist* (New York, July 30). For instance, there is the case of the naval salute. He says:

"Just suppose that every time the president of the Great American Wrench Trust visited one of their shops a man was detailed to throw 21 monkey-wrenches into a well provided for that purpose; 19 for the vice-president; 15 for the general manager; 13 for a director, and when one works manager visits another, 8 perfectly good monkey-wrenches were thrown into the scrap-well.

Every stockholder would be up in arms at the useless waste, and the price of monkey-wrenches would be correspondingly higher in consequence. Could any officer proposing such a course escape the lunatic asylum? And yet this isn't a cent on a dollar to the cost of the senseless firing of salutes when an officer visits a vessel of the navy. Nor is it only the cost of the salutes, but the waste of the time of the officers. A 'time study' of the time wasted in conforming with the 152 articles of the regulations devoted to 'Honors and Distinctions' would be even more illuminating than a similar study in the machine-shop."

IS JUPITER LAUNCHING A MOON?

UNDER this heading, *The Illustrated London News* (July 4) prints a series of drawings of the planet Jupiter by Siriven Bolton, Fellow of the Royal Astronomical Society, with the following explanation by the author, who accepts the theory that moons are thrown off by centri-

fugal force from their parent planets, when partially liquid:

"It is propounded that our earth, when once in a plastic condition, rotated on its axis so swiftly that the matter at the equator could not adhere together, and a breach caused a portion to be fractured, which portion gradually separated from the parent planet. So, apparently, in the case of our cousin-planet, Jupiter, whose rotational velocity at its surface is as great as ours used to be, there is at present a phenomenon which suggests an epoch in the evolution of moon-making. That puzzling object on its surface, known as the Great Red Spot, is not a fixture of the surface. It possesses an extremely oblate spherical outline, and its major axis measures over 20,000 miles. Its slow, irregular drift on the planet shows that while it is detached from the main globe, it moves round with the planet's axial rotation. The inference denotes a Jovian moon in embryo."

LETTERS AND ART

TOLSTOY'S PREVISION

THE EUROPEAN DÉBÂCLE was foreseen by Count Tolstoy as far back as 1910, tho the details of his vision vary somewhat from the drama now being enacted. This vision, which was communicated to the American press last year by the Countess Nastasia Tolstoy, a grandniece of the novelist, is said to have struck the German Kaiser as "one of the most impressive literary prophecies of this age." The original copy

THE REQUIEM OF THE GUNS.

—Carter in the New York Sun.

was presented to the Czar of Russia and by him was communicated to Emperor William and Edward VII. The Countess Tolstoy gives as her reason for making it public at the time she did the knowledge that "one of the royal principals is going to include the secret message in his private memoirs." The words as they issued from the aged Tolstoy were taken down by the Countess—so the account runs in the *New York Sun*—while he "leaned back in his chair, covered his eyes with his hands, and relapsed into an apparently comatose condition." In speaking, his voice had a low and hollow tone:

"This is a revelation of events of a universal character which must shortly come to pass. Their spiritual outlines are now before my eyes. I see floating upon the surface of the sea of human fate the huge silhouette of a nude woman. She is—with her beauty, her poise, her smile, her jewels—a super-Venus.

Nations rush madly after her, each of them eager to attract

her especially. But she, like an eternal courtesan, flirts with all. In her hair-ornaments of diamonds and rubies is engraved her name, 'Commercialism.' As alluring and bewitching as she seems, much destruction and agony follow in her wake. Her breath, reeking of sordid transactions, her voice of metallic character like gold, and her look of greed are so much poison to the nations who fall victims to her charms.

"And, behold, she has three gigantic arms with three torches of universal corruption in her hand. The first torch represents the flame of war, that the beautiful courtesan carried from city to city and country to country. Patriotism answers with flashes of honest flame, but the end is the roar of guns and musketry.

"The second torch bears the flame of bigotry and hypocrisy. It carries the lamps only in temples and on the altars of sacred institutions. It carries the seed of falsity and fanaticism. It kindles the minds that are still in cradles and follows them to their graves.

"The third torch is that of the law, that dangerous foundation of all unauthentic traditions, which first does its fatal work in the family, then sweeps through the larger worlds of literature, art, and statesmanship.

"The great conflagration will start about 1912, set by the torch of the first arm in the countries of southeastern Europe. It will result in a destructive calamity in 1913.

"In that year I see all Europe in flames and bleeding. I hear the lamentations of huge battle-fields. But about the year 1915 a strange figure from the north—a new Napoleon—enters the stage of the bloody drama.

"He is a man of little militaristic training, a writer or a journalist, but in his grip most of Europe will remain till 1925. The end of the great calamity will mark a new political era for the Old World.

"There will be left no empires and kingdoms, but the world will form a federation of the United States of Nations. There will remain only four great giants,—the Anglo-Saxons, the Latins, the Slavs, and the Mongolians."

This was the answer Tolstoy gave to a request from the German Kaiser and the King of England for a "direct message." The stipulation was that it should "be something that he has not published before and that he will never publish himself." The preliminary conversation leading up to the delivery of the vision of the aged seer is thus reported:

"Very strange," said Tolstoy. "I would be glad to send a message to royalty, but the trouble with me is that I have written all my life messages for the mob. I am not accustomed to the conventions of court diction. However, I will think the matter over."

"Leo Nicolaievich, don't you have any visions of a political nature, or any prophecies on a large international scale?" I asked.

"A good idea!" he exclaimed. "I have had some really strange experiences which I could not publish as fiction. There is something that has haunted me for the past two years. I don't know how to explain the nature of it to you.

"I can not call it a dream, because I have seen it often while I have been sitting at my writing-table. On other occasions it has appeared to me at twilight, before my dinner-hour. I am not a believer in ghosts, nor in the spiritualistic explanations of phenomena; but I admit that I can not account for this mysterious affair."

"Is it a vision?" I interrupted.

"Something of that order, but very clear. So clear that I could draw a distinct picture of all that transpires. Furthermore, I can call up the vision at will. I am almost sure I could do it while you are here. The only difficulty is that I am not able to write anything during the time of the manifestation. My hands are absolutely paralyzed."

"I shall be happy to write down what you dictate," I urged.

"Very good! That settles the matter," he replied. "I shall

try for something immediately. Here on the table are paper and pencil. Or use a pen—whatever you want."

When the trance-like state had passed, the author-reformer opened his eyes and looked slightly confused:

"'Had I gone to sleep?' he asked me. 'I beg your pardon.'"

"When I read this vision-talk to him he listened gravely and nodded, saying that it was correct. Upon my request he signed the document and handed it to me with a blessing. I left him the same day, and immediately upon my arrival informed the Czar of my readiness to see him.

"I was received at the court in an informal way, and led into the Czar's private study. I handed him the paper. He opened it nervously and read with pronounced agitation.

"'Well, it's very interesting. I will make a copy for myself and then forward other copies with a translation to the Kaiser of Germany, and through him to the King of England. The original shall be kept in my private archives. I shall ask the Kaiser and the King not to make any comments on the matter, as I do not like to figure as an intermediary between them and the old man whose seditious writings I do not like, generally.'"

THE MAGIC CHANGE OF PARIS

THE DISCUSSION OF LITERATURE has subsided under the influence of stirring life; whatever comes from the pen of even the humblest reporter partakes of the qualities of literature now. So the picture of Paris on the eve of the conflict—July 30—given in the *London Daily Mail*, justifies its entrance into these columns. It is "a changed Paris, quieter, more sober, more subdued," says Mr. George Ward Price, "for the people who go about her streets, tho they do the same things and do them in the same way as last week, are filled with very different thoughts." Reading on:

"In each mind there is a grim background to every other thought. It is the prospect of the wounds and the death, the ruin and the suffering, of war to be endured, perhaps, in a fortnight's time on that eastern frontier to which Frenchmen have looked so anxiously for forty-four years.

"There is just one subject of conversation. Already it would be monotonous if it had not the grim interest of a matter of life and death. 'It is for when, the mobilization?' The words are said not boastfully, not sadly, nor yet gaily—just calmly. It seems strange that the French, so ready for noisy demonstration on subjects of less import, should find themselves nearer to the day of reckoning with their old enemies than they have been since they last fought them a generation and a half ago, and yet remain tranquil, unexcited, no more than deeply interested, and clearly resigned, if the worst is indeed to come, to meet it firmly.

"Throughout Paris, and indeed, all over France, people are engaged in effecting a sort of discount of the ordeal that seems to be drawing on so fast. They are trying to foresee, to prepare for eventualities, to harden themselves to the trial by reflecting well upon it in cold blood.

"'I shall be left with four children on my hands,' said a woman in the omnibus this morning. 'What will become of us? God knows'—and yet the tone was not one of bitterness. 'The Government will look after us,' answered another. 'You will see. There will be distributions of bread. It will not again be like the last time. Ah, no.'

"'What day do you go?' It is the question you will hear wherever men in the prime of life are gathered together. For on each reservist's military papers it is indicated how soon after the date of the order of mobilization he must rejoin his regiment. Some must start at once. 'I rejoin at Toul the first day,' said the telephonist down-stairs with a smile. Toul—right on the German frontier. Life has abrupt changes for men of a continental nation; to be working a private telephone exchange one day, and hardly more than a few hours later, perhaps, to be right in the thick of the most desperate battle of nations since the beginning of the world.

"I was in a Ministry to-day—the most comfortable of all the French Ministries, I think, with soft carpets and tapestries and marble and paneling. The attaché to whom I was talking is a big man, but one who evidently takes care to dine well. He is always beautifully dressed, and his patent-leather boots, with their white cloth tops, have to be carried to and from the Ministry every day in a neat little car. He was leaning back in a gilt, red silk Louis XVI. chair. 'Next week,' he said, suddenly, with a

short laugh, 'I dare say I shall be much less comfortable—a rifle on my shoulder and a pack on my back, eh?—and sleeping under a hedge in the rain. I join the second day.'

"One's acquaintances begin to take on a romantic interest, of which they would have seemed hardly capable a week ago. Duclos, whom I see in the editorial offices of a newspaper in the small hours of every morning, smoking countless Maryland cigarettes, is, it seems, an artilleryman, and has a medal for being the best gunlayer in his battery. The *concierge* is a dragoon. The waiter, who has grown to tolerate my habit of taking cream with coffee after dinner, will be a 'sous-off,' giving orders instead of taking them. One has a sudden consciousness of inefficiency among all these people who are so ready to take their places as parts of the fighting machine, coupled with a vague feeling of resentment that all this time they

RECONCILED.

This drawing by the famous artist Steinlen, who lives in Paris, shows the hatred of the French working man for the military. They are at one now fighting in a common cause.

have been living double lives. Who would have dreamed, for instance, that that tall young man who cuts one's hair so satisfactorily twice a month is really a cuirassier, and will very likely be charging about in a gleaming breastplate this time next month, flourishing a heavy sabre to cut off heads, instead of trimming them."

In a Paris dispatch to the *New York Evening Post* we read:

"The *crêpe* festoons which for forty years have hung from the monument of the city of Strassburg, capital of Alsace-Lorraine, which stands in the Place de la Concorde, were torn down to-day and replaced with flowers and palm-branches, while a tricolored sash was draped about the figure. The ceremony was conducted by 2,000 members of the Federation of Alsatian Societies in Paris. Joseph Sanabœuf, Mayor of the Eighth Arrondissement, embraced the statue, and then, addressing the gathering, said:

"'The hour of revenge for which we have prayed unceasingly for forty-four years has at last struck. The French Army is in Alsace. The red trousers are again seen on our plains and mountains. The gay bugles of France sounded the charge at Altkirch and Mülhausen.'

"There were few who were not in tears as the speaker concluded. The singing of the 'Marseillaise,' followed by cheers for Belgium, Russia, and England, ended the ceremony."

HARDSHIPS IMPOSED BY THE CENSOR

ENGLAND AND AMERICA both are suffering through the recklessness of a yellow press and the strict censorship of real war news. We have been treated to accounts of North Sea battles, of sinking ships as well as of victorious fleets that are contradicted within the same day. Besides the publication of news that is no news, the German element of our population complain bitterly in letters to the press of the coloring of news in a way unfavorable to the Fatherland. The *New York Tribune* speaks for itself and other American papers in declaring its purpose to give authentic news on the progress of the war. News from the continent can not be guaranteed, however, "when all normal means of communication are in the hands of the military authorities and a strict censorship is maintained." Readers are asked to bear in mind that "under such conditions a newspaper can not verify the accuracy of all the reports reaching it, and yet must print them for what they are worth." The *New York Times* goes more into detail in explaining the vicissitudes of our war news in its passage through many hands before reaching us:

"A peculiarity of the war news, as it comes to the American papers, is that practically all of it, except that relating to England, has to pass two military censorships, and in the case of the news from Germany or Austria each censor has objects in view that are different from, as well as antagonistic to, those of the other.

"The correspondent in London is the nearest to free, tho even his liberty is much restricted. He can send to us any news he can get from any source, providing it receives official approval as making no untimely revelation concerning the British forces and intentions and as not injurious to British allies. The gatherer of the information in France has to submit his 'copy' to a like, but probably more rigid, scrutiny before what is left of it is sent on to London, whence alone it can come to America.

"But it is the man in Berlin who, for the present, at least, has the hardest time, for there the idea of a censorship takes the form of a determination to suppress not only all news harmful to German interests, but also all that is not, in the opinion of the authorities, in one way or another distinctly helpful to those interests. That, of course, makes the Berlin dispatches few in number, but in addition it makes more than probable that when they reach the hands of the British censor, he will decide that their publication would be undesirable. In other words, he is apt to object to them for the very reason that made them pleasing to the German censor.

"These are the facts that account for what a few of our readers mistakenly call the 'coloring' by us of our war news. 'Coloring' is not the right word for what happens, since nowhere is there compulsion on our correspondents to send untrue or distorted news, and they are thoroughly well aware that such news is not wanted from them, even when the alternative, as it is just now in Berlin, may be next to no news at all. The right word is 'selection,' and, unfortunately, the selecting in time of war is done with military, not journalistic, ends in view.

"Still, what the censors accomplish is not the suppression of the news, but the delaying of it. Sooner or later the truth all gets out."

The newspapers themselves have a ground of complaint in common with their readers. The *New York World*, in one editorial, reviews the same difficulties mentioned above and points out the astonishing thing that, "in spite of the almost insurmountable obstacles that belligerent governments have placed in the way of the press, the American newspapers have been able to do so well," yet in another place exclaims:

"The brutality with which European officialism has undertaken to suppress public and private information should be noted by the people of every nation. What is called censorship has been wanton destruction. The result has been hardship, suffering, and falsehood, with probably few advantages to anybody.

"In England measures have been taken to introduce common sense into the system, and in this country restrictions upon the use of the wireless which put it out of service in some cases have been modified. Perhaps in the course of time, public opinion

in all lands will compel governments to exercise intelligent discrimination in such matters.

"Whenever political or military power assumes to say what people shall read, how they shall think, and what conclusions they shall reach, it usually goes about the business clumsily, and thus defeats its own objects. True censorship, even in war, demands knowledge and wit. In this instance it has depended chiefly upon muscle."

THE "GREATEST ACTOR OF OUR TIME"

WHAT OF THOSE wonderful Russians who a few years ago came out of a mysterious East and charmed all Europe and America with the dance? Will they be forced back into the shadows whence they came by the numbing results of inexorable war? Next season was to bring back to us the incomparable Pavlova and possibly the great ballet organization that hitherto has been thought too costly to bring overseas. Moreover, it has been said that we should have another visit from the singing actor, Chaliapin. He was, indeed, with us a few years ago, but somehow found small favor with the critics. Whether they were wrong or he has matured and grown in the meantime is a question raised by the fact that in England, at least, he is hailed as the "greatest actor of our time." So high upon a pinnacle does "An Englishman" of *The Daily Mail* (London) place him that we must travel back in theatrical history as far as Edmund Kean to find his equal. "He is no mere artist of the opera," declares this writer, known behind his pen-name as Charles Whibley. "He is an actor who happens to sing." His chief virtue consists in not separating "the art of his voice from the art of personation, as is the habit of his Italian rivals." His being the greatest actor of our time, this writer thinks, "would be evident, even if he had not told us that his chief interest is in the exhibition of character." We read:

"He differs from the most of his English colleagues in insisting that the actor's first duty is personation. He is not content to show himself in the lime-light in easy contempt of the part which he pretends to be playing. He knows that the material of an actor's art is himself, his voice, and his gesture, and he handles this material with a courage and variety which place him high above his fellows. For them it is enough to make a display of their own features and their own 'temperament.' They walk upon the stage, boast their admirers, as into a drawing-room. You may recognize them securely, whatever coat they wear upon their backs. Every step, every movement of M. Chaliapin belong not to himself but to the man whom for the moment he represents.

"The distinction seems elementary, but in London, at any rate, it must be made. So long have we been accustomed to the player whose conduct is the same in all conditions, whose 'genius' shines through the thickest disguise, that we welcome with enthusiasm the actor who knows that his first and last duty is to act, to interpret the mind and soul not of himself but of another. And M. Chaliapin not only evades the mere suspicion of egoism when he comes upon the stage, he knows no single vice of the popular actor. He never rants, he is incapable of rhetoric. He does not mar his representation by false emphasis or elaborate gesture. His tones and movements are alike harmonious. He does not destroy at his first entrance upon the stage the possibility of subsequent emotion. He has a reserve of force, upon which he does not call in vain. He expresses what he has to say with unerring hand and voice. His art, like that of the writer or painter, is an art of expressing something outside himself. He does not show us Chaliapin with weary iteration. He shows us *Ivan* or *Boris* or *Don Quixote*, interpreting for us as he goes the meaning and idiosyncrasy of each. Whatever be his part, he plays it with a dignity of restraint, a sense of character, an elimination of self, which have not been seen in any actor of our time."

In his personation of *Ivan the Terrible*, we are told, there is nothing of Chaliapin:

"The ruthless Emperor is represented as the Oriental that he was. He appears before us old and awkward and suspicious.
